Risk Mitigation	The Company's research demonstrates that industry standards on refreshing hardware are generally three to five years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures; (2) avert customer frustration and employee downtime; (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities; (4) continue operating system support as older versions are retired by the manufacturer; and (5) ensure employees have the required software to perform their work.

Radar Intrusion Detection

Report Pulled: 11/1/2024 **Item ID: 8846**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Radar Intrusion Detection

Description This project will deploy new radar detection technology to enable the detection and tracking of individuals at Company sites. The radar will alert in real time and automatically dispatch Company security or law enforcement to investigate.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** SECURITY

WORK OBJECTIVES

Problem Statement

The Company currently lacks the ability to detect potential intruders at Company sites across the state, including critical infrastructure sites such as city gates, compressor stations, sub stations, generation plants, and hydro sites. Currently, three sites have flawed fence intrusion detection technology that result in the recurrence of multiple false alarms that require an employee to investigate. Additionally, the current detection technology is unable to identify the difference between animals and humans, cannot set different boundaries, and prohibits the expansion of intrusion detection at many other critical sites. Any Investigation that has to be done is hampered by the limitations of the current system, requiring manual frame by frame review of video playback is manually intensive and time consuming.

Objectives

Completion of this project will provide value to the Company through evaluating and selecting a more reliable intrusion detection solution that reduces the number of false alarms and prevents resources from being sent to a site for unnecessary investigations. Additionally, the project will improve the efficiency of investigations by reducing the amount of time it takes to review playback to develop a suspect or investigative lead. In most cases this will be eliminated completely. This added layer of security benefits both the Company through waste elimination, as well as the Company's customers through the safety and security of assets necessary to continue to serve.

Scope

The scope of this project encompasses: (1) implementing radar intrusion detection options; (2) establishing a priority list of sites where the solution will be rolled out; and (3) installing updated radar intrusion at physical sites in the Company's service territory with a focus on critical infrastructure sites, including but not limited to gas compressor stations, electric substations, and hydro-electric sites.

Alternatives

Alternatives considered included: (1) keeping the current fence intrusion detection solution; or (2) implementing a new intrusion detection solution. The preferred option is to implement a new solution, given the above limitations with the current solution.

Ransomware Recovery

Report Pulled: 11/1/2024 **Item ID: 11713**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Ransomware Recovery

Description This project will implement a multi-layered security approach to our production OT data center backups to mitigate data loss risk from a ransomware attack for both IT and OT.

Portfolio IT Services > Infrastructure > Data Center - Storage > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement

The company is at risk from ransomware attacks. A severe ransomware attack could leave the Company without access to critical data and unable to recover the data. In a best case scenario, a successful ransomware attack would likely result in primary systems outages for up to a week and months of work to recover remaining systems.

Objectives

The project will add value to the Company and its customers by: (1) implementing a 3-2-1-1 (3 copies, 2 media, 1 offline, 1 immutable) strategy to protect the production data center data and backups. This strategy will protect the Company from production data center data loss from a broader scope of cyber threats including ransomware. (2) Providing various restoration options to reduce data loss and improve recovery time. (3) Mitigating the risk of complete data loss with a maximum security backup to store a weekly copy of production data center data offline and in a format that cannot be changed. (4) Defining a ransomware response plan that the Company can use to respond to a wide array of cyber attacks with a practiced process. (5) Providing the ability for OT to sever all communications to the public internet and corporate IT networks.

Scope

The scope of this project is to deliver one day of hardware storage level snapshots, local immutable copies of production and OT data center data, public cloud third copy of 100% of production data center data, and a ransomware recovery plan with a scenario-based approach to ransomware response including plans for monitoring, containment, malware clean up and recovery.

Alternatives

The project team looked at a number of alternatives to provide a ransomware recovery plan including paying the ransom, using tape backup, restoring to the public cloud, and buying a third datacenter. The project team looked closely at tape backups but with Company's heavy investment in their current solution for backups and the ability of the current solution to provide immutable copies the team felt that the current solution immutability better met the requirements and at a lower cost and faster delivery. Restoration to the public cloud was considered but delivery would have been extremely complex and likely would have taken 3-5 years to get in place. Lastly the project team looked at setting up a third data center that would be used as an offline copy of production. The cost was too high and it didn't provide any value over our current public cloud and on-premise backup copies of production and OT data center data.

Rate Change Maintenance

EXECUTIVE SUMMARY

Report Pulled: 11/1/2024 **Item ID: 13957**

BASIC INFORMATION

Work Category Comply - Interval **Work Type** Project

Alias Rates Case Implementation, Rate Cases Annual Upgrade Implementation, Rate Cases Annual Upgrade, Rate Case Annual Upgrade, Rate Case Annual Requirements, Rate Case Maintenance, Rate Change Maintenance

Description The Rates Change Maintenance project will modify SAP billing in accordance with pricing and rate change requirements.

Portfolio IT Services > Applications > Customer Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement For the Company to continue to meet and comply with the Michigan Public Service Commission (MPSC) rate change requirements, there is a need to make periodic updates/modifications to the existing prices and rate structures. These updates help ensure accuracy of billing and provide optimal rates for customers.

Objectives The project will add value for both the Company and its customers through: (1) improved customer satisfaction by providing accurate billing; (2) optimized rate configuration enabling rate changes to be made more efficiently; and (3) timely updates to Company applications that incorporate mandatory changes to the rate structure that includes new surcharges, price changes, and energy efficiency programs.

Scope The scope of this project encompasses (1) implementation of annual or monthly (or both) electric and gas customer price changes, and rate structure changes as approved by the MSPC; and (2) optimizing the rate configuration in the Company's back-end system for more efficient rate changes.

Alternatives An alternative considered for this effort was a fully dedicated offshore development model. The option ensured resources were readily available with a more cost-effective labor expense. This alternative was not chosen due to the risk of billing inaccuracies and customer complaints. These risks were deemed too high because of the complexities of the rate structure, new development, and the timing it would take for testing of this model. Cloud is not an applicable option in this case as we are not replacing any software. The option to use onshore resources to plan, coordinate, and execute the rate changes was selected as it supports the Company's operation model for rate changes.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	Completing timely rate changes reduces the risk of increasing noncollectable revenue due to delays with rate implementation. The Company could risk millions of dollars if rate changes are delayed; establishing an optimized process for rate changes is crucial to mitigate this risk.
Technology Capability	Customer Management
Avoided Costs	Following the Rate Optimization implementation the team responsible for rate changes can streamline their efforts; preventing waste in the form of waiting and rework. Multiple changes can be completed at once versus sequencing them which causes rework when priorities shift.
Risk Mitigation	Maintain compliance by fulfilling MPSC rates requirements, ensuring customer bills remain accurate as the Company implements various rate changes. This will help the Company provide the best rates for customers as they're identified.

Replacement for Gas Automated Meter Reading (AMR) Tech Report Pulled: 11/1/2024 Item ID: 13960

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias , Field Collection Systems (FCS) and Itron Mobile Replacement, Replacement for Gas Meter Reading Technology, Replacement for Gas Automated Meter Reading (AMR) Technology

Description This project will replace Itron Field Collection Systems (FCS) and Itron Mobile with the newest Itron Software as a Service (SaaS) Temetra along with replacing Itron Mobile with Temetra Mobile for Gas AMR meters. This will allow the Company to leverage new cloud capabilities and align with the Company's Cloud strategy.

Portfolio IT Services > Applications > Gas Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The Company is using FCS and FCS mobile to gather gas meter reads. The vendor is replacing these systems with new Cloud software called Temetra and Temetra Mobile due to FCS and Itron Mobile being end of life December 2026. The software migration is necessary to maintain vendor support (latest security patches, bug fixes, latest functionality) while avoiding security, stability, and reliability risks for the Company. Moving to Itron Temetra will ensure no gas meter reading disruption and continued integration with existing gas communication modules and Itron Security Manager.

Objectives The project adds value by: (1) continuing to collect accurate and timely gas meter reads; (2) removing the risk of being on unsupported versions; (3) utilizing the latest functionality such as retrieving historic read data, photos and reports directly from Temetra; (4) seamlessly getting up to date security patches; (5) and reducing ongoing networking equipment replacement and upgrade costs.

Scope Included in the implementation is: (1) configuring and deploying Temetra and Temetra Mobile; (2) migrating data; (3) integrating to Itron Enterprise Edition (IEE), Itron Security Manager (ISM), gas AMR PI Historian and Data Lake; (4) integrating to Mobile Collectors (MC3s); (5) testing the software, data migrations and integrations; (6) educating and increasing the skills of the employees to leverage the new cloud services; (7) and decommissioning FCS and Itron Mobile and the on-premise databases and servers.

Alternatives Alternatives considered included: (1) continuing to use the FCS application and Itron Mobile without vendor support. This alternative was not selected because it would add application stability, security, and dependency risks to gas meter reading data collection which would negatively impact critical customer billing operations. It would also de-couple from the Itron security infrastructure that the other business critical Itron applications use, creating more expense and complexity in the technology environment. (2) Replace the platform with a different mobile gas reading application, which would also require the Company to replace the 1.2 million gas communication modules on the meters. Replacing FCS would require the application business owners to undertake a large initiative requiring multiple years to implement and a multi-team effort from start to finish. It would also increase the amount of technology needed to be supported and add cost to support as it would be a standalone product. (3) Move to Itron's Cloud technology (Temetra and Temetra Mobile). This option best suits customers and the Company's needs for the future as it offers new functionality while maintaining the system integrated into the Itron Security infrastructure and with the other Itron software products in use at the Company.

OTHER VALUE

Type	Description
Technology Capability	Gas T&D
Intangibles	Latest software of Temetra enables the best integration with other Itron products, such as future versions of Itron Security Manager. Failure to stay current, will impact the upgradability of the entire Itron software suite as well as gas meters from gas-only customers.
Intangibles	The Company has adopted a cloud-first policy. The move from FCS to Temetra will align with that policy.
Intangibles	This project will assist in improving performance of the platform through bug fixes and performance tuning and latest enhancements. Ensuring the Company is on the latest platform will enhance usability while also guaranteeing it is running the most secure configuration.
Risk Mitigation	To mitigate the risks of software reaching end-of-life, we need to transition to this new, supported solution. Temetra and Temetra mobile are essential to ensure vendor support with the latest security patches, bug fixes and latest functionality.
Avoided Costs	With applications in the cloud, the Company can reduce it's purchasing of on-premise servers and on-premise software

SAP Data Archiving

EXECUTIVE SUMMARY

Report Pulled: 11/1/2024 **Item ID: 6831**

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias SAP Archiving,SAP Data Archiving

Description This project will move outdated data from an online database to offline storage.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SER

WORK OBJECTIVES

Problem Statement The SAP Enterprise Resource Planning Central Component database is 37 terabytes in size and growing at a rate of 0.3 terabytes to 0.5 terabytes per month. If the database is not archived, then SAP system performance will degrade, and this will affect customers and employees who are completing tasks within the system.

Objectives This project will create value for the Company by: (1) increasing system stability by controlling online data storage levels; and (2) controlling maintenance costs associated with data storage. Annual data storage costs are $7,445 per terabyte only including the primary production system. Data back-up costs are $400 per terabyte per week for full back-ups.

Scope The project scope includes: (1) archiving data based on the fastest growing and largest archiving objects in SAP (an archiving object defines the structure and context of the data in the SAP database from an archiving perspective); (2) building and archiving solutions that allow retrieval of archived data in the required form; and (3) setting up a solution that meets compliance standards.

Alternatives Three alternatives were explored and determined non-viable for the project: (1) allow the database to continue to grow, which puts system performance at risk and results in prohibitive storage costs; (2) decrease the overall scope and archive fewer objects, which would result in minimal positive impact to system growth and significant storage-related costs; and (3) increase the scope and archive more objects in a shorter timeframe, which would result in a significant cost increase over shorter time period. After considering each of these options, it was determined that the current scope of the project was the best strategy to address the problem while balancing annual spending.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
System Failure (SAP & Other)	High	Medium	If the SAP database is not archived, the system performance will degrade over time, negatively impacting customer experience and preventing employees from completing transactions within acceptable performance thresholds. Additionally, at current growth rate, the Enterprise Central Component (ECC) database could potentially run out of storage space.

OTHER VALUE

Type	Description
Technology Capability	Administrative & General (A&G) Support
Intangibles	Maintain the data growth rate for SAP ECC (Enterprise Central Component) under 0.4 terabytes per month.
Risk Mitigation	Through data archiving, the size of the SAP ECC (Enterprise Central Component) database is kept in check allowing SAP to perform at an optimal level.

SAP HANA Database Migration

Report Pulled: 11/1/2024 **Item ID: 11774**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SAP HANA Database Migration

Description In preparation for SAP's planned end of support for its Business Suite product in 2027, the Company will migrate its existing SAP databases from Oracle to SAP HANA in advance of the required move to S/4HANA.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SER

WORK OBJECTIVES

Problem Statement

The Company's SAP applications currently utilize Oracle's relational database management system as their underlying database storage technology. SAP has informed its customers that standard support for its legacy Business Suite (aka ECC) product will end in 2027, along with support for all non-SAP database platforms. SAP has also informed customers that the future direction for their enterprise solution is S/4HANA, a solution built explicitly for their HANA database platform. To prepare for these upcoming events, the company will migrate all of its SAP databases off of Oracle and onto SAP HANA.

Objectives

This project lays the groundwork for the company's eventual shift to SAP's HANA-based solutions by: (1) proactively migrating SAP databases to a database technology that is fully supported by SAP beyond 2027; and (2) mitigating the risk of a complete loss of support for the current Oracle database technology in 2027.

Scope

Project scope includes: (1) procurement of HANA software licensing to cover all migrated SAP applications; (2) data migration for all SAP applications from the Oracle database to SAP HANA; and (3) implementation of new application support policies, procedures and tools required to manage the newly migrated SAP HANA applications.

Alternatives

Given SAP's announcement regarding the end of support for its ECC product in 2027, all customers running SAP on database software other than HANA will also lose support for their associated database software in 2027. SAP is offering no other options for databases other than HANA beyond 2027. While there is no alternative to the HANA database for SAP going forward, the Company has considered multiple options: (1) Perform a direct migration from SAP Business Suite on Oracle to S/4HANA. A direct migration to S/4HANA brings greater operational risk to the Company as both the underlying database technology and the SAP application's functionality would change simultaneously, so this alternative was not selected. (2) Remain on the current SAP Business Suite product but competitively bid support services to a third-party provider instead of SAP. This alternative was not selected because moving to a third-party support model forces the Company to remain on outdated SAP software and eliminates any possibility of benefitting from new business functionality provided by S/4HANA. It will also require the Company to accept significant risk due to the fact that SAP security patches, application patches and upgrades will not be available upon termination of the SAP maintenance agreement. (3) Migrate to SAP's Software as a Service (SaaS) implementation of S/4HANA. This alternative was not selected because an S/4HANA SaaS migration is a much more disruptive option as the Company's business processes must be adjusted to accommodate functionality differences between ECC and S/4HANA. The risk of negative business impact is significantly greater than simply changing the underlying database technology. (4) Migrate the SAP databases to HANA prior to implementing S/4HANA. This alternative was selected as it gives the Company several years to solidify its HANA database infrastructure before introducing the substantial business process changes required with S/4HANA.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	By completing this work in advance of December 2027, when SAP will cease support of its Business Suite (ECC) product, and by performing this work in a phased approach (migrating to HANA database first, before migrating the application to S/4HANA), the Company avoids potential operational stability issues.
Technology Capability	SAP is eliminating support for all databases other than HANA beginning in 2027. By migrating to HANA in advance of this 2027 date, the Company is able to eliminate its reliance on Oracle's database software and move to SAP's long-term database solution, HANA.

SAP Support Pack Upgrade 2023-2024

Report Pulled: 11/1/2024 **Item ID: 12500**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SAP Support Pack Upgrade 2023, SAP Support Pack Upgrade 2024, SAP Support Pack Upgrade 2023-2024

Description The SAP Support Pack Upgrade project is to maintain the currency levels of all SAP applications. This will ensure the applications are at version levels that are supported by SAP, have the latest patches and bug fixes, and provide cross-application compatibility for our business partners.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SER

WORK OBJECTIVES

Problem Statement To continue to maintain SAP application version currency, across all applications, the support packs released by SAP must be routinely applied. Without maintaining application currency, the core business applications running on the SAP platform are at risk of losing vendor support, resulting in the inability to apply bug fixes and patches, including security patches, and maintain application interoperability and stability.

Objectives The project will add value by: (1) maintaining supportability of SAP applications; (2) mitigating system security, stability and reliability risks by ensuring the applications are up-to-date with the most current patches and bug fixes released by SAP; and (3) ensuring ongoing cross-application compatibility.

Scope The scope of this project includes routine support pack upgrades to all SAP applications, which include: Enterprise Core Component (ECC), Customer Relationship Manager (CRM), Enterprise Portal, Process Orchestration (PO), Business Warehouse (BW), Business Objects (BOBJ), Data Services (DS), Governance, Risk and Compliance (GRC), Solution Manager, Data Quality Manager (DQM), Graphical User Interface (GUI), Single Sign On (SSO), System Landscape Directory (SLD) and other related SAP applications.

Alternatives Alternatives considered include: (1) Divide the scope into individual projects by SAP application. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work, especially testing efforts, and therefore potentially higher costs. (2) Migrate to SAP S/4HANA. This option was not selected at this time because it is part of the long-term digital plan and requires substantial planning and investment, (3) Balance the project scope through regular support pack upgrades. This alternative was selected because it provides the best balance of minimizing cost and maintaining support by combining multiple application upgrades through a single support pack upgrade effort.

SAP Support Pack Upgrade 2026

Report Pulled: 11/1/2024 **Item ID: 12501**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SAP Support Pack Upgrade 2025, SAP Support Pack Upgrade 2026

Description The SAP Support Pack Upgrade project is to maintain the currency levels of all SAP applications. This will ensure the applications are at version levels that are supported by SAP, have the latest patches and bug fixes, and provide cross-application compatibility for our business partners.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SER

WORK OBJECTIVES

Problem Statement To continue to maintain SAP application version currency, across all applications, the support packs released by SAP must be routinely applied. Without maintaining application currency, the core business applications running on the SAP platform are at risk of losing vendor support, resulting in the inability to apply bug fixes and patches, including security patches, and maintain application interoperability and stability.

Objectives The project will add value by: (1) maintaining supportability of SAP applications; (2) mitigating system security, stability and reliability risks by ensuring the applications are up-to-date with the most current patches and bug fixes released by SAP; and (3) ensuring ongoing cross-application compatibility.

Scope The scope of this project includes routine support pack upgrades to all SAP applications, which include: Enterprise Core Component (ECC), Customer Relationship Manager (CRM), Enterprise Portal, Process Orchestration (PO), Business Warehouse (BW), Business Objects (BOBJ), Data Services (DS), Solution Manager, Data Quality Manager (DQM), Graphical User Interface (GUI), Single Sign On (SSO), System Landscape Directory (SLD) and other related SAP applications.

Alternatives Alternatives considered include: (1) Divide the scope into individual projects by SAP application. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work, especially testing efforts, and therefore potentially higher costs. (2) Migrate to SAP S/4HANA. This option was not selected, because SAP S/4HANA is a multi-year project that is not expected to be completed by year-end 2026. So an alternative approach is needed to perform the application upgrades and maintain currency in the meantime. (3) Balance the project scope through regular support pack upgrades. This alternative was selected because it provides the best balance of minimizing cost and maintaining support by combining multiple application upgrades through a single support pack upgrade effort.

Saviynt EIGA Implementation

Report Pulled: 11/1/2024 **Item ID: 13302**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Access Now Upgrade 2023, Access Now Upgrade 2024, Saviynt EIGA Implementation, Saviynt Enterprise Identity Governance and Access (EIGA) Implementation

Description The project will implement Saviynt EIGA module, consolidate Identity Access Management (IAM) functionality into Saviynt, and retire the Identity Manager application. By implementing the new solution, the Company will optimize IAM functionality, eliminate complexity, and reduce support costs. In addition, the project will integrate the OT network with an IAM solution that will allow for automated management of users and entitlements in the OT Active Directory domains and applications.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STANI

WORK OBJECTIVES

Problem Statement The current version of AccessNow reached end-of-life in December 2022, with support discontinued in January 2023. The application has numerous custom workflows and integrations, requiring professional services for ongoing use and changes. It lacks proper data analytics and reporting, posing risks such as inability to fix critical defects, software incompatibility, compliance issues, increased costs, and degraded performance. The Company uses multiple IAM tools, each performing critical functions, leading to numerous required interfaces and customizations. While beneficial for end users, these integrations increase the risk of system failures, higher support costs, multiple subscriptions, infrastructure and maintenance costs, and more expensive upgrades. The current solution utilizes SAP HR batch file processes that introduces failure points, delays, and data integrity issues. Failures in these processes can prevent new or transferred employees from accessing necessary systems, leading to operational disruptions and potential compliance risks due to inappropriate access retention.

Objectives This project provides value by: (1) Consolidating multiple IAM platforms through the implementation of the Saviynt Enterprise IGA Module, reducing complexity and support costs; (2) Decreasing complexity and enhancing efficiency by reducing interfaces between multiple identity tools; (3) Improving the end-user experience and reducing human struggle with access requests through a new, intuitive portal design; (4) minimizing custom code and focusing on configurations only by utilizing out-of-the-box functionality; and (5) Streamlining employee data processing with the implementation of an HR interface.

Scope This project scope includes: (1) Implementing the Saviynt EIGA module to consolidate IAM platforms; (2) Standardizing processes by removing customized code and using out-of-the-box functionality; (3) Replacing and improving access system; (4) Addressing issues with aging applications, multiple IAM platforms, integration challenges, and antiquated HR processing.

Alternatives Alternatives considered include: (1) Implementing hot fixes to AccessNow version 8.1.5 to ensure support through mid-2023; (2) Upgrading only the application to current supported version, excluding the new web portal but will including new application functionality; (3) Remaining on current version that will be unsupported as of January 2023, requiring vendor professional services for any break / fix. Patches and enhancements may potentially introduce additional risk of version instability; (4) Implementing IAM functions in Saviynt platform to manage access requests, including Active Directory, SAP, SAP HR, disconnected systems, and existing API integrations. The alternative selected was implementing the new Saviynt system, eliminating AccessNow software.

Security Threat Intelligence Tool

Report Pulled: 11/1/2024 **Item ID: 13875**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Security Threat Intelligence Tool

Description This project will implement a threat intelligence application that will actively assess physical and cyber threats in the environment, visually display historical and active threat data for situational awareness and provide alerts to employees based on location of the threat. This information will allow the Company's combined physical and cyber security operations center (Fusion Center) to alert employees who are in the proximity of a physical threat on the risks they may face, help inform decisions on hardening facility locations and alert employees of active cyber threats that are currently impacting other companies. The ability to proactively alert employees of the threats will have a positive impact on Safety and Cyber Security for the Company by reducing response time to incidents and reduce the likelihood an employee will be physically injured.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STAN

WORK OBJECTIVES

Problem Statement The Company's Fusion Center and Physical Security teams currently do not have the ability to actively collect or disseminate threat intelligence in real time. This gap in technology increases the risk of physical and cyber crime to employees and company assets. As the threat landscape changes, automating data collection is essential to detecting and determining threats in real time. Currently the Company's Fusion Center manually searches through sources to collect threat intelligence. The data that is manually collected is often out of date by up to one week. This re-active approach has led to gaps in information and the inability to accurately depict the threat environment. Relying on manual processes and stale data results in employees to be put in life threatening situations. Cyber threats change daily in the environment. Spending valuable time to search manually through threat information causes delays in protecting the Company's sensitive data including electric and gas critical infrastructure, financial and customer data.

Objectives This project creates value for the Company by: (1) Implementing a threat intelligence tool that actively assesses threats in the environment; (2) Visually displaying historical and active threat data for situational awareness; and (3) Providing alerts to co-workers based their location. Accurate and timely information about threat actors and their tactics enables the team to proactively perform targeted investigation, containment, and remediation.

Scope The project scope includes: (1) Implementing a single threat intelligence application that will provide intel on both physical and cyber threats; (2) Integrating with the current security orchestration platform; and (3) Building automation to notify co-workers of physical threats that are identified through intel provided in the application.

Alternatives Alternatives considered include: (1) Maintaining the Company's current security posture of manually gathering information on threats through social media, law enforcement and news reports. Continue to alert employees of active threats once they are noticed by Fusion Center employees. This alternative was not selected because the process to gather the data is completely manual and the data gathered can be outdated by up to a week. Stale data can put company assets and employees in dangerous situations. Using outdated information delays response time for company crews and law enforcement to address the situation. (2) Expanding the Company's current mass notification tool use to integrate security threat intelligence intel. This alternative was not selected due to the risk of delayed response time to receive threat notification from the current vendor in comparison to other vendors in the market. (3) Building an in-house threat intelligence application to fulfill the security threat intel requirements. This alternative was not selected because developing security platforms of this type is not in the core competences of the Company. The Company's resources don't have access to the wide range of threat data that other companies leverage to develop a threat intelligence application. In addition, the cost to maintain an in-house application of this type would not be economically practical. (4) Implementing a threat intelligence application that meets the Company's security threat intelligence requirements. This alternative was selected.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Technology Capability	Alert employees who are in the proximity of a physical threat on the risks they may face, help inform decisions on hardening facility locations and alert employees of active cyber threats that are currently impacting other companies.
Technology Capability	Automatically pull and aggregate external threat information and Open Source Intelligence (OSINT) from disparate sources into a single source
Technology Capability	The application will provide a single interface with high-quality intel feeds that the Company's Cyber Security Incident Response Team (CSIRT) monitors as part of its operational duties.
Technology Capability	The Company's physical security area will benefit from the project by receiving accurate and timely information about threat actors and their tactics enables the security team to proactively perform targeted investigation, containment, and remediation.
Technology Capability	Threat intel information sources will be filtered for context and relevance to the Company.

Security/OT Field Modernization

Report Pulled: 11/1/2024 **Item ID: 13949**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Security/OT Field Modernization

Description This project will implement new infrastructure for accomplishing improved security in the field for OT assets.

Portfolio IT Services > Infrastructure > * > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SER

WORK OBJECTIVES

Problem Statement Gas and Electric technicians are using corporate laptops, to manage critical OT infrastructure which does not follow cyber security best practices for managing critical infrastructure. Vendors and contractors have access to the Company's critical infrastructure using non-company laptops. Best practice is to use dedicated laptops to connect to critical infrastructure.

Objectives The value of this project is deploying dedicated company OT laptops and associated OT infrastructure that can move between OT locations only and providing a secure environment.

Scope This project will procure and configure approximately 130 devices that will be used to manage critical OT infrastructure.

Alternatives The Company reviewed several options to mitigate cyber security risks inherent with the use of standard corporate laptops managing critical infrastructure. The alternatives considered are: (1) Continue utilizing existing workflow of using Corporate domain laptops with software installed; (2) Bring in an outside vendor to design and implement a proposed infrastructure; (3) Considered complete disallowance of all local access to critical systems; (4) Consider extending the OT network to remote Company locations; (5) Deploy a dedicated company OT laptop and OT communications circuits, which includes cellular connectivity. The dedicated OT laptop and communications circuits presented the best way to secure the critical infrastructure by limiting internet and e-mail access. Vendors and contractors could also utilize these approved dedicated systems for managing infrastructure they help support at Company locations. Based on the analysis performed, the Company chose to deploy a dedicated OT laptop and communications circuits.

OTHER VALUE

Type	Description
Technology Capability	Administrative & General (A&G) Support
Risk Mitigation	By utilizing dedicated Operational Technology (OT) laptops without internet or e-mail access, we are mitigating the risk of a device with internet and e-mail access compromising the critical infrastructure at various Electric and Gas sites while connecting to critical control systems.
Risk Mitigation	Mandating vendors to use a dedicated Consumers Energy devices to connect to CE industrial infrastructure mitigates risk to critical systems from unknown and untrusted devices.
Intangibles	There could be impacts to business services, customer service, and Company reputation.

Self Service Vendor Portal

Report Pulled: 11/1/2024 **Item ID: 13942**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Supplier Portal for Invoice Management, Vendor Portal, Self Service Vendor Portal

Description The work will create an external portal for vendors to exercise self-service features to streamline and automate purchase order and invoice management and improve visibility to invoice and payment status.

Portfolio Corporate Services > Financial Services > Controller > General Accounting > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement

For Accounts Payable, vendors must repeatedly interact with the Company through multiple channels to ask questions, submit invoices, or check invoice or payment status, including email, physical mail, or the phone. Once a request is submitted, additional calls, emails, or Company portal requests are required for status updates, to make payments, or to respond to missed contacts. The existing service portal has functionality limited to incoming vendor inquiries only and lacks self-service options for vendor invoice and payment management and lacks the ability for vendors to utilize touchless invoice creation from POs. The limitations of the existing portal result in waste and inefficiencies for vendors and Company employees/contractors, which currently includes 6 contracted resources, and creates the potential for late payments or missing early payment discounts. For Supply Chain, vendors must repeatedly interact with the Company through multiple channels to ask questions, update POs (quantities, costs, shipping dates) including email, physical mail, or the phone. Once a request is submitted, additional calls, emails, or Company portal requests are required for status updates or to respond to missed contacts. The existing service portal has functionality limited to incoming vendor inquiries only and lacks self-service options for updates to the POs. The limitations of the existing portal result in waste and inefficiencies for vendors and Company employees/contractors, which currently includes 4 employee resources. This also creates the potential for late payments, missing early payment discounts, delays in receiving due to lack of shipping notifications from vendors, delays to scheduled work due to lack of acknowledgement and lead time adherence, and the inability to enforce contractual obligations.

Objectives

This project creates value for the Company by: (1) creating self-service functionality/increasing touchless invoice creation/processing that allows the vendor to select items from a purchase order to create an invoice on demand; (2) providing vendors with real-time invoice and payment status, increasing employee productivity by eliminating waste (3) allow self-service updates of vendor master data (banking info, remittance info, etc.) (4) fewer late payments by vendors thus reducing Company follow up and tracking; (5) creating better visibility for vendors to take advantage of early payment discounts thus reducing related vendor inquiries; (6) reducing vendor questions related to invoice and purchase orders through self-service functions and portal information; (7) reducing the cost per invoice; (8) creating self-service functionality/increasing touchless PO creation/processing that allows the vendor to select items from a purchase order to update quantities, costs, and shipping dates; (9) providing vendors with real-time PO information, increasing employee productivity by eliminating waste; and (10) fewer late deliveries by vendors thus reducing Company follow up and tracking.

Scope

The project scope includes: (1) submit an RFP for a vendor portal solution and implementation; (2) configure ability for vendors to more efficiently and more accurately self-submit invoices and POs electronically; (3) configure ability for vendors to self-convert items on a purchase order to an invoice; (4) configure ability for vendors to view invoice and payment status; (5) configure ability for vendors to make changes to SAP master data, including PO line item details; (6) configure ability to offer/process dynamic discounting (7) create new reports and dashboards; (8) enabling method to validate vendors should have access to the portal and removing access when appropriate; (9) configure ability for vendors to make self-serve changes to shipping status and delivery dates; and (10) integration to vendor invoice management system and SAP.

Alternatives

Alternatives considered include: (1) Continue use of the current manual processes which results in waste and inefficiencies for employees and vendors. This could also result in late payments and lost discounts for vendors; (2) Build a custom solution. This option was not selected as the Company has a vendor portal, that is only leveraged for vendors to ask questions. As well, it doesn't leverage best practices; (3) Building a combination of custom and standard integration to existing solutions. This option was not selected because it doesn't follow industry best practices; (4) expand our current vendor portal. This option was not chosen due to limited functionality and not matching capability roadmaps; and (5) implement a new SaaS solution specific to a vendor portal experience. Option (5) is the preferred option because it leverages industry best practices with a proven solution; provides application reliability, security, and stability through ongoing vendor support; and brings innovation to vendors via real-time processing.

Service Suite Upgrade

Report Pulled: 11/1/2024 **Item ID: 6837**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias Service Suite Upgrade

Description The project will: (1) implement a new version of Service Suite Work Management that allows for easier distribution of work orders to the field; and (2) maintain a current version on a vendor supported platform for this critical enterprise application used across Operations and Engineering.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The Service Suite Application is the mission critical work management software delivering work orders for customers. The current solution lacks an integrated view of traffic and a readable dispatch work schedule. The upgrade will improve application deployment to field devices and keep the application current to maintain vendor support.

Objectives The project will add value by: (1) implementing a new version that provides the appropriate level of vendor support for this 24x7 critical solution that provides over 100,000 work orders to the field weekly; (2) implementing Service Suite Workforce Management and migrating to cloud-based configurations that will simplify support and speed deployment of future changes; (3) providing the new feature of live traffic display on the Dispatch Application which will allow for better dispatch decision making; and (4) improving the readability and usability of the Dispatch Application schedule view, which will allow for a better understanding of employees' work schedule.

Scope The scope of the project includes: (1) implementing the new version of Service Suite Workforce Management; and (2) integrating to a mobile mapping and driving directions application with Service Suite for mobile mapping on the field device to improve safety, response, usability, and supportability of the system.

Alternatives The alternatives considered included: (1) remaining on the current Service Suite version, which requires additional manual steps in the emergency response and work assignment; (2) creating a custom-developed solution, which increases waste and inefficiency, without the same level of Enterprise Resource Planning integration; or (3) changing the current vendor, which was not selected due to the increased complexity of migration and organizational change management. Upgrading Service Suite Field Service Management was chosen because it allows the Company to stay on the supported and familiar platform already being used in the field and provides additional business value and benefits to operations.

Technology Capability	Administrative & General (A&G) Support
Risk Mitigation	Critical application is unsupported by the vendor, putting the Company at risk for support for a business critical application.
Avoided Costs	field productivity: 3000 users at 10 minutes per day, improved software deployment - 3x deployments per year at a 30 minute reduction , – 4000 users - ELECTRIC - ELECT LINE CORRECTIVE MAINTENANCE - $13,500 O&M/$31,500 CAPITAL
Avoided Costs	field productivity: 3000 users at 10 minutes per day, improved software deployment - 3x deployments per year at a 30 minute reduction , – 4000 users - ELECTRIC - ELECTRIC METER - $40,500 O&M/$94,500 CAPITAL
Avoided Costs	field productivity: 3000 users at 10 minutes per day, improved software deployment - 3x deployments per year at a 30 minute reduction, – 4000 users - GAS - GAS DIST - $9,000 O&M/$36,000 CAPITAL
Avoided Costs	field productivity: 3000 users at 10 minutes per day, improved software deployment - 3x deployments per year at a 30 minute reduction, – 4000 users - GAS - GAS SERVICE/METER - $67,500 O&M/$67,500 CAPITAL
Intangibles	Live traffic display on Dispatch Application, Improved readability/usability of Dispatch Application, FieldWorker app enhancements to close gaps with Mobile Application and Enhanced Gantt Chart

SiteCore Primary Upgrade 2025

Report Pulled: 11/1/2024 **Item ID: 12727**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SiteCore Upgrade 2025, SiteCore Primary Upgrade 2025

Description The project will refresh all components of the website hosting, delivery, search, and analytics applications to add new features and improve search capabilities. Sitecore is the content management application for the consumersenergy.com website, a channel many customers use for accessing account information and bill payment.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement Sitecore is currently operating on version 10.3, which is due to end mainstream support at the end of 2025. If this occurs, there will be an increase in support and maintenance fees of 10% above the annual subscription spend in order to purchase extended support, security updates and fixes will only be made available if the extended support is purchased, and product support for errors or required hotfixes that may impact platform stability will not be available even if extended support is purchased.

Objectives The project will add value for the Company by: (1) avoiding costs for extended maintenance agreements required at the end of mainstream support; (2) ensuring that the website retains the most up-to-date security posture; and (3) supporting the Company's CXI goals by improving reliability and performance.

Scope The project scope includes: (1) upgrading the Sitecore content management software to include content hosting and delivery allowing the use of new features and functionality; (2) migrating the Sitecore platform to the most up-to-date hardware and software by refreshing the application and database servers to a newer version of Windows Server and SQL Server.

Alternatives Alternatives considered include: (1) Delay the upgrade. This alternative was not chosen due to the current version falling outside of the mainstream support window, requiring an additional 10% in maintenance fees. Along with rapidly changing feature sets that are continually being developed by the vendor, the Company would be in a worse position to handle constantly changing cyber threats; (2) Migrate to a cloud solution. This alternative was not chosen due to the cost/benefit analysis of re-architecting our current Sitecore implementation to facilitate cloud migration is not viable at this time; and (3) Upgrade Sitecore on a two-year cycle. This alternative was chosen as it provides up-to-date functionality, stability, and mitigates cyber security risks while minimizing cost and impact.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Avoid the cost of purchasing extended support from the vendor which comes at a 10% increase from normal licensing costs.
Risk Mitigation	If this project is not completed the company and the customers are at greater risk of encountering more reliability issues and cyber threats which could compromise the website. Keeping the Sitecore platform up to date will improve overall performance and reduce likelihood of operational issues. Additionally, the risk of cyber threats is reduced as patches and fixes are released on routine schedules.
Risk Mitigation	If website is either unavailable or not performing sufficiently, it will lead to a negative impact to Consumers Energy reputations with customers and lower JD Power scores. The website is a core contact point for the Company to interact with their customers. When Sitecore is not functioning completely the website will be impacted; potentially preventing customers from viewing their bill, make a payment, report an outage, and other functions.

SiteCore Secondary Upgrade 2023

Report Pulled: 11/1/2024 **Item ID: 12442**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias 2017 BizTalk Upgrade, SiteCore Upgrade 2024, SiteCore Upgrade 2023, SiteCore Secondary Upgrade 2023-2024, SiteCore Secondary Upgrade 2023

Description The project will ensure that all components of the website hosting, delivery, search, and analytics remain on the latest version, thereby retaining low-cost, unlimited vendor support. Sitecore is the content management application for the ConsumersEnergy.com website, a channel that many customers use for accessing account information and bill payment.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement Sitecore is currently operating on version 10.0, which is due to end mainstream support at the end of 2023. If this occurs, there will be an increase in support and maintenance fees of 10% above the annual subscription spend. Additionally, the Sitecore Experience Platform, a feature used for customer data analytics and marketing, has deprecated support for MongoDB and will require a move to SQL to maintain functionality.

Objectives The project will add value for the Company by: (1) avoiding costs for extended maintenance agreements required at the end of mainstream support; (2) ensuring that the website retains the most up-to-date security posture; (3) supporting the Company's CXI goals by improving reliability and performance; and (4) updating the customer analytics platform to SQL from MongoDB, ensuring the latest supported technology is used.

Scope The project scope includes: (1) upgrading the Sitecore content management software to the latest available version; and (2) migrating the Sitecore customer analytics module to the latest supported SQL platform.

Alternatives Alternatives considered include: (1) Delay the upgrade. This alternative was not chosen due to the current version falling outside of the mainstream support window, requiring an additional 10% in maintenance fees. Along with rapidly changing feature sets that are continually being developed by the vendor, the Company would be in a worse position to handle constantly changing cyber threats; (2) Undergo a full website redesign. This solution was not chosen as the cost/benefit analysis revealed this option is not viable at the time of filing; and (3) Upgrade Sitecore on a two-year cycle. This alternative was chosen as it provides up-to-date functionality, stability, and mitigates cyber security risks while minimizing cost and impact.

Software Asset - Service Management Upgrade

Report Pulled: 11/1/2024 **Item ID: 13928**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Software Asset - Service Management Upgrade

Description This project will optimize the software asset management process by systematically monitor, assess and oversee software licenses and compliance using Software Asset Management Professional.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SER

WORK OBJECTIVES

Problem Statement The on-premises software asset management technology currently used in the Company lacks compatibility to automate license reclamation, cost optimization, and license forecasting. These software asset management constraints lead to the inability to optimize software license purchasing and effective license demand management.

Objectives This project will create value by ensuring the Company's technology requirements are met through a comprehensive and cost-effective software asset management processes and workflow. Specifically, by replacing the on-premise application, the project will: (1) streamline the software request workflow including license reclamation and software deployment; (2) help ensure compliance with software license agreements; (3) identify opportunities of license optimization leading to cost optimization; (4) mitigate risk related to software asset management; (5) optimize license forecasting and (6) increase asset visibility.

Scope The project scope includes: (1) the implementation of software asset management tool; (2) the establishment of process and process roles needed to support the assets; and (3) retirement of the on-premise software asset management tool.

Alternatives Alternatives considered included: (1) Choose an alternate Cloud based asset management system. This alternative was not chosen as it would require introducing and integrating an additional vendor product into the technical landscape. (2) Develop a custom solution. This alternative was not chosen since the cost to build and maintain similar capabilities and to integrate the custom solution would not be feasible or cost effective. (3) Do nothing. This alternative was not selected as the current Software Asset Management tool that lacks integration and automation and will not address optimizing and effective management of licenses and purchases. (4) Develop and implement an on-premises Software Asset Management solution. This alternative ultimately chosen has strengths in software asset management and its integration capabilities with other platform modules from the same vendor. It offers a unified platform that can helps license compliance, optimization and automation.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Avoided cost by having automation built to reclaim licenses when a resource leaves the Company. SAM Pro will serve as the new Software Asset Management system of record, resulting in an annual cost savings of $66,000 and providing a single source to manage and request software and hardware. The cost savings here is from the 0.5 FTE HCL resource ($43,500) and 0.25 FTE CE resource ($22,500) that are not needed to manually maintain this process.
Technology Capability	By replacing the on-premise infrastructure with a Cloud Based System aligns with the Company goal of moving to the Cloud for better scalability and flexibility. This capability will help mitigate the labor of maintaining the current on-premise infrastructure with patching.
Technology Capability	SAM Pro provides the capability for better Automation on Software requests. With SNOW when a user requests for new Software, it took some time to check for the license availability and fulfill the request, but with SAM Pro the check happens real time and the latest version is procured. Governance improvements were made by adding extra checks in the workflow for EA (enterprise Architecture) and Cyber Security to do a high level review of the Software being requested to address any concerns early on.
Technology Capability	With the implementation of SAM Pro, there is no longer the need to sync up the software versions on 2 different systems (ServiceNow and SNOW) along with keeping the Product Owners and Technical Owners in sync for the software. SAM Pro also ensures that the SCCM ID has the latest version of the software to be pushed over to the user PC's when requested.

Software Platform Refresh

Report Pulled: 11/1/2024 **Item ID: 6843**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias Software Platform Refresh

Description The Software Platform Refresh project will upgrade server operating systems, hypervisors, databases and infrastructure platforms to retain low-cost vendor support.

Portfolio IT Services > Infrastructure > Data Center - Enterprise Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS &

WORK OBJECTIVES

Problem Statement For systems that go beyond their normal manufacturer support ending, there will be increased support and maintenance fees of 20% to 100% above current support and maintenance depending on vendor. Completing this project allows the organization to (1) avoid high support costs; (2) provide for system security; and (3) stay current to promote seamless interoperability among servers, applications, and databases. Aging platforms are more susceptible to security vulnerabilities and performance issues that ultimately could affect the business and customers.

Objectives The project will add value for the Company by: (1) avoiding costs for special maintenance agreements required at the end of normal manufacturer support; (2) ensuring reliability and compliance with Information Security requirements; (3) improving data center environment stability; and (4) avoiding the need for high risk upgrades that cross multiple versions.

Scope The project scope includes: (1) upgrading operating systems and databases on servers that are near end of support with a given vendor; and (2) maintaining hypervisors and infrastructure platforms at the current version for stability and performance.

Alternatives A funding options matrix was completed to review the potential alternatives. The alternatives identified were: (1) Complete the full scope of the solution for $1 million in order to eliminate the need for ongoing extended support; (2) Reduce the scale of the solution, which requires $1.6 million in ongoing extended support; (3) Reduce the scale of the solution even further, which requires $2.4 million in ongoing extended support; (4) Do not complete a software platform refresh, which requires $3.3 million in ongoing extended support. Alternative 1 was selected as the most cost effective solution to ensure ongoing system stability; seamless integration; and mitigation of cyber-security risks without the significant cost of extended support necessary for end of life software systems.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
Technology Obsolescence	High	High	There is a high risk of technology obsolescence that would result in a high impact to business and customer service operations. To mitigate this risk Consumers Energy can choose to pay significantly more for extended maintenance or complete the project with increased functionality at a lower cost.

OTHER VALUE

Type	Description
Technology Capability	Administrative & General (A&G) Support
Avoided Costs	Consumers Energy has 1,112 instances of operating systems, databases, and hypervisors that will require special maintenance contracts by January of 2020. Microsoft has identified additional maintenance costs of $705 per Central Processing Unit (CPU) Core running Windows 2008 starting in January of 2020. Consumers Energy has 4,718 CPU Cores running in the Windows 2008 environment for a total of $3,326,190 in additional maintenance charges.
Risk Mitigation	This project addresses the problem of new security vulnerabilities that would not be patched under extended maintenance.
Risk Mitigation	Through this project, Consumers Energy will be able to proactively patch systems to avoid bugs and stay current to promote seamless interoperability among servers.

SolarWinds Performance Monitoring Expansion Upgrade

Report Pulled: 11/1/2024 **Item ID: 13495**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SolarWinds, SolarWinds Performance Monitoring Expansion Upgrade

Description This project will develop an IT observability and monitoring solution that provides an aggregate view of IT system availability and performance.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS &

WORK OBJECTIVES

Problem Statement

The current IT enterprise monitoring approach doesn't provide a comprehensive view of application and infrastructure health resulting in unplanned service interruptions, extended service interruptions, and system performance degradation. In addition, unplanned service interruptions have a negative impact on business partners ability to provide reliable services to utility customers.

Objectives

This project will allow IT to reduce the number of monitoring tools and consolidate end-to-end view of IT performance alerts to a single view. These actions will prevent major service interruptions, reduce major incident Mean Time to Restore, improve system stability, and ultimately avoid O&M labor cost.

Scope

This project scope includes: (1) performing a proof of value assessment for the following SolarWinds modules, Hybrid Cloud Observability ("HCO")/ Database Performance Analytics ("DPA")/ AppOptics/Pingdom); (2) transition applications monitored by AppDynamics to SolarWinds; (3) deploy configure agent base infrastructure monitors for applications and infrastructure (4) retire AppDynamics; (5) transition critical applications not monitored by AppDynamics to SolarWinds; (6) create performance monitoring dashboards for critical systems (7) define monitoring templates for rapid deployment of new monitoring services; and (8) training co-workers on use and management of SolarWinds.

Alternatives

The following alternatives were considered: (1) Renew current licenses for both SolarWinds and AppDynamics without achieving any savings or operational efficiencies. (2) Evaluate other vendors to replace AppDynamics at a reduced cost for service. Initial deployment and annual cost would significantly increase regardless of service selected. In addition, the other vendors considered did not have the capabilities to monitor both application and infrastructure which did not allow for a consolidated approach to be adopted and/or reduction in licensing and ongoing maintenance cost. As a result, this alternative was not selected. (3) In conclusion, SolarWinds was determined to be the most cost-effective approach because of the expanded capabilities offered through the following modules, HCO/ DPA/AppOptics/ Pingdom that meets the needs of IT to proactively monitor systems and retire tools with similar capabilities to reduce ongoing maintenance cost. Therefore, the alternative selected is to move forward with deploying the expanded services offered by SolarWinds.

Risk Mitigation	Proceeding with a standard renewal of SolarWinds and the inability to retire App Dynamics in its current state will decrease the level of end-to-end proactive monitoring required resulting in increasing services interruptions and operational costs.

Spatial Asset Management

EXECUTIVE SUMMARY

Report Pulled: 11/1/2024 **Item ID: 13940**

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Spatial Asset Management

Description This initiative will implement SAP's Spatial Asset Management module. It will allow users to view assets, notifications, and orders geospatially using a map. The module will allow the Company to create and maintain asset maintenance plans for each segment of our gas and electric distribution networks (linear assets). The Company will create linear assets as technical objects (such as functional locations and equipment) and store linear data. The Company will enable creation of maintenance plans for these technical objects which result in notifications, maintenance orders, and measurement documents. We will enable monitoring the condition of our linear assets, identify where there is damage or a defect (using the start point and end point and offset), and manage all types of maintenance tasks (planned, unplanned, and preventative).

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement Currently, the Company lacks spatial visualization and spatial awareness of work and assets impacting requirements for first time quality and impacting the ability to plan, bundle and execute nearby work. The lack of a linear asset management capability affects the full work management value stream resulting in overproduction of asset maintenance activity such as assessments, surveys, and inspections.

Objectives This project creates value for the Company by (1) providing capability in SAP to view assets, notifications, and work orders on a map; (2) providing location awareness in SAP for assets and work; (3) establishing linear asset management capability in SAP for gas and electric delivery networks; and (4) enabling end-to-end map-based workflows.

Scope The scope of this project encompasses implementation in SAP of the Spatial Asset Management module.

Alternatives Alternatives considered include: (1) Implement a cloud-based individualized asset integration between GIS and SAP. This alternative was not selected as it proves ineffective in addressing needs of the end-to-end work management value stream while increasing the technical footprint of customization. There are also performance concerns with cloud to on-prem integrations; (2) Implement work group centric approaches to viewing work on a map. This alternative was not selected as it does not support standard operation through the entire work management value stream; (3) Do nothing. This alternative was not selected as this would result in increasing costs and inefficiencies in gas and electric work management; and (4) The alternative to implement the Spatial Asset Management module in SAP was chosen as it expands use of a core technology investment, supports current investment in our work management value stream, and is compatible with our GIS technology.

Standard Work Plan

Report Pulled: 11/1/2024 **Item ID: 13969**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Initiative

Alias , Standard Work Plan

Description The Gas and Electric Resource Planning process is solely reliant on spreadsheets and manual data collection from numerous, disparate sources. It is not only time-consuming but also prone to errors, leading to potential inefficiencies in resource allocation and a lack of detailed, insightful planning. The sole use of spreadsheets makes analyses and what-if scenario development cumbersome. The lack of workplan controls contributes to the completion of pull-ahead work resulting in unnecessary OT and contractor expense. Implementing a centralized planning platform that will interface with existing systems like SAP, DAPP, and EAM Dashboard would transform our planning organization, offering a clear view of planned work and ensuring that executed work is aligned with strategic objectives. In addition, a more integrated system that leverages automation and real-time data analytics would allow for the immediate, what-if scenario planning the business needs to support sound, data-driven decision-making. The tool, alongside necessary process and system enhancements will streamline the workflow and ultimately lead to schedule quality and ensure prudent overtime and contractor usage through reducing the amount of unplanned work breaking into the work management process. A shift to a digital solution that fully aligns resources, work units and feeds the schedule will represent a significant step forward in resource management, aligning with modern best practices.

Portfolio Electric Delivery Systems > * > * > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement The Gas and Electric Resource Planning process is solely reliant on spreadsheets and manual data collection from numerous, disparate sources. It is not only time-consuming but also prone to errors, leading to potential inefficiencies in resource allocation and a lack of detailed, insightful planning. The sole use of spreadsheets makes analyses and what-if scenario development cumbersome. The lack of workplan controls contributes to the completion of pull-ahead work resulting in unnecessary OT and contractor expense.

Objectives The project will add value by: (1) improving Work Planning Annual Forecast Process: This involves the enhancement of automated inputs, processing, and reporting with a shift towards a more asset-driven prioritization method and; (2) converting Monthly Work Plans into Weekly Schedules: Establish a process that seamlessly transforms monthly work plans into executable weekly schedules for easy handoff from planning to scheduling; (3) providing the ability to Run Forecasting and Planning Scenarios: Execute forecasting and planning scenarios and provide comparative analysis; (4) improve system visibility of Work Planned jobs increasing forecast accuracy of downstream processes ; and (5) creating multiple dashboards based on the audience of the data providing visibility across all levels of Operations Leadership as well as Supply Chain proactively informing of upcoming workload, potential gaps, opportunities for contingencies if levers are pulled, and clean executable work keeping our workforce fully engaged and productive. This results in improved Field Operations and Customer Satisfaction with delivery commitments and meeting reliability and compliance dates.

Scope The project scope includes the following: (1) developing a system for Work Planning Annual and Monthly forecast with automation; (2) creating the ability to translate the Monthly forecast into an executable Weekly Schedule; (3) creating technology for running Planning Scenarios with ability to compare scenarios for optimized field execution; (4) improving system visibility of Work Planned jobs increasing forecast accuracy of downstream processes (ie. materials); and (5) building Dashboards and reports to provide visibility and help management maintain process control.

Alternatives Alternatives considered: (1) Purchase commercially available system. This option was not selected as a single all compassing system does not link the Annual forecasting to execution. Products reviewed included Prometheus. (2) Microsoft Excel based solution, extending the Microsoft excel based solution was not selected as it did not provide the level of data integration for controlling large number of forecasted work items. (3) Development of a system that integrates with our SAP investment. This option was not selected as it does not align to expected value delivery timeline. (4) Purchase a SaaS solution to enable planning & forecasting with integration to our SAP work management system. The fourth alternative was selected because it aligns to the expected value delivery timeline and meets the functional requirements.

Talent Management Enablement

Report Pulled: 11/1/2024 **Item ID: 11828**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Talent Management Enablement

Description The project will deliver technology solutions to enable best-in-class Talent Management programs and processes that are critical to achieve the Company's overarching Talent Strategy Plan. The Talent Strategy Plan is a key enabler of the company's Integrated Resource Plan (IRP), Electric Distribution Infrastructure Investment Plan (EDIIP), and Natural Gas Delivery Plan (NGDP). Effective Talent Management programs and processes are critical to develop the skills, capabilities, productivity, and experience necessary to successfully execute these plans that deliver clean, reliable, affordable energy through an exceptional customer experience.

Portfolio IT Services > Applications > Corporate Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement Significant technology improvements are required to transform Human Resources (HR) to develop the skills and capabilities necessary to achieve the Company's strategic destination. Currently, many Talent Management processes are manually managed with little or no technology enablement. Specifically, the talent compensation processes are mostly manually done outside the system which introduces waste, and a potential for errors. In addition there is a limited visibility of competency gaps within the workforce. The Company cannot effectively place talent in accelerated development programs aligned to competency gaps, nor can it recognize and motivate employees for quickly increasing competency and performance. Furthermore, the Company operates in an increasingly competitive job market where candidates and employees expect best-in-class processes, technologies and experiences relative to their employment and career development. The lack of full technical enablement across Talent Management programs poses a risk to employee attraction, retention and limits the ability to develop the right skills at the right time to deliver on Company strategies.

Objectives This project will add value to the Company through technology that will enable: (1) fully functional integrated compensation module; (2) accelerated and targeted talent development of critical skills necessary to deliver on the Company's commitment to clean energy and exceptional customer experience; (3) transparency into talent and skill gaps in order to identify retention and service delivery risks within critical areas, as well as inform succession and hiring strategies; (4) improved knowledge transfer, business continuity, and customer service during a time when retirement eligibility is high and risk of knowledge loss has the potential to negatively impact customer service and satisfaction; and (5) increased efficiency and quality of talent management through simplified and automated processes that reduce costs associated with recruiting, onboarding, and developing employees. Talent Management Enablement will deliver the best-practice technology to enable and enhance (1) Fully functional integrated talent compensation management; (2) Simplified and automated talent management process for employee lifecycle management from on-boarding through Off-boarding; (3) Succession Planning and Business Continuity; (4) Career Development and Employee Retention.

Scope The scope will include: (1) implementation of each system/application; (2) integration with current systems, applications and processes as applicable; (3) retrofit current systems and applications to ensure a seamless end-to-end experience of HR processes; (4) delivery of mobile capabilities for in scope processes; (5) reporting and analytics dashboards and report insights for in scope processes.

Alternatives Three alternatives were considered for these Talent Management programs and processes: (1) Develop custom, internally built solutions that could meet most requirements. This alternative was not selected because a custom solution would result in higher overall costs, higher maintenance costs, fewer upgrades, and would not leverage industry best practices to ensure best-in-class delivery. (2) Select an on-premise software tool. This alternative was not selected because it requires internal maintenance, increases infrastructure costs, and would have less frequent upgrades which would hinder the Company's ability to ensure processes are evolving alongside industry trends and best practices. (3) Evaluate and select cloud/SaaS solution(s) which would have lower infrastructure costs, less internal maintenance than an on-premise solution, and would be built and evolved with upgrades based on industry best practices. Based on research, internal experience with successful best practice implementations, and vendor demonstrations, option three was selected.

Type	Description
Technology Capability	Administrative & General Support
Intangibles	Avoid inability to meet and support quality and timely delivery of the Company's customer centric strategy
Technology Capability	Deliver mobile-enabled Talent Management processes that will facilitate leaders' ability to minimize administrative downtime by increasing accessibility to core talent management processes, forms, approvals, and tracking.
Intangibles	Delivery of best-in-class technically enabled talent programs will enhance the attraction and retention of top talent in an increasingly competitive and geographically expanding job market.
Technology Capability	Eliminate wasted hours associated with the manual management of the Succession Planning process
Risk Mitigation	Mitigate risk due to 19% of the current customer-facing workforce that has 25+ years tenure by enabling effective Talent Management processes to prepare for these retirements to ensure continuation of strong customer delivery by facilitating employee development, engagement, succession planning and performance management
Risk Mitigation	Mitigate the risk of losing high performing talent or not being able to recruit the strongest talent to deliver on company strategies which support customer service and value delivery.
Technology Capability	Reduce waste generated by manual consolidation of data for reporting purposes by delivering standard and custom Talent Management reporting.

Tibco API Exchange Gateway Replacement

Report Pulled: 11/1/2024 **Item ID: 11728**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Tibco API Exchange Gateway Replacement

Description This project is looking to retire the API Exchange Gateway within the Tibco ESB and replace it with a new solution called Microsoft Self-Hosted Gateway. The API Exchange Gateway is used by the TIBCO ESB to integrate to external vendors, all new development will need to be done to integrate this solution.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SER

WORK OBJECTIVES

Problem Statement The Tibco API Exchange Gateway is anticipated to be sunset by the vendor, as they have already dropped all development of enhancements for the platform.

Objectives This project creates value for the Company by: (1) Avoiding the risk of running a project no longer supported by the vendor (i.e. the Tibco Enterprise Service Bus API Exchange module), and (2) Enabling the Company the opportunity to move to a product that is more stable, secure, and usable.

Scope The project scope includes: (1) Conducting a RFP to procure a replacement product and work with architecture team to migrate the product. (2) Migrate all current work items to the new platform. (3) Conduct appropriate testing to ensure all Service Level Agreements are met.

Alternatives Alternatives considered include: (1) Evaluating the replacement of the current product with a new product that is not already in the Company environment. This alternative was not selected because it would not be cost effective. (2) Keeping the current application as-is. This alternative was not selected as the vendor for the current platform has stopped all development for this product. (3) Leveraging an existing solution already in the Company environment. This alternative was selected as it avoids multiple solutions with redundant capabilities and avoids costs for supporting and maintaining a second solution.

Tracking & Traceability

Report Pulled: 11/1/2024 **Item ID: 6863**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - One Time **Work Type** Project

Alias Tracking & Traceability

Description Tracking and Traceability is a project driven from proposed regulatory rules that will require utilities to map new and replacement installations with tracking and traceability data for plastic pipes, fittings, and fusions for the lifetime of the asset.

Portfolio IT Services > Applications > Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-GAS

WORK OBJECTIVES

Problem Statement

The Company does not currently have a Tracking and Traceability program that will meet PHMSA proposed requirements (PHMSA-2014-0098), also known as the Plastic Pipe Rule. Tracking and traceability refers to the collection of information that provides manufacturing, material type, and location information for pipe and components. PHMSA defines the terms "tracking" and "traceability" as follows: (1) Tracking is information that provides for the identification and location of pipe and components, the date installed, and the person who made the joints in the pipeline system; and (2) Traceability is within American Society for Testing and Materials (ASTM) F2897-11a and includes a unique identifier for the location of manufacture, production, lot information, size, material, pressure rating, temperature rating and, as appropriate, type, grade and model of pipe and components. PHMSA will be requiring each pipeline operator to maintain tracking and traceability information for the life of installed pipeline segments. The lack of adequate traceability for plastic pipe and tracking of pipe location prevents gas pipeline operators from having enough information to identify systemic issues related to incidents involving plastic pipe. The lack of this information makes it difficult for operators and regulators to determine whether plastic pipe or component failures are related to a certain type or vintage of material, specific product defect or design, heat/lot of the product, or whether it was produced by a certain manufacturer at a certain time. The lack of information can result in excessive pipe excavations due to an inability to locate the affected sections of pipe or fittings when responding to plastic pipe or component manufacturer recalls.

Objectives

This project will develop a sustainable Tracking and Traceability program that will meet PHMSA requirements (PHMSA-2014-0098) which address the proposed tracking and traceability requirements. The project adds value by capturing traceability data via barcode readers and location tracking information via Global Positioning System (GPS) equipment to improve the quality of data and assist the Company in determining future scopes of work in the event of any component manufacture recalls.

Scope

The scope of work will include: (1) changes in SAP Supply Chain processes to capture the required barcode information for all plastic components used in gas distribution and service lines; (2) changes in SAP Work Management processes to account for capturing barcode information as part of material components added to work orders, capturing fusion information from work order completion and capturing GPS coordinates from work order completion; (3) changes in GIS to capture GPS coordinates of plastic components and GPS coordinates of component fusions; (4) building of a repository for tracking and traceability reporting and analysis; (5) purchasing barcode reading equipment for storerooms and gas distribution trucks; and (6) purchasing of GPS locating equipment to capture coordinates.

Alternatives

Alternatives considered: (1) The do nothing alternative, which was not selected because it would expose the company to significant legal and financial risk resulting from non-compliance. (2) Internally develope digital technology supporting the tracking & traceability standards included in the PHMSA-2014-0098 plastic pipe rule. The second alternative is being pursued by the Company.

	Net	-	-	-	-	-	-	-	-	-

B/C Ratio (Overall) -1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
Gas Distribution System	Medium	Medium	DRAM Risk Model – Distribution risk model accuracy. Improve quality of gas pipe attribution. Improve location of leak location.
Compliance - Gas Code	Low	Medium	MPSC Non-compliance - Excavation Tickets; Construction practices – failure to install components (through capturing the barcode we have check/balance)

OTHER VALUE

Type	Description
Risk Mitigation	Accurate positional data (valves in particular) leads to better emergency response.
Technology Capability	Automation for asset and location capture to GIS.
Avoided Costs	Data collection efforts through bar code scanning automation vs manual entry of bar code numbers. Average annual savings based upon 10 mins saved at $200 / hour across 10,000 work orders = approximately $330,000
Intangibles	Data collection for asset information being much more accurate
Risk Mitigation	Ease isolation/plan of attack for Risk Mitigation (DIMP System Integrity)
Risk Mitigation	Expired material identification (Pipe or fittings exposed to UV) (link to supply chain business case)
Intangibles	Fusion collection tied to each joint - Equipment used; Operator OQ
Risk Mitigation	Improve coordination with 3rd party entities.
Intangibles	Leak Data accuracy and analysis
Risk Mitigation	Location of factory recalled components
Intangibles	Public Reputation: What we might get from the public being a world-class company. Less damage to property with subsequent maintenance.
Technology Capability	Quality control capabilities in real-time

TSA Critical Facility Structure

Report Pulled: 11/1/2024 **Item ID: 12443**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - One Time **Work Type** Project

Alias , TSA Critical Facility Structure

Description This project will implement enhanced security measures outlined by the Transportation Security Administration (TSA) for critical facility assets in order to bring the locations up to enhanced status and avoid non-compliances. This project will increase the security and reliability of gas delivery to our customers while also meeting federal requirements.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-COMPLIANCE

WORK OBJECTIVES

Problem Statement Pipeline facilities that are deemed critical are required to apply enhanced security measures. Today, the Company currently has designated 4 locations as critical. However, based on the April 2021 update to the TSA Pipeline Security Guidelines, Section 5 (Critical Facility Criteria), a significant number of our gas infrastructure that were not previously subject to evaluation will now fall into scope. As the Company continues to analyze the remainder of our gas assets, there is the potential for an additional 1,000 pipeline facilities (pipeline interconnections, metering and/or regulating stations, pump stations, compressor stations, operational control facilities, main line valve, tank farms and terminals, etc.) may be deemed critical. The Company will be taking a phased implementation approach and will begin the process by implementing the enhanced security measures at the reminder of our compressor stations. Failure to update our sites will put the Company out of compliance with the updated guidelines.

Objectives This project provides value to the Company by: (1) Implementing enhanced security measures outlined by the TSA for four critical assets; and (2) Increasing the security and reliability of gas delivery to our customers while meeting federal requirements.

Scope This project will implement the following enhanced security measures: (1) access controls; (2) access readers; (3) cameras; (4) video and audio programming; (5) fencing and barriers; (6) gates; (7) locks and key control; (8) fence intrusion; (9) subcontractor work of trenching poles, etc.; (10) facility lighting; (11) background investigations for personnel working at the site; (12) security equipment maintenance and testing; (13) security vulnerability assessments; (14) security communication plans; (15) personnel training; and (16) security drills and exercises for the following locations.

Alternatives Alternatives considered were: (1) To not implement the enhanced security measures outlined by the Transportation Security Administration (TSA) for critical facility assets. This option was not chosen due to the risk of not complying with the TSA enhanced security measures. (2) To implement the enhanced security measures outlined by the Transportation Security Administration (TSA) for critical facility assets. This alternative was chosen to avoid the risk of not complying with the TSA enhance security measures, such as increased vulnerability of attacks, financial penalties, and operational disruptions.

Work Management Scheduling Analytics and Reporting

Report Pulled: 11/1/2024 **Item ID: 6811**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias DCO Scheduling Tool Project, DOET Scheduling Tool Project,Work Management Scheduling, Analytics, and Reporting, Work Management Scheduling Analytics and Reporting

Description The project will implement a solution to optimize the key components of the Distribution Planning and Scheduling functions including forecasting, work order intake, resource identification, work schedule creation, work execution preparation and associated work order analytics.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement The Distribution Planning, Scheduling and Administrative Support & Financial Services (Work Plan Strategy) teams are utilizing manually intensive work methods, systems and forecasting models. These inefficiencies impact the creation of work plans, lack predictive capacity planning, and reduce productivity of operational partners.

Objectives The project will add value by providing: (1) streamlined processes tied to workload review and preparatory analysis, leading to increased focus on workload priority, execution of work and a reduction of human struggle; (2)increased accuracy in crew work schedules, leading to improved customer satisfaction and on-time delivery of customer requested work, system integrity work, and gas compliance requirements; (3) reduced manual scheduling steps, reporting and analysis of data associated with work management processes and systems; thereby minimizing the risk of human error hours spent developing and updating crew route sheets; and (4) improved forecasting accuracy, that results in greater transparency into the weekly schedule and associated work plan.

Scope The project scope includes: (1) implement a solution to facilitate the review of work orders from various engineering organizations, allowing for streamlined check-in of work orders; (2) implement a scheduling tool that utilizes predictive modelling and advanced analytics and streamlines daily schedule modifications; (3) enhance integration with the Arcos application to bring in employee capacity and availability information; (4) integrate with SAP to retrieve work order data and manage record keeping requirements; (5) enhance integration with Field Service Suite (FSS) for quicker access to MISS DIG information and work order assignments; and (6) implement associated analytics and reporting.

Alternatives Three primary alternatives were considered for this project: (1) Automating manual data movement across excel and current systems through Robotic Process Automation. This option was not chosen because it will not meet base requirements and will not provide desired insights into whether the schedule supports operating priorities and metrics, financial scenarios, first time completion of work, and daily goals; (2) Integrating an off-the-shelf planning and scheduling system. This option is not preferred due to associated up-front and long-term costs; and (3) Implementing a hybrid of an off-the-shelf planning component with custom built scheduling functions. This is the preferred option to provide a more cost-effective and targeted fit for the organization.

OTHER VALUE

Type	Description
Technology Capability	5 - Work Management
Intangibles	As a result of improved forecasting accuracy, greater transparency into the weekly schedule and associated work plan would lead to improved on time completion of workplan elements relating to customer requested work and system improvement projects. It would also support problem solving in unit/hourly costs.
Intangibles	Employee engagement is improved by reducing human struggle, while being able to focus on priority and execution of work versus relying on workarounds and extra steps to meet daily scheduling needs.
Intangibles	Increased accuracy in crew work schedules, resulting in increased on-time completion of electric system integrity and gas compliance work. Based on the reduction of scheduling errors, a projected increase of 10% in the First Time Quality scheduling metric.
Intangibles	Increased accuracy of crew work schedules and First Time Quality are projected to lead to a 4% increase in Customer Satisfaction as measured by CXi
Avoided Costs	Initial savings based on implementation at one Company service center yielded $50,000 in savings from reduced truck rolls and reduced job delays through an enhanced quality control process . It is the intention of the Company to expand this statewide where further savings will be realized.

STOCK RATING

OW=Overweight: Total return on stock expected to be 10%+ over the next 12 months. BUY

EW=Equal Weight: Total return on stock expected to be -10% to +10% over the next 12 months. HOLD

UW=Underweight: Total return on stock expected to lag the Overweight- and Equal Weight-rated stocks within the analyst's coverage universe over the next 12 months. SELL

NR=Not Rated: The rating and price target has been removed due to lack of fundamental basis to support the recommendation or due to legal, regulatory or company policy considerations.

As of December 7, 2023
49.1% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Overweight.
44.0% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Equal Weight.
6.9% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underweight.
Wells Fargo Securities, LLC has provided investment banking services for 30.8% of its Equity Research Overweight-rated companies.
Wells Fargo Securities, LLC has provided investment banking services for 30.4% of its Equity Research Equal Weight-rated companies.
Wells Fargo Securities, LLC has provided investment banking services for 26.9% of its Equity Research Underweight-rated companies.

Important Disclosure for U.S. Clients

This report was prepared by Wells Fargo Securities Global Research Department ("WFS Research") personnel associated with Wells Fargo Securities, LLC ("Wells Fargo Securities").

WFS Research may, from time to time, provide clients with short-term trading views in its research reports regarding subject companies on which Wells Fargo Securities currently has equity research coverage. A short-term trading view offers a view on how the market price of a subject company's common equity may trend in absolute terms during the 30 days following the date of the short-term trading view. A short-term trading view on a subject company's common equity does not impact our fundamental investment rating or price target for that company, which reflect our view of how the subject company's common equity may perform over a one-year period. A short-term trading view may reach a different conclusion than the firm's fundamental investment rating and price target for a subject company and, therefore, short-term trading views could result in short-term price movements that are contrary to our fundamental investment rating and price target. Short-term trading views are not ratings and the firm does not intend, nor undertakes any obligation, to maintain, update or close out short-term trading views. Short-term trading views may not be suitable for all investors and have not been tailored to individual investor circumstances and objectives, and investors should make their own independent decisions regarding any short-term trading views discussed in WFS Research reports.

Executive Summary

Introduction

RRA evaluates the regulatory climate for energy utilities in each of the jurisdictions RRA evaluates the regulatory climate for energy utilities in each of the jurisdictions within the 50 states and the District of Columbia — a total of 53 jurisdictions — on an ongoing basis. The evaluations are assigned from an investor perspective and indicate the relative regulatory risk associated with the ownership of securities issued by each jurisdiction's energy utilities.

Each evaluation is based upon consideration of the numerous factors affecting the regulatory process, including gubernatorial involvement, legislation and court activity, and may be adjusted as events occur that cause RRA to modify its view of the regulatory risk for a given jurisdiction.

RRA reviews the ranking of a particular jurisdiction on an ongoing basis as developments occur and then holistically reviews the rankings when preparing the quarterly comprehensive ranking reports. The issues considered are discussed in RRA Research Notes, Commission Profiles, Topical Special Reports and Rate Case analyses. RRA also considers information obtained from contacts with the commissioners and staff, as well as company and government personnel. The final evaluation is an indicator of the probable level and quality of the earnings to be realized by the state's utilities as a result of regulatory, legislative and court actions.

It is important to note that RRA's rankings are from an investor perspective and are intended to provide insight into the relative risk associated with owning the securities of the jurisdictions in question. They are not an assessment of whether regulators are "doing a good job." In addition, the rankings look at not only the commission's actions but those taken by the jurisdiction's legislature, courts and chief executive, as well as the various stakeholders that intervene in the regulatory process.

About This Report

This report provides a discussion of recent changes in RRA's energy regulatory rankings, with details regarding the rationale for these changes. The report also identifies jurisdictions with ongoing proceedings or developing issues that have the potential to impact the relative regulatory risk for utilities operating within a given jurisdiction and, by extension, the ranking of that jurisdiction. The report also provides a discussion of key regulatory issues that impact the sector outlook as a whole. Finally, the report includes an overview of RRA's ranking methodology and the issues RRA examines in deriving the rankings.

The Take

In light of recent and ongoing developments, Regulatory Research Associates has altered the regulatory rankings of six state-level jurisdictions under coverage and identified nine jurisdictions that bear watching, given recent commission, legislative, gubernatorial and/or court activity.

Developments continue to unfold on a variety of key issues across the regulated utility sector nationwide on an ongoing basis, including evolving public policy related to the energy transition, accelerated capital spending driven largely by programs to meet a variety of societal goals, and higher inflation and interest rates than the US had seen in the prior four decades.

State regulators will play a pivotal role in determining the direction and magnitude of these impacts on the financial performance of the utilities that fall under their purview. How the individual jurisdictions meet these challenges will continue to inform RRA's prospective comparative risk assessments.

Recent ranking changes

Following a comprehensive review of the current rankings conducted during July, RRA made six ranking changes. RRA is raising the ranking of **Arizona**, **Kansas** and **Montana**, while lowering the rankings of **Maryland**, **Michigan** and **Mississippi**. The reasons for these changes are discussed in the paragraphs that follow.

Recent rate case decisions issued by the **Arizona** Corporation Commission (ACC) have been relatively constructive. The commission's decision for Pinnacle West Capital Corp. subsidiary Arizona Public Service Co. earlier in 2024 in particular represents a marked improvement over a 2021 ACC ruling that incorporated one of the lowest equity return authorizations observed by RRA in the last 40 years. Several recent commission electric rate orders have also authorized the state's investor-owned utilities to implement a constructive system reliability benefit mechanism to recognize rate base additions between rate cases. Based on these developments, RRA upgraded its rating of the Arizona regulatory environment for energy utilities to Below Average/2 from Below Average/3.

RRA also raised the ranking of the **Kansas** regulatory climate to Average/3 from Below Average/1 to recognize the recent enactment of legislation that allows the use of plant-in-service accounting for electric utility infrastructure investments that are made between a utility's base rate proceedings. Prospectively, the utilities will be permitted to defer, for future recovery, 90% of the depreciation expense and rate of return associated with "qualifying electric plant" investments. The resulting regulatory asset balances, which are to accrue carrying charges at the utility's weighted average cost of capital and be amortized over a 20-year period once included in rates, are to be adjusted to reflect any prudence disallowances ordered by the Kansas Corporation Commission. The new law is expected to mitigate the impact of regulatory lag for the electric utilities operating in the state and improve their prospects for earning their authorized returns.

Additionally, RRA also raised the ranking of the **Montana** regulatory climate to Average/3 from Below Average/1, in recognition of the constructive aspects of recent electric and gas rate case decisions issued by the Montana Public Service Commission for NorthWestern Energy Corp. In these proceedings, the Montana PSC authorized returns on equity that exceeded nationwide averages approved in settled cases for both electric and gas utilities. The authorized electric return on equity (ROE) exceeded nationwide average for all electric cases, while the authorized gas ROE approximated the nationwide average. In addition, the orders allow NorthWestern Energy to defer, for later rate recovery, incremental wildfire expenses that are capped annually. Given that the Montana PSC relies upon historical test periods and average rate base valuations that tend to exacerbate regulatory lag and that the magnitude of wildfire-associated costs appears to be accelerating rapidly for many utilities across the US Northwest, RRA views the ability of NorthWestern Energy to defer its wildfire expense for future recovery as constructive from an investor viewpoint. In pending rate cases before the Montana PSC, NorthWestern Energy is seeking a new balancing account for wildfire management costs, which may help to further reduce regulatory lag as it pertains to investments in wildfire mitigation programs and insurance costs.

By contrast, the **Maryland** regulatory climate has become increasing risky from an investor standpoint since the governor changed in January 2023. The incoming governor, Democrat Wes Moore, quickly removed three members of the Maryland Public Service Commission from office, including the chairman. The incoming chair, who has now been in the position for a little over a year, is a former attorney in the Office of People's Counsel (OPC). In the wake of this change, the OPC has become more vocal and taken a more contentious stance in regulatory proceedings.

One of the new commissioners is a former state legislator, while the other is an attorney who has represented various stakeholder interests before state and federal regulators. Since these changes, the commission's decisions have become more restrictive from an investor viewpoint, culminating in a June 2024 decision rejecting a multiyear rate plan proposed by Exelon Corp. subsidiary Potomac Electric Power Co., and raising questions regarding future use of that framework in the state.

Contemporaneous with this decision, Anthony O'Donnell, a long-time commissioner who did not participate in issuing the order, resigned, creating uncertainty with respect to the future makeup of the commission and opening up the prospect for another more consumer-oriented replacement.

In light of these developments, RRA is again lowering the ranking for Maryland regulation, this time to Below Average/3 from Below Average/2. This is the third reduction in the jurisdiction's ranking since mid-2023.

RRA is also lowering the ranking of **Michigan** regulation — to Average/1 from Above Average/3. While the jurisdiction remains more constructive than average from an investor viewpoint, the outcomes of recent rate proceedings have been mixed and could indicate a tightening in the regulatory climate.

RRA had placed the state on watch following a 2022 rate case decision in which the Michigan Public Service Commission authorized DTE Energy Inc. subsidiary DTE Electric Co. (DTE-E) an increase in rates that was less than 10% of that requested. At the time, RRA viewed the decision to be an anomaly.

The company filed a new rate case less than three months later, asserting that existing rates and projected electricity sales could not sustain its major capital investment program. Even though the ultimate outcome of this case was more constructive, DTE-E filed a third case within four months of the decision (on March 28, 2024), which is pending. The filing has met significant resistance from consumer groups who characterize the request as "absurd in both the astounding dollars and obnoxious timing," implying that this case will be more contentious than usual.

In a July 2 fully litigated electric rate decision for American Electric Power Co. subsidiary Indiana Michigan Power Co. (IMP), the commission authorized the company a rate increase that was about half of what IMP had requested. Rate of return and expense items accounted for most of the revenue requirement differences; among the items disallowed by the PSC were costs associated with employee incentive compensation and enhanced customer service technology, as well as a company-proposed inflation adjustment. Similar to the DTE-E proceedings, the commission voted to keep IMP's ROE unchanged despite recent increases in interest rates.

While a recently decided (July 23) gas rate case for CMS Energy subsidiary Consumers Energy Co. (CE) was settled rather than fully litigated, the stipulated revenue requirement increase was also less than half of that requested by CE and the authorized ROE remained unchanged from the last case.

While the approved ROEs for DTE, IMP and CE remain above prevailing industry averages, they compare less favorably to these averages, which have risen, albeit modestly, in recent periods.

Against this backdrop, six major utility rate cases are pending, including the aforementioned DTE-E electric rate case, most of which are driven at least in part by capital spending programs intended to comply with state reliability and energy transition policies; outcomes consistent with the above recently completed cases could render it difficult for the companies to continue to support these initiatives.

Also of concern, the electric utilities have been subject to more intensive scrutiny since extensive outages ensued in August 2021, following a major storm.

The **Mississippi** energy utilities continue to operate under streamlined, formulaic alternative rate plans in lieu of general base rate cases. The plans provide for annual rate adjustments and reflect timely recognition of new investments and fluctuations in operating costs. When specified, authorized equity returns as calculated under the plans have generally exceeded prevailing industry averages. However, RRA is lowering the rating of Mississippi regulation at this time to Average/1 from Above Average/3. The change partially reflects the relative inexperience of the three new commissioners that were seated at the Mississippi Public Service Commission earlier in 2024 but is also necessary to maintain a normalized balance in RRA's relative ranking of US regulatory bodies.

In conjunction with the prior review conducted during February 2024, RRA changed the ranking of **Virginia** regulation, raising it to Average/1 from Average/2, to reflect the removal of significant regulatory uncertainty with the election of two individuals to fill long-standing vacancies on the Virginia State Corporation Commission.

RRA also noted that in December 2023, RRA had lowered the ranking of the **Illinois** regulatory climate to Average/3 from Average/2 to reflect the impact of adverse rulings issued for Exelon Corp. subsidiary Commonwealth Edison Co. and Ameren Corp. subsidiary Ameren Illinois Co. in their respective multiyear grid and rate plan proceedings.

Jurisdictions to watch

In addition to the jurisdictions discussed above, where RRA has observed a shift in the regulatory climate, there are nine states where current trends and expected near-term developments could signal a shift in the level of regulatory risk for investors. Even though RRA recently revised the ranking of the regulatory climates in Arizona, Connecticut and Illinois, these jurisdictions continue to bear monitoring.

While RRA raised the ranking of **Arizona** regulation as part of its current review (discussed in the preceding section of this report), ongoing issues merit continued scrutiny, including the ACC's actions earlier in 2024 to reexamine certain long-standing rules, raising the prospect of a rollback of the commission's renewable energy requirements, among other things. While some commissioners have asserted that the rules have unnecessarily burdened ratepayers, the state's major electric utilities are continuing to transition toward more renewable heavy generation portfolios, and a disruption in the policy could have unforeseen consequences for the companies. In addition, three of the ACC's five commissioner seats are up for election this year, as are the governor and both chambers of the Arizona legislature. Changes in the makeup of these branches of state government could result in significant commission policy changes.

After lowering the ranking of **Connecticut** regulation in August 2023, RRA has continued to closely monitor the jurisdiction, which continues to be one of the most challenging in the US. Changes are currently underway to the makeup of the Connecticut Public Utilities Regulatory Authority (PURA), which under state law can be comprised of up to five members. Gov. Ned Lamont (Democrat) recently announced that long-standing commissioner John Betkoski (Democrat), who is serving beyond the end of his term, will be stepping down at the end of 2024. At the same time, Lamont announced the nomination of former state legislator and utility government affairs employee, David Arconti, Jr, (Democrat) as a new PURA commissioner to begin serving Aug. 5, subject to confirmation by the General Assembly in 2025. The other current members of the PURA, Chair Marissa Gillett (Democrat) and Michael Caron (Republican) continue to serve beyond the expiration of their terms.

Recent rate case decisions have demonstrated significant constriction in the regulatory climate and have created additional uncertainty surrounding the overall tenor of regulatory policy in the state. An appeal is ongoing of a 2023 rate case decision, in which the PURA authorized Avangrid Inc. subsidiary The United Illuminating Co. an 8.63% that reflected a 47-basis-point penalty for management and operational performance issues. Even without the penalty, the implied base ROE of 9.10% was among the lowest approved for an energy utility in recent years.

There are two gas rate cases pending for other Avangrid subsidiaries, as well as a legislatively mandated alternative ratemaking proceeding where the PURA is reviewing rules governing multiyear rate plans, earnings-sharing mechanisms, revenue decoupling and potential performance-based ratemaking measures for the electric utilities.

Even though RRA recently lowered the ranking of Illinois to reflect restrictive **Illinois** Commerce Commission (ICC) rate case rulings issued in late 2023, the state continues to bear watching, as Exelon Corp. subsidiary Commonwealth Edison Co. (ComEd) and Ameren Corp. subsidiary Ameren Illinois Co. have revised grid plan filings, pending ICC consideration. The commission is expected to render decisions on the proposals in December.

Further, the ICC's determinations in gas proceedings in late 2023 raise the possibility of the commission continuing to disregard the recommendations put forth by its own internal experts to the detriment of the state's utilities, raising the potential for further constriction in the regulatory climate. Three of the five commissioners are relatively new, having been in office for about a year; so, even though one of the "new" commissioners has served before, the commissioners are evolving in terms of how they work together. In addition to the revised grid plan requests, there is one pending rate case for a relatively small gas utility.

Iowa remains a jurisdiction to watch, considering the Iowa Utilities Commission's (IUC) actions in recent advanced ratemaking decisions regarding new renewable generation projects. In October 2023, the IUC made modifications to a settlement for Alliant Energy Corp. subsidiary Interstate Power and Light Co. (IPL), including a reduction in the authorized ROE for new solar generation; the settlement had specified a 10.75% ROE, but the IUC authorized a 10.25% ROE. While being higher than prevailing industry averages, the modified ROE is below previously approved ROEs for these types of facilities.

Prior to that, in April 2023, the IUC approved Berkshire Hathaway Inc. subsidiary MidAmerican Energy Co.'s Wind PRIME project but rejected a settlement regarding the associated advance ratemaking principles, leaving the ROE to be determined in a future rate case. On rehearing, the parties reached a revised agreement that the IUC approved without modification in December 2023, including an authorization of a 10.75% ROE for the project. However, in the ruling, one commissioner expressed concerns about approving a "premium ROE" within mature renewable energy markets, potentially indicating an eventual conclusion to the practice of approving premium ROEs for these types of investments.

It is noteworthy that two of the three current commissioners are relatively new to the IUC, having joined in May 2023. Consequently, two pending rate cases may face some uncertainty. IPL is in the midst of its first major electric and gas base rate case since 2019; hearings are underway after certain parties signed a nonunanimous settlement. Black Hills Iowa Gas Utility Co. LLC also has a case in progress — its first in about three years.

Kentucky continues to bear watching, as the Kentucky Public Service Commission's pattern of imposing modifications to rate case settlements over the past couple of years remains a cause for concern. The most recent rate case decision for a large utility occurred in January 2024, when the PSC authorized American Electric Power Co. Inc. subsidiary Kentucky Power Co. a rate increase that was meaningfully below the stipulated hike the parties had agreed to in a settlement; the revenue requirement difference stemmed largely from an adverse ruling on transmission-related cost recovery. The commission also rejected a settlement provision that called for the company to implement a distribution reliability rider.

Separately, legislation enacted earlier in 2023 prohibits the Kentucky PSC from approving requests to retire fossil fuel-fired facilities, unless the utility can demonstrate that the plant's retirement would not adversely impact ratepayers or the region's electric grid reliability. The Kentucky PSC recently approved one such proposal — by PPL Corp. subsidiaries Louisville Gas and Electric Co. and Kentucky Utilities Co. — that will result in meaningful changes to the composition of the companies' generation portfolios.

On a constructive note, a separate bill signed in 2023 allows the electric utilities to securitize certain costs associated with retired generation facilities and storm restoration efforts. The PSC recently approved Kentucky Power's securitization request. Even so, it is unclear how the commission will approach future requests.

The term of former Chairman Kent Chandler, a Democrat, expired June 30, and he left the commission instead of seeking reappointment. Gov. Andy Beshear, a Democrat, has not named a replacement. This development adds uncertainty to the state's regulatory climate at the same time that investors are seeking clarity regarding the commission's stance on a variety of regulatory matters.

New Jersey bears watching at this juncture, as Public Service Enterprise Group Inc. subsidiary Public Service Electric and Gas Co. — the largest utility in the state — is in the midst of its first combination electric and gas base rate case in several years. Proceedings are also underway for two of the major gas local distribution companies (LDCs), New Jersey Resources Inc. subsidiary New Jersey Natural Gas Co. and Elizabethtown Gas Co., with Elizabethtown Gas affiliate South Jersey Gas Co. expected to file a case by the end of 2024. The latter two LDCs are held by South Jersey Industries Inc., which is owned by Infrastructure Investments Fund US Holding 2 LP.

With these cases, as well as various energy transition proceedings under way, including a review of the state's Energy Master Plan, the New Jersey Board of Public Utilities is operating with one vacancy and three new members who took office in 2023, including the recently named president.

Due to uncertainty caused by changes in the composition of the **Oklahoma** Corporation Commission (OCC), the combative stance taken in recent proceedings by one of the long-time OCC members and the commission's decision to depart from customary practice and require significant changes to a rate case settlement, RRA lowered its ranking of Oklahoma regulation in November 2023. RRA continues to consider Oklahoma a state to watch, as two of the major energy utilities in the state have substantial rate requests pending.

The regulatory climate in **Texas**, as it pertains to the electric utilities under the purview of the Public Utility Commission of Texas, continues to bear watching. The regulatory framework in Texas and the PUC has been the focus of intense scrutiny, since a 2021 severe weather event caused widespread multiday outages and price spikes within Electric Reliability Council of Texas (ERCOT). While various proceedings are ongoing to transform the framework, the dramatic controversies that arose following that event have largely abated. Recent wildfire and severe storm activity could cause renewed focus on the utilities and the market structure in Texas.

Gov. Greg Abbott's reelection in 2022 provided a measure of stability, though there continues to be turnover at the PUC. One commissioner is serving beyond the end of term that expired in 2021, and both the PUC chair and a newly appointed commissioner are serving pending confirmation by the Senate when the legislature reconvenes in 2025.

Against this backdrop, both CenterPoint Energy Inc. subsidiary CenterPoint Energy Houston Electric Co. and American Electric Power Co. subsidiary AEP Texas Inc. filed rate cases in the first quarter of 2024 and certain intervenors took restrictive positions in their direct testimony in these cases. While a settlement was reached in the AEP Texas case, CenterPoint has filed a motion to withdraw its case in light of ongoing controversy surrounding the company's response to outages caused by Hurricane Beryl and the PUC has initiated a review of CenterPoint's actions during and following the storm.

Several of the utilities have also filed system resiliency proposals in accordance with 2023 legislation; these proceedings may prove challenging in light of the recent weather-related events.

The **Wyoming** regulatory climate bears watching, as the legal and legislative ramifications of a contentious electric general rate case decision for Berkshire Hathaway Inc. subsidiary PacifiCorp continue to play out. The utility has already filed a federal suit against the Wyoming Public Service Commission's order issued in January, arguing that the commission failed to account for the costs of maintaining reserve capacity, as mandated by the Federal Energy Regulatory Commission. PacifiCorp also plans to pursue action in state court, although the company has not specified when it plans to file.

In addition, multiple pieces of legislation enacted during the 2024 session addressed several issues that arose in recent commission proceedings, including recovery of costs associated with neighboring states' environmental policies and cost-tracking mechanisms to allow utilities to recover changes in certain electric supply costs between rate cases.

Outlook

Developments continue to unfold on a variety of key issues across the regulated utility sector nationwide. Accelerating capital spending to address a variety of public policy goals, inflation and rising interest rates present challenges for utilities and regulators and are driving an active rate case agenda across the US.

There were 164 electric and gas rate cases decided for the US investor-owned energy utilities in RRA's coverage universe during 2023, with an aggregate $9.3 billion of rate increases approved in those cases. During the first half of 2024, 45 cases were decided, netting $2.3 billion in rate increases.

The covered companies filed 156 new electric and gas rate cases, including limited-issue rider proceedings in 2023, with 94 filed in the first half of 2024. The combined rate increases requested in the 2023 cases aggregated to more than $18.1 billion, while those sought in the 2024 filings added up to almost $12.3 billion.

RRA anticipates this trend of robust rate case activity will persist for the foreseeable future, driven by continued expansion in capital spending.

Capital spending has risen steadily since 2006, when the energy utilities included in RRA's sample of the publicly traded US energy utilities reported total actual capital spending of about $52 billion; actual capital spending for the group came in at $166 billion in 2023.

According to data gathered by RRA in March, spending is expected to expand to $184 billion in 2024, increase to $191 billion in 2025 and moderate to $183 billion in 2026, bringing the total for the forecast period (2024–2026) to $559 billion.

The impacts of severe weather events, such as hurricanes, winter storms and wildfires, continue to play a more prominent role in utility financial outlooks and are contributing to the active rate case agenda.

The need to recover the related costs, together with the previously listed factors, will continue to put upward pressure on rates, exacerbating prevailing concerns about ratepayer impacts and affordability, and rendering it challenging for companies to reflect higher financing costs in their authorized returns.

The spread between average authorized ROEs and US Treasury bond yield contracted to roughly 550 basis points in 2023 from almost 800 basis points in 2020. The spread has continued to shrink in 2024, such that for the 12 months ended June 30, 2024, the spread approximated 520 basis points.

Still, the spread remains higher than it was during previous periods. For example, during the early 1980s — another time when the industry faced aggressive capital spending and persistently high levels of inflation and interest rates — the spread between Treasury yields and authorized ROEs was less than 300 basis points.

The evolving energy transition presents unique challenges for the electric and gas utility sector, but also offers potential for growth. Much of the evolution has come via state legislative initiatives and energy issues continue to be a focus in the current legislative session.

Energy issues will be a factor in the 2024 US presidential election, as well as state level elections, with gubernatorial elections scheduled in 11 states, legislative elections in 44 states and utility commissioners on the ballots in 10 states.

State renewable and clean energy standards and goals

California	100%	2045	Illinois	100%	2050	New Jersey	100%	2035	Washington	100%	2045
Colorado	100%[3]	2050	Maine	100%	2050	Texas	10,000 MW	2025			
Connecticut	100%	2040	Nevada	100%	2050	Virginia	100%	2040			

Data compiled July 29, 2024.
Targets indicate the final requirement and do not include interim steps. The data also does not include voluntary targets adopted by utilities, corporations, public power districts, etc.
* There are interim steps within the renewable portfolio standard that allow for a target to be met with renewable energy resources; however, the carbon-free target is the ultimate target resource policy.
[1] Massachusetts currently has in place a Clean Energy Standard and a separate Renewable Portfolio Standard. The 40% renewables by 2030 standard does not have a stated expiration date; the standard is to increase by 1% each year and will reach 100% renewable energy by 2090. The clean energy standard requires 80% clean energy by 2050.
[2] The state's clean energy targets legislation requires retail electricity providers to reduce emissions by 100% by 2040; while it is a separate policy, it is complementary and works in tandem with the renewable portfolio standard.
[3] The goal is in place for a retail utility that provides service to more than 500,000 customers, such as Xcel Energy, or any utility that decides to opt in.
[4] Legislation enacted in June 2024 modifes and increases the state's renewable portfolio standard to 100% retail sales by 2030 or 2035, depending on the size of the provider. The state's largest utility, Green Mountain Power, must reach the 100% target by 2030.
[5] Washington has an additional 15% renewable energy standard in place. The state's 2045 target of 100% renewable and nonemitting resources is a mandate and not a voluntary goal.

These factors raise the overall level of uncertainty, or investor risk, across the sector. State regulators will play a pivotal role in determining the direction and magnitude of these impacts on the financial performance of the utilities that fall under their purview. How the individual jurisdictions meet these challenges will continue to inform RRA's prospective comparative risk assessments.

RRA's rankings process

RRA ranks the regulatory climate in a total of 53 state-level jurisdictions, including the District of Columbia and the New Orleans City Council, and two regulatory bodies in Texas — the Public Utility Commission of Texas regulates electric utilities, while the Railroad Commission of Texas regulates gas local distribution companies.

RRA maintains three principal ranking categories — Above Average, Average and Below Average — with Above Average indicating a relatively more constructive, lower-risk regulatory environment from an investor viewpoint and Below Average indicating a less constructive, higher-risk regulatory climate.

The numbers 1, 2 and 3 within each principal ranking category indicate relative position. The designation 1 indicates a stronger or more constructive ranking from an investor viewpoint; 2, a midrange rating; and 3, a less constructive rating.

Hence, if you were to assign numeric values to each of the nine resulting categories, with a "1" being the most constructive from an investor viewpoint and a "9" being the least constructive from an investor viewpoint, then Above Average/1 would be a "1" and Below Average/3 would be a "9."

Methodology

RRA designed the rankings to reflect the interest of equity and fixed-income investors across more than 30 individual metrics. The metrics are scored based on the covering analysts' subjective judgment and then aggregated to create a single score for each state, with certain categories, such as the state's history with respect to authorized equity returns, practice with respect to rate case test years and presence, or lack of alternative ratemaking provisions, weighted more heavily than others.

RRA then ranks the states from lowest to highest and distribute them among the nine categories to create an approximate normal distribution. The team then reviews the distribution and may adjust individual state rankings based on the covering analysts' recommendations, subject to review by a designated panel of senior analysts.

The variables that RRA considers in determining each state's ranking are largely the broad issues detailed in state commission profiles and those that arise in the context of rate cases, generic policy proceedings, legislation and gubernatorial directives.

RRA's articles and reports on these issues are accessible through the S&P Capital IQ Pro platform, as are the jurisdictional commission profiles and RRA's database of major investor-owned utility rate case decisions going back to 1980.

As implied by the above discussion, the rankings reflect the state regulatory commission's decisions and the impact of the actions taken by the governor, the legislature, the courts and consumer advocacy groups. The policies examined pertain largely to rate cases and the ratemaking process, but RRA also consider issues such as industry restructuring, corporate governance, treatment of proposed mergers and those related to the ongoing energy transition.

In the charts within this report that depict the rankings by category, the jurisdictions within each category are listed in alphabetical order rather than by relative position within the category.

RRA endeavors to maintain an approximately normal distribution, with most rankings in the three average categories and the remainder split almost evenly between the Above Average and Below Average categories.

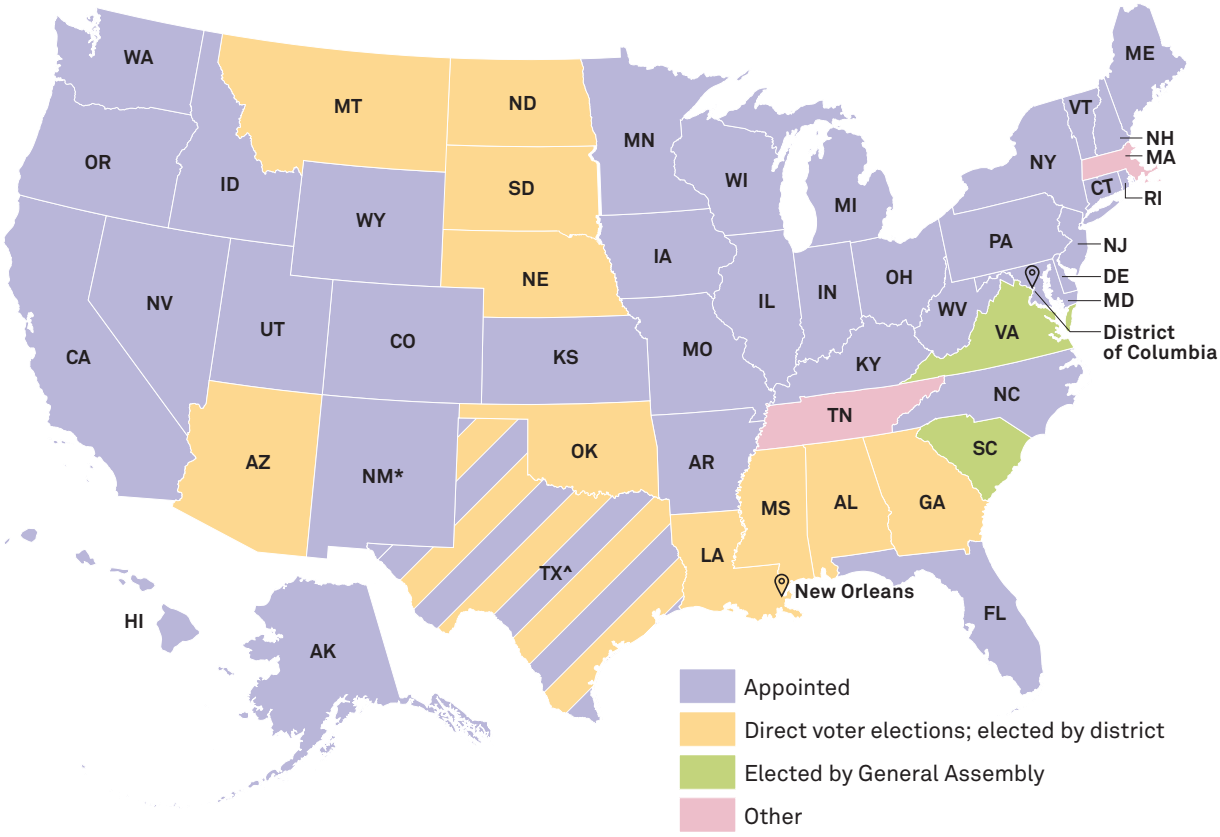
Overview of issues considered in the ranking process

The summaries below provide an overview of the variables RRA looks at, including a brief discussion of how each can impact the ranking of a given regulatory environment.

Governor/Mayor — Actions of the governor (or the mayor in the District of Columbia/City of New Orleans) may impact a jurisdiction's ranking. RRA takes no view on which political party is the more constructive option but does consider to what extent energy issues were of focus of recent elections, whether the governor seeks to become involved in the regulatory process and the type of influence the governor seeks to exert.

Commissioner selection process/membership — RRA examines how commissioners are selected in each state. All else being equal, RRA attributes a greater level of investor risk to states where commissioners are elected rather than appointed. Generally, energy regulatory issues are less politicized when they are not subject to debate in the context of an election.

Commissioner selection methods in US



Data compiled July 31, 2024.
* Prior to Jan. 1, 2023, commissioners were chosen through general elections.

Realistically, a commissioner candidate who indicates support for the utilities and their shareholders or appears amenable to rate increases is unlikely to be popular with voters. In addition, there might not be specific experience requirements to run for commissioner, so a newly elected candidate may have a steeper learning curve with respect to utility regulatory and financial issues, which could make discerning the decisions that an individual might make more difficult and could increase regulatory uncertainty.

There have been some notable instances, however, in which energy issues played a key role in gubernatorial/senatorial elections in states where commissioners are appointed, with detrimental consequences for the utilities.

In addition, RRA looks at the commissioners themselves and their backgrounds. Experience in economics and finance and/or energy issues is generally seen as a positive sign. Previous employment by the commission or a consumer advocacy group is sometimes viewed as a negative indicator.

New commissioners with little experience or exposure to utility issues represent the highest level of risk simply because there is no way to foresee their actions or the time they will take to "get up to speed." Controversy or "scandal" surrounding an individual and/or the potential for a conflict of interest are also crucial factors to consider.

Similarly, a high rate of turnover, extended vacancies, and leaving commissioners serving for a long period of time beyond the end of their terms all add to the level of regulatory risk in RRA's view.

Commission staff/consumer interest — Most commissions have a staff that participates in rate proceedings. The staff may represent the consumer interest, act as advisors to the commissioners or play a less defined role. In addition, there may or may not be additional state-level organizations that are charged with representing the interests of a certain class or classes of customers, such as the attorney general or a consumer advocate, coalitions of cities in which the utility operates, private consortia or lobbying groups that represent certain stakeholder groups and/or large-volume commercial and industrial customers that intervene directly in rate cases.

Generally, the greater the number of consumer intervenors, the greater the level of uncertainty for investors, as in most instances, the only party representing investors' interests is the company. The level of risk for investors also depends on the caliber and influence of the intervening parties and the level of contentiousness in the rate case process. Even though a commission may not adopt an extreme position taken by an intervenor, the inclusion of an extreme position in the record for the case widens the range of possible outcomes, increasing the risk of a negative outcome for investors. RRA's opinion on these issues is largely based on experience and observations.

Settlements — An increasing number of cases in recent years have been resolved by settlements rather than through a fully litigated process. There are often clear incentives for utilities and entities with vested interests in the sector to compromise. Utilities often obtain settlement benefits in the form of key utility policy objectives and more timely and favorable rate case outcomes than would otherwise be achievable. In some instances, however, settlement negotiations can be protracted and extend the duration of a rate case.

A settlement may set out all of the typical rate case parameters, such as rate of return and rate base, but many are "black box" settlements. These black box settlements are filed when the parties settle all, or nearly all, of their differences in the proceeding, but none of the parties want to disclose the final outcome on a given issue to avoid establishing a precedent.

Or, during settlement discussions, each party may have contemplated a certain revenue change amount as acceptable and may have performed calculations regarding the rate base and rate-of-return parameters behind their revenue requirement positions. Different values for these inputs, however, could be used in varying combinations to determine the same revenue requirement.

All else being equal, the ability of the parties to reach an agreement without having to go through a fully litigated proceeding is considered constructive, particularly since it reduces the likelihood of an after-the-fact court review. However, the agreements are generally less detailed than a fully litigated decision; so, there is a lack of clarity regarding how certain key issues were resolved.

In some instances, the parties may agree on only certain issues and will execute a partial settlement on those issues, while the remaining issues in the case will be litigated.

Rate case timing — For each state commission, RRA considers whether there is a set time frame within which a rate case must be decided, the length of any such statutory time frame and the degree to which the commission adheres to that time frame.

About two-thirds of state commissions nationwide have a rule or statute that requires a rate case to be decided within seven to 12 months of filing; very few have requirements that a case be completed in less than seven months.

Shorter time frames may apply for limited-issue proceedings or if the parties reach an agreement.

RRA generally views a set time frame as preferable, as it provides a degree of certainty as to when any new revenue may begin to be collected. In some states, however, the time frame may be extended with the company's agreement.

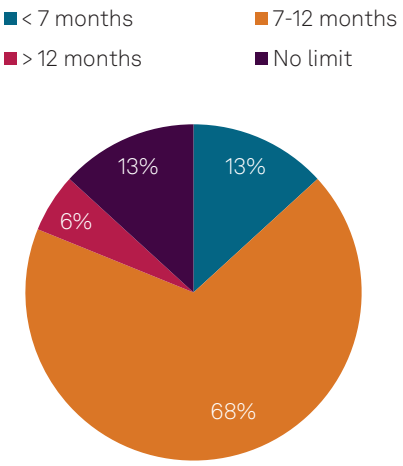
In addition, a shorter time frame for a decision generally reduces the likelihood that the actual conditions, during the first year the new rates will be in effect, will vary markedly from the test period utilized to set new rates, thus keeping regulatory lag to a minimum.

Interim procedures — RRA views the ability to implement all or a portion of a proposed rate increase on an interim basis prior to a final decision as constructive.

In jurisdictions that allow interim rate increases, the utility is required to refund any related over-collections, generally with interest, if the commission approves a rate change that is below the interim rates.

Implementation of an interim increase may be permitted by state law or may require prior approval by the commission, which may not be easy to obtain. Certain states allow a commission to establish an effective date for new rates prior to the final order in the case. The company would then be permitted to recoup any revenue not collected between the effective date and the decision date.

Rate case time frame



Data compiled as of July 31, 2024.

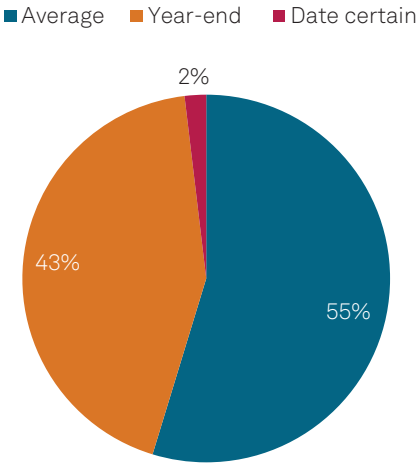
Rate base — A utility's rate base is essentially the company's "prudent" capital investment as determined by the applicable regulatory authorities, net of accumulated depreciation and other adjustments. Rate base is the net asset base of an electric, gas or water utility upon which an allowed rate of return — usually the company's weighted average cost of capital — is applied. The rate base value is a key variable that regulatory bodies use in a rate case to determine a utility's revenue requirement.

A commission's rate base policies can impact a utility's ability to earn its authorized ROE. State statutes often outline these policies, and the commission usually does not have much latitude with respect to these overall policies.

A key factor in assessing whether the company has been accorded a reasonable opportunity to earn the authorized return is the methodology the commission uses to determine rate base.

Commissions are nearly evenly split between those that employ a year-end, or terminal, valuation and those that utilize an average approach, with one using a "date certain" methodology. In some instances, the commission may employ a different rate base valuation method, depending on the utility type or case type or based on the test year selected by the company. For example, a forward-looking test year may be used in a limited-issue rider proceeding or a multiyear rate plan, even though a historical test year is used in traditional single-step base rate cases. Some states allow the utility to choose between a forecast or historical test year but require that an average rate base be used if a forecast test year is requested, while a year-end rate base must be used if a historical test period is selected.

Rate base valuation method



Data compiled July 31, 2024.
Source: Regulatory Research Associates, a group within S&P Global Commodity Insights.
© 2024 by S&P Global.

In general, assuming that rate bases are rising, i.e., new investment is outpacing depreciation, a year-end valuation is preferable from an investor viewpoint.

This again relates to how well the parameters used to set rates reflect actual conditions that will exist during the rate-effective period; hence, the more recent the valuation, the more likely it is to approximate the actual level of rate base being employed to serve customers once the new rates are placed into effect.

Some commissions permit post-test-year adjustments to rate base for 'known and measurable' items. Generally, this practice benefits the utilities when operating costs are rising and/or the company is making significant investments in infrastructure and other capital items.

The rules with respect to what constitutes a known and measurable adjustment, however, are not always specific, and there can be a good deal of controversy about what is and is not acceptable under state law or commission rules.

Another key consideration is whether state law and/or the commission generally permits the inclusion in rate base of construction work in progress (CWIP) for a cash return. CWIP represents assets that are not yet operational but ultimately will serve customers. Some states prohibit the inclusion in rate base of items that are not currently, i.e., during the test year or within a reasonably short period of time following the end of the test year, 'used and useful' in providing service to customers. Thus, CWIP must be excluded.

In these instances, the companies are permitted to accrue allowance for funds used during construction (AFUDC), which is essentially booking a return on the construction investment as a regulatory asset that is recoverable from ratepayers once the project in question becomes operational. While this method bolsters earnings, it does not augment cash flow and does not support credit metrics.

Investors generally view the inclusion of CWIP in rate base for a cash return as constructive since it helps to maintain cash flow metrics during a large construction cycle. In addition, if the company is not able to time its next rate case to coincide with the in-service date of a project, there may be a time period where the plant is operating and, therefore, the company can no longer accrue AFUDC but the utility is incurring operations and maintenance costs and booking depreciation expense, none of which are yet reflected in rates.

This becomes particularly challenging when the utility's construction program consists of several smaller projects with short ramp-up times, making it more difficult for the company to file a case quickly enough to reflect each new project.

Test year — The rate case test year is simply the 12-month period used as a baseline in examining the utility's actual revenues, expenses and rate base. In assessing the level of regulatory risk, RRA examines whether a historical test year is chosen or a future 12-month period with a forecast of the utility's revenues, expenses and rate base.

Almost two-thirds of the 53 jurisdictions covered by RRA utilize a test year that is historical at the time of filing, which increases regulatory lag and uncertainty for investors.

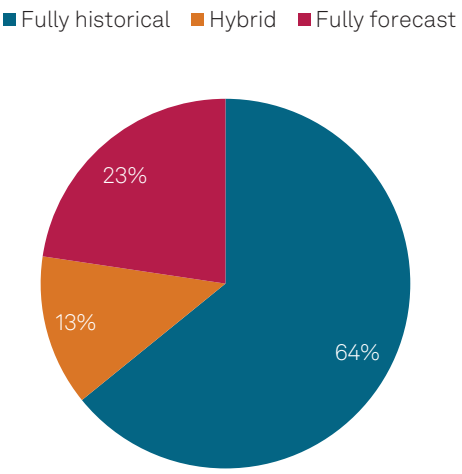
A fully forecast test year is generally considered to be most constructive, particularly in periods of robust capital spending, high inflation and rising interest rates.

Under a hybrid approach, the test year is partially forecast at the time the case is filed but is fully historical by the time the case is decided. The company generally files updates during the proceeding to reflect actual results as they become available.

Some jurisdictions use different test period types for different kinds of proceedings or utilities. For example, the commission may use a historical test year for single-year base rate cases but the use forward-looking test years for multiyear rate cases, alternative regulation plans and/or adjustment clauses.

Many jurisdictions allow for known and measurable adjustments to the test year, but there is considerable variability regarding how far beyond the end of the test year these adjustments may go, and statutes governing the definition of known and measurable can be ambiguous. Consequently, there can be wide disagreement among the rate case parties as to which adjustments qualify.

Rate case test year



Data compiled July 31, 2024.
Source: Regulatory Research Associates, a group within S&P Global Commodity Insights.
© 2024 by S&P Global.

Conversely, in periods where there is only a modest amount of capital spending, i.e., depreciation is outpacing new spending, low inflation and falling interest rates, the use of a historical test year and the associated regulatory lag would work in the utility's favor, as rates would likely reflect higher costs than the utility incurs.

Rate of return — The capital structure, debt cost rates and authorized equity return combine to determine the company's weighted average cost of capital, which is known as the return on rate base in the context of a rate case.

Return on equity (ROE) — The authorized ROE is perhaps the single-most litigated issue in any rate case. Commissions generally rely on financial formulas, such as the discounted cash flow, capital asset pricing model and risk premium approaches, as applied to a proxy group of companies with similar risk characteristics.

Average authorized ROE for US utilities, 30-year Treasury bond yields

Calendar years 1980 - 2023. LTM June 30, 2024

© 2024 S&P Global.

While these financial models appear objective, there are subjective judgments that go into many aspects of the analysis: the appropriate peer group, the level of risk in the subject company's operations and how it may differ from that of the proxy group and whether there are any other factors that warrant an adjustment to the base calculations.

In establishing rankings, RRA looks at the ROEs historically authorized utilities in a given state and compares them to nationwide industry averages, as calculated in RRA's Major Rate Case Decisions Quarterly Update reports. When referring to these "averages," RRA means the simple average of the ROEs approved in cases decided in a particular period; returns carried over from prior years are not included in the averages.

How the authorized ROEs in a given state compare to prevailing nationwide industry averages is only one aspect of RRA's analysis. Any given utility may be authorized a relatively high ROE, but factors such as the age or "staleness" of the test period, rate base valuation method, adjustments to the company-proposed rate base and expenses, and the way the commission chooses to calculate test year revenue and other adjustments may render it unlikely that the company will earn the authorized return.

Hence, a given rate case decision may be restrictive from an investor viewpoint, even though the authorized ROE is equal to or above the average.

Capital structure — The equity layer in the authorized capital structure is another aspect of a commission rate case decision that may impact the utility's ability to earn the authorized ROE. Most commissions utilize the company's actual capital structure at a given point in time, but in some instances, the commission may rely on an imputed capital structure that represents a mix of debt and equity that the commission views as more reasonable or economically efficient. These are known as hypothetical capital structures.

The commission may include short-term debt and/or other items not generally considered to be part of the utility's cost of capital for financial reporting purposes, such as job development investment tax credits, customer deposits or accumulated deferred taxes (as an alternative to reflecting accumulated deferred tax balances as an offset to rate base). These are generally considered "ratepayer supplied capital" and are accorded a blended cost based on the company's financial weighted average cost of capital or may be assigned a cost rate of zero. Such capital structures are known as regulatory capital structures.

If a commission uses a capital structure that is more highly leveraged than the company's actual structure, this will lower the authorized overall return and the revenue requirement ultimately approved and render it more difficult for the company to earn the authorized return on its actual equity, all else being equal.

Senior capital cost rates — The costs of long- and short-term debt are generally set at the weighted average interest rate on the outstanding issuances. While it is rare, a commission may choose to exclude a recent debt refinancing that alters the company's debt cost rate or may determine that the company was slow to take advantage of opportunities to refinance debt at a lower cost rate. If this occurs, and the senior capital cost rates used to set rates are lower than those that the company will experience while rates are in effect, then the utility will have a more difficult time earning its authorized ROE.

The cost of preferred stock, where there is any, is set based on the guaranteed dividend rate on the outstanding shares.

Accounting — RRA looks at whether a state commission has permitted unique or innovative accounting practices designed to bolster earnings. Such treatment may be approved in response to extraordinary events, such as severe weather events or the COVID-19 pandemic, and changes in federal tax laws, or for volatile expenses, such as fuel and pension costs. Generally, such treatment involves deferral of expenditures that exceed the level of such costs reflected in base rates. In some instances, the commission may approve an accounting adjustment, such as a change in depreciation rates, to temporarily bolster certain financial metrics or to eliminate over-earnings without requiring a full-blown rate case.

Actions taken to address emerging issues and their impact on the utilities are also key. For example, in the wake of the energy transition movement, an increasing number of fossil generation facilities and legacy meters are being retired early. Other types of utility assets are also at risk of becoming "stranded" costs as the transition progresses. In some states, companies have been permitted to accelerate depreciation of certain facilities to complete recovery of the investment prior to an accelerated shutdown of the asset. In others, the utilities are permitted to defer the remaining book value at closure as a regulatory asset that is to be recovered over a period of years; the unamortized balance may or may not be accorded a return.

Alternative regulation — RRA generally views as constructive the adoption of alternative regulation plans that are designed to streamline the regulatory process and accelerate cost recovery or allow utilities to augment earnings in some way. These plans can be broadly or narrowly focused.

Narrowly focused plans may allow the company to retain a portion of cost savings relative to a base level of some expense type (e.g., fuel, purchased power, pension cost, etc.), permit a company to retain a portion of off-system sales revenues for shareholders or provide a company an enhanced ROE for achieving operational performance and/or customer service metrics or for investing in certain types of projects (e.g., demand-side management programs, renewable resources, new traditional plant investment, etc.).

Broad-based plans include ROE-based sharing mechanisms, formula-based rates and MRPs that apply to all cost-of-service issues rather than specific investments or expenses. These types of plans may also include performance-based incentives.

The use of plans with somewhat broader scopes, such as ROE-based earnings-sharing plans, is, for the most part, considered to be constructive, but it depends upon the level of the ROE benchmarks specified in the plan — if any deadband that applies is symmetrical around the ROE target, and whether variations from the benchmark or outside the deadband are shared symmetrically.

Formula-based ratemaking plans generally refer to frameworks where the commission establishes a revenue requirement, including a target ROE, capital structure and rate of return for an initial rate base as part of a traditional cost-of-service base rate proceeding. Once the initial parameters are set, rates may adjust periodically to reflect changes in expenses, revenue and capital investment. These changes generally occur on an annual basis, and there may be limitations on the percentage change that can be implemented in a given year or a period of years.

Others use multiyear rate plans, under which the commission approves a succession of rate changes that are designed to consider anticipated changes in revenues, expenses and rate base. The commission may approve a static authorized ROE, or the plan may provide for adjustments to the ROE during the plan's term. These plans often include true-up mechanisms to ensure that the company makes the investments it committed to at the time the plan was approved. The plans often include earnings-sharing mechanisms and may also include PBR provisions or stay-out provisions, preventing a company from filing a successive rate case until a future point in time.

Court actions — This aspect of state regulation is particularly difficult to evaluate. Common sense would dictate that a court action that overturns restrictive commission rulings is a positive. However, the tendency for commission rulings to come before the courts and for extensive and sometimes protracted litigation as appeals go through several layers of court review may add an untenable degree of uncertainty to the regulatory process. Also, as is the case with commissioners, RRA looks at whether judges are appointed or elected, as political considerations are more likely to influence elected jurists.

Legislation — While RRA's commission profiles provide statistics regarding the makeup of each state legislature, RRA has not found a specific correlation between the quality of energy legislation enacted and the political party controlling the legislature.

If the governor and legislature are of the same political party, it is less likely that controversy will arise around key policy initiatives, which may directly or indirectly impact the energy regulatory framework. In instances where energy issues are a main focus, a lack of consensus between the legislative and executive branches of the state government can create uncertainty and increase risk for utility investors and other industry stakeholders.

Key considerations with respect to legislation include how prescriptive newly enacted laws are; whether the bill is clear or ambiguous and open to varied interpretations; whether it balances ratepayer and shareholder interests rather than only "protecting" the consumer; whether the legislation takes a long-term view or is a "knee-jerk" reaction to a specific set of circumstances; and whether it could constrict the utilities' opportunities to achieve their business objectives.

Legislative activity impacting utility regulatory issues has been robust in recent years as state policymakers, utilities and industry stakeholders seek to address 'disruptors' that challenge the traditional regulatory framework.

RRA follows these developments closely to assess whether the states take a balanced, sustainable approach and how the adopted policies will affect legacy utility providers.

Corporate governance — The term corporate governance generally refers to a commission's ability to intervene in a utility's financial decision-making process through required preapproval of all securities issuances, limitations on leverage in utility capital structures, dividend payout limitations, ring-fencing protocols and authority over mergers. Corporate governance may also include oversight of affiliate transactions.

RRA views a modest level of corporate governance provisions to be the norm, and in some circumstances, these provisions, such as ring fencing, have protected utility investors as well as ratepayers. However, a degree of oversight that would allow the commission to "micromanage" the utility's operations, limit the company's financial flexibility or significantly reduce the company's ability to pursue strategic mergers would be viewed as restrictive.

In recent years, RRA has observed an increasing emphasis on environmental, social and governance issues, and supplier and workforce diversity and social justice issues. In many instances, these policies are part of the ongoing energy transition. At this time, RRA takes no view on whether policymakers/regulators should adopt these practices, but when specific policies or targets are implemented, RRA evaluates how compliance costs are addressed.

M&A activity — The pace of merger activity fluctuates over time and consequently, so does the importance of a commission's merger policies.

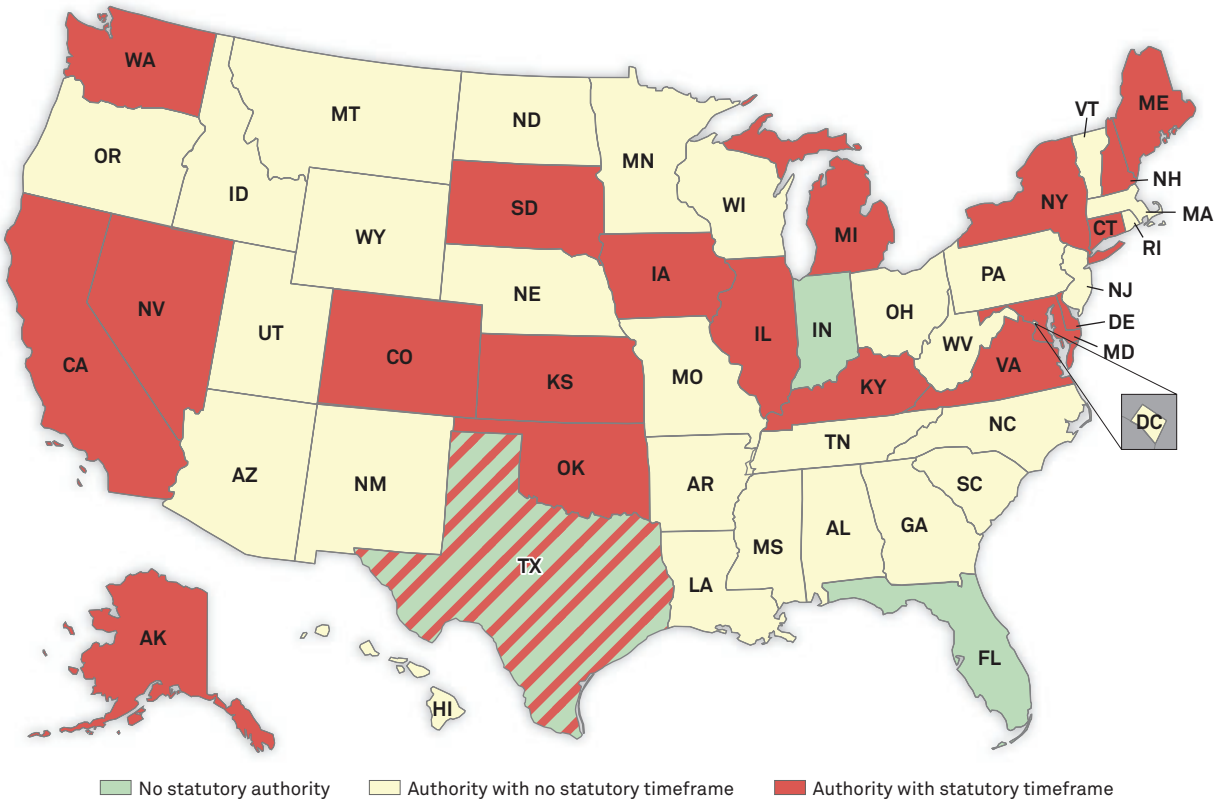
Deals involving regulated utilities are subject to review by all but three of the 53 state-level jurisdictions followed RRA follows.

The review process and standards vary widely for the 50 jurisdictions where commission preapproval is required. In 20 of the jurisdictions, the commission must complete a merger review within a prescribed period, but the remaining jurisdictions have no timeline for their merger reviews, which means a commission could effectively "pocket veto" a transaction by delaying a decision until either the merger agreement between the applicants expires or pursuing the transaction is no longer feasible.

The definition of what constitutes a transaction that is subject to review can vary widely and may include sales of individual assets or a marginal minority interest, as well as larger transactions where a controlling interest or the whole company is changing hands. State law often lacks specificity with respect to what constitutes a transaction that is subject to regulatory review.

In cases where the state commission has authority over mergers, RRA reviews the type of approval standard that is contained in state law and/or has been applied in specific situations.

Utility mergers — statutory authority



As of July 31, 2024.
In Texas, mergers involving electric utilities are subject to commission review; mergers involving local gas distribution companies are not.
Map credit: Arleigh Andes.

For discussion purposes, RRA groups the statutory standards into three general buckets: public interest, which is generally thought to be the least restrictive; no net ratepayer harm, which is somewhat more restrictive; and net ratepayer benefit, which is the most restrictive.

In many instances, regulators have broad discretion to interpret what the statutes mean by these terms. So, the standard of review is often more readily apparent by looking at how prior transactions were addressed than by reading the statutory language — one commission's public interest might be another's net ratepayer benefit.

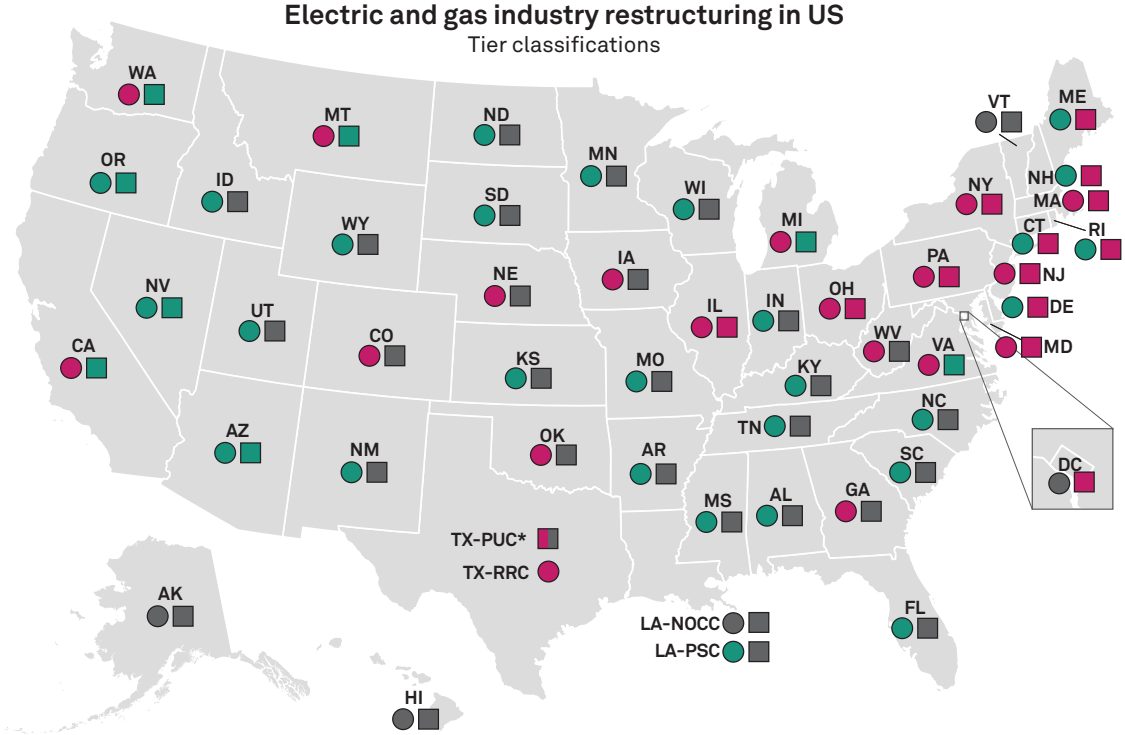
In addition, RRA considers whether the parties reached a settlement and, if so, whether the commission honored that settlement or required additional commitments. RRA also examines how politicized the process was: Did the governor (or the mayor in the District of Columbia and the City of New Orleans) play a role? Did the transaction garner much local media attention in the affected jurisdiction?

More narrowly, RRA reviews the conditions placed on the commission's approval of these transactions, including whether the company will be permitted to retain a portion of any merger-related cost savings, if guaranteed rate reductions or credits are required that are or are not directly related to merger savings, whether certain assets were required to be divested, the type of local control and workforce commitments required, whether there are requirements for certain types of investment to further the state's public policy goals that may or may not be consistent with the companies' business models and if the related costs will be recoverable from ratepayers and whether the commission placed stringent limitations on capital structure and/or dividend policy or composition of the board of directors.

Electric regulatory reform/industry restructuring — Electric industry restructuring refers to the implementation of a framework under which some or all retail customers can obtain their generation service from a competitive supplier of their choice. In a movement that began in the mid-1990s, about 20 jurisdictions implemented retail competition for all or a portion of the customers in the utilities' service territories. The last of the transition periods ended as recently as 2011, when restructuring-related rate freezes concluded for certain Pennsylvania utilities.

Electric and gas industry restructuring in US

Tier classifications



Gas tiers

Tier 1 — All customers are permitted to competitively procure their gas supply, irrespective of volumes.

Tier 2 — Select customers are permitted to competitively procure their gas supply, usually based on volume.

Tier 3 — All customers procure their gas supply from the utility under bundled rates.

Power tiers

Tier 1 — Power prices are competitively determined for all retail customers within the jurisdiction; both standard-offer-service and retail-access customers.
Retail access is permitted for all customers.

Tier 2 — Retail access is permitted to at least some customers/customer classes. Competitively priced power is limited to retail access customers. Power prices for standard-offer-service customers remain regulated.
For the most part, utilities remain vertically integrated.

Tier 3 — Power prices are fully regulated for all retail customers. All retail customers must purchase their power from the franchised utility. Utiities are vertically integrated.

As of July 31, 2024.
NOCC = New Orleans City Council; PSC = Public Service Commission; PUC = Public Utility Commission; RRC = Railroad Commission.

Once the transition periods were completed, RRA focused more on how standard-offer or default service is procured for customers who do not select an alternative provider and how much, if any, market-price risk the utility must absorb. RRA classifies each of the regulatory jurisdictions into one of three tiers based on their relative electric industry restructuring status.

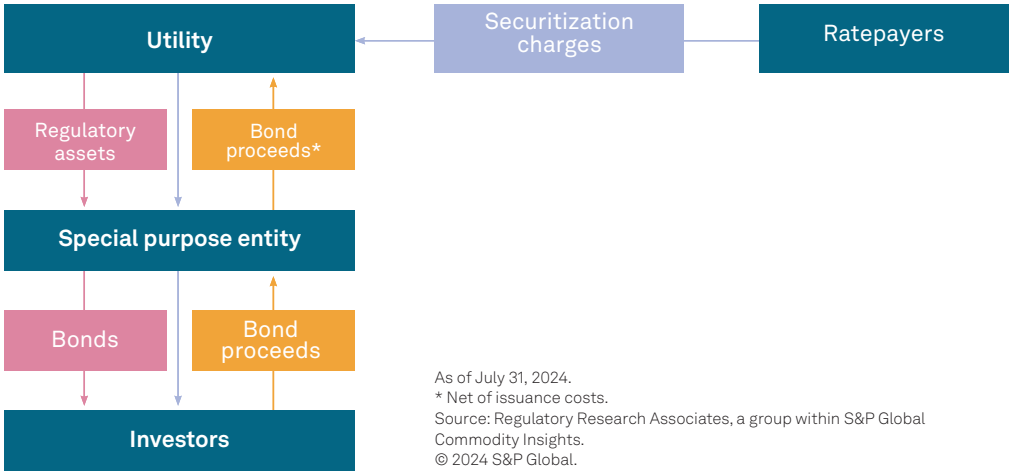
Gas regulatory reform/industry restructuring — Retail competition for gas supply is more widespread than electric retail competition, and the transition was far less contentious, as the magnitude of stranded asset costs was much smaller due to the more disaggregated structure of the industry.

Large-volume customers in most states can select their gas supply provider; the availability of gas customer choice is much more limited for small-volume customers. Like electric retail competition, RRA generally does not view a state's decision to implement retail competition for gas service as either positive or negative from an investor viewpoint. RRA primarily considers how stranded costs are addressed and how default-service, obligation-related costs are recovered.

Securitization — As it pertains to utilities, securitization refers to the issuance of bonds backed by a specific existing revenue stream that regulators and/or state legislators have 'guaranteed.' This does not mean that the securities are backed by the 'full faith and credit' of the jurisdiction but instead provides certainty that the revenue collections and/or underlying assets cannot be deemed imprudent and disallowed in the future.

Securitization generally requires a utility to assign an eligible regulatory asset and a designated revenue stream for that asset to a 'bankruptcy remote' special-purpose entity or trust; in some instances, a state financing authority fulfills this role. The trust or financing authority, in turn, issues bonds that the transferred revenue stream will service. The proceeds from the bond issuance flow to the utility and, in many cases, are used to retire outstanding higher-cost debt and/or buy back common equity, thus lowering the company's weighted average cost of capital.

Securitization flow chart



As of July 31, 2024.

Source: Regulatory Research Associates, a group within S&P Global Commodity Insights.
© 2024 S&P Global.

While it is unclear if securitization requires legislation, a specific legislative mandate generally improves the rating accorded securitization bonds and lowers the associated cost of capital, given that a legislatively supported revenue stream may be more difficult to rescind than a stand-alone order of a state commission. In RRA's experience, no state commission has authorized securitization in the absence of enabling legislation.

Securitization is viewed as an attractive option because it allows regulators to minimize the customer rate impacts related to the recovery of a particular utility asset. The carrying charge on the asset would be the lower interest rate applied to a highly rated, usually AAA, corporate bond rather than the utility's weighted average cost of capital or even the interest rate on typical utility bonds, which are generally rated BBB and carry higher interest rates.

At the same time, securitization reduces the investment risk for the utility by providing the utility with up-front recovery of its investment in what are usually non-revenue-producing assets. The company can then redeploy those investment dollars elsewhere.

Securitization has been used for various purposes to finance energy efficiency and conservation investment, address stranded costs associated with the implementation of retail competition or the extension of energy transition policies, reduce the impact on ratepayers of recovery of extraordinary storm costs or unusually high deferred balances or to finance bankruptcy reorganization plans.

Adjustment clauses — Adjustment clauses have been widely utilized to allow utilities to recover fuel and purchased power costs outside of base rate cases, as these costs are generally subject to a high degree of variability. In some instances, a baseline level is reflected in base rates, with only deviations from that amount addressed in the adjustment clause, whereas in others, the entire annual fuel/purchased power cost amount is reflected in the clause.

Over time, the types of costs recovered through these mechanisms were expanded in some jurisdictions to include items such as pension and healthcare costs, demand-side management program costs, Federal Energy Regulatory Commission-approved regional transmission organization costs, new generation plant investment, and transmission and distribution infrastructure spending.

RRA generally views the use of these types of mechanisms as constructive but also looks at the frequency with which the adjustments occur and whether: there is a true-up mechanism; adjustments are forward-looking or based on a historical period; a cash return on CWIP is permitted for mechanisms involving new investments; the mechanism includes an earnings-sharing mechanism that offers the utility upside earnings potential; or incentive(s) for making certain types of investment or for achieving benchmark performance that provide the opportunity to increase earnings.

Another class of adjustment clauses, known as revenue decoupling mechanisms, allows utilities to adjust rates between rate cases to reflect fluctuations in revenues versus the level approved in the most recent base rate case due to various factors.

Some of these factors, such as weather, are beyond a utility's control, and the mechanism can work both ways — it can allow the company to raise rates to recoup revenue losses associated with weather trends that reduce customer usage, and conversely, it can also require the company to reduce rates when weather trends cause usage to be higher than normal.

As energy efficiency initiatives have expanded, decoupling mechanisms have also been implemented to reduce the disincentive for utilities to pursue these types of programs by making the utilities whole for reductions in sales volumes and revenues associated with customer participation.

Some of these mechanisms also allow the utility to adjust rates to reflect fluctuations in customer usage that are brought about by broader economic issues, such as demographic shifts, large commercial/industrial customers migrating to other service areas, businesses shutting down due to changes in their respective industries, recessions and, theoretically, broad-based crises like the COVID-19 pandemic.

RRA considers a decoupling mechanism that adjusts for all three of these factors to be a "full" decoupling mechanism and designates those that address only one or two of these factors as "partial" decoupling mechanisms.

Generally, an adjustment mechanism would be viewed as less constructive if there are provisions that limit the utility's ability to fully implement revenue requirement changes under certain circumstances, e.g., if the utility is earning more than its authorized return or if the adjustment exceeds a certain threshold.

Integrated resource planning — RRA generally considers the existence of a resource-planning process to be constructive from an investor viewpoint, as it may provide the utility at least some measure of protection from hindsight prudence reviews of its resource acquisition decisions. In some cases, the process may also provide for preapproval of the ratemaking parameters and/or a specific cost for a new facility. RRA views these types of provisions as constructive, as the utility can make more informed decisions as to whether it will proceed with a proposed project based on the expected level of support a utility proposal receives from regulators.

Renewable energy/emissions requirements — Goals for renewable energy deployment and emissions reductions have become increasingly intertwined in recent years and often need to be viewed in tandem.

As with retail competition, RRA does not take a stand as to whether the implementation of renewable portfolio standards or an emissions reduction mandate is positive or negative from an investor viewpoint. However, RRA considers whether there is a defined preapproval and/or cost-recovery mechanism for investments in projects designed to comply with these standards.

RRA also reviews if there is a mechanism, such as a rate increase cap, that limits the impact of the related public policy goals on customers. Such a mechanism could impede the utility's ability to recover program-related costs, pursue additional investments and/or recover increased costs related to other facets of its business. RRA also looks at whether incentives, such as an enhanced ROE, are available for these types of projects.

The proliferation of renewables, particularly those that are customer-sited or distributed resources, and the related rise of battery storage and electric vehicles have raised questions regarding the traditional centralized industry framework and whether that framework needs to change, ushering in a second phase of electric industry restructuring. How these changes are implemented is something RRA considers in its rankings.

With respect to emissions, the threat of a federal carbon emissions standard for utilities and the spread of state-level initiatives have caused many companies to rethink legacy coal-fired generation, causing plants to be shut down sooner than anticipated. The way the commissions address these potential stranded costs also poses a risk for investors and is factored into the rankings.

The zero-carbon movement has also caused utilities/states to reexamine investments in nuclear facilities and, in some cases, to develop programs designed to support the continued operation of those facilities, even though they may not be economic from a competitive-market standpoint. RRA also considers the way these issues are addressed.

Rate structure — RRA looks for existing rate structures related to economic development or load retention. If such structures are in place, RRA examines whether and how any associated revenue shortfall is addressed. More broadly, RRA looks at any steps taken in rate cases to reduce/eliminate interclass rate subsidies, i.e., to equalize rates of return across customer classes.

In addition, RRA considers whether the commission has adopted or moved toward a straight-fixed-variable rate design, under which a greater portion of a company's fixed costs are recovered through the fixed monthly customer charge, thus providing the utility greater certainty of recovering its fixed costs.

This is increasingly important in an environment where weather patterns are more volatile, energy efficiency/conservation programs proliferate and large amounts of nonrevenue-producing capital spending are required to upgrade and harden the grid.

In conjunction with the influx of renewables and distributed generation, issues surrounding the level of compensation owed to customer-owners for excess power they put back into the grid have become increasingly important and, in some instances, controversial. The way these pricing arrangements, known as net metering, are structured can impact the ability of the utilities to recover their fixed distribution system costs and, by extension, their ability to earn their authorized returns.

RRA also looks at whether the state has implemented policies to address electric vehicle charging and time-of-use rates, as well as tariffs for renewable natural gas.

Fixed vs. variable costs

Fixed	Variable
Depreciation	Gas commodity
Delivery O&M	Electric commodity
Property taxes	Generation O&M
Return on investment	
Customer service

I. Executive Summary

A. Introduction

Consumers Energy Company's ("Consumers Energy" or the "Company") natural gas system serves Michigan safely, reliably, and affordably, providing energy for residential and business space heating, water heating, meal preparation, grain drying, industrial processes, and electricity generation.

Technological changes and environmental concerns create a time of unprecedented change in the energy industry. Consumers Energy embraces these challenges as opportunities for the coming decades by carefully planning for the future.

This annually updated *Natural Gas Delivery Plan* ("NGDP" or the "Plan") maps the Company's vision to safely serve customers with natural gas for the next 10 years. The Company's Commission-approved *Clean Energy Plan,* along with the *Electric Distribution Infrastructure Investment Plan* chart the path for its electric business.

Natural gas is fundamental for keeping customers warm in colder months, and delivering reliable and affordable energy for Michigan's businesses and high heat industrial processes. The Plan is founded on the Company's commitment to providing safe, affordable, reliable, and increasingly clean natural gas for Michigan.

The Plan reflects the Michigan Public Service Commission's ("MPSC" or the "Commission") previous Orders in which Consumers Energy received insights on the natural gas system through the 2019 Statewide Energy Assessment ("SEA"), and also from the outcome of the Company's latest gas rate case, Case No. U-21490.

In updating this Plan, Consumers Energy weighed input from peer gas utilities, industry experts, MPSC staff, and other key external stakeholders to best understand how to serve customers and the State of Michigan.

The Plan outlines the next decade of investments in natural gas infrastructure, planning for natural gas supply and demand, and operational changes in accordance with the industry best practice of a Pipeline Safety Management System ("PSMS") protocol from the American Petroleum Institute ("API") Recommended Practice ("RP") 1173, or as Consumers Energy identifies it, as an expanded Gas Safety Management System ("GSMS").

Four key external drivers are critical to the natural gas business future:

External Drivers	Key Factors
Safety	Employees, customers, and the public must safely co-exist with natural gas assets. That means Consumers Energy must anticipate risks and mitigate them proactively.
Increasing Regulation	Safety incidents across the nation's gas infrastructure and changing policies regarding carbon and methane emissions continue to present new rules and increased regulatory oversight at the state and federal levels.
Changing Supply and Demand Patterns	The plan anticipates domestic natural gas supply growth adequate to meet increases in long-term demand, enabled by mid-stream investment. This will limit real commodity price increases over the longer term as the North American natural gas market expands.
Environmental Focus	The impact of natural gas use on climate change through carbon emissions and methane emissions is becoming a focal point of environmentally conscious customers, regulators and other stakeholders as coal-based emissions from electric generation continue a downward trend.

The Plan documents the Company's analysis and stakeholder input on these drivers and is built on the following four objectives that provide flexibility to adapt and perform as an energy provider that customers, regulators, and the people of Michigan can count on.

Objectives	Natural Gas Delivery Plan Outcomes
Safe	Ensure the safety of customers and the communities we serve by maintaining pace of retiring vintage materials throughout the gas system to reduce risk of incidents that could adversely affect the public, customers, and employees or contractors.
Reliable	Improved reliability, resilience, and system flexibility in preparation for more variable climate patterns, variable supply sourcing options, and regulatory and maintenance activities, with improved equipment reliability.
Affordable	Stable, predictable, and reasonable total bills, including gas asset investment costs, the commodity costs of natural gas, and costs to support additional regulatory requirements.
Clean	Reduction of the Company's and its customers' contribution to climate change through gas system decarbonization. Gas system decarbonization will include options for reducing methane emissions across the delivery system and investment in renewable natural gas to help customers offset emissions associated with natural gas use.

Throughout the development of this Plan, the gathering of stakeholder input, and the SEA report, the Company considered the long-term future of the natural gas business along with the potential outcomes of current trends. The resulting plan informs shorter-term activities and regulatory filings to best serve customers.

The Plan will guide the Company's actions today, and provide an evolving framework to monitor initial assumptions, gather new stakeholder input, adjust to potential new expectations for the future, and remain on a transparent pathway to a safe, reliable, affordable, and clean natural gas system for Michigan.

B. Consumers Energy's Natural Gas System

The Company's natural gas system serves approx. 1.8 million customers across Michigan's lower peninsula and is comprised of four Asset Classes: Storage, Compression, Transmission, and Distribution.

Natural gas follows this flow through the Company's system in the following way:

- Consumers Energy receives gas supply into its transmission pipelines that operate between 400–1,185 pounds per square inch ("psi"), which are considered transmission pressure ("TP") lines.
- Compressor stations are used to increase the pressure of natural gas for transportation in the system and for withdrawal from or injection into storage fields.
- City gate stations move gas from the transmission pipeline system to feed distribution mains that operate as high-pressure ("HP") lines between 60–400 psi and medium pressure ("MP") lines between 2-60psi.
- Gas is then routed throughout the distribution system and delivered to residential and business customers that operate on MP lines, and standard-pressure ("SP") lines at less than 1 psi.

An illustration of a typical natural gas system layout is shown in Figure 1 with system statistics listed in Appendix A.

Key attributes and focuses across the primary asset classes include the following:

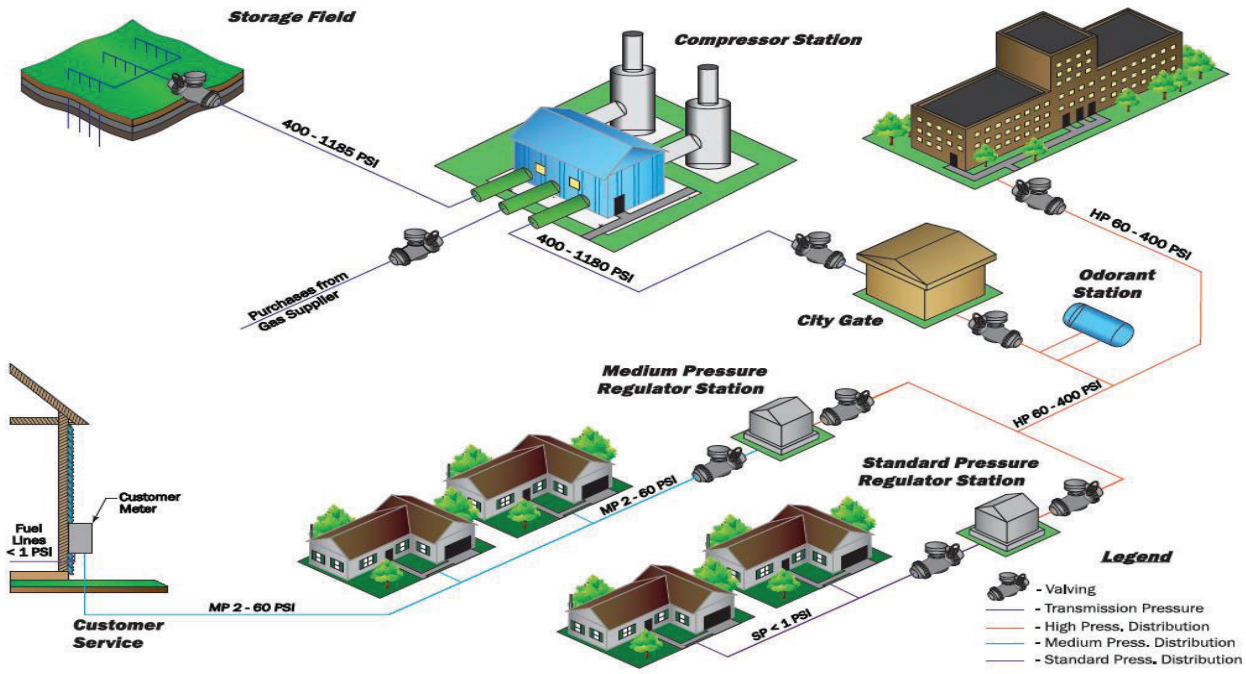
Storage: Storage assets play an important role in customer affordability and system resiliency. The Plan calls for execution of well inspection, well rehabilitation, increased remote well monitoring, and strategic new well drilling to optimize storage fields. This work increases efficiency and resiliency while lowering risk and cost.

Compression: Gas compression assets inject gas into and withdraw gas from storage fields, inject gas onto the Company's system from interstate pipelines, and boost transmission and distribution gas pressures seasonally. The Plan outlines how the compression fleet is optimized, which may include the addition of certain equipment for reliability, and retirement of antiquated compression assets.

Transmission: Gas transmission pipelines are the 'expressways' of the gas system, transmitting large quantities of gas at high pressures in large diameter pipes ranging from 4 inches to 36 inches. The Company's goal is to meet the capacity needs of Michigan as well as to optimize the transmission system in terms of age, materials, and technology to ensure public safety.

Distribution: The distribution system includes some of the Company's oldest facilities that are situated closest to customers. Therefore, replacing aging infrastructure to reduce risk and expanding remote monitoring in this area is a critical focus.[1]

Figure 1: Typical Natural Gas System Layout



[1] U.S. Department of Transportation, Gas Distribution System Annual Report for Calendar Year 2023, submitted 03/12/2024.

C. Pipeline Supply

Consumers Energy's system accesses seven interstate pipelines and one major intrastate pipeline.

This interconnectivity provides diverse access to supply from Appalachia, the Rockies, Canada, the Gulf Coast, and Mid-Continent production basins.

Interstate pipeline supply into Consumers Energy's system generally ranges from 600 million cubic feet per day ("MMCFD") to 1,400 MMCFD. Overall, pipeline supply is required to fill storage in the summer season while meeting customer demand.

A mix of pipeline supply and storage supply withdrawals are used during the winter season to ensure reliability and affordability to customers.

D. Operational Capabilities

The Plan requires essential operational capabilities in the areas of people, process, and technology to ensure 10-year goals and outcomes are achieved.

People

Consumers Energy is focused on ensuring the Company has the right people, with the right skills and culture, at the right place and time. To deliver on this vision, the Company is focusing on creating the right employee experience, attracting and retaining qualified and talented candidates, ensuring the right skills are there for the right jobs, and make certain a diverse, equitable, and inclusive workforce.

Process

To ensure the Company continues to best position itself for the future uncertainties, it will also assess operating models (e.g., governance, roles, responsibilities, structure, ways of working) and will adjust as required. Primary operating models include the CE Way and Gas Safety Management Systems. See *Operational Capabilities* below for further discussion.

Technology

To fully enable the goals and outcomes of the Plan, the Company invests in digital capabilities to keep assets safe, secure, operating, and maintained. Key technologies involve monitoring capabilities, improving data analytics, physical and cyber security upgrades, and incorporating more predictive capabilities. See *Technology* below for planned digital investments.

E. Climate Goals

The Company is committed to reducing fugitive methane and carbon emissions from the delivery system, while also better understanding the emissions from the natural gas upstream suppliers and end-use customers. This commitment is demonstrated in the Company's Scope 1 net zero methane emissions goal by 2030 and Scope 3 customer net zero carbon emissions goal by 2050. These goals align with the MI Healthy Climate Plan and Federal Executive Order ("EO") 14008.

Please see *Gas System Decarbonization* for additional discussion.

II. Consumers Energy Natural Gas Delivery Plan

A. Vision Statement

The Company's vision is to ***deliver safe, reliable, and affordable natural gas to our customers while transforming the system to deliver cleaner fuels for a decarbonized and equitable future.***

B. Objectives

The Plan has four objectives to guide future investment decisions across the full system of storage, compression, transmission, and distribution. These objectives are: Safe, Reliable, Affordable, and Clean. Consumers Energy will include energy and environmental justice as an additional key objective in future revisions.

These objectives help prioritize investment decisions based on factors such as risk, cost, and various impacts to the customer to ensure successful outcomes for the Plan.

The Plan reflects a thorough analysis of the natural gas system, the natural gas commodity market, trends and practices across the industry, as well as customer trends. Consumers Energy intends to routinely review the inputs and assumptions that led to the creation of the Plan, update it as appropriate, and continue to share the Company's vision with stakeholders across Michigan.

1. SAFE

The **safety** of employees, customers, the public, and the system is the Company's top priority. It is critical the Company protects not only customers, but the communities served. To ensure a safe system, the following focus areas remain paramount:

- Reduce system risk to ensure the safety of the community and our customers.
- Focusing on process enhancements to improve gas system safety.
- Enhancing reliability and expanding 24/7 monitoring of the system.
- Modernizing the entire natural gas system, including the remediation of distribution and transmission assets, and replacing higher-risk vintage distribution mains and services.
- Using remote control, real-time data monitoring, probabilistic risk modeling to better identify safety concerns across all asset classes.

The Company is also placing an emphasis on **best practices in GSMS** (API RP 1173), and **records management**. Consumers Energy will use operational metrics to measure factors spanning the safety of personnel, assets, processes, as well as physical and cybersecurity.

2. RELIABLE

Consumers Energy creates and maintain a **reliable** system through dependable assets, measured through metrics such as gas flow deliverability, and total system resilience. The Company issues a **resilient storage and market supply plan for peak demand days**, and proactively balances peak customer demand primarily with storage and use of EWR.

Considering the 2019 Ray incident, the SEA, and the need to ensure **energy delivery resiliency and system reliability**, the Company assesses the system's ability to adapt to winter single failures, and the agility needed to respond to potential changes in the natural gas market environment and connected systems.

The American Gas Foundation[2] provides definitions for both resilience and reliability as follows:

- **Resilience** is defined as ***a system's ability to prevent, withstand, adapt to, and quickly recover from a high-impact, low-likelihood event such as a major disruption in a transmission pipeline.***
- **Reliability** is defined as ***a system's ability to maintain energy delivery under standard operating conditions, such as the normal fluctuations in demand and supply.***

The Company agrees with those definitions and considers both reliability and resilience critical to the Company and its customers. This shows the value of Consumers Energy having an underground transportation network that is highly reliable and resilient in delivering energy without interruption.[3]

In addition, the Company assesses gas system resiliency needed due to potential climate change risk, as part of our publicly available *Climate Change Risk, Vulnerability and Resiliency Report*[4].

3. AFFORDABLE

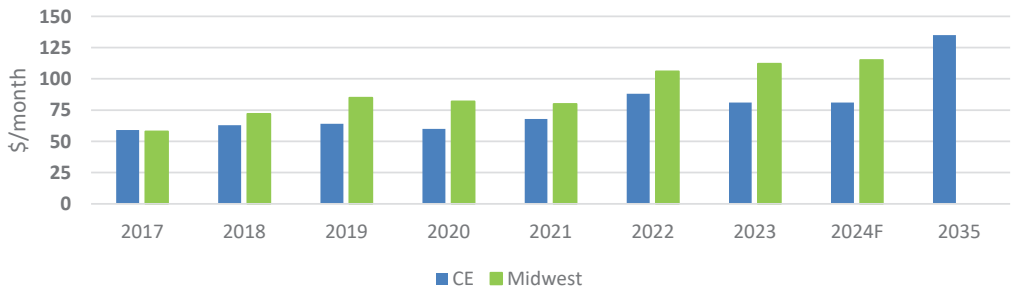
There is consistent **focus on delivering affordable** gas to customers with competitive and predictable prices. Consumers Energy analyzes average customer bills (total cost and cost per Mcf) against the Midwest average to manage total costs to the customer.

Customer bills are expected to increase over the next several years due to inflation, capital investments, and market forces. **The Company has a responsibility to keep bills as low as reasonably possible for all customers** and will work with customers to mitigate these rising costs as follows:

- The Company helps customers use less natural gas by providing energy-efficient products and resources. This includes winterization kits for homes and businesses and promoting customer assistance available.
- The Company offers energy waste reduction choices for all classes of natural gas customers.
- The Company offers tariff options to customers to create additional benefit of enabling decreased transportation costs for C&I customers during peak times.
- The Company is committed to supporting low-income customers through the Consumers Affordable Resource for Energy ("CARE") Program.

Figure 2 shows customer bill history in blue against the Midwest average and the average monthly residential bill per year forecast over the next 10 years.

Figure 2: Average Monthly Residential Customer Bill History and Forecast



[2] American Gas Foundation. Building-a-Resilient-Energy-Future-Full-Report_FINAL_1.13.21.pdf (gasfoundation.org)

[4] *Climate Change Risk, Vulnerability and Resiliency Report*

As shown in Figure 2, the average monthly bill increased approximately 5% year over year since 2017. This is below the Midwest average growth rate of approximately 10%. Moving forward, the residential bill is expected to grow approximately 5% per year through 2035.

The Company also ensures commodity costs are in line with market conditions. It will invest in the long-term infrastructure investment requirements needed to ensure safe, reliable, and compliant gas delivery while also maintaining competitive, affordable, and predictable customer bills.

4. CLEAN

Consumers Energy is committed to Michigan, its natural resources, and a sustainable climate for generations to come.

The Company's proposed *Clean Energy Plan*, as filed with and approved by the MPSC in June 2022, proposes to end coal use by 2025, increases renewables and energy efficiency, and meets customer needs with 90 percent clean energy resources. The *Clean Energy Plan* puts the Company on a trajectory to meet its net zero carbon emissions goal for the electric system by 2040.

In support of Michigan's Healthy Climate Plan 2050 carbon neutrality goal, as well as other national and international efforts, the Company is evaluating changes to the natural gas business to reduce, offset, and replace methane and carbon emissions, including customer end-use. The primary "clean" outcome is to achieve net-zero methane emissions by 2030, which is a first step and important component of the decarbonization plan.

Additionally, the Company committed in 2022 to expand on its clean energy goals to include all emissions, including upstream suppliers and downstream customers, that are part of the entire gas delivery system to be carbon neutral by 2050. Which includes an interim goal of 20% reduction in customer emissions by 2030. The initial step towards reducing customer end-use emissions is the launch of the MI Clean Air carbon offset voluntary program for residential, commercial, and industrial customers.

Key pathways to achieve net zero carbon emissions by 2050 include: energy waste reduction ("EWR"), carbon offsets, renewable natural gas ("RNG"), and potentially other decarbonization technologies in the future (e.g., hydrogen, carbon capture sequestration, electrification, geothermal, etc.). In 2024, the MI Clean Air Program was expanded to offer customers a voluntary option to offset emissions associated with natural gas use through renewable natural gas.

C. Alignment with Objectives, Goals, and Outcomes

The investments described in this Plan are necessitated by federal and state regulatory requirements, ensure safety, reliability, and the environment, while keeping customer bills affordable and predictable.

The Company will track these—as well as short-term operational metrics—by measuring and analyzing leading and lagging indicators, displayed below in Figure 3.

As the Company evolves its strategy, energy and environmental justice (EEJ) will be a meaningful component of how the Company plans investments. See *Operational Capabilities* below for how the Company is assessing EEJ and how the Company will ensure a clean and equity energy future for all customers and all communities.

Figure 3: Natural Gas Delivery Plan Objectives, and Outcomes

Objective	Delivery Plan	Outcome	Year Ending 2024	2030 Target
Safe	Achieve zero incidents by replacing high-risk materials in service, distribution, and transmission	Implement probabilistic risk model	40%	100%
		Sustain GSMS maturity level	3.37	≥4.0
Reliable	Ensure supply reliability and system resilience by improving fleet reliability, leveraging storage, and using multiple interconnections	Maintain Gas Flow Deliverability	95%	95%
		Increase Resilience	88.7%	>91.5%
Affordable	Improve value through stable and predictable total bill growth	Average monthly residential bill < Midwest Average	+5.8%	<Midwest average
		Customer Satisfaction Index	1st quartile	1st quartile
		Increase Energy Waste Reduction	1.1%	1% year over year
Clean	Reduce gas system carbon equivalent emissions by eliminating methane leaks and implementing various technologies for gas system decarbonization	Reduce Scope 1 system methane emissions from 2012 baseline	30% reduced	100% reduced
		Reduce Scope 3 customer carbon emissions from 2022 baseline	2%	20%

III. Consumers Energy Natural Gas Supply

A. Overview of Natural Gas Market

Over the past 15 years, advancements in unconventional drilling production methods alongside increased mid-stream investment turned the U.S. into a net exporter of natural gas.

The U.S. natural gas market continues to expand while accommodating changing producer priorities and global influences as export demand matures, with 2024 U.S. consumption estimated to achieve an all-time high of 33 Tcf. Over the long-term, natural gas prices are projected to remain affordable as U.S. natural gas production is viewed as capable of efficiently meeting demand growth due to favorable U.S. oil and natural gas shale production economics, market transparency, and a resilient interconnected interstate natural gas transportation system.

Michigan was well positioned to benefit from growth in shale production over the last 15 years. The largest U.S. shale production basin is in the nearby Marcellus and Utica Appalachian formations primarily in Ohio, Pennsylvania, and West Virginia[5]. Appalachian production accounted for approximately one third of the U.S. production in 2024 and has applied downward pressure to regional natural gas prices as local supply volumes have increased over time in concert with Michigan's U.S. leading natural gas storage capacity.

Amid this environment, Consumers Energy is well positioned for affordable, reliable, and diverse natural gas supply. Beyond ample regional supply, the Company's natural gas system has access to seven interstate pipelines and the most prolific natural gas production basins in the country, Canadian supply, a major intrastate pipeline interconnect and Michigan production.

Consumers Energy's class leading storage facilities, flexible interconnected system, and access to low-cost regional supply provide competitive advantage below benchmark commodity prices.

B. Consumers Energy's Natural Gas Supply Plan

The Company's GCR supply plans are detailed in a separate regulatory filing and are updated annually and include procurement details on the advantage Consumers' system provides to customers.

- Foundationally, the Company's GCR Plan seeks to lock in historically lower summer natural gas prices using storage investments to minimize winter procurement and associated price and supply risks.
- Typically, the Company procures about 75% of its GCR supply requirements in the summer months for injection into storage fields to meet winter GCR customer demand. Winter GCR sales constitute about 75% of total GCR annual sales. On the coldest days, storage can provide up to 80% of total customer demand, with the balance of demand served by the fixed (ratable) flowing pipeline supply.
- Storage provides price stability, lowers supply related risks, and generally lowers commodity costs in the winter months. It also provides system flexibility and resilience to enable reliable and timely delivery services by efficiently balancing variable customer load throughout the day.
- The Company, in conjunction with DTE Gas, plans to construct a transmission interconnect in 2025 between the two companies that will diversify the supply source, improving resiliency for both companies. This Project is further described below in the *Transmission Plan* section.

[5] Shale natural gas production in the Appalachian Basin sets records in first half of 2021 - U.S. Energy Information Administration (EIA)

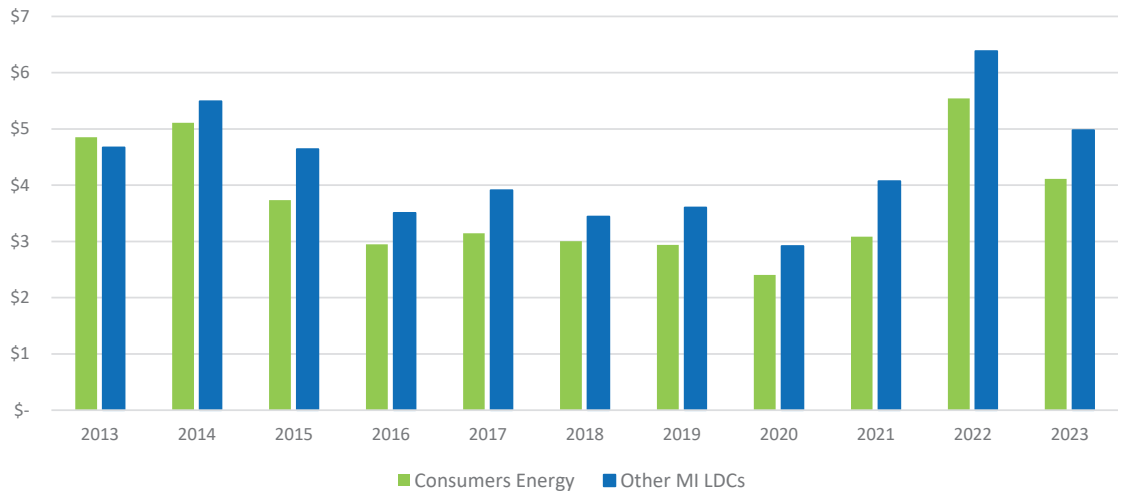
- The increase in regional and U.S. natural gas production and Midwest interstate pipeline capacity and interconnectivity transformed the area's supply fundamentals, substantially increasing the supply available at the Company's system interconnects, i.e., city gate supply. City gate supply has proven to be a reliable, resilient, and least-cost alternative to upstream purchases using interstate pipeline capacity. In the past, higher levels of transportation contracts were used to reduce supply availability, price volatility, and system deliverability risks.
- Over the past several decades, the Company made investments in its transmission pipe, storage, and compression assets to increase the deliverability of storage assets and overall system flexibility capable of balancing customer demand and less flexible pipeline supply. These investments along with the increase in regional supply have reduced the reliance on fixed cost transportation contracts born solely by the GCR customer class to about $43 million per year.
- The Company's GCR Plan also includes provisions leveraging system investment capacity and flexibility to engage in value-added transactions based on emergent market opportunities to capture favorable price arbitrage economics lowering net GCR commodity costs for our customers. Further provisions allow for fixed price purchases of customer supply requirements when markets prices are at historically low levels.

The Company's system investments and commodity supply plan minimize natural gas price volatility and supply risk for customers. This has resulted in GCR customer commodity costs often lower on average than other Michigan regulated gas utilities over the past decade.

To ensure affordability, Consumers Energy will continue evaluating both GCR commodity and investment costs when considering the total delivered price of gas the customer pays.

Figure 4 shows the Company's annual average GCR price when compared to the average of the other Michigan Local Distribution Companies (LDC's) through 2023.

Figure 4: Average GCR Billing Factor Price for Consumers Energy and Other Michigan LDCs[6]



[6] https://www.michigan.gov/documents/mpsc/gasrates_592543_7.pdf

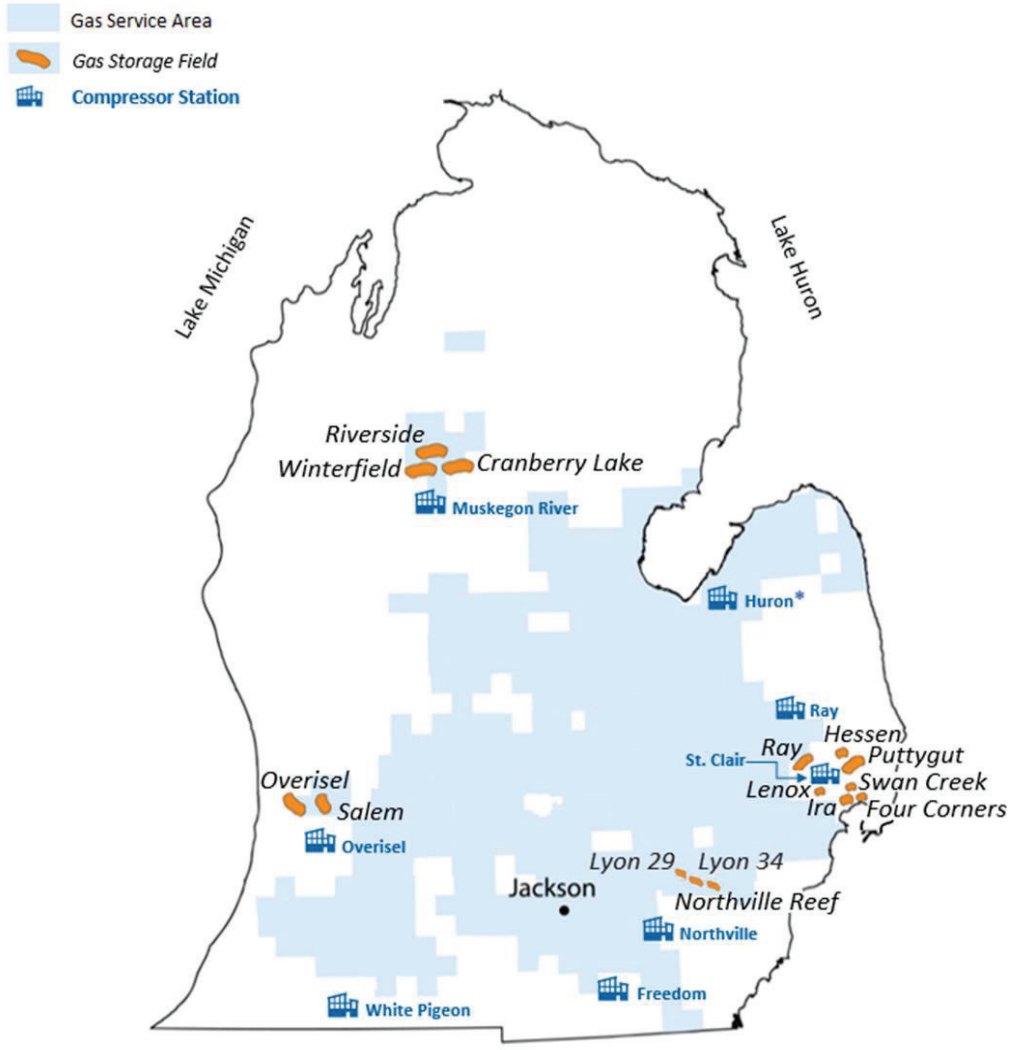
IV. Asset Classes

A. Storage Asset Plan

As a northern peninsula state, Michigan is geographically disadvantaged but geologically advantaged from a natural gas perspective.

Consumers Energy has 15 underground natural gas storage fields tapping into depleted hydrocarbon reservoirs deep underground through approximately 808 wells that tie into the Company's gas system. Figure 5 illustrates the location of the storage fields in relation to the compression assets.

Figure 5: Map of Michigan with Storage Field and Compressor Station Locations



The Company's storage assets are used to inject and withdraw natural gas to meet Michigan's winter energy needs as a safe, reliable, resilient, and low-cost alternative to traditional firm interstate transportation capacity. **This storage capacity provides customer value** by enabling the Company to purchase gas at lower prices in the summer, and provides the capability to quickly adapt to customer demand and operational changes throughout the day, week, and month.

The flexibility of storage provides end user/transport suppliers, Gas Customer Choice suppliers, and the Company the **ability to purchase gas in ways that provide economic benefits while ensuring supply adequacy during periods of high demand**.

The storage fleet plays an important role during extreme weather situations and emergent operational changes by providing **quick access to high volumes of gas** that are geographically close to Michigan's demand centers at summer versus peak use pricing. Michigan's winter demand peaks are due to residential heating and therefore significantly affected by weather conditions. These demand peaks often coincide with increased electric generation demand.

Geographical **proximity of gas storage to customer load provides a systemic advantage** during the extremely cold winters. Growth of gas-fired generation to offset the retirements of coal-fired generation generally adds to the variation and peak needs during a day. For this reason, it is critical to maintain a safe and reliable storage asset portfolio for Michigan's electric supply.

All the Company's gas storage fields are accessed through vertical or horizontal wells and are connected to compressor stations by storage pipelines. Improvements in field performance depend on the performance of the entire integrated facility since the gas flows through to get to the transmission system.

The Company's efforts to optimize overall field performance through multiple efforts (i.e., new wells, well rehabilitation, strategic plugging, etc.) are **leading to better performing fields that allow for a more resilient overall system.** Since 2018, the Company reduced the number of storage wells, becoming more efficient and safer, while maintaining relatively consistent levels of working gas and capabilities. This provides quicker access to large quantities of natural gas than incremental pipeline supply purchases.

The storage fields provide approximately 154 Bcf of cyclic design capacity known as Working Gas. In addition to the natural gas cycled annually for customer use, a base level remains in place to ensure the field is adequately pressurized.

1. STORAGE ASSET CLASS 10-YEAR FOCUS

- Optimize aging storage asset infrastructure to lower operating cost, maintain deliverability, and decrease emissions points.
- Assess wells to determine if they are underperforming.
- Optimize storage asset risk, in alignment with PHMSA requirements, and performance by coordinating remediation, plugging and decommissioning underperforming wells, maintaining storage capability with new and more efficient wells, and updating existing storage equipment and lateral pipelines.
- Increase cycling of peaker fields for cold weather events as prescribed GCR filings.
- Invest in digital solutions for increased storage well monitoring.

2. STORAGE ASSET MANAGEMENT

The Company's gas storage fields are segmented into baseload, intermediate, and peaking fields to serve different needs depending on daily, monthly, and seasonal demand deliverability requirements.

Storage fields in the system are used in three ways:

- ***Baseload*** storage fields run daily during the winter to meet base level demand and provide more efficient supply paths to the natural gas system further away from pipeline supply interconnects.
- ***Intermediate*** storage fields run during longer periods of higher demand.
- ***Peaker storage fields*** run during the extreme hours and days when demand changes quickly.

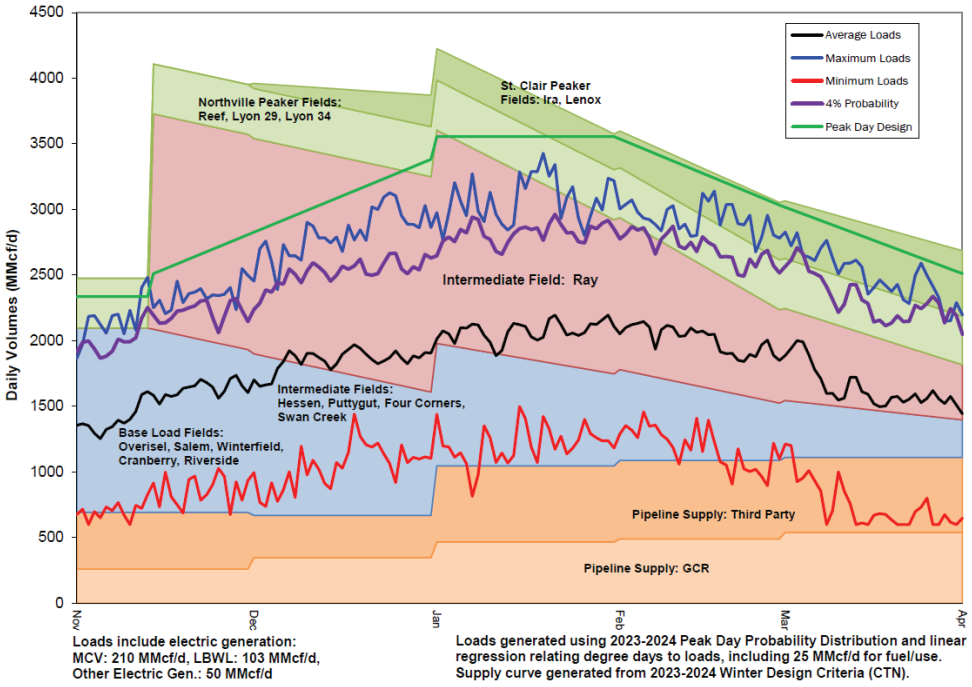
Table 1: Storage Field Types, Names, Working Gas, Base Gas, Total Gas Volumes, Number of Wells

Type	*Storage Field Name*	*Working Gas Volume (Bcf)**	*Base Gas Volume (Bcf)**	*Total Gas Volume (Bcf)**	Number of Wells
Base	Winterfield	25.30	47.00	72.30	249
	Overisel	25.50	27.50	53.30	152
	Salem	11.60	18.90	30.50	71
	Cranberry	11.00	17.20	28.20	129
	Riverside	1.50	7.50	9.00	51
Intermediate	Hessen	13.50	3.48	16.98	24
	Puttygut	9.50	5.10	14.60	24
	Four Corners	2.39	1.39	3.78	6
	Swan Creek	0.42	0.23	0.65	1
	Ray	48.10	17.27	65.37	62
Peaker	Ira	2.00	4.25	6.25	15
	Lyon 29	1.23	0.95	2.18	3
	Lenox	1.20	2.03	3.23	11
	Lyon 34	0.70	0.66	1.36	5
	Northville Reef	0.50	0.72	1.22	5
***NOTE:** All gas volumes are in MMcf at 14.73 psi dry pressure base.					

Each storage field has unique reservoir characteristics, including different cyclic capacities. This includes the ability to efficiently maximize storage utilization through leveraging the design and mechanical condition of the wells, transmission pipeline, attached compressor station, and system operating conditions such as weather. Additionally, supply can be sourced from storage to offset normal conditions in the event of high storage inventory.

Figure 6 displays the wide variety of customer demand that is considered as represented by the vertical space between the lime green (Minimum Loads) and the green (Design Peak Day) flows. Storage effectively allows for the variation in customer load as the Company can shut in or dispatch storage supply as needed throughout the day.

Figure 6: Daily Winter Design Capacity and Loads



The above supply curves (daily volumes) use assumptions, and therefore Figure 6 helps the reader conceptually understand how the Company's storage fields are used based on their capabilities.

Delivery rate is the flow rate of gas per time (usually daily) that a specific storage field or well can provide. Fields designated as **peakers,** such as Lyon 29, typically have high per-well delivery rate, but fewer overall wells, while **baseload** fields, such as Winterfield, tend to have higher well counts but lower overall deliverability on a per-well basis.

Fields designated as **intermediate** fields also have relatively high deliverability characteristics as well as significant cyclic capacity that makes them suitable for both peaking and baseload operations.

Storage field deliverability is directly tied to the amount of gas within them, and as gas is removed from them to supply customers, their deliverability rate capability (daily volumes) decreases.

Consumers Energy's historical storage usage follows a similar annual pattern: generally steady injection from April to October and withdrawal from November to March.

Injection and withdrawal plans consider the individual field capability and inventory as well as capability of the natural gas system and customer demand. Some fields take longer to fill or empty depending on their geology, inventory, and the use of compression. Their capability for accepting gas decreases as they are filled, and as field inventory decreases, the ability to provide supply decreases.

During the withdrawal season, baseload fields provide early winter gas, followed by intermediate fields, such as Ray, and peaking fields when the temperatures drop and customer demand increases.

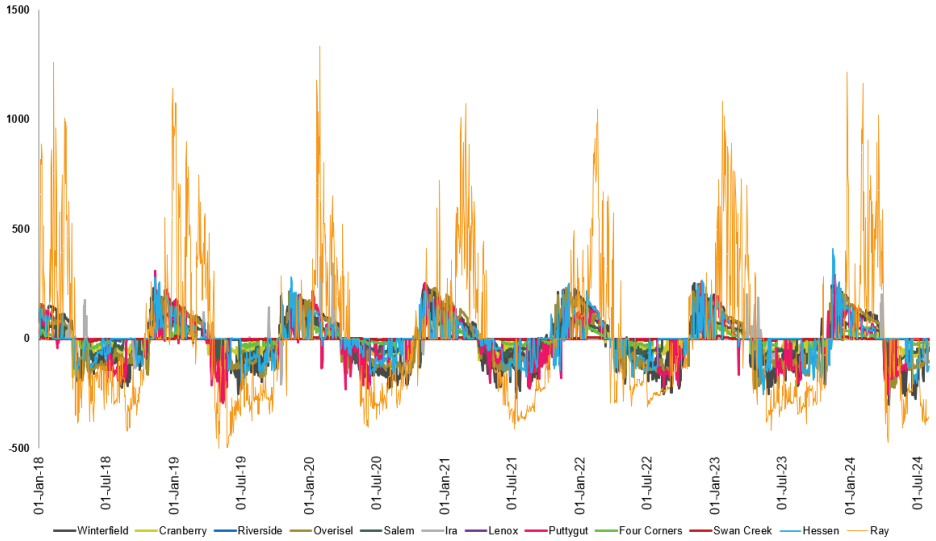
When temperatures rise, storage fields can be shut in for hours or days to adapt to customer load. This shut-in capacity can be used to provide system resilience in the event of unplanned outages on the system impacting supply.

The peaking fields serve multiple purposes:

- **Use during peak/design or near peak/design days.** Peaking fields may be needed when significant quantities of gas are required to meet customer demand. Because of its unique properties, the Ray field can be used as a peaker field when its inventory and gas conditioning equipment allow for it.
- These fields, depending on inventory, **can be used to reduce interstate pipeline supply** at the end of the winter season should excess capacity remain. They also **can provide supply capacity reserve** off peak/design for resiliency.
- The peaker fields **diversify storage supply and reduce reliance on Ray to meet peaking needs.** Additionally, they avoid relatively high fixed costs associated with interstate firm capacity and third-party storage. To aid in the reduction of our reliance on Ray, the Northville Gas Conditioning project is underway to help the fields provide quality gas when called upon.

Figure 7 shows that Ray uniquely fills the role of a peaker field (because it can deliver high rates of gas flow) and a baseload field because of its ability to hold a large volume of gas.

Figure 7: Daily Storage Field Injections (negative) and Withdrawals (positive) by Field from January 2018 - July 2024 (mmcf)



3. STORAGE WELL INTEGRITY PROGRAM

The key risk in storage field operations is degradation of the well, allowing gas stored in the reservoir below to escape and leak into the surrounding area.

Storage asset maintenance involves inspections (i.e., “logging”), repair, rehabilitation, and decommissioning for wells that provide less value to the customer. In addition, new wells with

horizontal drilling technology can be added to the system to enhance access to the storage field to replace decommissioned wells.

Well Inspections

Consumers Energy inspects wells to determine their current state and to assess risk. The *Storage Asset Plan* complies with Federal Pipeline Safety regulatory requirements, and the applicable sections of API RP 1171.

These procedures govern operations, maintenance, integrity demonstration and verification, monitoring, threat and hazard identification, assessment, remediation, site security, emergency response and preparedness, and recordkeeping requirements for all existing underground natural gas storage facilities.

Integrity assessments of underground storage wells began in 2017 to support the 10-year compliance timeframe for completing all risk management activities by 2026. Based on these new requirements, all wells will have three current logs at the completion of the 10-year rehabilitation program.

Well Rehabilitation

The Company's 10-year Well Rehabilitation Program began in 2017, and is on track to have all wells remediated by 2026, following publication of the PHMSA interim final rule to address underground storage safety issues.

This Program involves remediating wells across Consumers Energy's storage portfolio to return them to 'like-new' condition as well as to comply with the baseline assessment period of the final rule from PHMSA. Primary benefits of the well rehabilitation include:

- Safer and more efficient long-term storage operation by reducing risks stemming from factors such as corrosion, gas migration, leaks, and well integrity issues.
- Improved well deliverability.

Well Reassessment/Preventative and Mitigative Measures Program

A well-specific Preventative & Mitigative (P&M) Measures Program is in development for each well that completes the Well Rehabilitation Program.

The current plan provides a 21-year outlook for well work that will continue to verify and monitor well integrity. This P&M Program began in 2024, as outlined by the seven-year assessment cycle prescribed by Federal underground storage requirements.

Items included in the P&M Program include specific activities depending on well type: facility, observation, and Class II disposal wells. Maintenance includes items such as logging frequency, fill depth checks, slickline cleanout of paraffin for wells with known paraffin issues, mechanical integrity testing (MIT) on wells with tubing and packer systems, and fluid checks on wells with known water levels.

New Well Drilling

The purpose of the New Well Drilling Program is to identify the best locations to drill new wells within the storage assets. Important considerations include: the sequencing of well logging, remediation, new drilling, and plugging to ensure continued deliverability.

Consumers Energy is taking a holistic system view that these activities follow a logical sequence. For example, new well drilling should precede well plugging and decommissioning if practical, to ensure short-term flow is not significantly compromised. Options to accelerate drilling should be considered, when possible, to ensure remediation, new well drilling, and plugging follow an optimal schedule.

- Drilling new wells includes centralizing multiple wells to one location. This reduces overall operational maintenance and could reduce overall storage pipeline lengths.
- Using seismic mapping and reviewing of existing well information to place the well within the best part of the reservoir for increased deliverability while minimizing liquid production.
- Using safe drilling operations that provide a clean well for injection and withdrawal.
- New wells allow for drilling to current standards and potentially allow for plugging of aging wells that may present higher risk.

Well Re-Entry

A subset to the New Well Drilling Program has been initiated and focused on re-entering existing horizontal or deviated wells and drilling new drain holes. **Re-entry work is less expensive** than a full new well as the casing and pipeline are already installed.

Re-entering an existing well further **helps to improve field and well deliverability,** especially for wells that were drilled off structure or too deep on the structure. The additional rate can be used to either improve the field overall deliverability or allow for plugging of nearby vertical wells if they have integrity concerns but have sufficient flow rates to reduce risk without impacting storage field performance.

Additional benefits to the Program include using part of an existing well to plugback the original horizontal well and drilling additional drain holes to increase deliverability. This work uses wells with good integrity and coil tubing equipment that is a closed system.

Well Plugging

Well plugging is performed on certain wells, balancing risk with reliability and customer value.

- Plugging poor-performing, high-risk wells decreases maintenance expenses and reduces risk.
- After a well is plugged, the Company reduces its land footprint by restoring the area.
- Plugging a well reduces methane emissions by reducing maintenance related venting, and fugitive emissions associated with system piping and wellhead components.

Plugged Well Monitoring

In 2022, Consumers Energy contracted a third party to review all plugged wells within the Company's gas storage boundaries. The work included creating wellbore diagrams and classifying the plugging as *questionable*, *adequate*, or *exceptional*. This classification was used to develop monitoring plans for both the Company's plugged wells and third party plugged wells.

The plugged well monitoring plan for the Company's plugged wells will have a frequency based on the plugging classification. **The wells classified as *questionable* will be field monitored more frequently** than the wells classified as adequately plugged. The exceptionally plugged classified category will be field monitored the least frequency. The plugged well will be classified and a baseline field monitor will be completed within three years of plugging completion.

The plugged well monitoring plan for third party wells includes field monitoring for any potential gas leakage every five years for questionably plugged wells that don't have a bottom cement plug through the storage zone. These wells are drilled through the storage zone and are located within a quarter mile radius of a Consumers Energy well. Monitoring is limited to landowner or well owner cooperation.

This work will be recurring with a frequency based on the plugging classification and the evidence of gas leakage.

Storage Lateral Pipeline Replacement

The purpose of the Storage Lateral Pipeline Replacement Program is to replace and upgrade storage laterals based on age, condition, relative risk, and association with the other gas storage programs. Primary improvements anticipated from the program include:

- Installation of launcher and receiver barrels that allow for pipeline inspections.
- Potentially changing the pipeline length and size based on the new well drilling and well plugging programs.

These changes will help reduce risk while creating a more efficient path for gas flow to the larger natural gas system.

Northville Lyon 29/34 Liquid Removal Project

The primary focus of the Lyon 29/34 facility is to deliver transmission quality gas to the pipeline system and act as a metering station.

On peak days, this site is an important additional source of natural gas supply to the metro Detroit area. During 2018, 2019, and 2020 there were multiple occasions of gas purity issues occurring during the gas withdrawal season associated with water content.

The Lyon 29/34 facility upgrade project will help improve gas purity, measurement accuracy, and pipeline reliability by reducing corrosive components from the gas stream and improve site performance by installing gas purification equipment.

4. STORAGE FIELD ASSET PLAN

In alignment with the Storage Well Integrity Program and based on scenario modeling completed in 2018 through the lens of Consumers Energy's four objectives, the Company assessed the potential retirement of four low-cyclic fields to consolidate the storage system: Swan Creek, Four Corners, Lyon 34, and Riverside. Collectively, these fields provide less than 1.5% of the Company's gas supply throughout the winter.

Model results indicated three fields still provide value to customers and showed that Riverside may be a viable candidate for retirement.

- Removing Riverside from the storage portfolio has minimal cyclic impact, given the small amount of working gas volume at 1.48 Bcf, but has other operational considerations because it directly supplies three small city gate stations.
- Riverside contained approximately 9% of the system's total number of storage wells in 2018. Retirement would eliminate an estimated 14% of total risk associated with storage wells, including 5.8 metric tons of methane emissions.
- The remaining three fields represent just under 2% of the overall system risk and are currently providing significant supply resiliency. They also have a high deliverability to well count ratio that is used to supply peak demands.

Considering the items stated above, the Company decided to move forward with divestment of the entire Riverside storage field. The Riverside storage field supplies customers in adjacent communities via city gates directly to the field.

The Company's engineering team developed alternate supply options for the three city gates that span the distribution, transmission, and storage assets. The execution schedule for these projects occurs between 2023 and 2025. The completion of these projects will allow the Company to retire or sell the storage field.

The Company is currently pursuing the sale of the storage field with a tentative closure date in 2025. Divestment of the Riverside storage field will reduce system risk and O&M expenses associated with operation of these storage assets with minimal impact to overall system deliverability.

Figure 8: Storage Well Integrity Program Overview

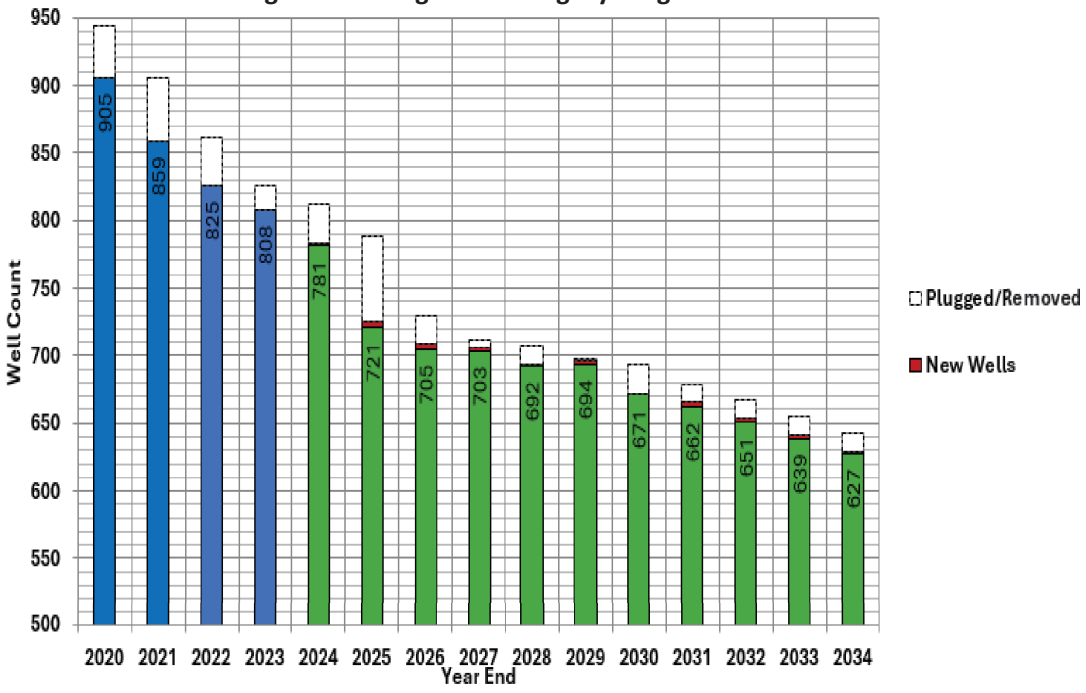


Figure 8 identifies that the combined approach of the Storage Well Integrity Program and the retirement of the Riverside storage field would reduce the overall number of wells, which will result in lower risk, lower operating costs, and lower methane emissions, while ensuring system resiliency, deliverability of gas flow per well, and potentially improving gas quality resulting in less risk to compressor station operations and downstream facilities.

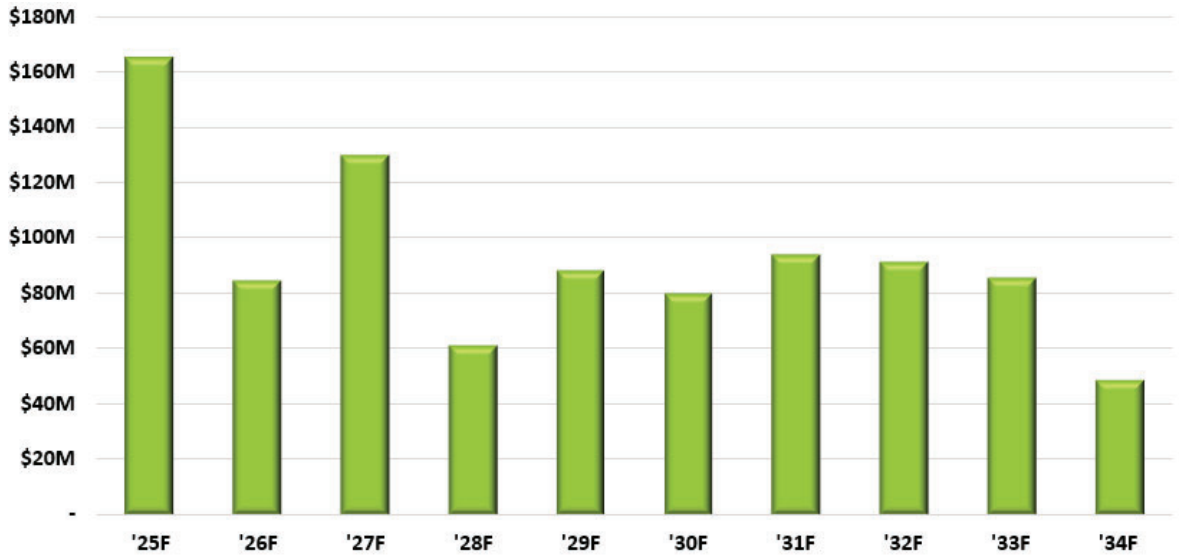
This reduction in the overall number of wells will have a minimal reduction in working gas capacity from an approximate current amount of 154 Bcf to a forecasted amount of 152 Bcf in 2027.

5. STORAGE ASSET FINANCIALS

Figure 9 shows the spending needed to efficiently and effectively execute the Storage Well Integrity Program and other investments in the storage asset area.

This investment plan aligns with Company objectives by reducing asset risk (safe), increasing the deliverability of each remaining well and positively affecting the natural gas system's resilience (reliable), reducing the overall well count (affordable), reducing the emissions points in this system (clean).

Figure 9: Storage Capital Investment Plan



B. Compression Asset Plan

Consumers Energy has eight compressor stations that pressurize and condition natural gas for safe transport through the pipeline and distribution systems, as well as injection into and withdrawal from underground storage.

The compression fleet can be segmented, based on the purpose of the compressor station, into storage, transmission, and distribution stations, as described below in Table 2.

Table 2: Overview of the Four Types of Compressor Stations

	Storage Compressor Stations	Transmission Compressor Stations	Transmission and Storage Compressor Stations	Distribution Compressor Station
Purpose	Inject gas into and withdraw gas from underground storage fields. Condition gas as needed to meet customer needs.	Receive and transport gas throughout the gas delivery system. Condition gas as needed to meet customer needs.	Compression units are storage units that also provide transmission compression.	Boost gas pressure through the distribution system when agricultural processes such as grain drying increase demand in the rural Thumb region of Michigan.
Station Names	• Ray • Muskegon River	• White Pigeon • Freedom	• Overisel • Northville	• Huron

	• St. Clair			

Consumers Energy operates the fleet with local Company personnel while monitoring through Gas Control with SCADA.

The Company monitors system pressures, flows, and key high-volume customers. The station control room is linked to the other utility back-up control rooms in real-time, per the control room standard for physical and cybersecurity assurance.

Table 3 provides a more detailed summary of the compression units at the storage and transmission stations.

Table 3: Summary of Compressor Units

Station	*Mothballed/Retired*				*Operable*			
	Units	# Units	Unit HP	Total HP	Units	# Units	Unit HP	Total HP

System Total		**7**		**28,271**		**40**		**147,393**

1. COMPRESSION ASSET CLASS 10-YEAR FOCUS

- Reduce system risk and methane emissions through retirement and decommissioning of vintage compression units and equipment.
- Improve fleet reliability and system resilience through increased system health monitoring, automation to maintain asset performance, and preventative maintenance.
- Improve system resilience and maintain gas compression facility deliverability through alternative flow path validation and creation, as well as implementation of robust design enhancements to existing

equipment to protect major natural gas supplies from interruption. Use system supply requirements, station assessments, and the Total System Resilience process to inform investments.

- Overall, the Company has a goal to achieve 30-40% utilization for the entire compressor fleet. Considerations for optimal utilization are described below in *Compression Asset Management*.

2. COMPRESSION ASSET MANAGEMENT

The Company's 2023 system weighted average compression utilization of 22% is below industry average of about 50%. The utilization rate calculates the amount of time that a compression unit is available to operate vs. the amount of time that it does operate.

Utilization is impacted by winter weather conditions and typically trends up when the winter is colder than normal, and a higher amount of storage is used. It will trend down when winter weather is warmer than normal, and a lower amount of storage supply is used. It also is affected by how and where gas is delivered by suppliers, the interstate pipeline delivery pressure verses Company transmission line pressure, conditions outside of the Company's natural gas system, asset availability, and other factors.

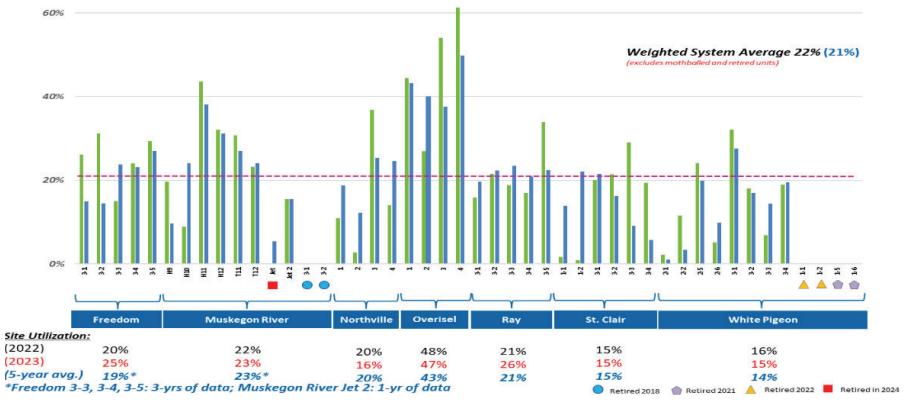
Overall, compression assets don't anticipate a utilization rate as high as the industry average due to the uniqueness of the Company's natural gas system.

- The Company's compression assets are used more to serve peak day and seasonal needs of storage assets, both for injection and withdrawal. Some compression assets are needed to ensure reliability at the station to avoid negative impacts to our customers as well as to provide the flexibility necessary to enable use of city gate supply.
- Another consideration, given the locational supply flexibility offered by the Company's natural gas system, is that interstate pipeline supply-focused compression may fall below industry average utilization depending on market pricing conditions.

The Company believes that an increase from the current 22% compression utilization is possible and can be achieved through efforts to improve the reliability of compressor stations and allowing the retirement of aging units. This will increase the utilization of the other compressor units and will be accomplished while considering the Company's natural gas system's resilience and supporting that system's maintenance needs.

Figure 10 illustrates the 2023 utilization of each compressor unit including mothballed units or units not currently in service.

Figure 10: 2023 5-yr Average Utilization by Compressor Unit



The Compression Demand Schedule as seen below, is a communication tool that describes how much horsepower is needed at each station to meet planned needs for anticipated operational conditions, including design conditions. Random outage rates analyze potential compression buffer or shortfalls in terms of units and hp at each station.

The Company is the supplier of last resort and must prepare for design conditions that are not regularly seen, and that contribute to lower than peer compression utilization.

Figure 11 shows the monthly compression demand schedule that indicates the required quantity of units, hp, and projected peak demand months for each station.

Minimum required horsepower reflects what is required to pump Design rates, backup engines are required for planned and unplanned outages.
* Ray HP in November required up to the start of Ray field survey, 2 units available post survey
** St Clair turbines are availabe for March withdrawals if base field pressures allow or for use with peaker fields
*** If the indicated number of units cannot be met then other units (engines or turbines where applicable) must be substituted to try to meet HP Demand requirements even if there is no requirement for the units

The demand schedule highlights the variation in monthly peak demands for storage and transmission compressor stations. In general, storage compressor stations tend to have greater variability in hp requirements month-to-month as they are used to adapt to varying customer demand while meeting summer injection and winter withdrawal needs.

- The lower hp utilization at St. Clair and Ray reflects how the Company uses the capability of those facilities to adapt to operational conditions. This reflects their ability to be adjusted as needed to meet continuously varying customer demand and system conditions.
- High utilization of most of the hp typically occurs when those facilities are using storage inventory and that compression is needed for withdrawal, which occurs later in the winter, generally during February and March.

Late season focus remains on cycling the base storage fields to reduce risk of gas migration in the fields, and this results in some stations' utilization being comparatively low. Using compression to cycle fields allows the Company to hold inventory in more prolific storage, and thus reduces the need to procure large quantities of more expensive pipeline transportation and supply during the winter, which is not guaranteed to be available.

Peak day demands, including those that may be associated with gas-fired generation, are expected to primarily be met with peaking storage at Northville, St. Clair, and Ray, given their high deliverability characteristics and their ability to be used to respond throughout the day needed by the varying electric generation load.

- To manage reliance on Ray, and to support the system resilience, hp is needed to refill Northville and St. Clair after a peak demand period in the winter to facilitate more frequent cycling of peaker fields.
- The lower utilization at White Pigeon reflects market conditions and locational pricing that is currently more favorable for supply to be received through Freedom and Northville.

Maintaining access to supply and flexibility for changes in the location in supply helps keep consumer market prices lower and the natural gas system more resilient.

Transmission compressor stations have more stable daily and monthly peak demands to meet ongoing gas demand and transport needs throughout the year. However, there are changing conditions at those stations throughout the year that affect utilization, like available interstate pipeline pressures, varying market conditions and planned/unplanned upstream facility outages.

3. COMPRESSION ASSET PLAN

Based on the scenario modeling, five long-term recommendations for compression reflect new operating realities and align with the Company's objective of improving the system's reliability, resiliency and optimal utilization. The recommendations are:

a. Accelerate the implementation of preventative maintenance program and practices, and gradually implement predictive technologies.

b. Decommission retired/mothballed compressor units.

c. Optimize the fleet of compressor units at Muskegon River to meet volume and pressure requirements.

d. Evaluate contingency options for resiliency and opportunities that mitigate risk of outages at the compression stations.

e. Assess feasibility of retiring additional compression assets to focus investment on most critical units and optimize portfolio.

f. Compressor Station Compliance with Proposed Michigan NOx RACT Rule.

The following sections describe each recommendation in more detail.

Implement Enhanced Maintenance Program and Practices, and More Predictive Technologies

Consumers Energy will enhance maintenance practices to ensure the implementation of more proactive and efficient prevention programs. This will eliminate expensive, reactive events, improve the compression fleet's ROR, reduce downtime and overall maintenance costs.

The Company's current compression maintenance practices don't allow for analytics-based decision making or preventative and predictive maintenance. This is primarily due to the following:

- Compression is operating on a break-fix cycle.
- Maintenance data (such as failure records and work order maintenance logs) is incomplete.
- Equipment condition data, such as temperature and in-flow pressure, is limited.

The Company also will improve record-keeping practices to ensure a standardized entry methodology or nomenclature for SAP entries.

Station performance and maintenance schedules and data are stored separately at each station in local templates. Investing in digital infrastructure will enable these important factors to be standardized across the fleet, and for performance monitoring and improvement to occur more efficiently.

Decommission Retired Compressor Units/Auxiliary Assets

Currently, there are 7 retired compressor units not being operated. These units are disconnected and removed from the system.

The Company's goal is to decommission these units, which enhance the site aesthetics and safety for employees, as well as reduce operating expenses.

The retired units, are located at Muskegon River, and White Pigeon:

- Muskegon River –Two HVC units (3-1 & 3-2) and one turbine
- White Pigeon – Two KVT units (1-1, 1-2) and two W-330's (1-5, 1-6)

Four KVG units (306, 316, 319, 320) at Muskegon River were decommissioned during 2020, and three HVC units (2-2, 2-3, 2-4) at St. Clair were decommissioned in 2021-2022.

The units in Plant 1 and Plant 2 at Freedom were decommissioned in 2023 after the completion of the Plant 3 Upgrade project.

The 5 units in Plants 1 and 2 at Ray were decommissioned in 2024.

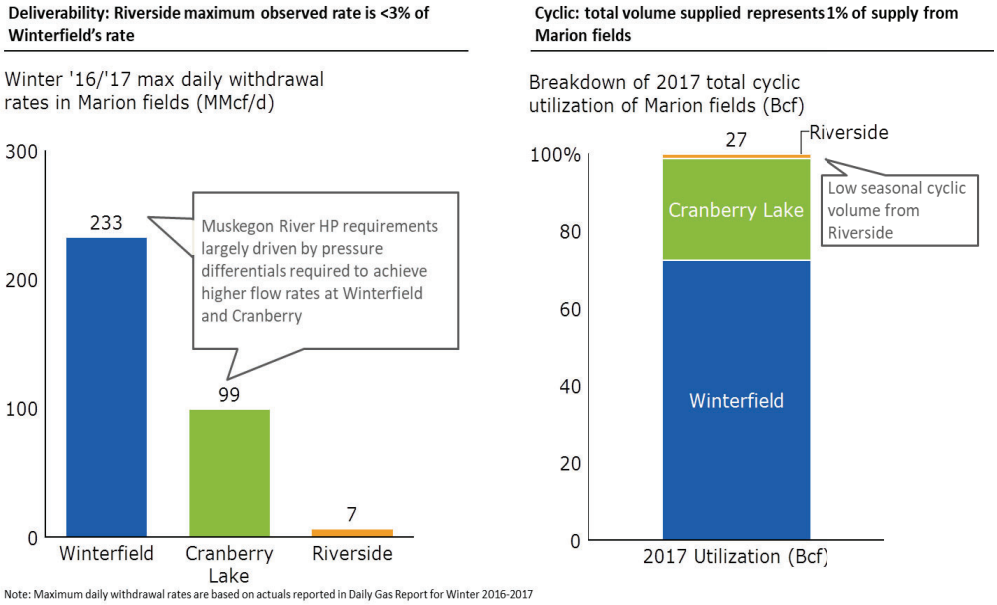
Engineering and planning activities are underway to support decommissioning activities at Muskegon River, and White Pigeon.

Optimize Compressor Units at Muskegon River to Meet Volume and Pressure Requirements

With the retirement of the Riverside storage field, another high-level evaluation was completed that validated that Muskegon River compressor station without the Riverside storage field still delivers value to the system:

- The Muskegon River storage compressor station will still be used to pressurize gas to inject into and withdraw from the Winterfield and Cranberry Lake storage fields.
- Muskegon River hp requirements are largely driven by pressure differentials required to achieve higher flow rates at Winterfield and Cranberry Lake, and the total cyclic volume supplied from Riverside is 1% of the supply from the storage fields in the region (Riverside, Winterfield, Cranberry Lake), as shown in Figure 12. Replacing the antiquated suction boosting compression with a new turbine will enable more reliable suction boosting and higher cycling from the remaining two storage fields. Therefore, the impact at the Muskegon River compressor station from retiring Riverside is minimal.

Figure 12: Maximum Daily Flow & Cyclic Capacities for Storage Fields Supported by Muskegon River



Consumers Energy is optimizing the compression horsepower at Muskegon River to meet volume and pressure requirements by:

- Completing the retirement of Plant 3 HVC pressure boosting units due to their age and ROR performance (2018). Completing installation of an in-kind replacement for suction boosting turbine. (Commissioned during winter 2022-2023).
- Retiring the existing turbine after the installation of the new turbine is complete (2024).
- Rebuilding to like-new the existing HBA and TLA (slower speed models) to extend their useful operating life by 2033.

Evaluate Contingency Options for Resiliency and Opportunities that Mitigate Risk of Outages at Compression Stations

The Company is analyzing resiliency in Compression, Storage, and Transmission, including gas flow path analysis and review of design improvements and hazard assessments.

A logical review of interrelated systems will occur in a manner that can identify specific potential failure points and quantifiable impacts. The components reviewed are typical of the following:

- Compression: compressors and engines including coolers, unit control and unit specific auxiliaries
- Gas conditioning equipment
- De-hydration equipment
- Natural gas heaters
- Slug catchers
- Filter-separators

- Scrubbers
- Mechanical-structural
- Main gas headers
- Isolation and control valves, regulators, and fire gate systems including valves
- Fuel / pilot gas systems
- Compressed air systems
- Electrical instrument & controls, transformers, switchgear, MCCs, panels
- Station Control and Network Systems and instruments

In addition, the Company will evaluate the overall gas compression system to identify recommended investments to support an overall increase to system resiliency:

- Areas that will be evaluated include, but are not limited to, a bypass out of the Ray Storage facility directly into the transmission pipeline system, mitigation of single point failures in the system, and fleet-wide system improvements.
- Results from site hazard assessments and focused self-assessments have been used to evaluate each station to make recommendations to standardize system design to mitigate overall risk to the system.

Annually Assess Feasibility of Retiring Additional Compressor Units

The Company annually assesses feasibility of retiring additional compression assets to prioritize investment on the most critical assets for an optimized portfolio. This includes the following:

- Monitor signposts such as reliability, performance, and load changes over time.
- Evaluate station/asset reliability and required units.
- Incorporate system resilience assessments.
- Assess station layout risk and developing mitigations.
- Develop business cases for retirements/additions.

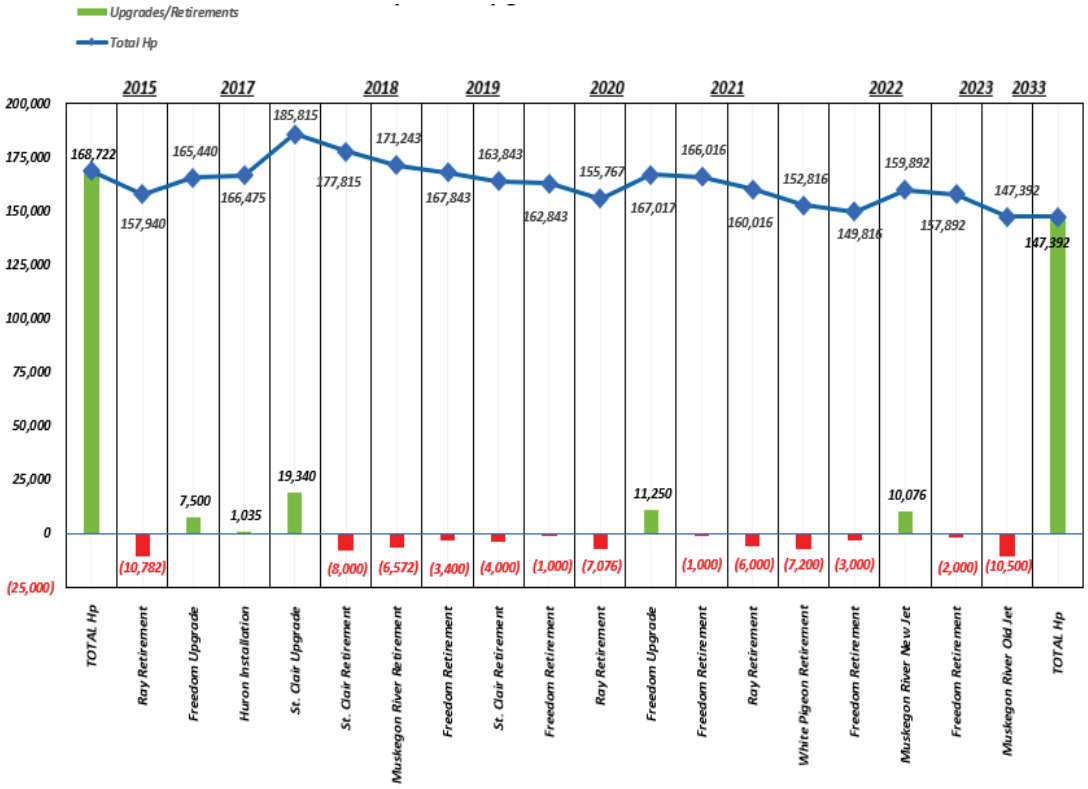
A transformation of compression maintenance practices to be more predictive and proactive, for example, will reduce ROR and increase reliability and performance of compression assets.

As these practices demonstrate further increases to reliability, the Company will evaluate the compression portfolio to identify the appropriate number of reserved capacity assets and amount of capability required at each station to meet peak demand. This aligns with the Plan's aim to improve supply resiliency and system optimization, including increasing the weighted average compression utilization rate as one of the 10-year outcomes.

Furthermore, the Company will monitor other factors that may impact the evaluation of whether to retire or upgrade compressors over time. For example, increasing market supply, storage cycling, or storage deliverability via compressor stations such as Overisel and Northville may require increasing hp at these two stations to reliably handle increase in peak or seasonal demand.

Figure 13 shows the Company's plan to optimize the compression fleet with an approximate net reduction of 21,328 hp from 2015 to 2033 without impacting customer deliverability.

Figure 13: Compression Fleet Optimization (2015-2033)



Compressor Station Compliance with Michigan NOx RACT

These rules impact the older, slow speed units at Overisel, which has 4 engines that require modification to achieve proposed NOx emission limits.

Overisel is in an area that is currently designated as ozone non-attainment and is subject to the Michigan NOx RACT rule, a project is underway to modify the engines to meet the new NOx emission limits.

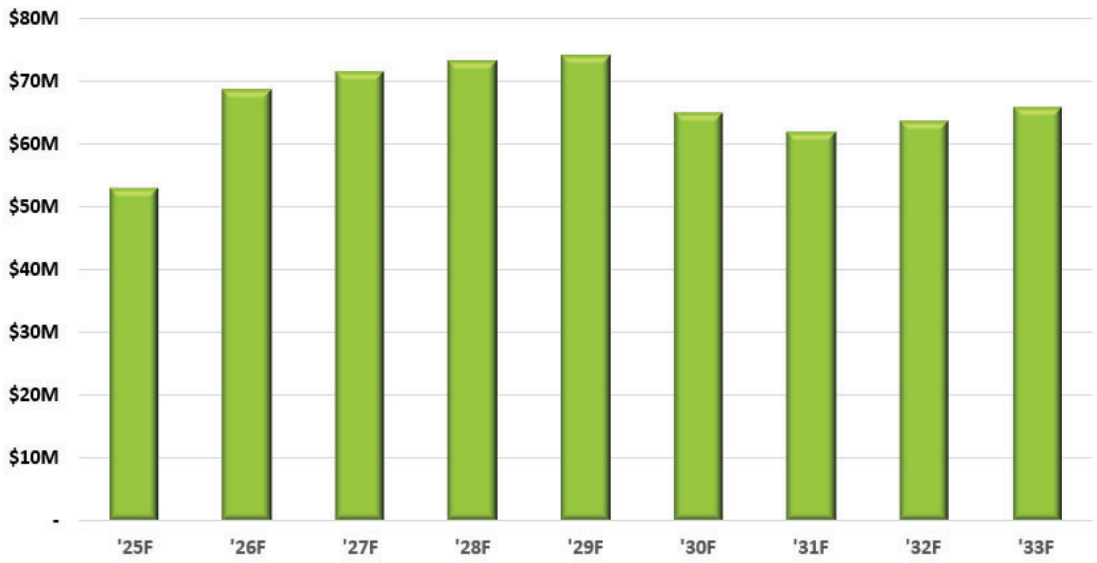
4. COMPRESSION ASSET FINANCIALS

Based on the modeling and planning to date, the forecasted capital investment plan for the Company's compression assets is shown in Figure 14.

This capital investment plan will be updated routinely as assessments are completed, and business cases are created to support necessary spend plans.

Overall, this investment plan for compression assets aligns with the Company's objectives by reducing asset risk (safe), reducing the ROR and increasing utilization rates (reliable), optimizing the fleet with more modern equipment and modifying maintenance practices (affordable), and reducing the amount of equipment emissions (clean).

Figure 14: Compression Capital Investment Plan



C. Transmission Assets

The Company's transmission system is the 'expressway' of the gas system, transmitting large quantities of gas in pipe diameters ranging from 4 inches to 36 inches, at high pressures between 400 and 1,185 pounds per square inch ("psi").

Gas Transmission lines move gas from interconnects, to and from storage, as well as to city gates for delivery to the distribution system. Within the Transmission system is Transmission Operated as Distribution ("TOD") pipe. TOD is considered transmission pipeline for DOT Reporting, but from an operating perspective is part of the distribution system.

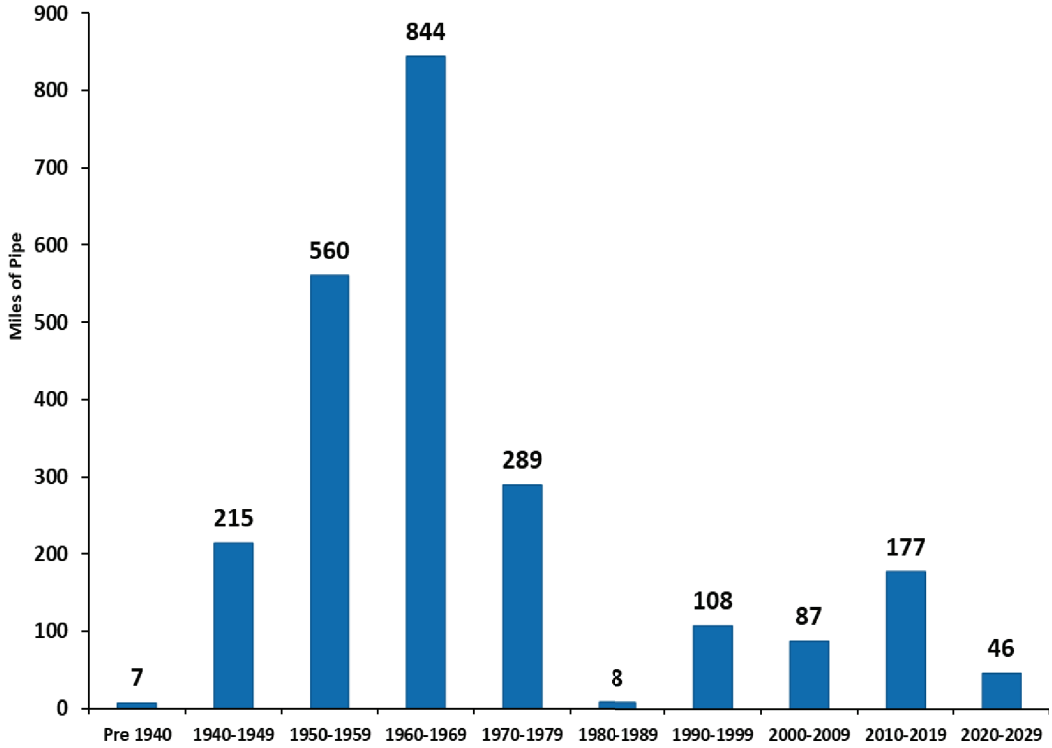
Per the Company's 2023 Transmission DOT Report filing, there are 2,342 miles of pipeline. The associated breakdown of transmission pipeline mileage is shown in Appendix B.

The Company's goal is to meet the capacity needs of Michigan as well as to optimize the transmission system in terms of age, materials, and technology to ensure public safety.

The Plan to achieve this goal includes compliance with State and Federal Pipeline Safety regulatory requirements for inspections to address threats on the system and actions to mitigate risk. The Plan also continues investment in upgrading and replacing the Company's major pipelines and modernizing the system with remote-control valves ("RCVs") to quickly isolate the system when system integrity is compromised.

The weighted average age by miles for the transmission pipeline system is 52 years old. Approximately 1,915 miles, or 82%, of transmission pipe was installed in the 1970s or earlier, as shown in Figure 15.

Figure 15: Transmission Pipeline by Decade of Installation



1. TRANSMISSION ASSET CLASS 10-YEAR FOCUS

- Obtain the necessary technology for system response and needed flexibility with capacity throughput and diversity of flow paths for total system resiliency to reduce system risk and methane reductions caused by aging infrastructure. This is achieved through SCADA upgrades described below under *Technology*.
- Increase the pipeline integrity scope to account for the additional remediation work for transmission piping to meet new regulatory requirements for Maximum Allowable Operating Pressure ("MAOP") reconfirmation, as well as the incremental remediation as an outcome of inspecting TOD and storage lines.
- Attain 70% of RCVs installed on valves on the transmission system by 2028.
- Upgrade the Company's natural gas supervisory & control data systems, which allow for secure monitoring and control of the natural gas system, and upgrade city gates.
- Reduce the probability of high impact natural gas system failures.
- Eliminate MAOP exceedances by installing emergency shut down devices at facilities, install filtration equipment at facilities, and perform maintenance pig runs.

2. TRANSMISSION ASSET PLAN

a. Capital Remediation for Transmission Pipeline (i.e., "mainlines")

By the end of 2025, all transmission mainline miles will be inspected regardless of consequence area classification. This does not include transmission miles within the storage fields, compressor stations, TOD segments or transmission lines installed within the last 10 years.

Within the transmission mainline miles are high-consequence areas ("HCA") and moderate consequence areas ("MCA"). HCA and MCA classifications are inspected on a recurring basis, six and nine years, respectively.

In addition to the planned, on-cycle inspections, risk mitigation inspections for transmission lines display early signs of deteriorating conditions, such as Stress Corrosion Cracking ("SCC").

- SCC is a form of environmental cracking that requires three conditions to develop, susceptible material (steel), stresses on the pipeline that are higher than the threshold for SCC and an environment that supports cracking such as local soils and groundwater.
- Many factors can affect the initiation and propagation of SCC, but a pipeline's coating system provides the primary barrier with Cathodic protection providing a secondary barrier.
- The environmental factors that support SCC can develop under the right conditions when the coating on a pipe is compromised or dis-bonded.
- In 2015, one of the Company's pipelines ruptured due to SCC. Since that time, the Company has assessed pipelines that have the highest potential for SCC to occur, and there have been instances where SCC was found and remediated.

The Company completed the construction of the Mid-Michigan Pipeline project in 2024 to replace an existing 70-year-old pipeline that has shown signs of SCC and experienced the rupture in 2015.

This project is further discussed in below in the section concerning the *Transmission Enhancements for Deliverability and Integrity* ("TED")-I program.

b. Inspection for Transmission Operated by Distribution (TOD) Pipelines

Within the total Company TOD miles, 100 miles of TOD reside within HCAs and will follow the inspection cadence discussed above.

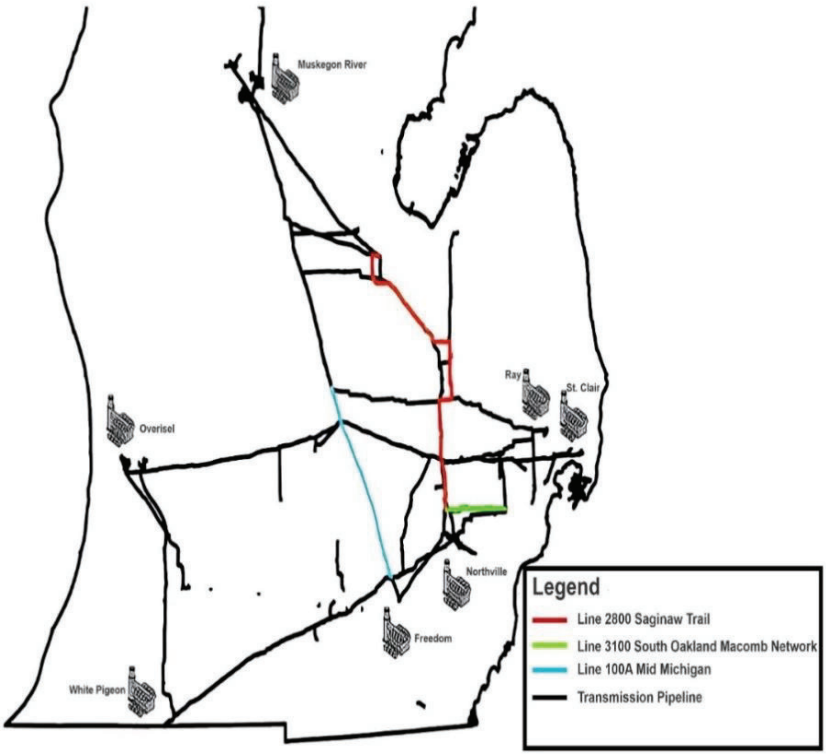
For the remaining non-HCA TOD pipelines, the Company is extending the Low Stress Assessment process to inspect and remediate areas with low cathodic protection levels to ensure continued safe operation.

c. Transmission Enhancements for Deliverability and Integrity projects

Transmission Enhancements for Deliverability and Integrity ("TED-I") pipeline projects focused on maintaining integrity, deliverability, and include transmission pipeline replacements of higher relative risk pipe to ensure safe operation. Higher relative risk pipe includes segments with previous anomalies or stress characteristics related to integrity management risk mitigation. Consumers Energy identified certain transmission pipelines to replace or upgrade due to their condition.

The major TED-I projects are Saginaw Trail Pipeline (started in 2017 and completed in 2020), the South Oakland Macomb Network (started in 2018 with construction and completed in 2021), and Mid-Michigan Pipeline (construction 2023 and 2024). As of 2024, all major pipeline replacements are successfully complete. No additional major pipeline replacements are planned. The completed projects are shown below in Figure 16.

Figure 16: Map of TED-I Gas Transmission Pipeline Projects



As transmission lines age, there are two primary factors considered for replacement, *capacity needs* and *integrity*.

All transmission lines are continuously evaluated based on these two factors, which form the basis for prudent decision making in repair versus replacement. Capacity requirements are factored into line replacements to ensure customer deliverability.

- TED-I pipeline projects improve customer reliability and advance public safety by replacing or retiring higher relative risk pipe segments and, in some cases, increasing capacity which in many cases enhances system resilience.
- Replaced pipelines also have enhanced pipeline pressure control and isolation capabilities.
- The Company is planning the Oakland Resilience Interconnect, a transmission interconnect with DTE Gas, in 2025 that will improve overall system resiliency to the benefit of customers of both Companies. In accordance with 1929 Public Act 9, the Companies received a certificate of necessity to construct and operate the interconnect on October 10, 2024. This project is responsive to the Commission's recommendation pertaining to risk mitigation in the 2019 SEA.

d. City Gates

A city gate is a distribution center and/or fuel station. The Company operates 90 city gates as of December 31, 2023, where pressure is regulated and natural gas is odorized for safe delivery to homes and businesses. Over-pressure protection and SCADA monitoring equipment are located at city gates.

City gates are an important component to the natural gas system in that they reduce transmission line pressure for distribution use and in some cases improve the quality of gas before entering the distribution systems. Most city gates inject an odorant into the gas stream for leak detection through the sense of smell.

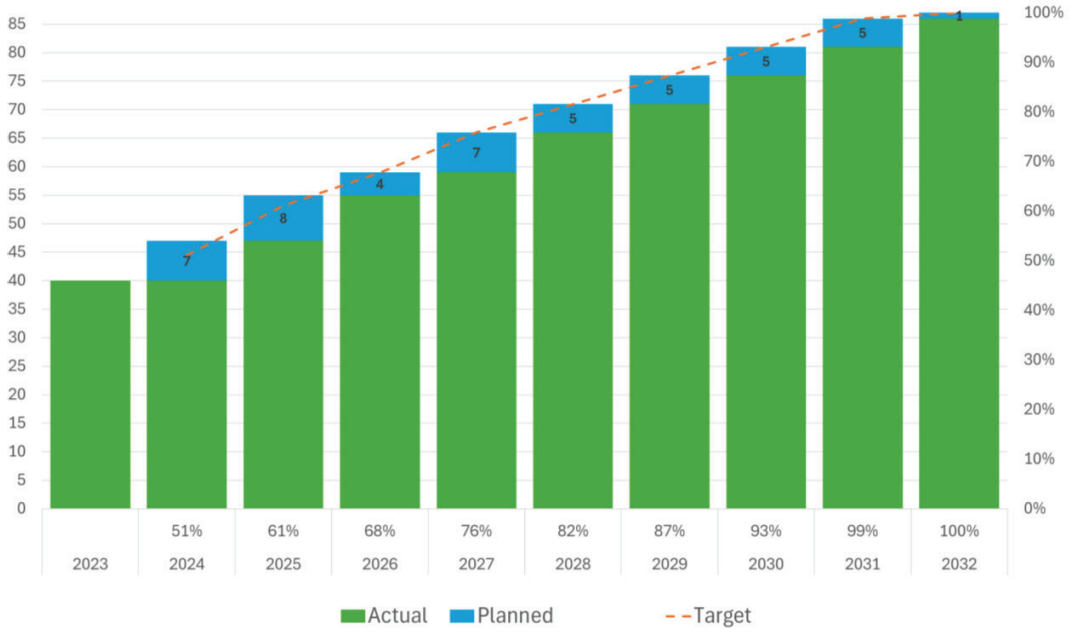
City gate facilities and their equipment have a reasonable life span of about 50 years. However, age alone is not the primary factor for rebuilding a city gate.

The city gate fleet goal is to 'modernize' 90% of the Company's city gates within this 10-year plan. *Modernization* is defined as upgrading the following mechanisms: emergency shutoff system, bath heater system, separation systems, and the required SCADA transducers for each stage.

The 10-year plan shown on Figure 17 calls for the modernization of 5-10 city gates each year. In addition to full rebuilds, components required for modernization will be rebuilt or added as appropriate rather than full rebuilds as specific station needs dictate in consideration of customer affordability. To achieve this target, annual spending between $1 to $13 million per city gate, or $40 to $60 million annually for the entire program for the next 10 years is required.

After modernization is complete, city gates will be rebuilt on a cycle that will ensure the entire fleet is rebuilt within 50 years, or as required for safety, customer demand, and high-performance demand.

Figure 17: City Gate Attribute Modernization Plan



e. Remote Control Valves (RCV)

RCVs are important safety components in the natural gas system. RCVs reduce response time in the event of damage to a transmission line or a rupture event. The ability to remotely and quickly stop the flow of gas is essential, and RCVs are the standard for achieving this across the system.

It is important to note that RCVs do not prevent failures from occurring but are intended to minimize the time gas flows after a failure. These RCVs also allow for manual operations if a condition calls for an operator to override the RCV. RCVs were first installed in 2017 in HCAs and at flexible points in the system.

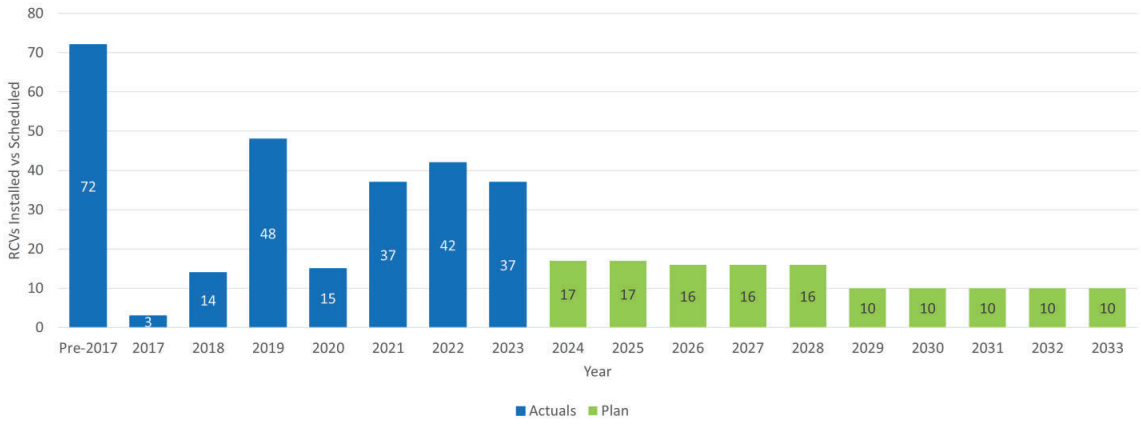
- Check valves will also be used on transmission tap lines when appropriate to aid RCVs in the isolation of a particular transmission segment.
- Check valve technology prevents the back feeding of gas in the event of an emergency.

To leverage RCVs as a means of increasing the safety of the transmission system, the Company is planning an installation rate toward a goal of 70% of the system valves by 2028, as shown in Figure 29. Figure 18 below represents the year in which the RCVs have been installed and are planning to be installed with final commissioning of RCVs sometimes occurring in the subsequent year.

This safety benefit is the time reduction to isolate the system during an emergency or abnormal operating condition. The current goal aligns with the continuously evolving prioritization of work, available resources, and system outage schedules.

In addition, a Gas SCADA system upgrade is being conducted to support this plan. Currently, the Company has 481 valves on the transmission system, requiring approximately 336 additional RCVs to reach the 70% goal.

Figure 18: Current RCV Installation Rate



Total # of RCVs	72	75	89	137	152	189	231	268	285	302	318	334	350	360	370	380	390	400
Percent Completed	14.9%	15.6%	18.5%	28.5%	31.6%	39.2%	48%	55.8%	59.2%	62.8%	66%	69.4%	72.8%	74.8%	77%	79%	81.1%	83.2%

f. Other Transmission Investments

In addition to the Transmission Investments mentioned above the Company invests in other programs that ensure safety, resiliency, reliability, and compliance with regulations. These include:

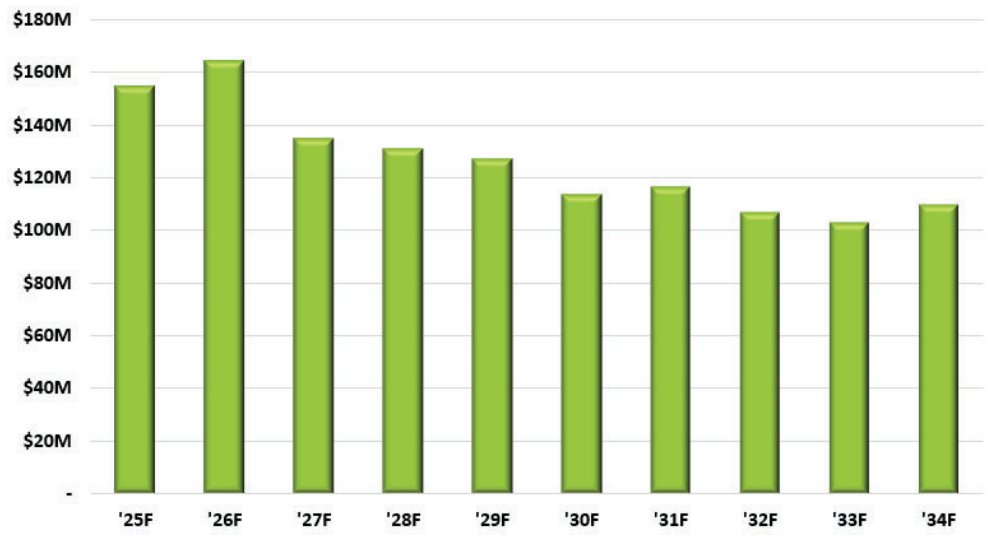
- **Asset Relocation**: Transmission investments include gas transmission infrastructure replacement projects that are required due to civic improvement activities initiated by federal, state, or local governmental units where transmission pipeline location or depth of cover requires relocation of an existing pipeline to prevent third-party damage, eliminate physical conflicts with other utilities, and to ensure continued safe operation. Major projects planned include Chippewa River line lowering, Rabbit River line lowering, and Townline Road line lowering.
- **Cathodic Protection Program:** This Program maintains compliance with federal regulations for cathodic protection of facilities.
- **MAOP Compliance:** Pipeline investments involve MAOP verification and remediation of transmission pipelines, including Transmission Operated by Distribution pipelines.
- **Deliverability Base Field Measurement:** These investments ensure accurate gas quality and measurement.
- **Deliverability Base Pipeline:** These investments support maintaining operations in accordance with State (Michigan Gas Safety Standard) and Federal Pipeline Safety regulatory requirements. The Company intends to eliminate transmission and storage identified inoperable valves by replacement and/or retirement. Types of projects include:
  - Replacement of valves, and if necessary, the associated valve operators, when inspection determines that the valves no longer perform as needed. Which may mean valves no longer turn or they may not fully seal off the flow of gas.
  - Replacement of piping due to MAOP revisions.
  - Construction of new sectionalizing valves and tap valves to improve system deliverability and help meet valve spacing requirements defined by State and Federal Pipeline Safety regulatory requirements; (iv) reconfiguration of tap piping (i.e., laterals) and associated valving upstream of city gate facilities as companion projects to city gate rebuilds.
  - Installation or retirement of pipeline taps to Transfer Meter Site facilities being attached to the Company's system.

3. TRANSMISSION ASSET PLAN AND FINANCIALS

Consumers Energy's transmission inspections, remediation work, city gate modernizations, and RCV installations provide the basis for the capital investment plan shown in Figure 19.

Overall, this investment plan for the transmission asset class aligns with the objectives by reducing asset risk (safe), ensuring the pipelines can flow when required (reliable), providing the necessary resilience to obtain either pipeline or storage gas supplies and being remote controlled for system agility (affordable), and reducing the amount of emissions in this system (clean).

Figure 19: Transmission Capital Investment Plan



D. Distribution Asset Plan

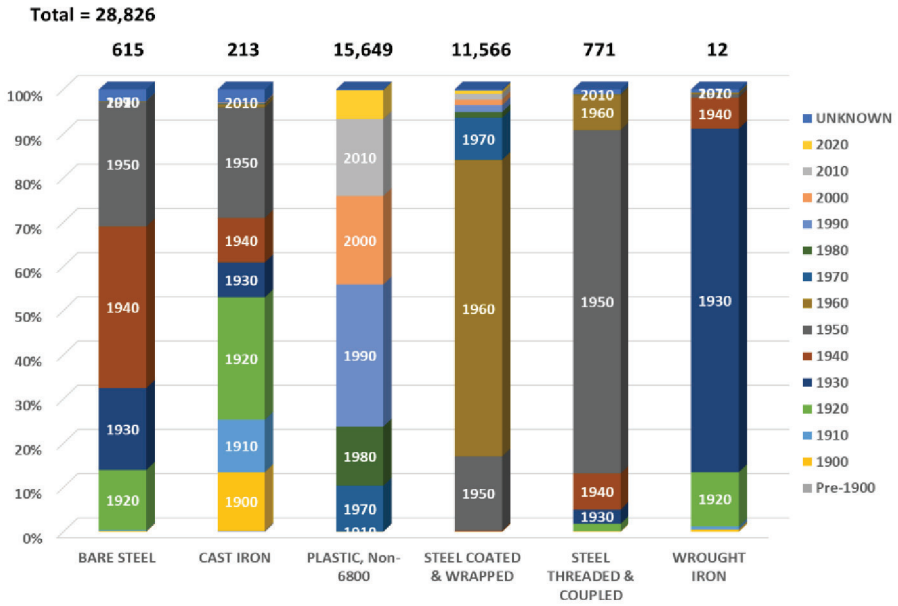
- Consumers Energy's distribution system moves gas at 60-400 psi from city gates through pressure regulation stations into neighborhoods and commercial and industrial ("C&I") districts to customer businesses and homes at service pressures that are less than 1 psi.
- Consumers Energy has approximately 28,368 miles of distribution pipeline, 516 miles of TOD pipeline, and 1.6 million services as of December 31, 2023.
- The Company's distribution mains are approximately 55% plastic, 43% cathodically protected steel, and 4% cathodically unprotected steel and vintage materials.
- The distribution system includes some of the Company's oldest facilities that are situated closest to customers. Replacing infrastructure to reduce risk and expanding remote monitoring in this area is critical. Vintage materials include cast iron, bare steel, and copper, which were installed from the 1890s through the 1970s. These are the highest-risk assets in this system and are the primary risk drivers. There are 1,611 miles of vintage materials with 112,157 services of vintage materials
  - In 2012, Consumers Energy launched the *Enhanced Infrastructure Replacement Program* ("EIRP"), targeting replacement of pipeline vintage materials over multiple decades.
  - Further, in 2017, the Company added the Vintage Service Replacement ("VSR") Program to eliminate identified vintage materials on services on a programmatic basis.
  - Removing vintage materials from the distribution system will improve customer safety and reliability by eliminating higher-risk materials from the system. This includes eliminating the standard pressure system.
- While leaks in this asset class are at a lower pressure compared to the transmission system, they are also located much closer to the public. To support expanded monitoring, the Company is implementing advanced leak detection and upgrading its Supervisory Control and Data Acquisition ("SCADA") system—this is further explained in the *Technologies* section.

1. DISTRIBUTION ASSET CLASS 10-YEAR FOCUS

- Reduce system risk and methane emissions while addressing system reliability and capacity. This will be accomplished by addressing aging or vintage infrastructure that is closest to the customers.
- Remediate vintage distribution main, standard pressure main, and vintage services to meet 2035 completion date. The annual targeted miles, as shown in Figure 20, is revised to balance with affordability and account for labor requirements, municipality project schedules, identified remaining segment projects, etc.
- Plan for resource availability to accommodate emergent and long-range requests for civic/asset relocation work consistent with actual 2019 – 2023 historical experience, or approximately 34.5 miles of gas distribution main installations annually.
- Remediation of line segments for which the Company has located pressure test records that conform to State and Federal Pipeline Safety regulatory requirements for traceable, verifiable, and complete documentation.
- Ensure funding for Distribution programs requiring changes to comply with new regulations, business growth, or technology obsolescence to avoid non-compliance or outdated/inefficient solutions.

The Company's system is comprised of a variety of materials with installations dating as far back as the early 1900s as shown in Figure 20 below[7].

Figure 20: Distribution Main by Materials and Installation Date (includes TOD)



Cast and wrought iron pipelines are among the oldest in the Company's distribution system. Nearly 65% of these pipeline types were installed pre-1940 making them over 84 years old. The age of the pipelines

[7] U.S. DOT PHMSA reported figures (March 2024)

introduces corrosion and cracking due to the degradation of the iron alloys (i.e., pipes rust and get brittle with age) and pipe joint design.

The following factors increase risk involved with a system that contains vintage materials:

- Bare steel (also called 'uncoated') pipelines are considered higher risk due to corrosion and cracking caused by age and lack of protective coating. External corrosion occurs on metal pipe due to soil and moisture conditions. Bare steel pipe is in direct contact with these corrosive conditions.
- Fluctuations of temperatures during the seasons, as experienced in Michigan, create additional risks. Once the ground freezes at low temperatures, pipelines are susceptible to frost heave causing new cracks to form and existing cracks to expand.
- Natural gas vapors are lighter than air and will generally rise and dissipate quickly. These vapors will move through the soil finding the path of least resistance. Frozen ground acts as a vertical barrier causing gas to gather and pushing it horizontally until it finds an opening (porous/cracked foundations, water/sewer lines) often leading into a building.
- In underground low-pressure gas pipelines, a leak may result in water infiltration (also called 'water ingress'). Groundwater enters the gas pipeline through a crack or corroded section of pipe, and eventually blocks the gas flow to the customer. In winter months, the water can freeze causing additional blockages, customer meter freeze-offs, and/or expanding existing pipeline cracks.

PHMSA classifies the highest risk materials[8], in order of risk, as:

- Cast iron
- Bare steel
- Threaded & coupled steel
- Wrought iron

These at-risk materials total 1,611 miles of main or approximately 5.7% of all distribution main miles. Of the remaining at-risk material miles, there are 1,394 miles located within the SP/MP system and 217 miles are in the HP system. Remaing miles for the highest risk materials are shown in Figure 22.

Another distribution integrity risk is pipes operating at standard (utilization) low pressure. Gas needs to reach each customer with enough flow rate and pressure to fuel equipment and appliances while staying below the maximum operating pressure for each segment within the system. The challenges of operating a standard pressure system are the dynamic flow and pressure changes due to varying customer demand within a narrow pressure operating range.

The standard pressure system operates at 8 - 12" water column ("WC") (about a ¼ psig). The pressure delivered to customers is the same pressure within the distribution pipeline from the upstream regulator station. The regulator station reduces the pressure to a level that allows the low-pressure gas to flow continuously to customers without the need for a second regulator located at the meter stand.

Since there is not a second regulator at every meter stand in a standard pressure system, an overpressure condition occurring on the distribution system can affect all customers served by the

[8] Pipeline Replacement Background | PHMSA (dot.gov)

system if the regulator(s) at the regulator station that controls the pressure for the system fails. This type of over-pressure incident occurred in 2018 in Merrimack Valley[9].

In addition to the risk of high-pressure incidents, a standard pressure system is also at risk of low-pressure incidents. This system struggles to operate at rated pressures on extreme cold weather days, respond to customer demand changes, etc.—and requires accurate and timely pressure control to meet deliverability requirements. If the rated pressure is not maintained and drops below 7" WC, customers may experience heating and other appliance problems due to low gas pressure.

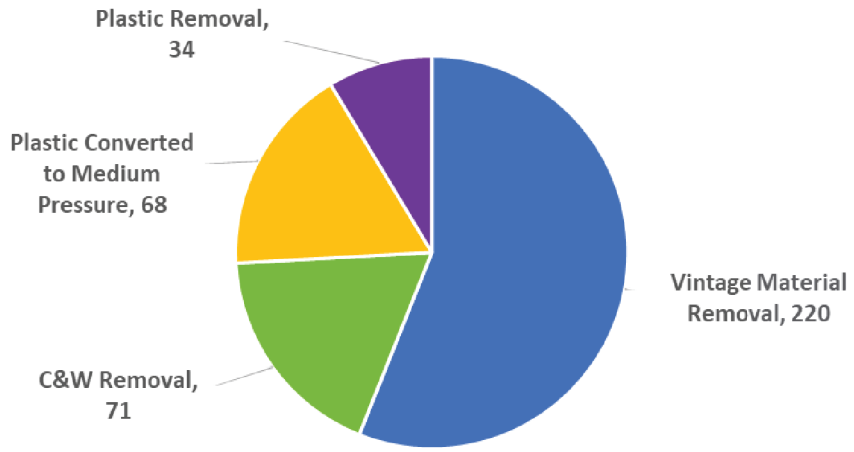
Other factors that can contribute to low gas pressure include standard-pressure portions of the system, with largely vintage materials, which are susceptible to fluid infiltration from the ground. This fluid can travel through the system, including to customer meters.

Additionally, in freezing temperatures, this fluid may seal the orifices of the meter and/or regulator and interrupt gas flow. This poses a risk to customers during the heating season. Furthermore, removal of this fluid requires maintenance of "drip" points on the standard-pressure system with additional costs for removing/pumping the fluids.

The Company's vintage miles cover all but approximately 173 miles of the 393 remaining miles of the standard-pressure system. The 173 miles are made up of 71 miles of coated and wrapped steel and 102 miles of plastic pipe. A portion of the plastic pipe, 68 miles, is planned to be converted from standard-pressure to medium pressure. The remaining 105 miles of plastic and the coated and wrapped steel will be removed/retired.

Therefore, to improve customer safety and reliability and improve system efficiency due to higher operating pressures, the 105 miles of non-vintage standard low-pressure pipe will be added into the vintage remediation goals with the intention of eliminating the standard pressure system by 2030.

Figure 21: Standard Pressure System (in miles)



[9] Merrimack Valley NTSB Report: https://www.ntsb.gov/investigations/AccidentReports/Reports/PAR1902.pdf

2. DISTRIBUTION ASSET MANAGEMENT

Overview of the Current Main and Service Remediation Program (i.e., EIRP, VSR)

The *Pipeline Inspection, Protection, Enforcement, and Safety Act* ("PIPES") of 2006, Public Law No: 109-468, mandated that PHMSA, within the U.S. Department of Transportation, prescribes standards for *Distribution Pipeline Integrity Management Programs* ("DIMPs").

Federal DIMP rules were subsequently established under Subpart P of the U.S. Code of Federal Regulations, Title 49, Part 192. The Company's current replacement program (part of Consumers Energy's DIMP to remediate at-risk cast iron, bare steel, and threaded and coupled steel) is the EIRP.

The EIRP was launched in mid-2012, with the first full program year in 2013. Through all programs, the Company remediated 373 miles of cast iron, 413 miles of bare steel, 298 miles of threaded and coupled steel, 10 miles of wrought iron, 1 mile of x-trube, 38 miles of Low Frequency Electric Resistance Welded ("LFERW"), for a total of 1,134 miles.

Figure 22 shows miles of historic Vintage Material remaining on the system based on data submitted on and supplemental data to the Distribution DOT annual report for that year.

Figure 22: Vintage Miles of Main Remaining by Material Type

Figure 23 shows the total miles of SP/MP Vintage and HP Vintage main remaining on the system at the time of the 2023 DOT Report submittal and is represented by the first two bars in the figure. Data is specific to the EIRP Program and is based on the EIRP Annual Performance report data. The totals may not sum to the individual years due to rounding.

Figure 23 shows a breakdown of the remaining EIRP program miles by material, pressure class, and TOD pipe as of February 1, 2024.

Figure 23: Remaining EIRP Program Retirement Miles

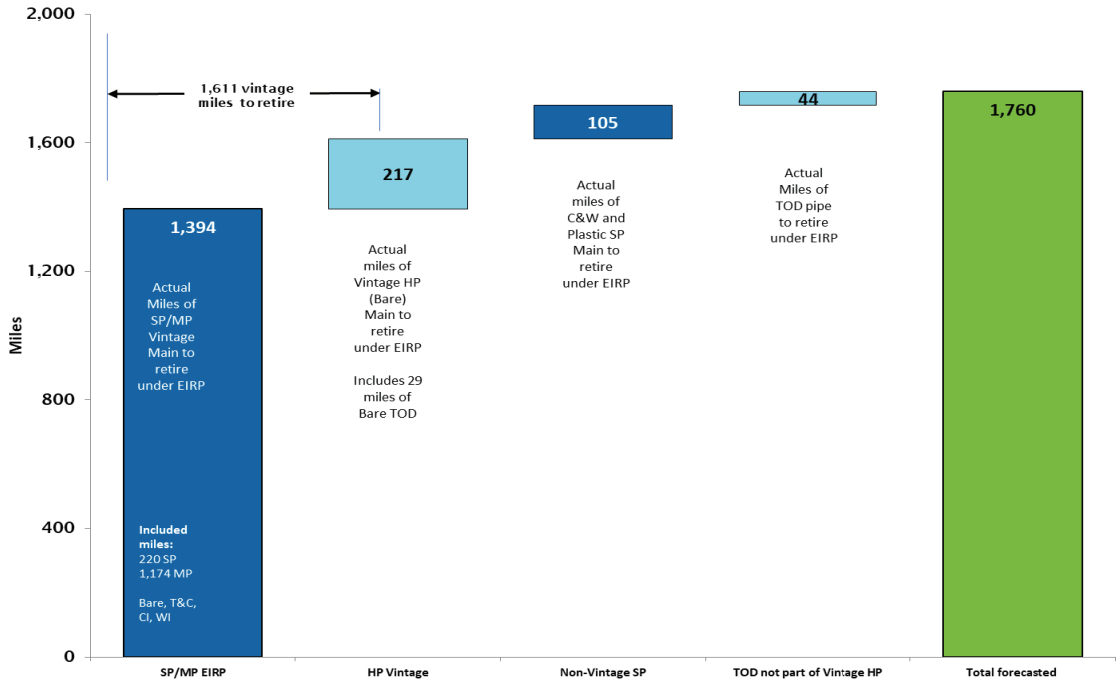


Figure 24 represents the historic 2012-2021 vintage miles retired by all programs and illustrates the new plan for the 1,726 remaining miles to retire from 2024-2035.

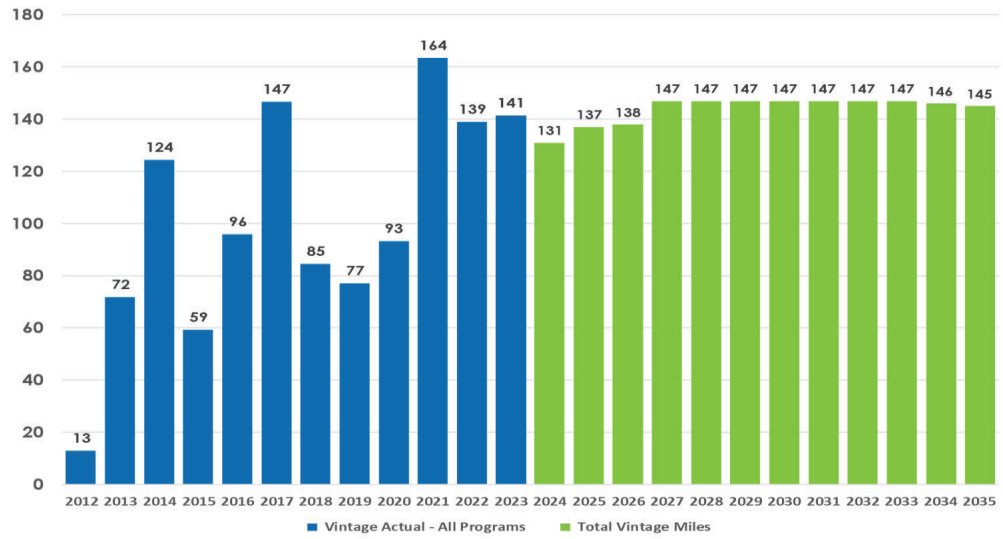
Figure 24: Retired Vintage Miles for All Programs



3. OVERVIEW OF DISTRIBUTION SERVICES AND VINTAGE SERVICE REPLACEMENT PROGRAM

The distribution system includes approximately 1.6 million service lines that connect the distribution mains to homes and businesses. Service lines can contain at-risk materials and are dispersed evenly across the system.

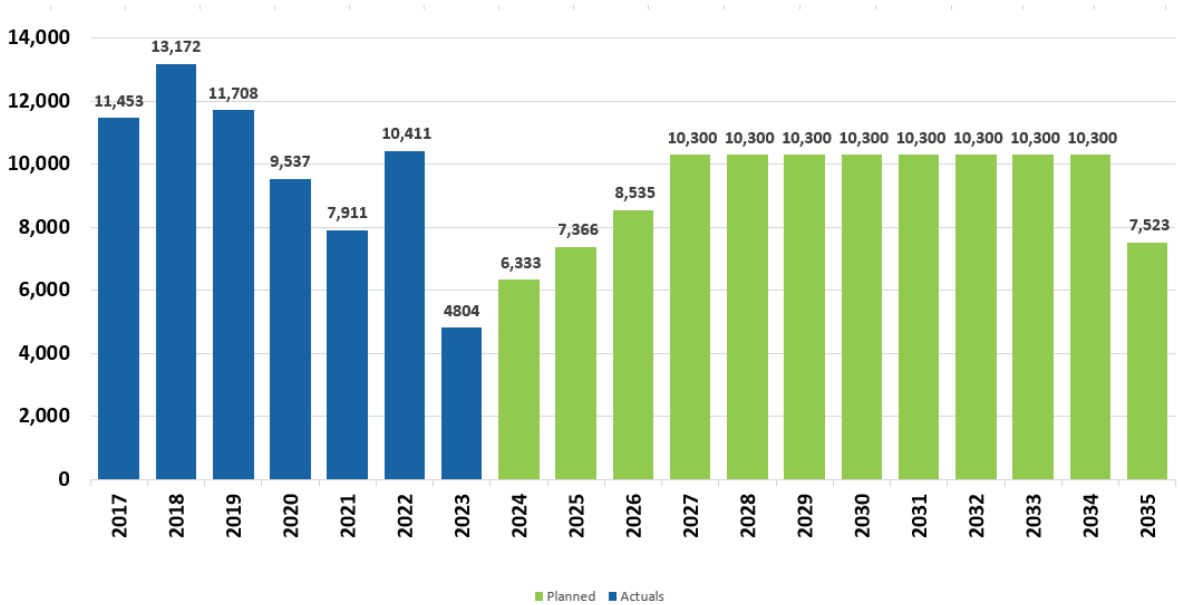
As of December 31, 2023, the system contains approximately 95,829 copper services, or 5.9% of all services and, in a much smaller quantity, the system also contains 6,556 bare steel services and 9,772 services for which the material is unknown.

Consumers Energy launched a Vintage Service Replacement (VSR) Program in 2017. Similar to vintage main replacement, the Company has **streamlined planning across all vintage remediation programs and leveraged construction efficiencies** to minimize customer impact to achieve completion by 2035.

Vintage services are classified into three groups. These services could be replaced by various programs including VSR, Civic, Leak, etc.

1. **In-Grid VSRs** are vintage services attached to a vintage main located within an EIRP project.
2. **Proactive In-Grid VSRs** are vintage **services** attached to a non-vintage main located within an EIRP project.
3. **Proactive Out-of-Grid VSRs** are **vintage** services located outside of an EIRP project.

Figure 25: Remediation Plan by Category for Vintage Services



4. MAINTAIN PACE OF VINTAGE MATERIAL REMEDIATION

The Company collaborated with external stakeholders, and concluded that completing EIRP and VSR programs by 2035 best balanced customer safety and reliability with affordability.

Benefits to Customers to Remediate Vintage Material

- A target of 2035 positions the Company to remove the risk from assets, and ensures the safety of customers and the public while balancing with affordability.
- Minimizing impact to customers using the grid approach. This approach reduces mobilization and demobilization to the same or nearby neighborhoods.
- Remediating vintage materials reduces methane emissions. Methane studies estimate that cast iron pipes leak almost 23 times more methane than plastic pipes, while unprotected steel leaks almost 10 times more.
- Improving local coordination with municipalities to better align timing of Company-planned work with public works projects.
- Limiting customer safety and reliability risk by more rapidly eliminating higher-risk vintage main pipe and services from the system.
- Improving system efficiency by reducing standard pressure on the system.
- Lowering gas losses and reducing methane emissions into the atmosphere.
- Reducing O&M costs for leak repair and survey as provided in the annual EIRP Performance Report.

5. FUTURE INFRASTRUCTURE RISK REDUCTION PROGRAM CONSIDERATIONS

Consumers Energy is identifying the next areas of high-risk after completion of the vintage material replacements. Currently under consideration are the following higher risk areas:

Services

- The Company has approximately 10,000 vintage service stubs made of copper, bare steel, and X-Trube steel on the system. Service stubs are a result of historical maintenance where a service was not retired or replaced due to limited access to the main.
- Replace metallic services currently not cathodically protected, as the cost of replacement of that service with plastic would be more economic than the cost to add cathodic protection.
- X-Trube services are of 1950-1960s vintage. X-Trube is protective-coated thin wall steel pipe. This material has the highest leak rate. Consumers Energy has approximately 100,000 X-Trube services on the system.

Mains

- Replacement of metallic mains that are not cathodically protected, as the cost of replacement of that main with plastic would be more economical than the cost to add cathodic protection. Cathodic protection did not begin until 1970, but Coated and Wrapped (C&W) mains were installed on the system since the 1950s. These mains therefore were used up to 20 years without cathodic protection. C&W unprotected pipe within the date range above and currently cathodically unprotected pipe would be evaluated and criteria developed to determine the focus area.

- Transmission Operated by Distribution (TOD) main on Consumers Energy's system that is not replaced under EIRP or other programs must be replaced to lower the SMYS below 20%, which addresses MAOP concerns and reduces operating costs.

6. REGULATOR STATIONS, ODORIZERS, AND STANDS

The Company operates and maintains approximately 657 regulator stations, 1,200 regulator stands, and 100 odorizers as of December 31, 2023. These assets regulate natural gas pressure to ensure safe delivery to customers. Regulator stands include 1" regulator units that feed smaller distribution systems.

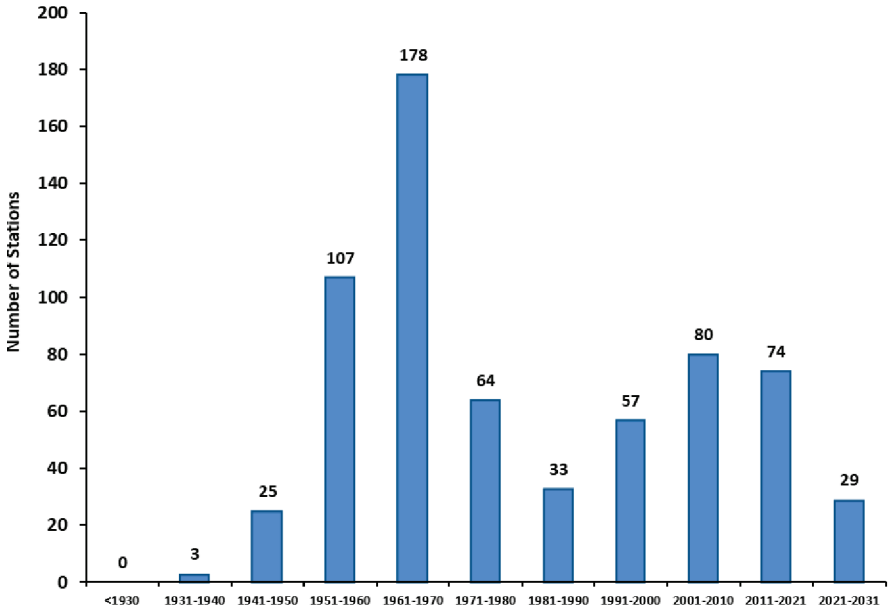
Regulator Stations

Regulator stations reduce pressure supplied from a higher-pressure system, including 2" and larger pipe that feeds a distribution region.

The 10-year goal for the regulator station fleet is to ensure 60% of all regulator stations are not in service longer than 50 years.

Investments made into regulator stations improve safety and maintain the integrity of the asset. These investments include over-pressure protection and SCADA monitoring equipment. Approximately half of the regulator stations were installed before 1971, as shown in Figure 26[10].

Figure 26: Distribution of Regulator Station in Service Dates



The asset life for a regulator station is approximately 50 years. To maintain an average lifespan of 50 years across the fleet of regulator stations, the Company must rebuild 8-12 stations per year at an average cost of $3 million per regulator station, while retiring four standard pressure serving regulator stations. This equates to an average program cost of approximately $30 million per year in station rebuilds.

[10] GIS database

Adding more distribution systems monitoring through SCADA, particularly at regulator stations and odorizers requires technology updates, including upgrades to the SCADA historian and monitoring systems.

These enhancements allow for additional data points to be monitored along with additional storage for that data. See the *Technology* section for additional discussion on SCADA monitoring.

Odorizers

Odorizers are assets that add odor to the downstream gas system, which is a critical safety element required by code.

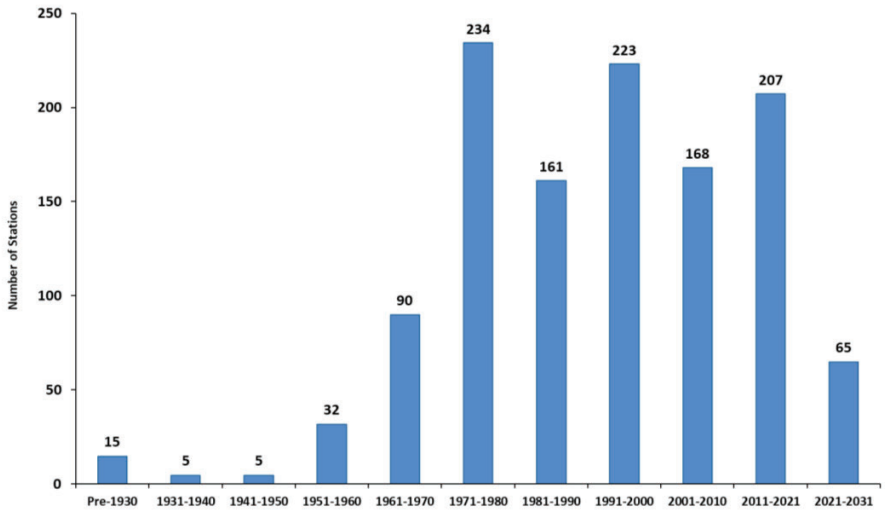
Odorizers are co-located at city gates and transmission valve sites, as required, to comply with State and Federal Pipeline Safety regulatory requirements. They deliver a potent smell notifying someone with a normal sense of smell of a gas leak. The year-over-year goal for the odorizer fleet is to ensure odorizer pumps are 30 years old or less, and that any exceptions are planned for replacement.

Currently, all odorizer pumps in the system are less than 30 years in service. The Plan allows for one odorizer station to be rebuilt per year independent of a city gate rebuild. This is a stable and reasonable trend that should continue for the next 10 years, maintaining all pump in-service dates less than 30 years.

Regulator Stands

Approximately 12.6% of the regulator stands were installed before 1971, as shown in Figure 27. Due to the age and condition of regulator stands, the Company plans to continue investments in these assets comparable to historical years.

Figure 27: Distribution of Regulator Stands Age Distribution



7. LEAK REMEDIATION

Employee and public safety are top priority. Consumers Energy uses regular leak surveys to identify and remediate potentially hazardous gas leaks.

As discussed above, a potent odorant chemical is delivered to the system which allows customers and other third parties to identify gas leaks before they become hazardous. Once notified of a potential leak, a response is provided within 30 minutes and a leak analysis is completed to determine the appropriate leak classification for repair scheduling.

Factors used in the analysis include gas concentration readings, distance of the leak from the outside of a building, and potential that gas could migrate into a building.

Leak repair scheduling is required per code—Michigan Gas Safety Code 192.703, 192.709, 192.711 and Michigan rules 318 and 327.

Minimum requirements for distribution system leak survey programs outlined in 49 CFR 192.723 are:

- At least once each calendar year, at intervals not exceeding 15 months, a leak survey using leak detecting equipment must be performed in business districts at all locations. This provides an opportunity to locate gas leaks (e.g., gas, electric, and water system manholes and sidewalk/pavement cracks).
- Outside of business districts, leak surveys must be performed at least every five years. For cathodically unprotected distribution lines, leak surveys must be conducted every three years.

Table 4 provides an explanation of how the Company currently classifies leaks on the gas system,

Table 4: Leak Classification at Consumers Energy

Leak Classification and Evaluation of Leak Severity and Prioritization of Repairs	
Leak Classification	**Definition**
Immediate Action	• Repair immediately (temporary or permanent repair) OR • Take corrective action to reduce the hazardous condition to a level which the leak can be reclassified as a Scheduled Action
Scheduled Action	• Repair or investigate the leak within the specified timeframe: ○ Distribution – 4 months ○ T&S – 4 months • A documented classification is required for each re-investigation. • Permanent repair must be completed within the specified timeframe. ○ Distribution – Within one year of the leak being found ○ T&S – As soon as feasible, based on re-investigation, ongoing review of system outages, and upcoming projects
Deferred Action	• Re-investigate the leak within one year of the date the leak was found. • A documented classification is required for each re-investigation. • If deferred again, re-investigate within a year from the new date.

In January 2025, the Company anticipates new requirements from PHMSA proposed regulatory amendments directed by the *Protecting the Infrastructure of Pipelines and Enhancing Safety Act of 2020* to reduce methane emissions from new and existing gas transmission pipelines, distribution pipelines, compression facilities, and underground natural gas storage facilities.

PHMSA's Leak Detection and Repair or "LDAR" regulations are pending. The anticipated effective date for the proposed regulatory amendments is June 2025. As currently understood, full compliance to the regulations is required by January 2028.

As of December 2023, the Company has approximately 5,622 total active leaks. In preparation for the anticipated PHMSA rulemaking, the Company is assessing the current leak backlog and how to best address all new leaks.

To balance our pace and prioritization of system needs with affordability, the Company will prioritize and remediate across all programs, such as the leak renewal and vintage material programs, to reduce overall risk.

8. SYSTEM AUGMENTATION FOR RELIABILITY

During periods of high customer demand in cold temperatures, areas are identified with a need to address low delivery pressure or service losses to customers.

System augmentation projects are designed and constructed to enhance capacity and maintain service to customers in these areas.

Examples of large augmentation projects currently planned for 2024 through 2026 include:

- Connecting the existing medium pressure distribution system to a new outlet at the Orion city gate. This requires construction of approximately 1,100 feet of six-inch medium pressure plastic main. The connection to the new outlet enhances capacity and resilience in an area where growth could create low pressure conditions. This project is planned for completion by November 2024.
- Installation of approximately 1,700 feet of four-inch plastic medium pressure main on Rives Junction Road and 1,300 feet of two-inch medium pressure plastic main on Parnall Road in the Jackson area to construct a looped gas supply to reduce risks of low pressure as well as improve resilience on this main. The project is planned for construction during 2026.
- Installation of approximately 1,100 feet of six-inch plastic medium pressure main on Belsay Road that connects with existing two-inch medium pressure main on Burton Estates Drive east of Flint. This project will address low pressure conditions experienced during the winter of 2022-2023 in this area, and improve resilience in this area. Construction is planned to occur during 2025 for this project.
- The Beaverton Shaffer Road east of Alamando Project involves the construction of 7,050 feet of 12-inch steel high pressure main that will be constructed parallel to existing six-inch high pressure main out of the Coleman Beaverton city gate station. This capacity expansion will improve delivery pressure in an area of growing demand. This project is planned for construction during 2025.
- The Crooked Lake Road - Latson Road Project will construct 3,000 feet of six-inch medium pressure plastic main to create a looped system near the end of two existing distribution main systems. This augment project will improve deliverability by creating a back feed and increase the system pressure. The resilience of the system will also be enhanced by the looped system. This project is planned for construction in 2024.
- The Galesburg - Celery & River Street project will construct a 6,900 feet of eight-inch-high pressure steel main from the Galesburg city gate outlet to Comstock Avenue & Celery Street in the Kalamazoo area. This will create a looped system from the Galesburg city gate high pressure outlet, increase the delivery pressure and reduce the risk of customer outages due to damage or failure. This project is planned for construction in 2024.

9. MAOP RECONFIRMATION AND COMPLIANCE PROJECTS

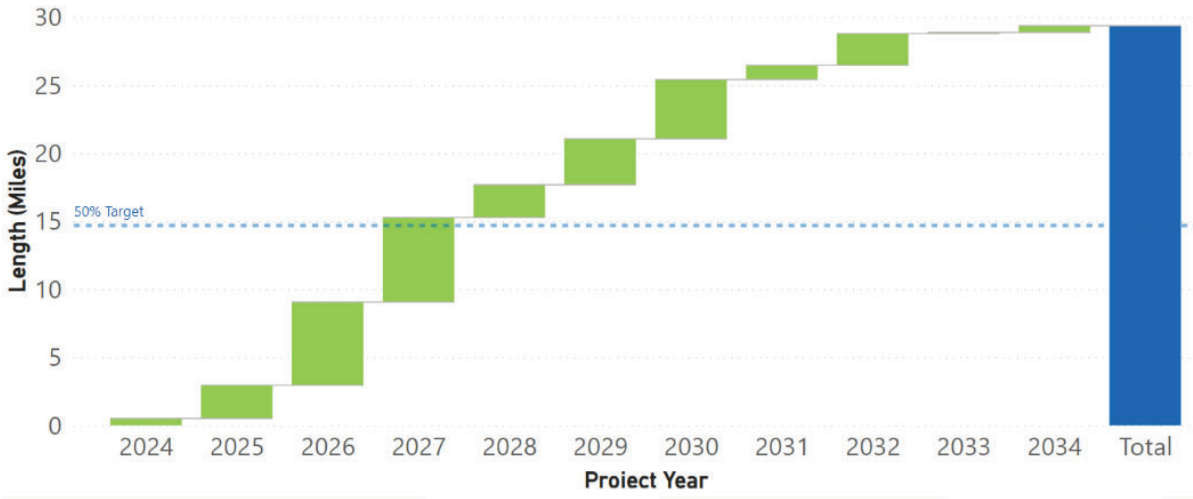
Compliance with State and Federal Pipeline Safety regulatory requirements support the Company's goal of providing safe and reliable natural gas service to customers. Various distribution line segments are being evaluated for compliance with MAOP standards.

Per Federal requirements, the Company must operate gas distribution line segments in a manner consistent with maximum allowable operating pressures. This requires reconfirmation of pressure test records and remediate line segments where no pressure test records exist that meet PHMSA's expectations for traceable, verifiable, and complete documentation.

Compliance milestones related to MAOP projects include a requirement to complete all required actions on 50% of the pipeline mileage subject to MAOP reconfirmation requirements by July 3, 2028, and complete all required actions on 100% of the pipeline mileage subject to MAOP reconfirmation requirements by July 2, 2035. A listing of currently planned MAOP projects is provided in Appendix F.

In addition to the work being done by the Company to evaluate compliance with MAOP standards, it was determined that Line 1080, which serves customers to the west of Kalamazoo, must operate at a lower pressure to comply with Federal requirements. Pipeline modifications are planned for construction during 2025 and 2026.

Figure 28: Planned MAOP Distribution Miles Reconfirmed



10. CUSTOMER METERING

The Company routinely purchases meters, regulators, and related equipment for serving new business connections, the Routine Meter Exchange Program (an MPSC requirement), service renewal meter move-outs, and normal replacement of obsolete or broken meters.

The Company currently uses temperature-compensated diaphragm (regulated and top connect) meters, rotary meters, and purchases gas meter communication modules ("GCM"), gas electronic volume corrector units ("EVC"), and testing equipment.

From 2015 to 2019, the Company installed GCMs manufactured by Itron on more than 1.8 million existing gas meters as part of the AMI and AMR projects. Gas smart meter technology using cellular communications, like the AMI solution deployed for electric customers, was not available.

In 2020, Itron customers, including Consumers Energy, received end-of-product-life notices for the GCMs and diaphragm meters currently in use.

The Itron announcement regarding the end of life for their diaphragm meter product line impacts approximately 1,600,000 installed regulated diaphragm ("RM") customer meters. These meters have a different connection method compared to the top connect ("TC") diaphragm meter, and will require a meter stand rebuild to accept a TC meter. In view of this, the Company began proactively rebuilding RM meter stands in 2020, starting with multi-meter stands.

The new meter stands include a meter bypass that will improve safety and reduce customer interruptions during exchanges, accept the industry standard top connect meter, and will enable the Company to improve multi-meter installation designs by allowing the installation of one master regulator to serve multiple meters.

Due to the gas metering technology obsolescence announcements from Itron, the Company is investigating various scenarios, including projected costs and schedule, for conversion of all RM meter stands to TC meter stands. The conversion will require a new TC meter and regulator be purchased to replace the RM meter.

While investigating various metering scenarios, there is an emerging trend among natural gas utilities to use single path ultrasonic gas smart meters ("USM") for customer metering. This type of meter offers many advantages, including improved measurement accuracy, remote shut-off capabilities, and hi-flow detection.

In 2024, the current USMs available do not include a cellular communications option but that option is expected to be offered in 2025. The Company will continue to evaluate changes in metering technology to incorporate the migration of customers to gas smart meters into the scenarios evaluated.

Installation of TC meter stands will provide the opportunity for future gas smart meter technology upgrades with minimal field changes. The different types of meters, including an example of a residential gas smart meter (Itron Intellis Ultrasonic Meter (USM), are shown in Figure 29.

Figure 29: Meter Types

Regulated Meter (RM) | Top Connect (TC) Meter | Top Connect (TC) Meter w/Bypass | Itron Intellis USM

11. NEW BUSINESS

The New Business Program consists of adding infrastructure to serve new commercial, industrial, and residential customers. These projects are required in response to customer requests for new gas service.

Customers who request service share in the construction costs with the Company based on the appropriate tariffs approved by the MPSC. During 2022, customers contributed approximately $7 million to new business project costs, increasing to more than $10 million in 2023.

The program costs include the cost of installing mains, services, regulators, and the cost of meter stands to serve new customers. Between the years 2019 and 2023, the Company connected 37,909 new gas services to its gas distribution system.

The Company uses forecasting data from multiple sources to forecast and plan for new business growth. During July 2022, the University of Michigan Research Seminar in Quantitative Economics published its long range economic and demographic projections for Michigan through 2050.

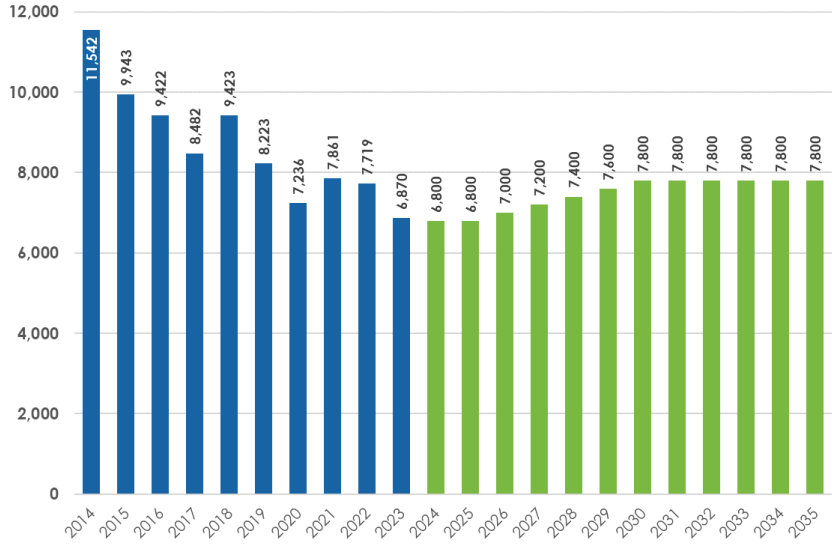
Michigan experienced declines in population during 2020 and 2021 and was expected to decline again in 2022. Population levels are projected to grow through 2046, then begin declining each year through 2050.

During the 2020 to 2050 period, the number of households in Michigan is forecasted to increase to 432,815 households, or 10.9%. The pace of household growth will exceed the pace of population growth as single person households become a larger share of total households due to aging demographic characteristics. Growth rates in many of the counties served by the Company's gas utility should exceed the statewide average. For example, Macomb County and Oakland County are projected to experience population gains of more than 10%.

Based on recent analysis of housing market data, the Company believes that service connection volumes for 2020 through 2023 represent activity levels that are negatively impacted by numerous factors since the onset of the COVID-19 pandemic. This includes periods of construction labor constraints, inflated lumber prices, shortages in electrical transformer supply, and increasing mortgage interest rates. Even prior to 2020, it is generally accepted that the pace of new housing construction in Michigan has not kept pace with demand. As a result, current constraints on the supply of available housing make it difficult for new households to find affordable housing.

The Company reasonably expects annual connection volumes to grow incrementally at a modest rate of approximately 200 services per year beginning in 2026 and stabilizing around 2030 as shown below in Figure 30. Housing starts economic indicator projections provided by S&P Global Market Intelligence in May 2024 (Michigan forecast) and the National Association of Home Builders in April 2024 (U.S. forecast) both support growth in projections of housing construction activity starting in 2025.

Figure 30: New Business (Number of Service Connections)



The Large New Business Program includes new customer connection projects where the estimated infrastructure cost exceeds $500,000, a facilities agreement is required for unpredictable operations, or the connection is deemed necessary for special tracking and therefore included in a separate sub-program.

Projects are generally created under this program when the requesting customer has signed a contract with the Company documenting the load requirements and revenue expectations.

There were two projects completed under this program in 2024:

- A 1-mile extension of 8” high pressure steel main to serve a battery manufacturing facility in Marshall, with an estimated annual usage of 2 billion cubic feet (Bcf).
- A new plant that supports the semiconductor industry in Hemlock, extending approximately 4,500 feet of 6” high pressure steel main to support an estimated 0.5 Bcf of added annual gas usage.

In 2025, there is an approximate 200-foot extension of 8” high pressure steel main to serve a natural gas-fired electric generation facility expansion in the Lansing area, with an estimated annual usage of 2 Bcf.

12. ASSET RELOCATION CIVIC IMPROVEMENT

According to the 2023 Report Card for Michigan’s Infrastructure, published by the Michigan Section of the American Society of Civil Engineers (or “ASCE”), Michigan is making progress in reversing underinvestment in the state’s infrastructure.

State and Federal funding sources have included $3.5 billion in bond funding from the *Rebuilding Michigan Program* and $4.7 billion from the *Building Michigan Together* Plan. The 2021 Bipartisan Infrastructure Law also provides $11 billion to address needed infrastructure projects. The ASCE’s 2023 Michigan Infrastructure Report Card assessment shows modest improvement in the overall grade from a D+ in the 2018 report card to a C- in the 2023 report card. Roads and Stormwater infrastructure grades have improved from a D- in 2018 to a D in 2023.

Civic Improvement Relocation projects frequently involve replacement of vintage mains and services, avoid third party damage to non-vintage facilities, and reduce the potential for leaks when infrastructure contractors are working around vintage main.

The annual replacement of vintage mains and services are documented as part of Attachment 9 *Non-EIRP Distribution Main Replacement Project Metrics*, which is included in the Company’s enhanced infrastructure replacement annual reports.

From 2019 - 2023, more than 181 miles of metallic pipe was retired through the construction of Civic Improvement projects.

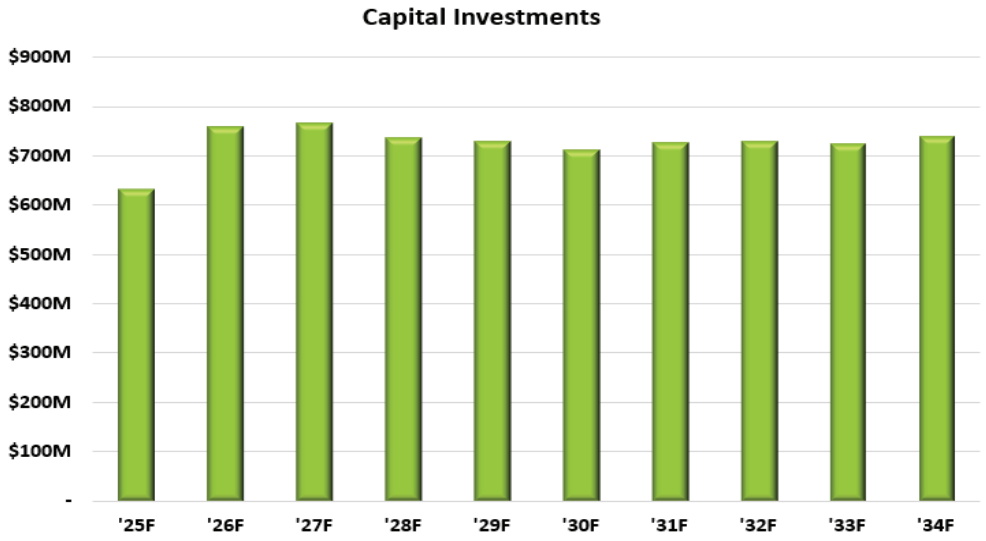
13. DISTRIBUTION ASSET FINANCIALS

Consumers Energy’s largest capital increase is due to vintage material remediation. The Company believes it can lower remediation costs through economies of scale and work management improvements.

With the extension of the EIRP and VSR programs to 2035, the Company expects the total main and services remediation to cost approximately $5.2 billion. The capital investment plan for the entire distribution asset class is shown in Figure 31.

Overall, this investment plan for the distribution asset class aligns with the objectives by **reducing asset risk** that is closest to the customer (safe), ensuring the **system is able to deliver gas as required** (reliable), **balancing the pace of system improvements** to preserve customer affordability (affordable), and **reducing the amount of emissions** in this system, which equates to more than one-third of the Company's methane emissions (clean).

Figure 31: Distribution Capital Investment Plan



V. Operational Capabilities

Operational capabilities surround people, process, and technology to enable achievement of the 10-year objectives, goals, and outcomes.

A. People – Talent and Workforce Approach

The Company is focused on how to safely deliver for customers by ensuring Consumers Energy has the right people, with the right skills, at the right place and time.

1. INTERNAL RESOURCES

- The Company is placing a **strong focus on hiring skilled trade workers and engineers, and creating a diverse, equitable and inclusive employee experience** to ensure the Company is attracting and retaining the most qualified candidates.
- To prepare for the skills of today and tomorrow, Consumers Energy has developed a **full-scale Gas City Training Village** that trains coworkers through real-time, hands-on situations and continue relentless focus on making safety the top priority.
- To prioritize asset protection, the Company is **evolving cybersecurity skills** as technology becomes more integrated with assets. As customer expectations shift, the Company will need a workforce skilled in leveraging the power of data, and empathy, to meet customer needs.

- More than 1,400 coworkers inspect, maintain, and build our natural gas system. This framework facilitates the **matching of coworkers, capabilities, and qualifications to the requirements of the business to minimize the risk and costs of turnover**. The Company also developed a competitive Michigan workforce of approximately 500 coworkers that is focused specifically on the natural gas infrastructure.
- The Company focuses on attracting, developing, and retaining engineering talent through the Company's Entry Engineer Program and Engineering Intern Program. These programs build technical engineering and design capabilities, ultimately ensuring adequate pipeline for engineering talent specific for the Company's natural gas system.

2. DIVERSITY, EQUITY & INCLUSION IN THE ENTIRE TALENT LIFECYCLE

As one of Michigan's largest employers, Consumers Energy is building a world-class, inclusive workforce where diverse groups of people feel safe and welcome at work. The Company workforce strives to be wholly reflective of the communities it serves. To drive innovation and provide the best energy products, Consumers Energy is creating a pipeline to become an employer of choice for under-represented communities in high demand occupations. To ensure an adequate talent pipeline, multiple forums are used to attract, retain and grow people described in detail in Appendix D. A few examples include:

- **Diversity of our line workers**: To ensure every co-worker has an equitable opportunity to succeed, talent pipeline programs are built in diverse communities to increase equitable access to our skilled-trade positions.
- **Connecting youth with energy innovation**: Over 300 Consumers Energy employees volunteer their time as Talent Ambassadors with K-12 student throughout the communities it serves to discuss career pathing and other utility-related professional development opportunities.
- **Apprenticeship training programs**: Consumers Energy offers in depth training programs designed to further the skills, knowledge and ability of its existing workforce including certification program recognized by the Department of Labor as a certified Apprenticeship.
- **Workforce development opportunities**: Development opportunities include community engagement, hardware manufacturing, hardware/software design, data analytics, installation, and operations. To attract talent from the communities served by this project, Consumers Energy will work to better understand workforce challenges in specific areas and find ways to address concerns for skilled labor and professional careers.

Regarding skilled labor, the project will involve the installation of new hardware throughout the service territory. Consumers Energy and its technology vendor, Utilidata, will work with labor organizations on new training material and field demonstration guides intended for metering technicians.

Regarding professional careers, Consumers Energy will work with institutes/schools within Michigan on coursework that addresses artificial intelligence predictive modeling for the distribution grid. As part of this process, Consumers Energy will explore the possibility of creating an internship program that places students that have completed the relevant coursework into data analytics, software design, or grid modernization teams.

3. DIVERSITY, EQUITY & INCLUSION MOVEMENT STANDS

To quantify this work, several DE&I Movement Stands exist including Culture, Talent, Supplier Diversity and Philanthropy. These stands include multi-year goals that support our strategy, are aligned with our Executive DE&I Council, and represent measurable aspirations. See Appendix E for further information.

Table 5: CE DE&I Movement Stands

Our Movement Stand	2024 Measurement	2025	2028
Culture: The Company includes and values people of all backgrounds in the company and culture.	+2 increase from 2023 score on DE&I Index	+2 over YE	93
Talent: Every **current** and future coworker has an equitable opportunity to succeed.	Engineering roles at/above labor market availability: 49%	54%	79%
	Operational roles at/above labor market availability: 53%	58%	63%
Philanthropy: The **Company** creates equitable, sustainable change to support social justice initiatives throughout Michigan.	$5 million	$15M	$40M
Supplier Diversity: The Company will **double** its spending with diverse suppliers to achieve 1st quartile.	11.90%	14%	1st Quartile

4. ENERGY AND ENVIRONMENTAL JUSTICE (EEJ)

Consumers Energy is dedicated to our purpose to achieve world class performance delivering hometown service, measured by a triple bottom line - **People, the Planet, and Michigan's Prosperity.** This commitment guides decision making for an equitable clean energy future.

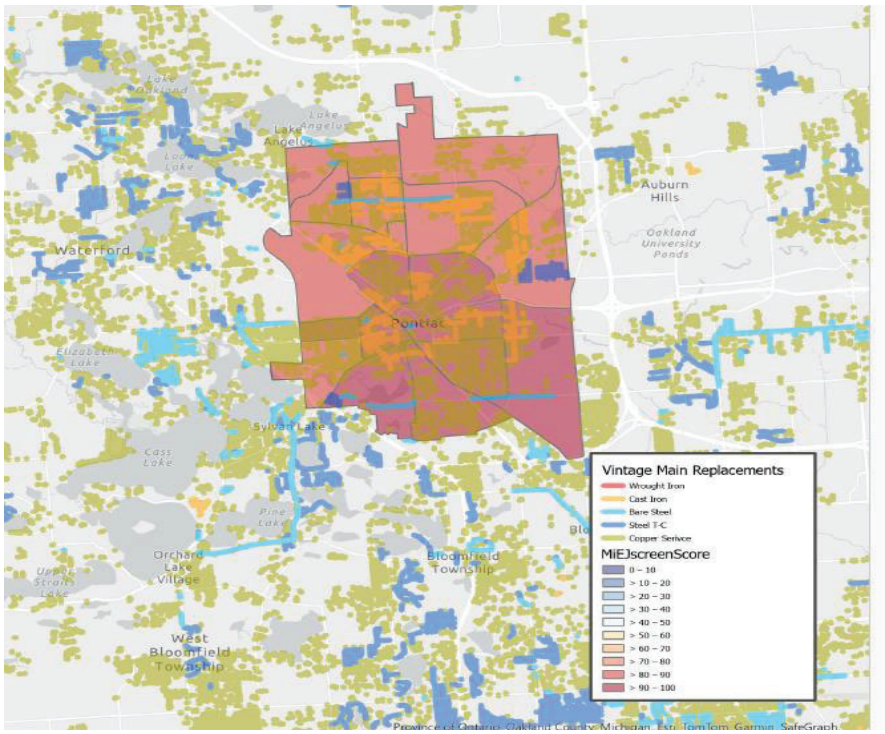
CMS Energy is dedicated to engaging communities to understand unique needs and provide platforms for collaboration. Responsibility for EEJ is designated to the Diversity, Equity and Inclusion Department as well as our Environmental Quality and Sustainability Department.

In addition, Consumers Energy is currently developing a comprehensive EEJ Strategy Playbook, to guide both internal and external actions, and emphasize the importance of enhancing more equitable and inclusive community stakeholder engagement pathways.

The Company is assessing how to best incorporate EEJ considerations into the overall planning process across all asset classes.

As shown in Figure 32, the MiEJScreen tool, operated by Environment, Great Lakes and Energy (EGLE), will be used to identify the highest impacted areas within the Company's service territory. Regions with scores of 80+ is defined as an EEJ community. The Company is seeking to better understand factors including vintage materials and vintage systems in these areas.

Figure 32: MiEJScreen illustration - Pontiac



B. Process – Operating System Approach

The Company is committed to operational excellence. At Consumers Energy this means achieving a state of performance that enables the Company to deliver on its purpose.

Through application of Lean principles (The CE Way), work management enhancements, and the Gas Safety Management System, the Company is transforming how it operates to improve performance, customer experience, identify efficiencies in the business, and minimize risks.

1. THE CE WAY

Consumers Energy's purpose of 'CMS Energy: World Class Performance Delivering Hometown Service' means ensuring the Company delivers safely, reliably, affordably, and with the highest quality. Examples of performance improvements can be seen across the organization because of the Company's Lean journey.

In 2016, Consumers Energy began its Lean journey, The CE Way, to provide the best value for customers through a culture of continuous improvement. This is the adaption of the Company's lessons learned in manufacturing and other industries applied to design, construction, and operations of utility assets to continuously improve safety, quality, cost, delivery, and morale.

In 2017, the Company launched the 4 Basic Plays (Visual Management, Operating Reviews, Problem Solving, and Standard Work) as a prioritized approach to begin implementing the CE Way. These basic plays establish a strong capability for delivering value to customers and achieving breakthrough performance. The CE Way Basic Plays are interdependent and achieve maximum effectiveness when implemented together.

The next step in our CE Way journey is to combine data with the Basic Plays to deliver a CE Way + Digital approach. Combining the CE Way with data increases the speed and accuracy of decision-making.

2. WORK MANAGEMENT AND CONTRACTOR OVERSIGHT

As part of the operational excellence process, **work management is a key to successful execution of this Plan**.

Work Management

Work Management provides a well-structured, predictable, and repeatable process, and describes the lifecycle from intake and system planning all the way through Engineering, Scheduling, Field Operations, and Closeout.

Effective work management eliminates defects and maximizes efficiency and productivity. The Company is assessing how digital tools in every step of the end-to-end process can further enhance productivity and cost efficiency.

Digital tools are an important component of eliminating unnecessary steps to simplify processes and make them as efficient as possible. See Technology for specific digital investment plans.

Enterprise Contractor Oversight

Enterprise Contractor Oversight ("ECO") is a key initiative for the effective oversight of contracted work for higher risk (level 3 & 4) activities.

ECO provides a framework for governance, performance monitoring, and controls of contractor work across the entire Consumers Energy Enterprise, including gas, electric and project management. The goals of ECO are to:

- Design and implement a Center of Excellence ("CoE") covering all aspects of Contractor Oversight.
- Implement risk-based standardized contractor prequalification processes, procedures, and tracking metrics.
- Develop remote inspection capability allowing for oversight of all contractor operations.
- Create standardized contractor performance metrics paired with common contracts, in line with Consumers Energy's Safety Culture.

3. GAS SAFETY MANAGEMENT SYSTEM (GSMS)

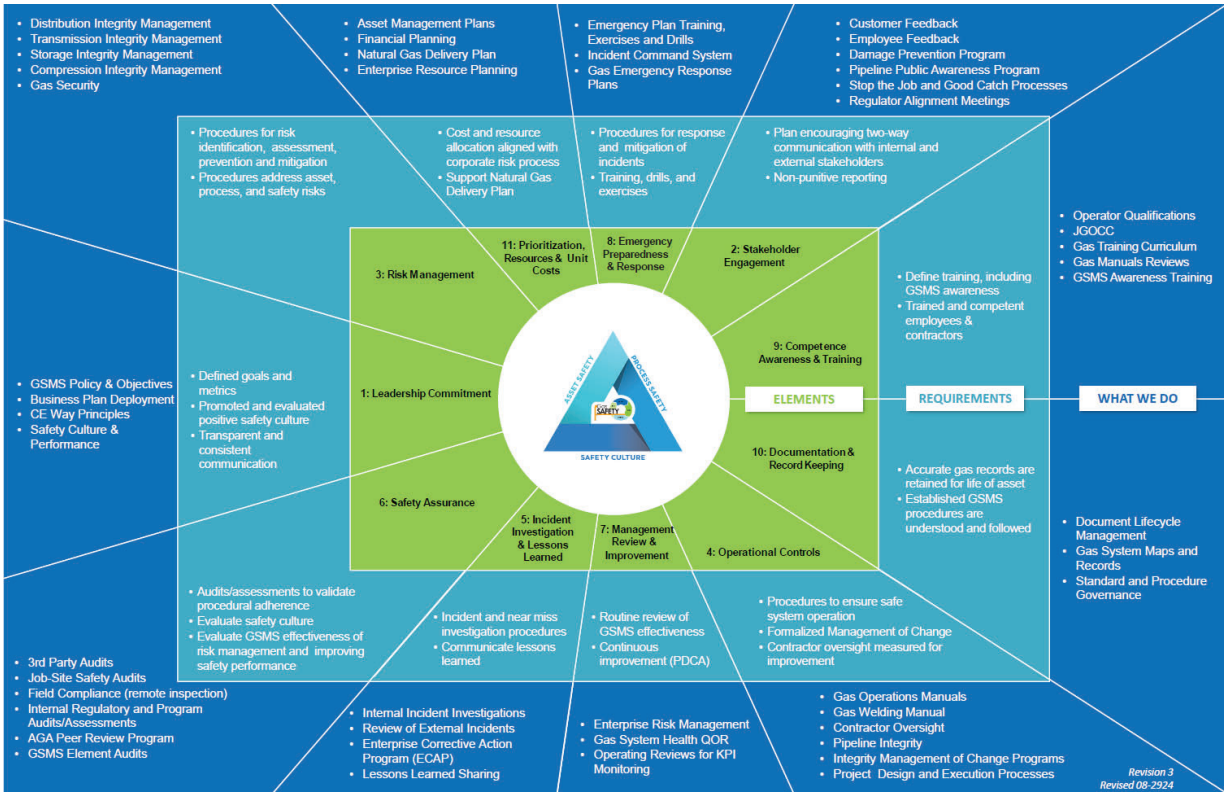
The Company is engaged in continuous improvement of the Gas Safety Management System ("GSMS"), identifying and mitigating risks related to the operation of the gas system.

GSMS is the Company's approach to conforming to the requirements of API RP 1173. The elements and related processes included in the GSMS are referenced in Figure 33.

In support of continuous improvement, the governing policy for the GSMS was expanded in 2024 to encompass additional areas of the utility. The CE leadership-approved policy states "Consumers Energy employees and contractors will comply with regulations, adhere to and continuously improve all Company natural gas, electric, and supply policies and procedures to improve overall system safety and reliability for Michigan and our co-workers."

To support the policy in action, GSMS maintains visibility of key performance indicators to leadership resulting in identification of improvement opportunities that enhance gas asset safety. Improvement opportunities are managed through the enterprise corrective action program developed as a part of GSMS.

Figure 33: Overview of Gas Safety Management System



4. ENTERPRISE CORRECTIVE ACTION PROGRAM ("ECAP")

The ECAP provides an enterprise standard and governance, supported by an auditable, electronic system of record (DevonWay). This enables reporting of potential and identified non-conformance events and issues. This process primarily supports the Incident Investigation, Evaluation & Lessons Learned element outlined in our GSMS program in accordance with API RP 1173.

A dedicated ECAP team, supports an industry benchmarked CAPA process outlined in the ECAP standard as follows:

1. *Issue Identification* – System, Asset and Process Safety issues/findings and/or events.
2. *Evaluation of Issue* – Risk ranking (impact and severity) in the context of Safety, Regulatory Compliance, Financial, Environmental and Reputation.
3. *Detailed Investigation* – Utilizing a systematic methodology to identify root cause(s) so corrective action plans address more than just symptoms, but systemic issues.
4. *Implementation* – Corrective Actions planned, approved, assigned and implemented as designed.
5. *Verification* – Confirmation with objective evidence that the issue has been adequately addressed and risk mitigated/eliminated.
6. *Effectiveness/Sustainability Review* – A periodic assessment post verification that recurrence of original issue is no longer present, and actions once implemented are sustained.

Performing this standard CAPA process prioritizes issues commensurate with the evaluated incoming risk. This process resulted in a year over year decrease in non-compliance violations and enterprise risk on the system.

5. GAS DAMAGE PREVENTION STRATEGY

The Company's vision for Damage Prevention is to **improve compliance with Public Act 174 through reducing and preventing excavation damages to the gas distribution system** in support of employee and public safety.

Damages are caused by home/business owners or excavators digging around Consumers Energy gas distribution assets. The primary causes of damages are due to:

- Inadequate excavation practices (failure to hand dig, failure to maintain marks, improper backfilling).
- Failure to call MISS DIG and working outside of valid ticket window.
- Locating practices not sufficient (mismarked facilities, record errors, system issues).

A series of field programs are deployed to support the 3rd party excavating community with industry best practices including:

- Proactive outreach program – risk-based outreach program to assist the excavating community proactively including coaching and training, locating assistance.
- Repeat damager program – step escalation program targeted to mitigate the highest risk excavators.
- No-call damager program – coaching and enforcement program to mitigate the highest risk excavators not properly using one call processes.

The Company is also planning to engage in discussions with repeat third-party damagers and collaborate with regulatory stakeholders, to continue to improve in this area. Key considerations in the strategy are **focused on behavioral change, including a combination of trust, relationships, and accountability**.

In 2023, a dedicated gas distribution workforce was established to improve timeliness, accuracy, and excavator communications on projects and serves specific Consumers Energy needs leading to improved timeliness compared to historical performance. This will be achieved by having a single utility focus for ticket management.

Another key objective is quality, with **improved staking accuracy performance** compared to recent historical data. **Improved communications with the excavating community** will be enabled by use of enhanced positive response. The Company tracks timeliness and related cause of contractor damages to show the benefits realized from the dedicated model.

In 2024, the Company expanded the dedicated gas distribution workforce to include 30% of total ticket volumes.

In the first quarter of 2025, the Company plans to expand the dedicated workforce to include 100% of total staking ticket volumes.

Plans for the dedicated workforce implementation were accelerated after the analysis of 3rd Quarter 2024 requests for proposal resulted in a dedicated workforce approach being more economical when compared to a shared workforce approach for the remainder of the companies' gas service territory. This is, in addition, to the realized performance improvements in timeliness and staking accuracy.

6. LOST AND UNACCOUNTED FOR GAS

a. Overview of Lost and Unaccounted for Gas

Lost and Unaccounted for ("LAUF") Gas is the difference between the total measured transmission and distribution pipeline system gas volumes received less gas volumes delivered.

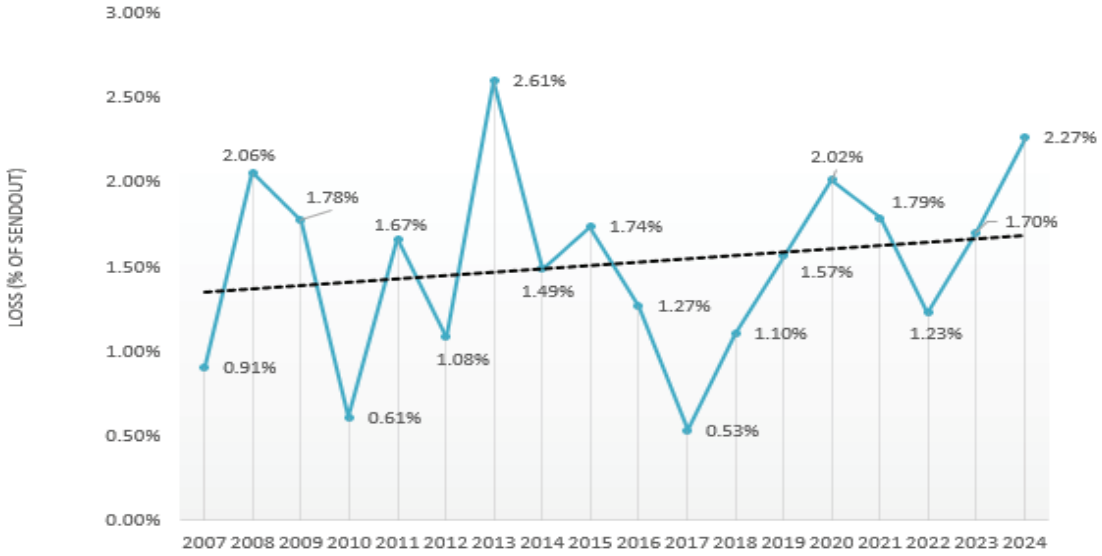
A 'loss' occurs whenever measured receipts are greater than the deliveries of the pipeline system. Conversely, a 'gain' occurs whenever measured deliveries are greater than the measured receipts. Factors that contribute to gas losses and gains are described in section b.

LAUF = (Total Measured Input Volumes - Total Measured Output Volumes)

The Company calculates LAUF annually, based on 12 months ending July 31. This is the percentage used for reporting purposes. There is natural variability in the yearly data due to factors such as weather and load distribution.

As shown in the chart in Figure 34, the overall trend shows an average loss of 1.48%. Through general rate cases the Company recovers LAUF expenses based on a five-year average of line losses, based upon current cost of gas.

Figure 34: LAUF Historical Reporting (volumes for 12 months ending July 2007-2024)



b. **Factors Contributing to Gas Loss**

There are many factors that contribute to gas losses or gains. The most common factors are related to equipment, measurement accuracy, theft, and leaks.

- Equipment issues can be incorrect sizing, condition, and location of meters and meter components.
- Incorrect calibration of meters and/or transmitters, data interface, and communication errors between systems can also cause inaccuracies.
- Other factors are inaccurate estimates of lost gas during venting of gas or when damages to the system occur, and stolen gas.

c. Plan for LAUF Monitoring and Control Improvements

1. Smart Energy and Gas AMR

With the completion of the AMI and Gas AMR projects, the Company will incorporate monthly calendar reads for the calculation of delivered gas to sales customers, reducing the impact of cycle billed reads. This mitigates the unbilled volumes inherent in the lag between meter reads and customer billing.

2. Gas Quality and Measurement Improvement Projects

Pressure, temperature, and gas quality are the contributors to accurate measurement. To increase measurement accuracy for volume, heat content, specific gravity, pressure, and temperature effects, the Company plans to replace 230 orifice meters, which range in age from 50 to 65 years old, using highly accurate ultrasonic meters ("USM") and install 20 additional gas chromatographs across the state over the next 15 years.

3. **Increase Utilization of Flow-Cal Enterprise Gas Automation Software**

   Gas system segmentation within the Flow-Cal system includes installation of boundary meters to enable system segmentation and tracking of LAUF by zones (segments). Further refinement into zones results in improved LAUF tracking and issue identification.

4. **Infrastructure Improvements**

   The age and materials of the distribution system affects LAUF. Natural deteriorations in vintage materials causes corrosion and cracking in piping which results in leaks across the system. Replacement of vintage materials and other aged assets should reduce gas loss over time.

C. Technology – Digital Approach

Digital capabilities optimize compression and storage assets, modernize the distribution and transmission systems, incorporate predictive and condition-based maintenance, transform work management, and ensure physical and cybersecurity of assets. From a digital perspective, Consumers Energy's is focused on:

- Faster delivery with new practices such as adopting agile frameworks.
- A move to cloud solutions where and when appropriate.
- Data as an asset and deployment of larger-scale analytics.
- Deployment of a consistent asset management system/framework.
- Deployment of integrated control systems for system automation.
- Continuous operational improvements through automation.
- A commitment to ensure digital investments do not introduce unnecessary risk to the Company or its customers, and to protect sensitive data and critical infrastructure from cyber threats.
- Evaluating current strategic platforms to ensure they are fully leveraged/optimized, and implementing enhancements as needed to provide new functionality for emergent business and customer value.

  Evaluating new platforms that can further enhance the Company's capabilities. This is in alignment with API RP 1173, "*11.2 – Management shall also periodically evaluate new technology that may enhance pipeline safety.*"

1. LOST AND UNACCOUNTED FOR GAS

Supporting digital capabilities including platforms, tools, processes, and frameworks enable business outcomes. Key capabilities are shown below:

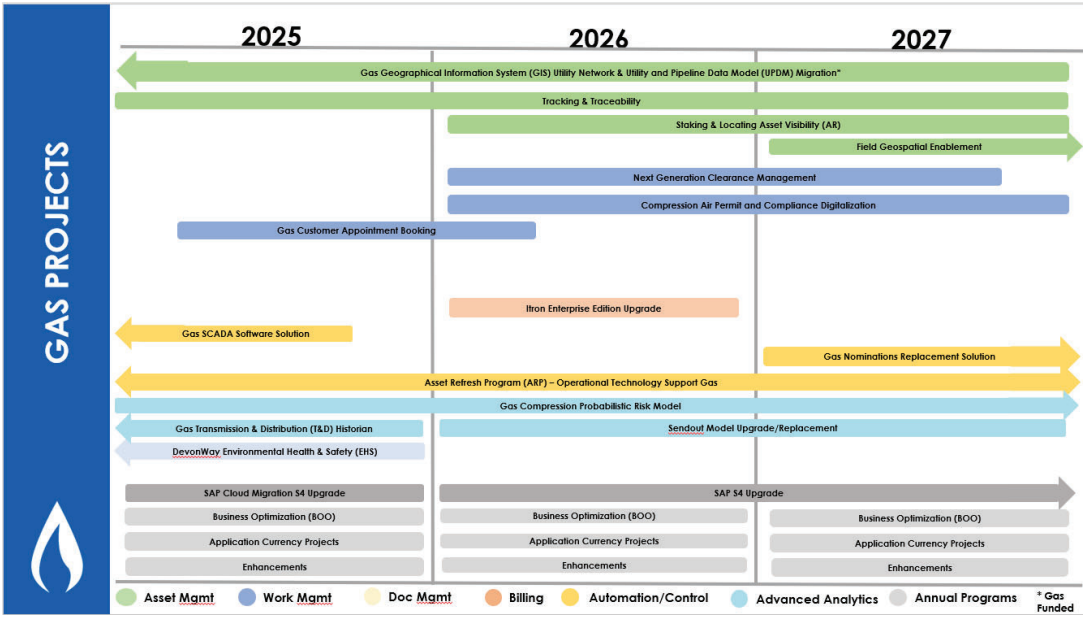
- **Data and analytics** – Accurately manage and collect data, integrate across systems and applications, and create insights to inform business outcomes and decisions.
- **Data management and governance** – Manage data as an asset through data life cycle process (create, update, and delete) for master data management.
- **Data integration** (Application Programming Interface Fabric) – Integrate data across platforms, systems and applications with a reusable framework to increase speed of delivery for new integrations, and avoid costs associated with point-to-point integrations.
- **Work automation with artificial intelligence** – Automate repetitive tasks through software to improve efficiency and productivity. This includes low-code/no-code application platforms that enable employees across the Company to build simple applications to automate their business processes.

- **Cloud platform enablement** – Manage scalable solutions, platforms, and technical infrastructure remotely over the Internet to flex capacity with demands. Consumers Energy is currently using cloud solutions by adopting Software as a Service ("SaaS") and Platform as a Service ("PaaS") offerings. Key platforms include EWN Services Operator Qualifications for tracking and renewals of employee's qualifications, ARCOS solution for employee schedules and callout, ESRI's ArcGIS Online for creation of focused mapping and analysis solutions, ServiceNow, Office 365, and SAP SuccessFactors are examples of SaaS solutions that have been implemented.
- **Cloud technologies** – Integrate data and run advanced analytics at scale using leading machine learning and artificial intelligence frameworks.
- **Electronic content management** – Manage enterprise content/data to enable digital document management for retention, compliance, and privacy.
- **IT Infrastructure and Communications Technology** – This technology is critical to business applications, providing a strong backbone required for supporting 24 x 7 Operations. The technology is key to manage data, voice and multimedia communications through a reliable and redundant network infrastructure with robust frameworks to protect physical and cybersecurity assets. The technology also supports communication for truck connectivity, virtual private networking, mobile phone connections, and field communications. Field communication via 800 MHz radio provides dedicated mission critical connectivity between dispatch and field operations. The Company recently migrated to the Michigan Public Safety Communications System to improve coverage and reduce costs.

2. TECHNOLOGY INVESTMENTS

The Plan includes digital investments in the following areas: asset management, work management, system automation and control, security and privacy, and advanced analytics. An overview of digital projects over the next few years is shown below in Figure 35.

Figure 35: Overview of Consumers Energy Digital Projects



a. **Asset management** investments include the ability to store, manage, and track Company gas assets as part of asset life cycle management and predictive maintenance practices.

- Projects include the transformation of the Enterprise gas GIS system to the new industry standard Utility Pipeline Data Model, and implementation of the Utility Network extension to merge the transmission and distribution into one data model. This will allow:
  - A unified Gas GIS by combining Transmission and Distribution networks into their respective GIS data models: Gas: Wells → Meters.
  - Enhanced Data Quality Control via gas rules managed at the system level.
  - Develop geospatial insight on a more granular asset level, and more accurately define how each part of a utility system is connected.
  - System Tracing (Upstream, Downstream, Pressure Zones, Protective Device, etc.).
  - Enable future benefits such as GIS editing in the field, data capture via GPS/Bar Code scanning, and GIS-enabled design.

  The Utility Network will enable transformational enhancements in the way we operate, making us more efficient, more reliable, and safer.
- In driving to a single source for the geospatial location of Company gas assets, Consumers Energy is migrating gas service records into GIS. Completing this effort will create a single source for distribution asset location, simplify processes, reduce opportunities for inconsistencies in data sources, enhance the ability to interrogate and improve the data, and increase public safety.
- Extending the implementation of ProjectWise for Gas Distribution assets facilitates a management of change process for gas engineering design and gas system configuration changes—increasing public and employee safety and regulatory compliance with complete and accurate records that are easily accessible and searchable.
- Advanced Methane Detection using Picarro technology helps prioritize and plan for the accelerated pace of vintage material remediation, perform risk-based surveying in the compliance leak surveying process, and measure emissions from distribution pipelines.

  The Company currently uses asset-based compliance leak survey to perform compliance leak survey. It is a method whereby individual assets are surveyed based on the compliance due date regardless of where the asset is located within the gas system. Grid-based compliance leak survey is performed in quarter-mile sections. The survey will include all in-scope assets within a quarter-mile section at the same time. The cadence for returning to perform compliance leak survey in that area again is based on the asset makeup within that area. The frequency is determined by the compliance schedule of the asset makeup within that area.

b. SCADA historian secures data required for gas accounting, operational planning, and predictive maintenance. The Company will require live digitized records and performance of all assets to enable predictive calculations and a potential future state of machine learning. The SCADA historian is undergoing a replacement with a modern platform which will **improve administrative applications and will streamline historic data accessibility, visualization and analysis.** The Historian Project supports the broader Gas SCADA Transformation Roadmap discussed in part d. The Historian Project completion is synchronized with the Gas SCADA replacement project completion.

c. Work management and field service management solutions provide electronic capabilities for work forecasting, resource and work planning, work scheduling, dispatch, field execution and closure, tracking performance and work trends, and reacting/responding to emergencies.

- Advanced fleet telematics enhance the visibility of crew and work location, create opportunities to improve crew and work dispatching.
- Modern technology tools are also required for work groups still using paper forms, including the Gas Measurement, Regulation, and Pipeline & Storage and Gas Construction.
- Enabling contractors with an electronic work management system supports improved accuracy and timeliness of work. Fully digitizing the work management experience supports improved customer service by providing real-time work status.
- Improved field mapping and graphics functionality enables better visibility of maps and drawings in the field including the ability for field redlines/edits to ensure records are accurate.
- Advanced planning and scheduling work management features will lead to efficient work assignment to field employees and other resources for improved customer service.

d. **SCADA** is comprised of software and hardware components used to monitor, analyze, and control real-time data from field devices on the gas system. Field data from measuring devices (sensors, valves, meters, etc.) is collected using a Remote Terminal Units ("RTU") and then relayed to Gas Control where software is used to display for operators to analyze and interact with.

- **Gas Control SCADA Transformation Roadmap**

  The Company's system has outgrown the current gas SCADA software solution, Citect implemented in 2000. As the solution ages, increased effort is required to address obsolete application and database software architecture, and enhancements to the system are limited.

  The current gas SCADA tool limits increased system health monitoring and preventative maintenance capabilities due to the inherent complexity. Replacement of the gas SCADA Citect software is planned for completion in 2025. Transitioning to a more advanced gas SCADA software system provides:

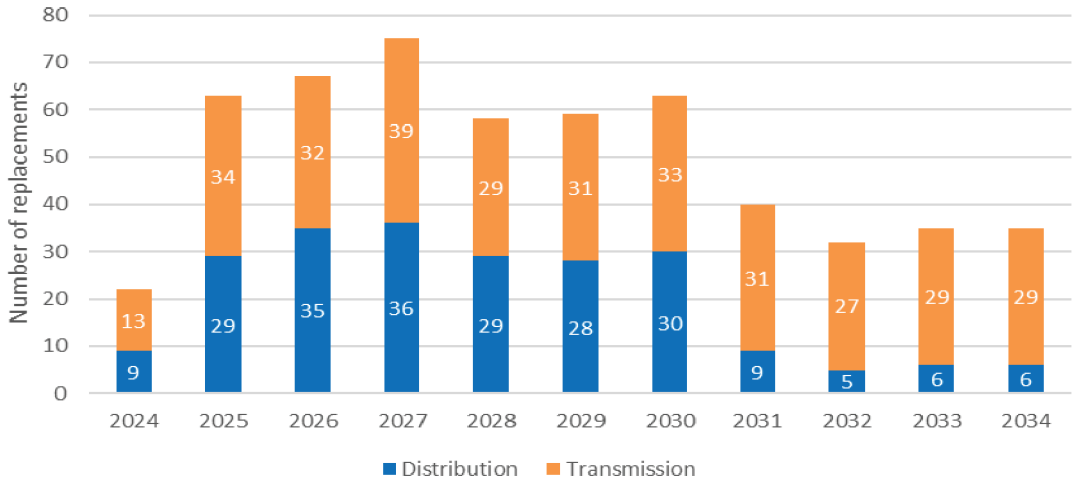
  a. Integration with GIS for system control reliability.
  b. Gas system visibility and transparency.
  c. Deployment of RCVs integrated with the gas SCADA system.
  d. The future ability to control and perform remote shut-off to preserve safety and reliability of the gas system.

- **Remote Terminal Unit (RTU) Solution**

  The current RTU solution, called SixNet, was implemented in 2006. The SixNet hardware and software required to program and operate RTUs are no longer supported by the original equipment manufacturer ("OEM").

  New RTU models support DNP3 protocol offering multi-channel communication and enhanced Cyber Security protections. The plan is to replace the existing SixNet RTU platform with a new platform, shown in Figure 36.

Figure 36: The 10 Year RTU Replacement Plan



e. **Security and privacy** investments secure key Company assets, including physical locations with card access.

   Transitioning from a lock-and-key system at city gates to card access centralizes access control and enhances security. The system is capable of both single-factor authentication (card only) and two-factor authentication (card and code).

   - Currently the Company deploys two-factor authentication in only the most sensitive physical areas (generally North American Electric Reliability Corporation ("NERC")/Critical Infrastructure Protection ("CIP") medium assets). Two-factor authentication is under investigation for gas facilities over time, as security and regulatory requirements mature.
   - Card access management is a single, centralized system and process for the Company. Processes are in place to deactivate badges immediately upon notification of separation from the Company and automatically when not used for specific periods of time.
   - Modernizing and standardizing the gas SCADA network at gas compressor stations and control rooms to mitigate cyber security vulnerabilities, and to allow compliance with API requirements to provide a secure gas system that meets customer needs.
   - Implementation of security infrastructure to enable more visibility and protection of critical infrastructure, including but not limited to, perimeter fencing, security cameras, and two-way audio.

f. **Advanced analytics** investments include data collection, standardization, and analytical model frameworks.

   - Consumers Energy plans to apply advanced statistical and predictive modeling tools and techniques for deriving insights from gas system data. Such projects enable damage prevention predictive analytics and customer-level load profiling and predictive models with propensity ranking for future gas DR programs.

- Integrating operational gas system data to a consolidated data repository will strengthen operational reporting and analytical capabilities. For example, customer value modeling efforts revealed the need to invest in a repeatable capability for rapid system configuration modeling to run scenarios as future supply states and customer demand evolve.

The Company's current maintenance practices vary among assets. For example, compressor units use a mix of usage-based and time-based maintenance for large parts. This means parts are replaced based on throughput or time since last replacement. Select smaller parts use a break-fix approach.

Moving all maintenance plans to *predictive* instead of reactive schedules will help to better allocate resources while maintaining integrity of safety and reliability.

f. **Probabilistic Risk Model**

To manage system risk, the Company uses multiple indexed risk models for asset areas, which are used throughout the gas utility industry. These models have changing risk factor weightings annually that affect project planning and resource requirements.

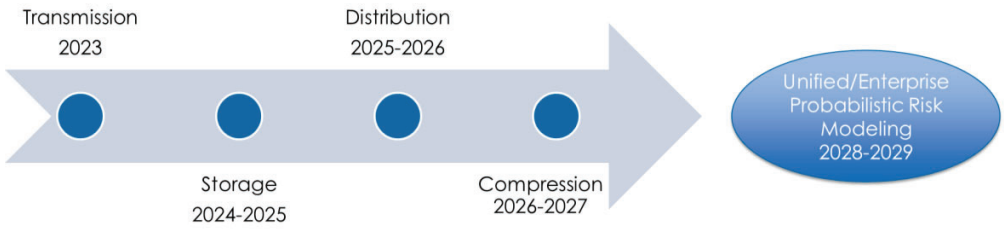
Gas pipeline systems have a complex set of inputs, and their performance is based on a series of possible outcomes controlled by a range of probabilities.

The Company's goal is to implement probabilistic risk models for transmission, compression, distribution and storage by 2030.

The industry is shifting from relative index risk models toward probabilistic risk models. PHMSA defines probabilistic as *a model with inputs that are quantities or probability distributions, with outputs that can be expressed as probability distributions.*

Model logic attempts to adhere to laws of probability. A probabilistic risk model helps better allocate resources by making decisions based on data associated with impact and probability. Figure 37 shows a roadmap for implementing Probabilistic Risk Modeling across the major asset classes between 2023 and 2029.

Figure 37: Probabilistic Risk Model Upgrade Roadmap

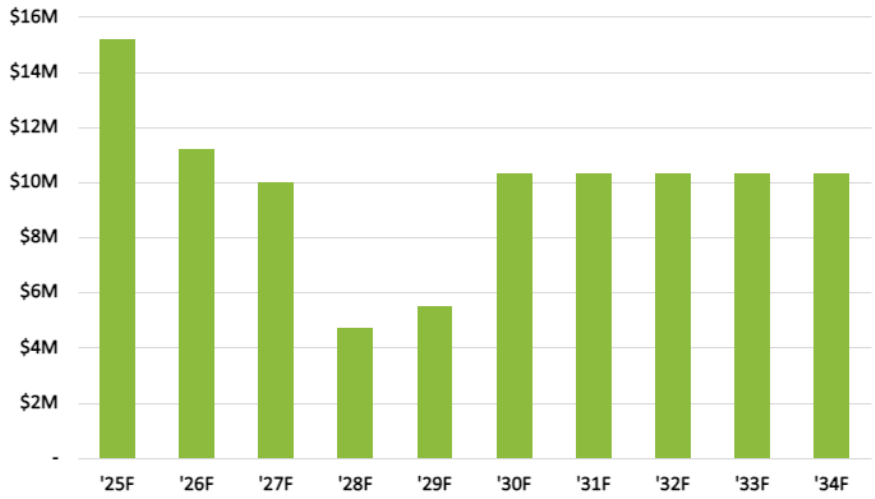


This roadmap will not only account for the entire system but will also result in a Unified Model. The benefits of the unified model are as follows:

- A clear understanding of the existing and projected future performance of assets including reliability and integrity.
- The ability to articulate risk and investments to regulators and stakeholders.
- The capability to make budget decisions based on risk and reliability across the entire system.
- Assurance the investment profile is aligned with the Enterprise risk profile.

Figure 38 shows forecasted capital investments for this digital implementation into the gas system and will support many gas projects and programs.

Figure 38: Digital (IT) Capital Investment Plan



Equally as important as new digital investments in technology as an integral element of the Plan, is the ability to properly maintain technology assets after implementation.

Prudent technology asset management and replacement programs, system monitoring, timely upgrades, and continuous system patching to mitigate cyberthreats are necessary Information Technology ("IT") O&M expenditures required to sustain business operations, and provide the experiences customers expect.

NOTE: More information on Digital, including a corresponding financial summary, is available in the Company's *Digital Three-Year Plan*.

VI. Gas System Decarbonization

Consumers Energy is implementing industry-leading plans to reduce greenhouse gas emissions created by its natural gas operations. This includes modernizing its natural gas system to achieve net zero methane emissions from its operations by 2030.

Consumers Energy leads Michigan's clean energy transformation by looking beyond its own operations to help customers and suppliers reduce their greenhouse gas emissions, especially those generated from natural gas sources.

In 2022, the Company committed to achieve net zero greenhouse gas emissions from the entire natural gas production and delivery system, including customers and suppliers, by 2050. To support this goal, the Company will demonstrate steps required to achieve this goal through investigating customer preference and demonstration of clean fuel technologies. This 2050 net zero goal supports Michigan's MI Healthy Climate Plan to achieve net zero carbon emissions by 2050, including an interim state target of reducing emissions from space heating 17% by 2030.

Additionally, Federal Executive Order ("EO") 14008 of January 27, 2021, commits the United States to a broad action plan addressing climate change. This EO directs federal agencies to prioritize projects that reduce emissions of toxic substances and greenhouse gases from existing and abandoned infrastructure, and to coordinate investments to achieve substantial reductions of methane emissions from the oil and gas sector as quickly as possible. Consumers Energy will remain agile and adjust as needed to accommodate policy as it evolves both on a federal and state level.

The U.S. Environmental protection Agency (EPA) tracks greenhouse gas emissions in three categories:

- **Scope 1**: Direct emissions from sources that are owned or controlled. At our Company, these are emissions produced in the process of generating and supplying energy for customers, such as carbon emissions from burning methane or fugitive methane emissions from our natural gas delivery system. **The Company's goal to reduce Scope 1 emissions is "methane net zero by 2030."**
- **Scope 2**: Indirect emissions associated with the purchase of energy for any end use. These emissions may arise from the energy we purchase and use at our facilities and comprise only a fraction of the emissions linked to our company.
- **Scope 3**: Emissions are from sources not owned or directly controlled but related to our activities. These include all emissions traced to natural gas we purchase and activities by customers and suppliers, primarily from end uses like burning natural gas to heat homes and businesses. **The Company's goal to reduce Scope 3 emissions is "net zero carbon emissions by 2050."**

1. METHANE NET-ZERO GOAL

Consumers Energy recognizes methane as a greenhouse gas emission, and that methane's impact as a greenhouse gas is notably more significant than that of carbon dioxide, with a short-term global warming potential that is approximately 100 times greater.

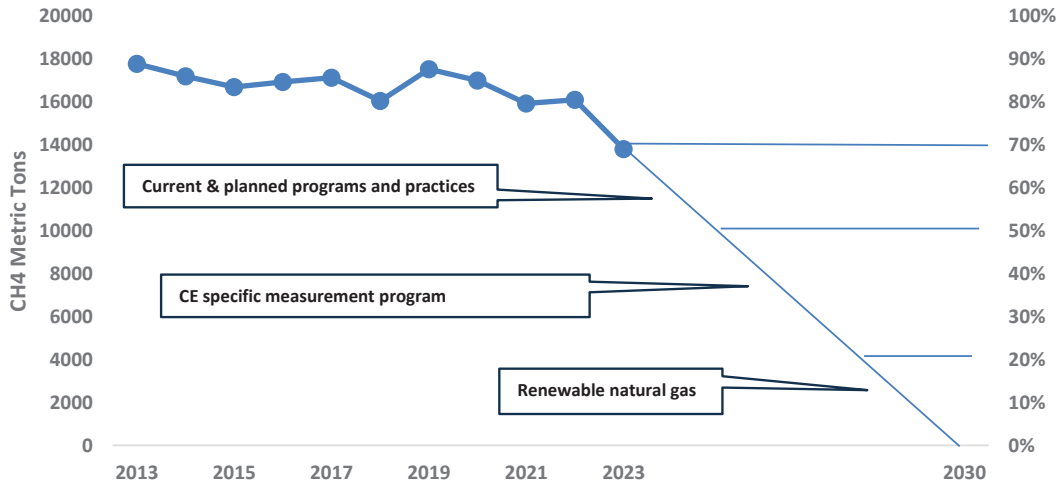
As of 2023, the Company's system emitted 13,811 metric tons of methane. This means that removing methane early in our decarbonization journey has an even greater benefit to the environment. Even over longer time horizons, methane's global warming potential remains 25 times that of carbon dioxide. Since 2012, Consumers Energy has reduced its methane emissions from its natural gas delivery system by approximately 27%.

The methane net-zero plan seeks an 80% reduction of methane emissions by 2030 through the following near-term measures:

- Distribution main leaks: replacing vintage pipe (cast iron and unprotected steel).
- Distribution services leaks: replacing vintage pipe (copper and bare steel).
- Storage: Wellhead component leaks (plug and abandon program).
- Compression blowdown venting procedures: reducing natural gas venting frequency/duration.
- Transmission blowdown procedures: increase temporary compression to reduce venting.

As shown below in Figure 39, procurement of carbon credits potentially through RNG is expected to cover the remaining 20% methane emissions to achieve net zero for the delivery system.

Figure 39: Net Zero Methane Goal: Emission Reduction and Renewable Natural Gas Offset



2. NET ZERO CARBON EMISSIONS GOAL BY 2050

In March 2022, Consumers Energy committed to net zero emissions from sources not owned or directly controlled but related to our activities on or before 2050. These include all emissions traced to natural gas purchases and activities by customers and suppliers, like those associated with burning natural gas to heat homes and businesses.

Reaching 'net zero' will require Consumers Energy to balance many diverse emission reduction opportunities with safe, reliable, and affordable energy delivery.

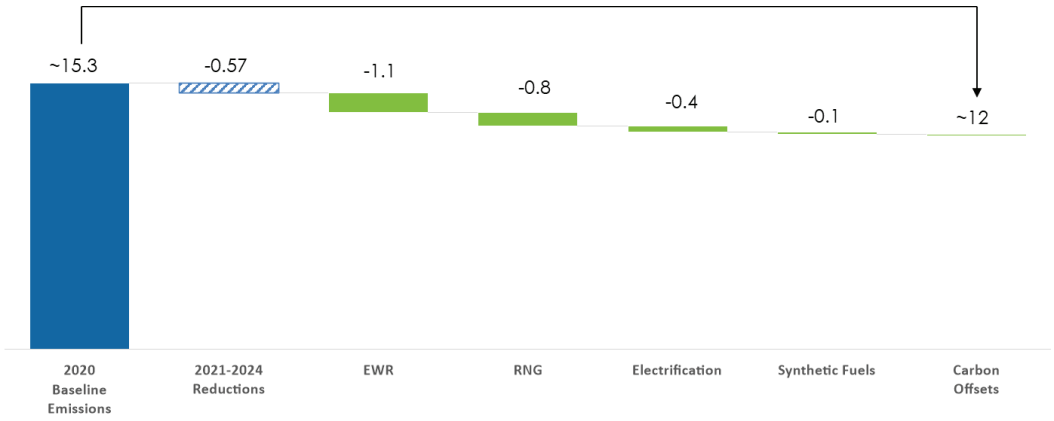
It will also require working partnerships with stakeholders across the state to ensure a decarbonized gas system can continue to meet the needs of customers, communities, and businesses.

Overall, to support Michigan's decarbonization goal and meet carbon neutrality by 2050, Consumers Energy has set an interim goal to work with our customers to help them achieve a 20% reduction in Scope 3 emissions by 2030.

Consumers Energy will actively investigate all clean fuel pathways to meet the needs of customers and assess which technologies best support the energy transition.

The plan to achieve this 20% reduction by 2030 is shown below in Figure 40, which illustrates that EWR, RNG, carbon offsets, and new emerging decarbonization technologies are all necessary pathways.

Figure 40: Scope 3 20% carbon emission reduction by 2030



Customer Programs

Consumers Energy offers customers voluntary options to reduce emissions associated with natural gas use through the Company's MI Clean Air Program[11].

In February 2022, the MI Clean Air Program was approved to provide a voluntary offering for customers to offset the emissions tied to natural gas use via the use of forestry carbon offsets sourced in Michigan. In March 2024, the Company received additional approval to expand the Program to include RNG as a clean fuel alternative for full-service natural gas customers.

- **Carbon Offsets**

  A carbon offset reduces emissions of greenhouse gases made in a separate location. In this way, a reduction in emissions is made in one location to compensate for emissions in a different location, negating the effects of the remaining emission. Accordingly, this Program will provide customers the option to offset the carbon impact of the conventional natural gas used at their location. The Company will supply offsets from in-state forestry projects located in the Upper Peninsula. Limiting the volume of deforestation through this project promotes clean air, preserves wildlife habitats, and clean carbon storage.

- **Renewable Natural Gas (RNG)**

  Consumers Energy received regulatory approval in 2024 to provide RNG to customers on a voluntary basis. As part of approval, the Company will build, own, and operate RNG production facilities to provide customers a clean fuel alternative to natural gas sourced from Michigan.

3. RENEWABLE NATURAL GAS (RNG)

RNG is pipeline quality gas that is low-carbon or carbon-negative, and can be used in existing pipelines and end uses. RNG is created by capturing methane from the decomposition of organic matter through anaerobic digestion. This decomposition can occur in wastes associated with food, animals, landfills, wastewater and forest residues. This methane would otherwise be vented into the atmosphere.

[11] *MI Clean Air Annual Report 2024:* [0688y00000DXDy2AAH (site.com)]

This captured gas is called **biogas** and must be further refined to meet pipeline quality specifications necessary for pipeline injection and customer end use. Once purified to meet pipeline quality standards, the gas is called **RNG** and is chemically identical to fossil natural gas.

- RNG feedstocks including animal waste, landfill, wastewater and food waste are consistently available in Michigan, and can be converted into renewable energy on demand, making it a valuable renewable energy source.
- RNG can also support other environmental goals, including reduced nutrient run-off and improved water quality, organic waste management and diversion, groundwater protection, and displacement of fossil fuels.

RNG Emission Benefits

Benefits are quantified using the industry standard Greenhouse Gases, Regulated Emissions, and Energy Use in Transportation ("GREET") model, resulting in a lifecycle Carbon Intensity ("CI") score. A CI score is the total measure of greenhouse gas emissions associated with producing, distributing, and using a fuel, reflected in grams of Carbon Dioxide equivalents ("CO2e") per megajoule ("MJ") of energy.

After including all RNG process emissions from capturing methane, upgrading it, transporting it, and burning it, the benefit of avoided methane emission to atmosphere is still significantly greater than the total of those lifecycle emissions. The lower the CI score, the more cost effective it is to reduce emissions. This is because with a carbon negative fuel, only a small portion of RNG needs to be blended to achieve carbon neutrality. For this reason, animal manure based RNG is preferred because it has the lowest carbon intensity of any feedstock.

RNG Production

RNG produced from animal waste will supply the Company's MI Clean Air Program, which will deliver approximately 175,000 tons of carbon dioxide equivalents abatement potential annually to voluntary customers across four production facilities in Michigan.

RNG is scheduled for commercial operation in 2025. In support of Public Acts 53 and 166, which require the Michigan Public Service Commission (MPSC) to develop a low carbon energy infrastructure enhancement and development grant program for the purposes of planning, developing, designing, acquiring, or constructing low carbon energy facilities, two (2) grants were awarded to Consumers Energy for RNG projects at Swisslane and TDI Farms in 2023.

Consumers Energy seeks opportunities with farms to help bring clean fuel to the State of Michigan. Any farm can potentially contribute to Consumers' natural gas supply as Renewable Natural Gas. RNG is an opportunity to reduce emissions and improve the environment in Michigan, while supporting local farms.

4. ENERGY WASTE REDUCTION

Since 2009, Consumers Energy implemented a diverse and balanced portfolio of EWR programs achieving significant energy savings for all major sectors and customer classes, including small businesses and low-income customers.

Energy Waste Reduction (i.e., Energy Efficiency) reduces energy waste, lowers bills and reduces emissions. See below in *Energy Waste Reduction* for discussion.

5. EMERGING TECHNOLOGIES

Potential pathways to meeting net zero emissions by 2050 include using hydrogen to produce energy, capturing and sequestering carbon emissions from natural gas combustion, and using synthetic natural gas and electric heat pump systems to heat homes and businesses.

- **Hydrogen**

  Hydrogen has the greatest energy-to-weight ratio of any fuel due to its lack of carbon-based elements. Additionally, hydrogen is an ideal fuel when it comes to emissions as it contains no carbon or sulfur when combusted. Modeling results show hydrogen is most optimally used as a replacement fuel for high heat end use processes that are difficult to electrify[12].

  Note that hydrogen and natural gas are *not* completely interchangeable as a usable fuel at existing pressures and flow rates. However, given advantages tied to dispatch, storage, and carbon neutrality, hydrogen is being assessed by the energy industry to determine its potential as a clean energy pathway for the future natural gas system.

  Hydrogen's zero carbon footprint along with its energy content characteristics make it an important pathway that targets hard to abate high heat processes such as industrial drying, compression, and long-haul transport. The Company's initial focus on Hydrogen is to support customers who currently use Hydrogen and wish to reduce emissions associated with its production.

- **Clean Synthetic Fuels**

  Clean synthetic fuels refer to manufactured natural gas that has no carbon footprint. Manufactured natural gas combines hydrogen and carbon dioxide to form methane under certain conditions. With Michigan businesses recently selected as partners in the Midwest Alliance for Clean Hydrogen (MachH2) hydrogen hub, committed to growing the Midwest regional hydrogen value chain, Consumers Energy is investigating how to best partner with these businesses as an energy provider.

  With synthetic natural gas widely deployed around the world, zero emissions can be achieved by combining green hydrogen via electrolysis with carbon dioxide captured from a Company-owned RNG facility. The result is a zero-carbon form of methane that has no impact to the existing natural gas infrastructure. In 2025, Consumers Energy will investigate the economics and feasibility of this technology in support of the MachH2 hydrogen hub.

- **Electrification – Individual air source heat pumps and Hybrid heating**

  Electrification is the conversion of energy for end uses from natural gas to electricity. The carbon benefit to electrification is the elimination of emissions tied to natural gas combustion. Modeling shows the most cost-effective means of electrifying residential end uses is with hybrid heating. Hybrid heating combines the heat content of natural gas with the efficiency of a heat pump. In this context, heat pumps would be used as much as possible; however, during the coldest winter months, natural gas furnaces would still be used to mitigate winter peak electric load. Consumers Energy is assessing where hybrid heating and heat pump technology can best serve customers.

[12] *Properties of Hydrogen*, 2001. College of the Desert.

- **Electrification – network geothermal systems**

  Geothermal energy is the most efficient form of energy yet high up-front costs remain a barrier to its development. Although ground-sourced heat pumps can be installed on individual homes, Consumers Energy is investigating the concept of 'network geothermal.' A networked geothermal system is a network of ground source heat pumps connected via common ground circuits. Network geothermal systems have two unique attributes. First, they share energy between load centers, where a business that rejects heat for cooling purposes can be used down the street by a home for heating purposes, thereby greatly increasing energy efficiency. Secondly, these systems store heat in the earth during cooling seasons and withdraw that same heat months later during heating seasons just like a natural gas storage field. For these reasons, network geothermal systems drive energy efficiencies upwards of 600%.

  Networked geothermal systems are mature technologies, used for decades on college campuses, and well considered the most energy efficient form of heating and cooling. Two natural gas utilities, *Eversource* and *National Grid*, have network geothermal demonstrations approved through public service commissions today with plans to expand.

  In 2024, the Company received a grant award from the MPSC to study network geothermal across its service territory. The initial objective is understanding how such a system meets the needs and energy preferences of existing natural gas customers. Initial community engagement will occur to educate customers on geothermal benefits, gauge interest in participation and identify anchor users for specific locations. Anchor users are defined as higher load entities that reside near homes and other businesses.

- **Carbon Capture**

  Michigan is unique in that its geology provides large scale potential for underground carbon sequestration. Although not well understood at this time, carbon capture, sequestration and storage remain a key technology to achieve a net zero emissions future.

VII. Energy Waste Reduction (EWR)

Natural Gas EWR programs play a role in decarbonizing the gas system; reducing the amount of energy consumed; and reduces Scope 3 methane emissions.

Additionally, EWR Programs contribute to the Company's Clean Energy Plan goals to end coal use for electricity generation by 2025, reduce carbon emissions by more than 63 million tons, and meet customer needs with 90% clean energy resources (including renewable energy and EWR) by 2040.

Consumers Energy filed its 2024-2025 EWR Plan Filing in August of 2023, case number U-21321[13] and it was settled on February 8, 2024. The portfolio of EWR programs achieves 1% natural gas savings annually, which will cumulate to approximately 14.8 Bcf by 2026 and 26.5 Bcf by 2030

Consumers Energy built the EWR portfolio by selecting program measures (equipment), customer participation, and customer incentives to cost effectively achieve legislative and Consumers Energy clean energy goals. Taken together, the portfolio of EWR programs outlined in this Plan continue Consumers Energy's history of offering a diverse portfolio of cost-effective, flexible, and inclusive program

[13] The February 8, 2024 Case No. U21321 Order Approving Settlement, available on the MPSC website: 0688y00000BulxcAAB (site.com), authorizes gas EWR program investment of $95.5 million in 2024 and $95.1 million in 2025 to achieve 1% of sales gas targets each year.

choices, incentive options, and educational opportunities for every customer class. Consumers Energy's program offerings are summarized in Table 6.

Table 6: 2024–2025 Program Summary

Program Name	Markets Served	Program Offerings
Residential EWR Portfolio		
Appliance Recycling	All residential electric customers	• Incentive and environmentally responsible, free pick up of older, inefficient refrigerators, freezers, and small appliances.
Assessments and Behavioral	All residential customers	• Walk-through or virtual home inspection, installation of free energy-saving measures, and customized post-assessment report with energy-saving tips and recommendations tailored to customer's fuel type (dual fuel, natural gas–only, or electric-only). • Personalized household reports, sent by mail and/or email, with individual energy usage tips and program recommendations.
Home Solutions	Residential customers in single-family homes	• Distributor and point of purchase rebates for the purchase and installation of high-efficiency heating, cooling, insulation, windows, and hot water equipment. • Web-based Find-a-Contractor tool.
Income-Qualified	Residential low-income customers in single-family homes	• Free walk-through or virtual home inspection/assessment with equipment installation. • Home weatherization funding assistance. • Collaboration with community partners to provide maximum and coordinated benefit to income-qualified customers.
Income-Qualified Multifamily	Residential low-income customers in multifamily housing	• Direct, no-cost installation of energy-saving devices in individual tenant units and common areas. • Educational materials explaining the program's energy and money saving benefits. • Prescriptive and custom incentives (offered at a higher rate than those in the Market-Rate Multifamily program) for property owners to install energy-saving equipment in individual units and common areas.
New Home Construction	Residential builders	• Incentives for builders who construct new homes to ENERGY STAR standards or achieve a minimum Home Energy Rating System (HERS) score. • Builder training on high performance building practices and how to promote the value of energy-efficient homes.
Think! Energy	Early elementary to high school students and community groups	• In-class or virtual EWR presentations and educational content for teachers and community groups. • Free energy-saving take-home kit including low-cost energy-efficiency measures and educational content.

Program Name	Markets Served	Program Offerings
Business EWR Portfolio		
Prescriptive	Large business customers	• Prescriptive downstream and midstream rebates ranging from 20% to 40% of the incremental cost of high-efficiency electric and natural gas equipment.
Custom Solutions	Large business customers	• Analysis, performance-based incentives, and technical assistance for large commercial and industrial customers who install high-efficiency equipment or process improvements not covered through the Prescriptive program.
Energy Assessments	Small- and medium-sized business (SMB) customers	• On-site energy assessments with limited direct installation measures and a report on the measures installed, product recommendations, and tips on how to save more energy. • Installation and direct distribution (via mailed kits) of free measures including showerheads, faucet aerators, pre-rinse sprayers, pipe wrap, and programmable and smart thermostats.
Small Business Store	SMB customers	• Self-service, online marketplace that provides instant incentives for the purchase of qualifying energy-efficient products.
SMB Contractor Rebates	SMB customers	• Installation of common lighting and refrigeration measures by participating trade allies.

The table below outlines the Company's approved 2024-2025 EWR Plan natural gas savings targets.

Table 7: Natural Gas Investments and Savings Compared to Targets

	2023 Actual	2024	2025
Planned Investment, Natural Gas Programs	$99,111,306	$95,487,640	$95,066,407
Annual Natural Gas Savings, Statutory Target (Mcf)	2,171,018	2,515,998	2,506,105
Annual Natural Gas Savings, Statutory Target	0.75%	0.875%	0.875%
Annual Natural Gas Savings, Planned (Mcf)	3,752,780	2,934,071	2,944,466
Annual Natural Gas Savings, Planned (%)	1.3%	1.0%	1.0%

VII. Financial Summary

A. Benefits of the Integrated System Plan

A significant benefit of this Plan is allocating capital using a holistic view of the entire gas system to prioritize projects between asset classes. The four objectives of the Plan (i.e., safe, reliable, affordable, and clean) are used to guide and prioritize future investment decisions. The Company allocates capital based on the most necessary needs and in accordance with these objectives, enabling success in the 10-year outcomes.

B. Financial Profile

The Integrated System Plan informs funding decisions about capital projects. Forecasting work over a rolling 10-year period helps communicate investment in various portfolios over a longer time, while providing the agility necessary to modify plans based on potential internal and external changes over time.

Overall, the total future capital spend shows approximately $12 billion from 2025 to 2034, at an annual capital investment spend of approximately $1.2 billion per year. This level of capital investment is consistent with recent past years with new potential investments for digital technologies, RNG, and other possible decarbonization technologies to evolve the system in the future. The capital forecast helps achieve the safe, reliable, and clean objectives by enabling predictable and affordable customer bills.

Figure 41: 2025 – 2034 Capital Plan

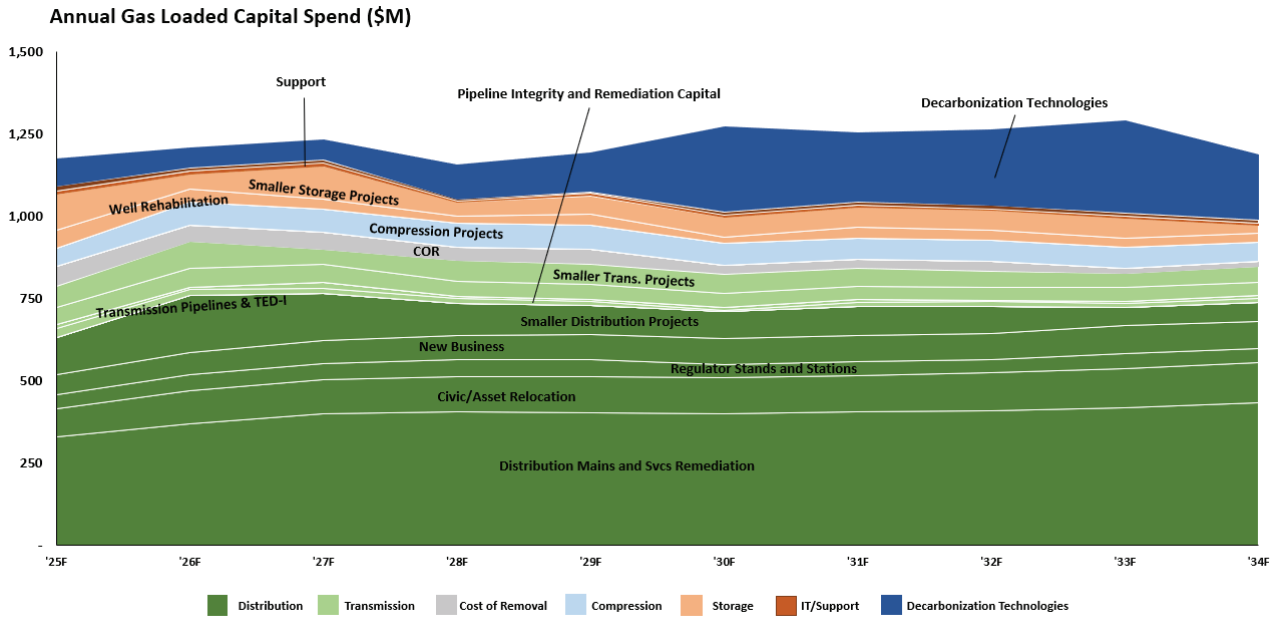


Figure 42 shows that this capital investment will also result in an increase of O&M cost over the next five years. Additionally, the Company anticipates requirements to comply with the Pipeline and Hazardous Materials Safety Administration (PHMSA) proposed Leak Detection and Repair (LDAR) rule to result in an increase in O&M cost beginning in 2028 and beyond.

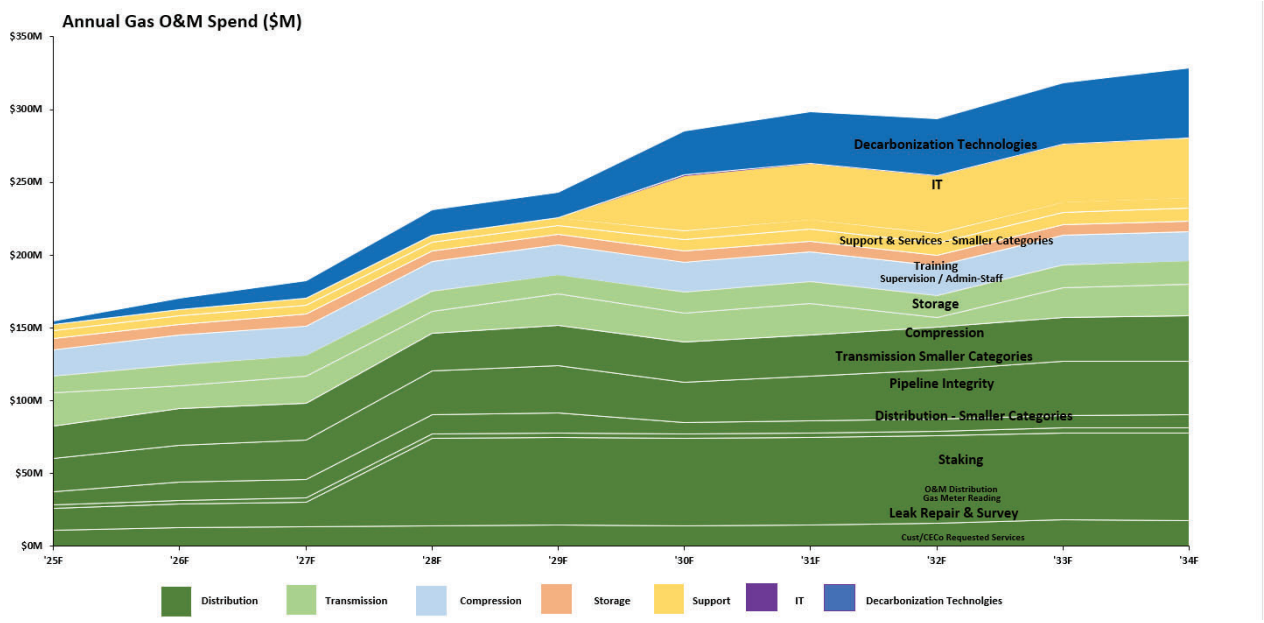
It is expected that capital investments in the distribution asset class will support the cost of leak repair and survey but will increase due to the continued aging of the system and anticipated enhanced regulatory requirements from the LDAR Rule.

- Given the criticality of maintaining and securing technology assets after implementation, if a gap exists in the IT or other O&M available, the Company will prioritize operational support of its current technology assets over investing in new capabilities.
- The Company's IT O&M projections are calculated based on a comprehensive analysis of known and forecasted expenditures providing accurate and reasonable projections of future year IT O&M requirements.

Figure 42: 2025 – 2034 O&M Plan



VIII. Closing

Consumers Energy has developed this 10-year Plan for the gas delivery system to ensure Michigan has a safe, reliable, affordable, and clean natural gas supply. This Plan highlights commitments to:

- Enhance **safety** by prioritizing and lowering system risk throughout the gas delivery system.
- Deliver **reliable** supply to customers with prudent contingency planning.
- Provide **affordability** to customers through stable, competitive, and predictable energy value.
- Create a **cleaner** gas delivery system that reduces greenhouse gas emissions.

The Plan reflects a thorough analysis of the system, the natural gas commodity market, trends, and practices across the industry, and regulatory and customer trends.

Consumers Energy routinely reviews the validity of the inputs and assumptions that led to the updating of this Plan, and will adjust in the future as appropriate, and continue to share the Company's vision with stakeholders across Michigan.

Appendix A – Industry Standards

As a regulated gas utility company, Consumers Energy must adhere to many different State and Federal Pipeline Safety regulatory requirements. The following is a high-level, not fully inclusive, list of requirements and industry standards or practices as an example:

Code of Federal Regulations

- 49 CFR Part 191 - Transportation of Natural and other Gas by Pipeline; Reports
- 49 CFR Part 192 - Transportation of Natural and other Gas by Pipeline; Minimum Federal Safety Standards
- 49 CFR Part 199 - Drug & Alcohol Testing

Michigan Gas Safety Standards

Michigan Technical Standards for Gas Service

American Petroleum Institute

- Standard 1164 – *Pipeline Control Systems Cybersecurity*
- Recommended Practice 1171 - *Functional Integrity of Natural Gas Storage in Depleted Hydrocarbon Reservoirs and Aquifer Reservoirs*
- Recommended Practice 1173 – *Pipeline Safety Management Systems*

Appendix B – System Figures & Facts

Miles transmission pipeline:	2,342
• Miles of mainline pipelines:	1,560
• Miles of pipeline within compression stations:	22
• Miles of storage pipes:	244
• Miles of TOD:	516
Miles distribution pipeline:	28,368
Number storage fields:	15
Number compressor stations:	8
Number customers:	Approximately 1.8 Million
Number storage wells:	808
Gas storage working gas capacity:	154 Bcf

Appendix C – Decarbonization Modeling

In 2021, Consumers Energy worked with industry leading consultants to better understand the most affordable and resilient state-wide economy decarbonization plan that achieves net zero carbon emissions by 2050.

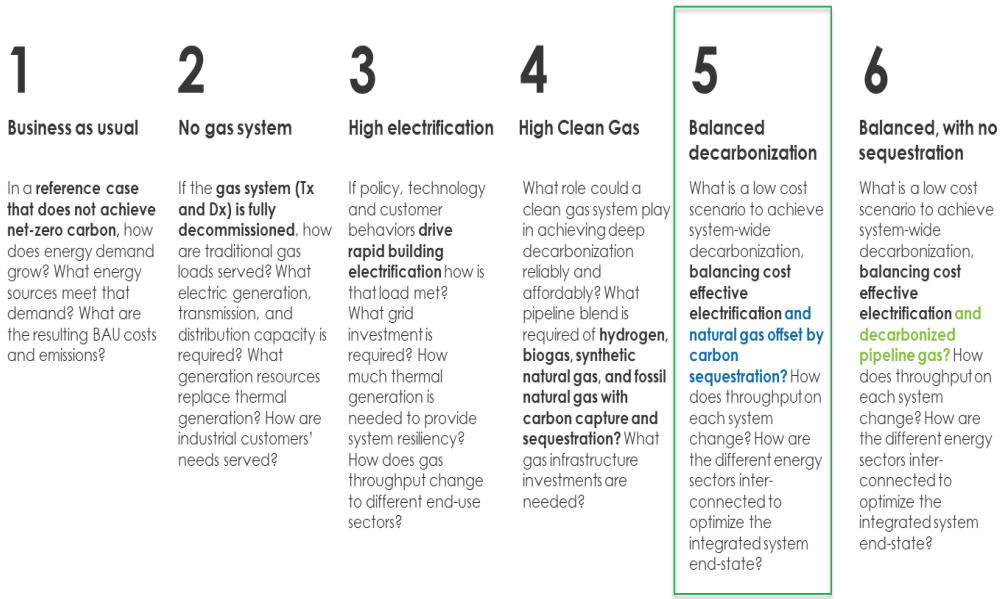
This analysis incorporates both the Company's electric and gas utilities with an 'energy agnostic' approach. It was determined that limiting the scope of analysis to the Consumers Energy service territory would improperly exclude constraining factors like electric vehicle demand on the grid and would not take advantage of geographic and logistical efficiencies throughout the State.

The modeling analysis used regional attributes to understand the most cost-effective energy supply to meet the energy demand of the State, including full electrification of the passenger vehicle sector, while simultaneously achieving net zero emissions by 2050.

The analysis was completed for six different scenarios, shown below in Figure 43. Important assumptions are noted here across three specific scenarios.

- **The business-as-usual scenario is used as a reference point** and assumes no progress in energy decarbonization.
- The **no gas system scenario was assessed to understand the cost of meeting energy demand** in the absence of the gas system, meaning all current uses of gas, including industrial processes and electric generation would require alternative energy supplies like hydrogen or electrification. This scenario also demonstrates the value the current gas system provides to the state's overall decarbonization costs.
- **The high electrification scenario assumes all end uses are electrified except for natural gas electric generators,** meaning the compression and transmission system would remain, while most gas distribution pipelines would be retired.

Figure 43: Decarbonization Scenarios



The key conclusion from modeling was that a **balanced combination of multiple technologies is the most cost-effective means of achieving economy-wide decarbonization by 2050**. The diversity in a balanced combination of multiple technologies not only increases resiliency, but also increases optionality across the system, lowering risk of not achieving carbon neutrality.

In all scenarios, electric load increases due primarily to electric vehicle deployment and some space heating electrification. As coal plants are retired, gas generation with carbon capture grows to meet increasing load.

Renewables are an increasingly important part of Michigan's energy supply, but controllable energy, like long duration energy storage is needed for maintaining a reliable energy supply.

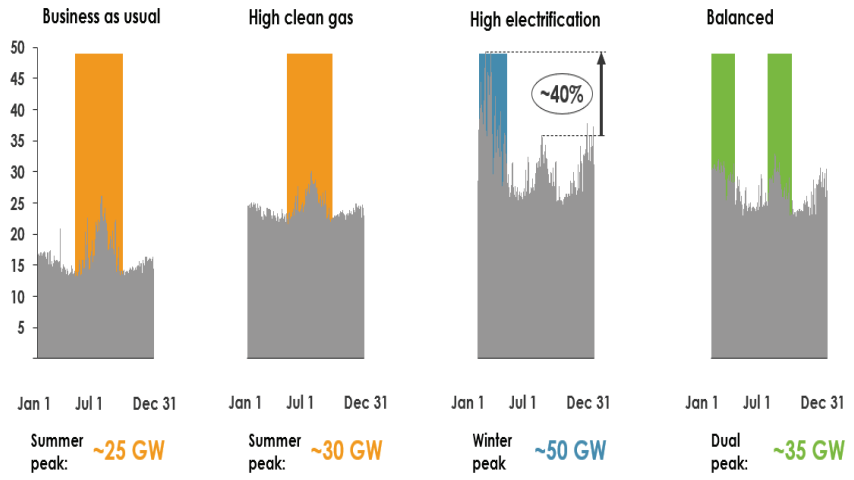
Other important conclusions show:

- The gas distribution system enables cost effective, reliable home heating in Michigan winters.
- The gas transmission system is needed to supply natural gas to electric generators.
- Carbon sequestration is needed to cost effectively achieve durable decarbonization, specifically to support electric generation, synthetic gas and hydrogen production.
- Clean fuels such as RNG and hydrogen provide system resiliency, diversification, and energy for hard to electrify end uses.
- Electrification potential was constrained by costs associated with additional transmission and generation infrastructure necessary to meet winter peaking electric demand.

As shown below in Figure 44, analysis indicates that in a highly electrified decarbonized future scenario, building electrification can drive winter peaks as high as 40% higher than summer peaks. In this scenario, the most economic form of clean electric base load generation to support building electrification would come from natural gas generators fitted with carbon capture.

Hybridized electric + gas space heating, as represented within the 'balanced scenario' can mitigate a peak shift to winter, reducing the need for investment in electric generation and transmission by ~$20-$25B compared to a high electrification scenario.

Figure 44: Potential Electric Peak Load Impacts by Scenario



Additionally, ~20% less electric generation capacity is required in the 'balanced scenario' than in a high electrification scenario, which helps mitigate cost increases.

In each decarbonization scenario, there is a societal cost impact to Michigan with a 'balanced scenario' the lowest societal cost pathway to meet carbon neutrality by 2050. Total energy system costs include all costs associated with energy in Michigan, including feedstock and commodities; electricity generation, storage, and fuel production technologies; energy delivery infrastructure; carbon capture and sequestration; demand-side technologies (e.g., appliances and vehicles, EE investments, etc.).

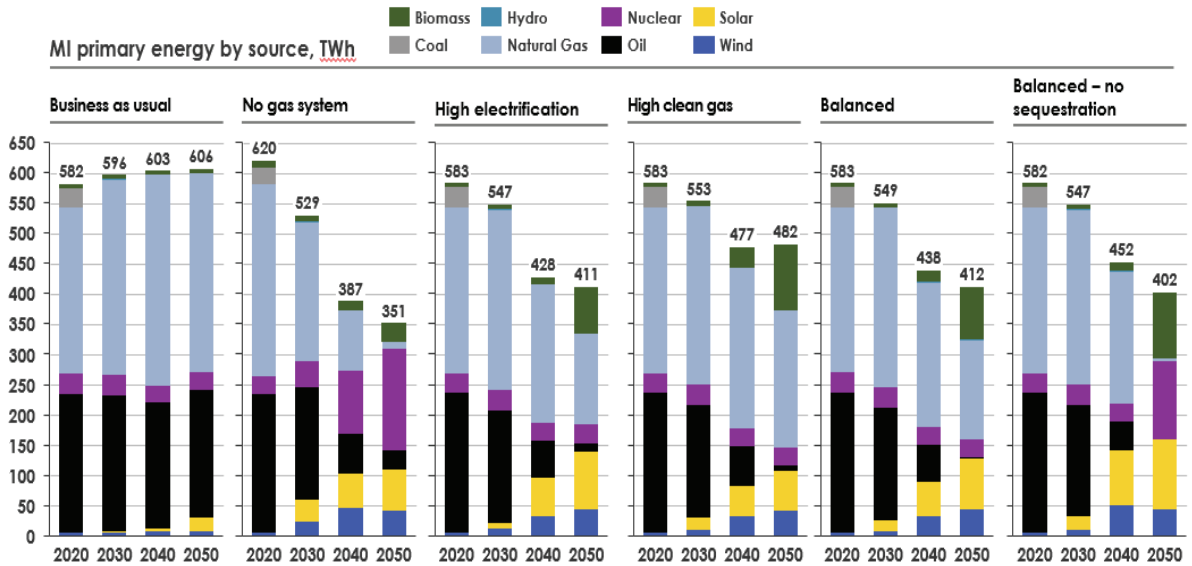
RNG ("biogas") is seen as a foundational technology that best prepares the Company for any likely decarbonized future scenario including high electrification, high clean gas, and a balanced approach. This is because RNG is cost effective in reducing carbon, mature technology, and requires no incremental investment in the existing infrastructure.

RNG resources are available today and require no modification to the existing infrastructure, making it more cost-effective than other approaches. For this reason, the Company offers RNG as a voluntary product to customers providing the State with progress towards our shared environmental goals over time.

In all likely scenarios (high electrification, high clean gas, balanced), modeling shows natural gas generation as the least-cost, carbon neutral energy supply able to meet demand. In the absence of a gas system or carbon-neutral natural gas generation, new nuclear generation would be necessary to support demand by 2050 as shown in Figure 45.

NOTE: This analysis is Michigan-wide and does not necessarily reflect the Company's expected energy supply.

Figure 45: Potential Primary Energy Sources by Decarbonization Scenario



Appendix D – Talent Pipeline

The following initiatives are important steps to attract, retain, and grow the talent within the Company:

1. Career Awareness Activities

- **Michigan Career Quests:** There are 10 MI Career Quest events held throughout the state each year. These day-long events provide hands-on career exploration for high school students.
- **Careers in Energy Week:** Each year the third week of October is declared to be *Careers in Energy Week* by the Governor. The Company makes a concerted effort to promote skilled trades, engineering, renewables, and IT career fields within energy via a series of tours, events, school career fairs, social media contests and campaigns, and public relations activities.
- **Talent Ambassadors (Formerly Education Champions):** Nearly 450 employees raise their hand each year to support local school district career fairs, mock interviews, and to speak with classes about careers in energy, their personal experience and career pathway.
- **Summer Youth Energy Academies:** The Company expanded in 2022 to add Pontiac and Flint to the two summer youth employment programs started in 2021 in Jackson and Grand Rapids. This 6-week academy provides participants with exposure to energy careers while gaining pre-employment essential skills. Intentional efforts to build networks with diverse partners and communities resulted in over 50% of students from historically underrepresented populations.
- **Elementary School Energy Safety and Careers Presentations**: Beginning in 2022, the Company offers hands-on, one-hour presentations for 4th and 5th graders in partnership with the union, UWUA, representing our frontline gas and electric workforce. We have identified the top 10 most diverse school districts in our service territory as the highest priority to deploy these important workshops. In 2022, we reached 1,500 students across 21 schools.
- **Detroit Area Pre-College Engineering Program (DAPCEP)** is a Detroit area pre-college engineering program designed to increase the number of historically underrepresented students pursuing STEM Careers.
- **Project SEARCH** focuses on high school students with cognitive disabilities. The program provides work experience and mentoring to the students while they complete their senior year at our headquarters in Jackson. Consumers Energy was honored, along with six other Michigan Project SEARCH sites, with the employment outcome awards for the 2021-2022 year. The graduating class resulted in 83% of students obtaining employment in the community after their experience. Since its inception, 44 students have participated and graduated from Consumers Energy's program and our company is welcoming 10 new interns for the 2023-2024 school year.
- **Inside Track Webinars** This new popular webinar is focused on promoting energy careers to diverse job seekers. Held three times in 2022, over 1,000 people joined in the one-hour session to learn about our career pathways, school partners, application processes, decoding our job postings, and increasing their employability at Consumers Energy.

2. Training and Education

- **Veteran's Gas Bootcamp:** In partnership with UWUA trade school, Power for America (P4A), the Utility Military Assistance Program: Michigan Gas Boot Camp (UMAP-MI) openly recruits current Michigan National Guard members, Reservists and Honorably Discharged military veterans. The program is designed to provide the requisite skills and knowledge an individual will need for a successful career within the gas utility sector. To date, Consumers Energy has employed 201 Veterans because of the Gas Bootcamp.
- **Energy Industry Fundamentals:** Through the Michigan Energy Workforce Development Consortium, we partner with Career Technical Education centers and high schools (Hartland, Boyne City, Oakland South and Oakland North, Holt, Jackson Public, Jackson Northwest, Western High school) to deliver the national certification course, *Energy Industry Fundamentals*. This course is also offered as a part of college energy programs at Lansing Community College, Jackson College, MIAT, and Henry Ford Community College. Each year more than 250 students enroll in the course statewide.
- **Jackson College Energy Systems Program**: As the college located in our Headquarters' hometown of Jackson, Consumers Energy partners with Jackson College to provide education for a multitude of job roles including gas delivery technicians, planners, and schedulers. Their two- and four-year degree programs in Energy Systems were developed in partnership with the Company and are continually updated to meet our needs.

3. Resources

- **Michigan Energy Workforce Development Consortium:** The Company works with other utilities and provides leadership for MEWDC. This organization is made up of more than 50 partners from education, government, workforce development, and community-based agencies to strategize, plan, and execute activities that increase available diverse qualified workforce.
- **State Apprenticeship Expansion (SAE) Grant Funding:** Most recently MEWDC was awarded a $1.1 million grant ($134k coming to CE) to recruit and train more women, racial or ethnic minorities, and veterans into skilled trade positions.
- **Going Pro Grant:** In addition, the Company receives between $400-500k per year in grant funding to support technical training for our operations, maintenance, and construction workforce through the State Going Pro grant program—ensuring that our new apprentices have access to high quality state of the art training.

4. Diversity, Equity, and Inclusion in the Talent Pipeline

- **Intern Recruiting:** Annually engages in over 50 on-campus recruiting and networking events connecting students to various internal business departments. Partner with various internal Intern Councils to identify workforce needs, schedule recruiting activities, screen, and select company interns. In an average year, the Company vets over 5,000 qualified intern candidates to fill roughly 100-150 positions.
- **Targeted Campus Organizations:** In support of the campus recruitment, the Company will deliberately partner with diverse student organizations in effort to ensure maximum exposure of our intern and career opportunities. Some of the most prominent student organization partners include: Society of Women's Engineers (SWE); National Society of Black Engineers (NSBE); Society of Asian Scientist and Engineers (SASE); and Society of Hispanic Professional Engineers (SHPE).
- **Intern Experience:** During the summer internships, the Company leads several engagement opportunities with the interns to foster a positive experience. Annually, Consumers Energy hosts an intern luncheon experience designed to develop a deeper understanding of our business and build affinity.

- **Professional Organizations:** In support of the core business needs and benchmarking studies, the Company continuously seek partnerships to improve our employee diversity. The goal is to infuse high quality diverse applicants into all our external job postings. These deliberate efforts include a paid partnership with Professional Diversity Network (PDN) to participate in six diverse organization career fairs in 2021 and post all of vacancies on over 30 partner network careers sites reaching over 500,000 diverse jobseekers.
- **Corporate Giving Partnership:** Collaboration with Corporate Giving gives the Outreach Team the ability to connect with recipient organizations to support our workforce needs. These partnerships provide unique opportunities to meet, mentor, and support student bodies that traditionally have a high attrition rate of female and minority students.
- **National Women in Construction (NAWIC) Relationship:** Over the past five years, the Company has maintained a strong working relationship with NAWIC to help promote our opportunities to their membership. Over the past two years, Consumers Energy has shared every external gas construction vacancy posting with NAWIC.
- **Targeted Career Fairs:** Annually, the Company supports more than two dozen career fair events focused on racial/ethnic minorities, females, veterans, and individuals with disabilities.
- **Virtual Engagement:** In 2019, the Company began using virtual career fair platforms to provide more opportunities to reach targeted audiences. This augmentation plan allowed the Company to seamlessly transition to full remote career fair and networking with targeted jobseekers in our current remote environment.
- **Career Bootcamps for Hiring Success:** The Company is creating a pipeline to become an employer of choice for underrepresented communities in high demand occupations. These bootcamps are designed to springboard participants to a successful career. In partnership with trade schools and the Utility Military Assistance Program, our Michigan Gas Boot Camp (UMAP-MI) openly recruits current Michigan National Guard members, Reservists and Honorably Discharged military veterans. The program is designed to provide the requisite skills and knowledge an individual will need for a successful career within the gas utility sector. Successful completers are employed with Consumers Energy as entry-level Gas Lines Construction Laborers.

Appendix E – DE&I Movement Stands

Embedding DE&I focuses on educating our coworkers and highlighting opportunities where coworkers can contribute to creating an inclusive environment.

- **DE&I Awareness Training:** In 2021, the Company launched a from-the-top learning model for our employees for DE&I awareness training. In 2022, 100% of all coworkers were committed to completing DE&I awareness training.
- **Business Employee Resource Groups (BERG)***:* The Company has 2,000+ coworkers, more than 20% of our workforce, engaged in our Business Employee Resource Groups where each embrace differences to improve working relationships and deliver better results for customers, communities, and coworkers. All seven BERGs are employee-led, raising new initiatives that will lead to a greater sense of belonging for all.
- **DE&I Champion Program:** A program made up of union employees and exempt, their mission: Create safe spaces and assist the workforce in embedding DEI into everything we do, at all levels, by promoting an inclusive environment and restorative approach through training, coaching and supporting the workforce one on one, in teams and through inclusive leadership. The program works to advance belonging by leading grassroots communication efforts and action-oriented opportunities for involvement, identifying, and addressing gaps through problem-solving, and providing continuous DE&I learning opportunities.
- **Well-Being Consultants:** "Well-Being Consultants," lead well-being initiatives throughout the Company by identifying and addressing needs of our co-workers and provide continuous opportunities to engage in well-being efforts throughout the organization and beyond (retirees and spouses).

Our Talent Stand: We expect every future and current employee to have equitable opportunity to succeed.

Consumers Energy is building a world-class, inclusive workforce to better reflect our community.

- **100% Diverse Hiring Committees and Candidate Slates**: The Company expects every future and current co-worker to have an equitable opportunity to succeed. The practices include 100% diverse hiring committees and candidate slates for every position posted. Further, the hiring training includes the hiring best practices for our managers, including strategies to mitigate unconscious bias.
- **Summer Youth Energy Academies:** Within the communities where the Company's employees live and work, there are 450+ Talent Ambassadors inspiring K-12 students to become future coworkers—thus building the Talent Pipeline in the communities we serve for future generations. The 6-week Summer Youth Academy provides participants exposure to energy careers while gaining pre-employment essential skills.

Our Supplier Diversity Stand: A vibrant and diverse supplier network increases competition, strengthens innovation, and ultimately benefits customer affordability.

The Company is maturing in diverse supplier programs by building a framework that enables high quality, long-term success, knowing that supplier diversity contributes to operational excellence.

- **Expanding our reach:** The Company connects, supports and develops minority, women, LGBTQ, disability, and veteran-owned suppliers. Diverse suppliers are encouraged to create a business profile on our "Become a Supplier" website. The program will continue to expand across a diverse supplier network and strengthen supplier relationships.

Our Philanthropy Stand: Consumers Energy creates equitable, sustainable change to support social justice initiatives throughout Michigan and the communities served.

The Company has given back to Michigan for more than 135 years, supporting communities through the Consumers Energy Foundation since 1990. The Foundation supports organizations working to advance racial and ethnic justice and striving to further equity for women, veterans, the LGBTQIA+ community, people with mental and physical disabilities, and people living below the Asset Limited, Income Constrained, Employed (ALICE) threshold.

- **Signature Awards:** Each year, the Consumers Energy Foundation makes signature grant allocations of $500,000 each (totaling $1.5 million) to two or more Michigan nonprofit organizations striving to make a positive impact aligned with the corresponding priority area.
- **Supporting DE&I in Local Communities:** In 2022, the Foundation launched an initiative to award $100,000 to five community foundations actively engaged in DE&I efforts in their local communities. Each community foundation received $20,000 to support this important work. Based on the success of this program, the Foundation doubled its investment in 2023 by awarding $200,000 to ten community foundations across the State.
- **BERG Grant Program**: Each year, the Foundation allocates $10,000 in grant funding to each Business Employee Resource Group (BERG).

Line No.	Company Name	Affiliation, Percentage Ownership	Purpose of Business
	(a)	(b)	(c)
1	CMS Capital LLC	CMS Energy Sub, 100%	Formed to assist in securing financing for CMS Energy Corporation and its subsidiaries and affiliates
2	CMS Electric & Gas LLC	CMS Enterprises Sub, 100%	Formed to hold a portion of CMS Energy's international interests in projects located in South America
3	CMS Energy Corporation	Parent Company	Formed for the purpose of a Holding Company for both regulated and non-regulated businesses
4	CMS Energy Resource Management Co	CMS Enterprises Sub, 100%	Involved in providing gas, electric, oil and coal marketing, risk management and energy management services
5	CMS Engineering Company	Consumers Sub, 100%	Engaged in offering design, engineering project management and related construction services to natural gas utilities, natural gas exploration and production companies, and other energy businesses
6	NorthStar Clean Energy	CMS Energy Sub, 100%	Owns subsidiaries engaged in the development, acquisition and management of energy-related businesses and projects worldwide - FORMERLY KNOW AS CMS ENTERPRISES - NAME CHANGE ONLY
7	CMS Enterprises Sustainable Energy	CMS Enterprises Sub, 100%	Organized to engage in wind and solar projects
8	CMS Gas Transmission Company	CMS Enterprises Sub, 100%	Organized to engage in the transmission and processing of natural gas
9	CMS Generation Filer City Operating LLC	CMS Enterprises Sub, 100%	Formed to operate a coal and wood waste-fueled power plant
10	CMS Generation Michigan Power LLC	CMS Enterprises Sub, 100%	Owns generating units which are to be sited in Michigan for the purpose of generating power during peak demand periods
11	CMS Generation Operating Company II, Inc.	CMS Enterprises Sub, 100%	Involved in the operation of various power plants throughout the United States
12	CMS Generation Operating LLC	CMS Enterprises Sub, 100%	Involved in the operation of various power plants including Grayling and Genesee
13	CMS International Ventures LLC	CMS Enterprises Sub, 98.5%	Formed to own, manage and sell certain of CMS Energy's international investments
14	CMS Land Company	CMS Capital Sub, 100%	Formed to act as a repository for any unused real property formerly owned by Consumers Power and hold the same for possible non-utility development
15	CMS Treasury Services LLC	CMS Energy Sub, 100%	Formed to handle cash management functions/intercompany banking operations for CMS and certain of its subsidiaries and affiliates. No invoicing or payments made to this company
16	Consumers Campus Holdings LLC	Consumers Sub, 100%	The lessee in the synthetic lease financing of the new Consumers Energy Company office building. No invoicing or payments made to this company
17	Consumers Reveivable Funding II LLC	Consumers Sub, 100%	Buys certain accounts receivable from Consumers and sells them to a third party.

Line No.	Company Name	Affiliation, Percentage Ownership	Purpose of Business
	(a)	(b)	(c)
18	Consumers 2014 Securitization Funding LLC	Consumers Sub, 100%	Formed to engage in Securitization Financing
19	Craven County Wood Limited Partnership	CMS Enterprises, 50%	Owns power plant fueled on waste-wood and poultry waste.
20	Dearborn Generation Operating LLC	CMS Enterprises Sub, 100%	Operates the Ford/Rouge project (both the base units and the peaking unit)
21	Dearborn Industrial Generation LLC	CMS Enterprises Sub, 100%	Parent of DIG (100%) Operates Air permit for DIG
22	ES Services Company	Consumers Sub, 100%	For the purpose of offering design, engineering project management and related services primarily to electric utilities and generation facilities and building Solar projects for customers.
23	Flambeau Solar Partners, LLC	CMS Enterprises Sub, 100%	Formed to develop a solar photovoltaic electric generating system in Phillips, Wisconsin
24	Genesee Power Station LP	CMS Enterprises, 50%	Formed to develop, construct and operate a waste wood cogeneration facility
25	Grand River Wind, LLC	CMS Enterprises Sustainable Energy, 100%	Develops and operates Wind assets/projects
26	Grand River Solar, LLC	CMS Enterprises Sustainable Energy, 100%	Develops and owns Solar assets/projects
27	Grayling Generating Station LP	CMS Enterprises, 50%	Owns a waste-wood fueled power plant
28	HCE - Biopower, Inc	CMS Enterprises Sub, 100%	Formed to hold partnership interests in various power projects.
29	HYDRA-CO Enterprises, Inc.	CMS Enterprises Sub, 100%	Engaged in the ownership and/or operation, by itself or with others, of one or more cogeneration, small hydro or alternate energy production facilities thru partnership interests and ownership of domestic corporations
30	Minnigan Holdings Co	CMS Enterprises, 50%	Joint venture formed to develop Renewable Energy Projects.
31	New Bern Energy Recovery, Inc.	CMS Enterprises Sub, 100%	Formed to participate as a general partner in the Craven County Wood Energy limited partnership formed to construct, operate and own a wood-fired electric generating facility
32	T.E.S. Filer City Station LP	CMS Enterprises, 50%	Owns a wood chip and coal cogeneration plant

Source:
1/ Exhibit A-16 (SMG-2), Schedule F-1.1, Page 13

> double-counting average demand understates the residential cost of service while overstating the cost of service of more efficient gas users…. Based on the above, we find that the Company's proposed A&E methodology is more reflective of an accurate representation of PECO's mains distribution system.[8]

Similarly, the Minnesota Public Utilities Commission also approved Minnesota Power's proposal to replace the A&P method with A&E in its 2021 rate case citing the issue of double counting:

> Minnesota Power articulates reasonable grounds – based in concerns for equity, efficiency, and cost causation – for favoring the Average & Excess classification method over the Peak & Average method. Both methods recognize that average demand and peak demand warrant consideration. The choice to use peak demand in excess of average demand mitigates the double-counting problem associated with the Peak & Average method.[9]

Q HAS CONSUMERS PREPARED A CCOSS USING THE A&E METHODOLOGY?

A Yes. As previously discussed, Version 3 of the CCOSS prepared by Consumers appropriately utilizes the A&E method in place of the A&P method to allocate the costs of transmission, high pressure mains, non-high pressure mains, and storage.[10]

Q HAVE YOU CORRECTED THE A&E ALLOCATION FACTORS IN CONSUMERS' VERSION 3 CCOSS?

A Yes. I corrected the A&E allocation factors Consumers calculated by utilizing each class's NCP demand in place of the PDD. The class NCP was derived using each class's maximum monthly throughput instead of the PDD. Thus, excess demand is

[10] Direct Testimony of Yong F. Keyes at 3.

the difference between each class's maximum monthly throughput and its average demand. The revised NCP A&E allocators are shown in **Table 1**.

Q WHY ARE YOU RECOMMENDING A REVISED VERSION 3 CCOSS?

A I am recommending that the Commission adopt ABATE's revised Version 3 CCOSS to better reflect cost-causation principles relative to Consumers' proposed Version 2 and Version 3 CCOSSs. First, as previously discussed, the A&E method is an improvement over the A&P method utilized in Version 2 because it appropriately balances the two components of a class's average and peak demands without double-counting. The average component included in the A&E method is mathematically and functionally identical to that included in the A&P method, and subsequently, they provide the same measure of annual throughput for each class and recognize that the gas distribution system is partially planned to serve customers in each and every day

Unless noted otherwise, capital "other" costs include expenses such as AFUDC, fleet transportation, pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, and business expenses (e.g., travel, meals, etc.).

This exhibit demonstrates the projected break down for each program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month (Jan 2023 - Jun 2024) average actual percentage of the breakdown of these components in these programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes. Cost confidence levels were not used to develop these cost projections.

	Contractor	211,260	177,467	58,404	235,871	73,193	
	Non-Labor Overhead	1,716	1,810	1,323	3,132	1,655	
	Non-Labor Other	35,610	26,829	16,397	43,226	18,887	

Unless noted otherwise, capital "other" costs include expenses such as AFUDC, fleet transportation, pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, and business expenses (e.g., travel, meals, etc.).

This exhibit demonstrates the projected break down for each program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for all programs and projects except for the Mid-Michigan Pipeline MMPL) for 2024 and beyond are based upon the 2023-2024 18 month (Jan 2023 - Jun 2024) average actual percentage of the breakdown of these components in these programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes. Cost confidence levels were not used to develop projected test year costs.

[1] The information related to the 2020 Settlement Accounting Utility Amortization was provided directly by CMS and was not calculated or reviewed by Aon. The amortization was set up as a regulatory asset for the utility portion of the 2020 settlement loss of $35.5 million at August 31, 2020. As provided by CMS, the amortizations starts in September 2020 over service life of 8.55 years. Additionally, the settlement attributable to the utility portion on December 31, 2020 is $9.8 million, which is also amortized over service of 8.55 years beginning in January 2021. Nonutility portions of the settlement loss are $0.9 million and $0.3 million for August 31, 2020 and December 31, 2020 respectively.

[2] The information related to the 2021 Settlement Accounting Utility Amortization was provided directly by CMS and was not calculated or reviewed by Aon. The amortization was set up as a regulatory asset for the utility portion of the 2021 settlement loss of $17.6 million at October 31, 2021. As provided by CMS, the amortizations starts in November 2021 over service life of 8.19 years. Additionally, the settlement attributable to the utility portion on December 31, 2021 is $3.3 million, which is also amortized over service of 8.19 years beginning in January 2022. Nonutility portions of the settlement loss are $0.5 million and $0.1 million for October 31, 2021 and December 31, 2021 respectively.

[3] The information related to the 2022 Settlement Accounting Utility Amortization was provided directly by CMS and was not calculated or reviewed by Aon. The amortizations were set up as regulatory assets for the utility portions of the 2022 settlement losses. The settlements attributable to the utility portions are $3.9 million, $3.7 million, $11.5 million, and $2.5 million as of March 31, 2022, June 30, 2022, September 30, 2022, and December 31, 2022 respectively. As provided by CMS, the amortizations are amortized over service life of 8.11 years beginning in April 2022, July 2022, October 2022, and January 2023 respectively. Nonutility portions of the settlement loss are $0.1 million, $0.1 million, $0.3 million, and $0.1 million for March 31, 2022, June 30, 2022, September 30, 2022, and December 31, 2022 respectively.

Salary Increases	3.60%	3.65%	3.65%	3.65%

2024-2026 projections reflect the following:

- January 1, 2023 census data.
- PBO discount rate of 5.05% (Plan A) and 4.95% (Plan B) in fiscal 2024+, based on December 31, 2023 yield curve anlaysis.
- Service Cost effective interest rate of 5.08% (Plan A) and 5.12% (Plan B) in fiscal 2024+, based on December 31, 2023 yield curve analysis.
- Interest Cost effective interest rate of 4.93% (Plan A) and 4.87% (Plan B) in fiscal 2024+, based on December 31, 2023 yield curve analysis.
- Expense is allocated to Utility/Non Utility based on PBO using the preliminary allocation percentages for 2024 expense.
- Contributions are allocated to Utility/Non Utility based on the most recent allocation percentages provided by CMS for the December 2020 contributions.
- December 31, 2023 market assets provided by CMS, with expected returns thereafter.
- Expected and actual asset returns of 7.50% in fiscal 2024+.
- The plans will waive Funding Balance when necessary, in order to maintain a Funded Percentage of at least 80%.
- Other provisions, assumptions and methods are the same as those used for the December 31, 2023 ASC 715 disclosures.

New Lansing Service Center – Potential Locations within City of Lansing

401 N. Verlinden Ave. Lansing, MI 48915

Positives:

- Low purchase price
- Potential tax incentives available
- Utilities available

Limitations:

- Environmental concerns
- Unknown abandon utilities and tunnels under surface
- LBWL substation on site along with HVD line but unable to serve ourselves with electric
- Fiber would need to be ran to site
- Medium-risk security assessment needed

S. Waverly Rd. & W. Miller Rd. Lansing, MI 48911

Positives:

- Potential assistance with site preparation
- Potential assistance with demo of asbestos

Limitations:

- Wetlands and possibly not enough usable property
- Potentially unable to have a drive on S. Waverly due to hill and high speeds coming northbound on Waverly - both drives would have to be off of W. Miller Rd
- Length of time to potentially acquire site
- Demo of houses with asbestos
- Probably unable to serve ourselves with electric
- Fiber is currently some distance away – would need to be ran to site
- Currently zoned residential and would need to be rezoned to light industrial
- Medium-risk security assessment needed
- Unknown purchase price

New Lansing Service Center – Potential Locations within City of Lansing

South of Grand River, Ave.

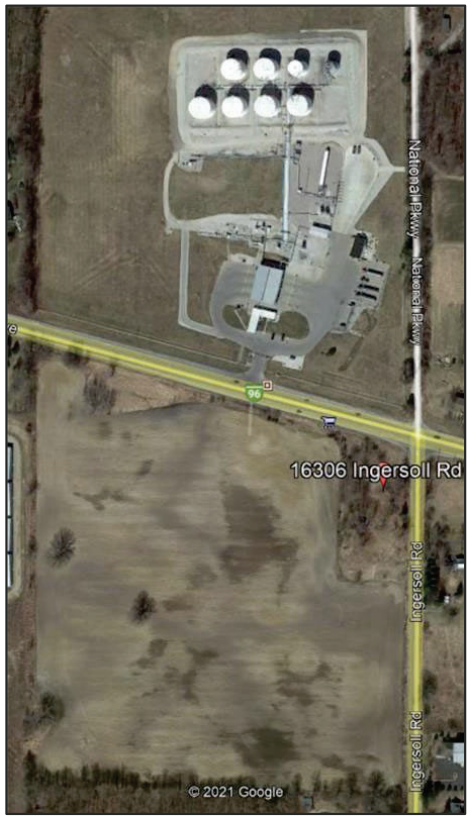
Positives:

- Utilities available (Water & Sewer)

Limitations:

- Fuel station across the street
- Possible wetlands
- Further north
- Lots of traffic on road

*No other data was collected regarding this location



New Lansing Service Center Potential Location

401 N. Verlinden Ave. Lansing - Site Characteristics

57 acres

Response Time:	• 87% of reported outages are reached in 30 minutes timeframe • 100% of reported outages are reached within 45 minutes
Ease of Travel:	CE Operations: • Difficulty with turning and maneuvering trucks and trailers through city streets and blocks • Travel impediment due to foot and bike traffic, CATA bus stops, railroad crossing and street parking in residential areas • Difficult to access highways through residential areas: 2 miles to I-496
Security:	• **CE Security Risk Assessment Rating – HIGH** • Crimes occurring within 1-mile radius of parcel within 12/26/19-01/23/20: Assault – 15; Weapon Offenses – 6; Larceny – 6; Vandalism – 4; Burglary – 4; Motor Vehicle Theft – 3; Robbery – 1 • 74 sex offenders in registry within 1-mile radius
Wetlands identified:	• No identified wetlands on the parcel
Environmental concerns:	• Significant concern regarding existing contamination and abandoned underground utility facilities on the property. Further due diligence would be required if site is selected to evaluate impact to service center construction and operations.

New Lansing Service Center Potential Location

S. Waverly & W. Miller Rd, Lansing - Site Characteristics

33 usable acres

Response Time:	• 88% of reported outages are reached in the 30 minutes • 100% of reported outages are reached within 50 minutes
Ease of Travel:	CE Operations: • Difficulty with turning and maneuvering trucks and trailers through city streets and blocks • Travel impediment due to foot and bike traffic, CATA bus stops and street parking in residential areas • Difficult to access highways through residential areas: 1.5 miles to I-96
Security:	• **CE Security Risk Assessment Rating – MEDIUM** • Crimes occurring within 1-mile radius of parcel within 12/26/19-01/23/20: Assault – 6; Vandalism – 1; Larceny – 1; Motor Vehicle Theft – 1 • 16 sex offenders in registry within 1-mile radius
Wetlands identified:	• The State's National Wetland Inventory map indicates 17 acres of regulated wetlands of the 50-acre parcel • CE would not be able to use 17 acres without costly wetland mitigation. Would limit or possibly eliminate future expansion on site.
Environmental concerns:	• LEAP reports asbestos abatement needed prior to demolition of existing houses on parcel • CE Environmental reports existing contaminated site on the adjacent property to the east

New Lansing Service Center Potential Location

6964 N. Canal Rd, Dimondale - Site Characteristics

60 usable acres

Response Time:	• 91% of reported outages are reached in the 30 minute timeframe • 100% of reported outages are reached within 45 minutes
Ease of Travel:	CE Operations: • Located in the industrial area of Windsor Commerce Parkway. Roads and intersections provide for wider turns for maneuvering trucks and trailers • Access to highways through commercial areas: 0.75 miles to I-96; 1.35 miles to I-69 • Limited foot and bike traffic and no parking on roads
Security:	• **CE Security Risk Assessment Rating – LOW** • Crimes occurring within 1-mile radius of parcel within 12/26/19-01/23/20: Assault – 0 • 4 sex offenders in registry within 1-mile radius • High police presence due to Michigan State Police within 0.6 miles from parcel
Wetlands identified:	• The State's National Wetland Inventory map indicates 7.29 acres of regulated wetlands on the 77.67-acre parcel • Property size allows for CE use to be designed to avoid wetland areas and allow for future expansion.
Environmental concerns:	• No known environmental concerns

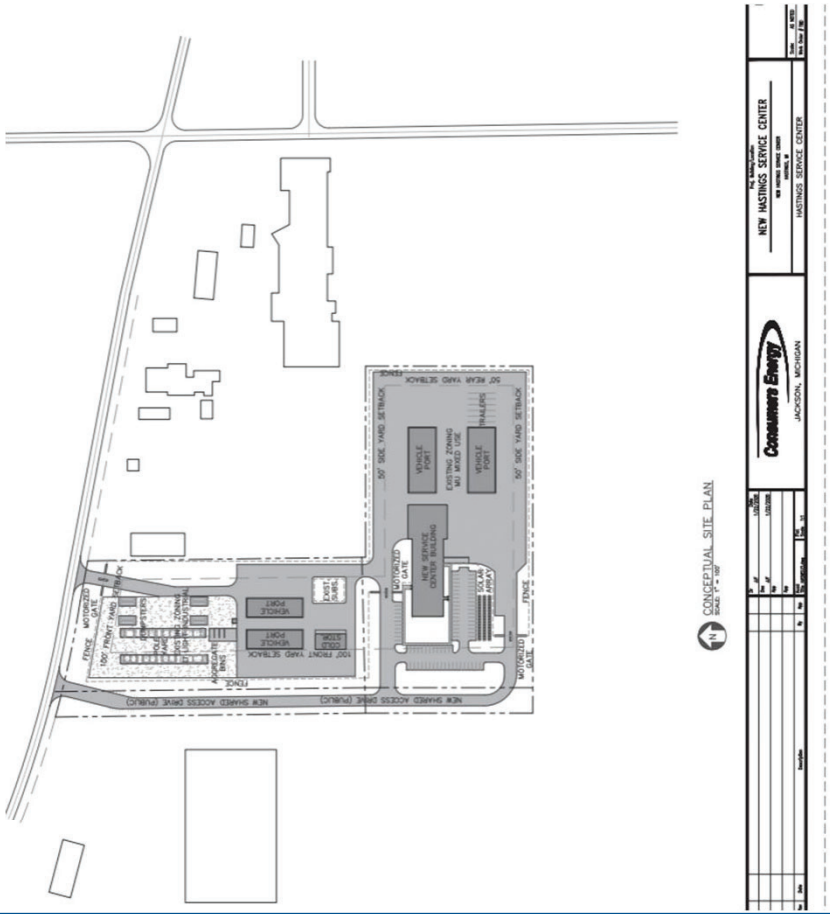
Hastings Service Center – Conceptual Site Plan



Gas Call Drive Time Summary

- **For the current Hastings Service Center and the proposed site at Vacant Land M-179**
  - Within 20 minutes we are able to reach 50% of gas customers and in 40 minutes we are able to reach 100% of gas customers.
- **For the proposed site at Vacant Land Enterprise Drive**
  - Within 25 minutes we are able to reach 50% of gas customers and in 45 minutes we are able to reach 100% of gas customers.

Electric Outage Drive Time Summary

- **For the current Hastings Service Center and the proposed site at Vacant Land M-179**
  - Within 15 minutes we are able to reach 50% of electric customers and in 30 minutes we are able to reach 100% of electric customers.
- **For the proposed site at Vacant Land Enterprise Drive**
  - Within 20 minutes we are able to reach 50% of electric customers and in 30 minutes we are able to reach 100% of electric customers.

Summary Site Comparison

Vacant Land: Enterprise Dr

- Public water and septic
- Would add 5 minutes to both electric and gas drive times

Vacant Land: M-179

- Private water and septic
- Drive times would remain similar to what is being experienced at the current location

Hastings Service Center Site Options Comparison

Vacant Land: Enterprise Dr, Hastings, MI 49058

Characteristics:

- Property – 18 acres
- Municipal Water – Available at the street
- Municipal Sewer – Available at the street
- Fiber – Available
- Wetlands – No mitigation required
- 3-Phase – Available at the street
- Natural Gas – Available at the street

Vacant Land: M-179, Hastings, MI 49058

Characteristics:

- Property – 30 Acres
- Private Water System – New system needed
- Private Septic System – New system needed
- Fiber – Available
- Wetlands – No mitigation required
- 3-Phase – Available at the street
- Natural Gas – Available at the street

Vacant Land: M-179, Hastings, MI 49058

Location Description: Just west of the corner of M-43 and M-37, on M-179 at M-43. Just East of Kellogg Community College parcel.

Access: Main entrance off M-37

Owner: 2 property owners have been approached one being Kellogg Community College

Vacant Land: Enterprise Dr, Hastings, MI 49058

Location Description: Southeast in the City just off E State St and Star School Rd in the Industrial Park

Access: There could be multiple drives on E. Enterprise Dr. Northeast parcel has access to Star School Rd.

Owner: City of Hastings, parcels are currently for sale.

Notes:

% breakdown for cost elements is based on 2023 actual
Test Year is based on a monthly cash flow from 2025-2026
2023-Test Year excludes facilities
Line 3 and 9 - 2023 Actual includes ($0.8M) for H-9 Eng rebuild - credit is for parts going back into inventory for future rebuilds
Line 3 and 9 - % breakdown for cost element for Turbo Engine Rebuild Actual 2023 is based on 2023 forecast due to large credit in materials.
Line 3 and 9 - All rebuild costs considered capital after 10/1/2022

Unless noted otherwise, capital “other” costs include expenses such as AFUDC, fleet transportation, pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, and business expenses (e.g., travel, meals, etc.). This exhibit demonstrates the projected break down for each program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month (Jan 2023 - Jun 2024) average actual percentage of the breakdown of these components in these programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes. Cost confidence levels were

This exhibit demonstrates the projected break down for each program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month (Jan 2023 - Jun 2024) average actual percentage of the breakdown of these components in these programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes. Cost confidence levels were not used to develop these cost projections.

Unless noted otherwise, capital “other” costs include expenses such as AFUDC, fleet transportation, pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, and business expenses (e.g., travel, meals, etc.).

This exhibit demonstrates the projected break down for each program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month average (Jan 2023 - Jun 2024) actual percentage of the breakdown of these components in these programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes. Cost confidence levels were not used to develop projected test year costs.

Unless noted otherwise, capital "other" costs include expenses such as AFUDC, fleet transportation, pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, and business expenses (e.g., travel, meals, etc.).

This exhibit demonstrates the projected break down for each program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month average (Jan 2023 - Jun 2024) actual percentage of the breakdown of these components in these programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes. Cost confidence levels were not used to develop projected test year costs.

Employee Incentive Compensation Plan - Metric Explanation and Measurement or Calculation Method

Line	(a)	(b) Metric	(c) Explanation	(d) Measurement or Calculation Method
1	Employee Safety	**Recordable Incident Rate**	Recordable Incident Rate is the number of recordable injuries multiplied by 200,000 (industry standard) divided by the total hours worked	# of recordable injuries * 200,000 / total hours worked
2		**High Risk Injuries**	Number of injuries (Recordable and Non-Recordable) that are classified against the EEI Safety Classification Learning Model as High Risk which includes: HSIF & PSIF	# of injuries classified as HSIF & PSIF
3	Culture Index	**Employee Engagement Index**	The Employee Engagement index is an average favorability score derived from the taking the total favorable responses received for the 5 questions within the Employee Engagement Category from each of the Company's employee engagement surveys administered by Korn Ferry and they use Qualtrics as the survey platform (https://www.qualtrics.com/) and dividing by the total number of responses received. The Company's Engagement, Empowerment and Diversity, Equity and Inclusion indexes are how we measure our culture values in action. The indexes focus on things like ensuring we have simple processes, fix problems, keep our workforce engaged by measuring the combination of emotional commitment (are you proud to work here?) and rational commitment (do you plan to stay?) and embed diversity, equity and inclusion into everything we do.	This index is an average of the scores of 5 questions: 1.If I were offered a similar job elsewhere at the same pay, I would stay at the company. 2.How likely is it that you would recommend this company's products and services to family and friends? 3.I feel motivated to do more than is required of me. 4.Given your choice, how long would you plan to continue working for the company? (Less than 1 year, 1-2 years, 3-5 years, More than 5 years/until retirement) 5.I would recommend my Company as a good place to work.
4		**Employee Empowerment Index**	The Employee Empowerment index is an average favorability score derived from the taking the total favorable responses received for the 5 questions within the Employee Empowerment Category from each of the Company's employee engagement surveys administered by Korn Ferry and they use Qualtrics as the survey platform (https://www.qualtrics.com/) and dividing by the total number of responses received. The Company's Engagement, Empowerment and Diversity, Equity and Inclusion indexes are how we measure our culture values in action. The indexes focus on things like ensuring we have simple processes, fix problems, keep our workforce engaged by measuring the combination of emotional commitment (are you proud to work here?) and rational commitment (do you plan to stay?) and embed diversity, equity and inclusion into everything we do.	This index is an average of the scores of 5 questions: 1)I feel encouraged to come up with new and better ways of doing things. 2) I am involved in decisions that affect my work. 3) Our existing processes are efficient and effective. 4) There is a reasonable balance between my work and personal life. 5) People at my Company fix problems so that they don't happen again.
5		**Diversity, Equity & Inclusion Index**	The Diversity, Equity and Inclusion index is an average favorability score derived from the taking the total favorable responses received for the 5 questions within the Diversity, Equity and Inclusion Category from each of the Company's employee engagement surveys administered by Korn Ferry and they use Qualtrics as the survey platform (https://www.qualtrics.com/) and dividing by the total number of responses received. The Company's Engagement, Empowerment and Diversity, Equity and Inclusion indexes are how we measure our culture values in action. The indexes focus on things like ensuring we have simple processes, fix problems, keep our workforce engaged by measuring the combination of emotional commitment (are you proud to work here?) and rational commitment (do you plan to stay?) and embed diversity, equity and inclusion into everything we do.	This index is an average of the scores of 5 questions. 1.Employees are encouraged to participate in making decisions that affect their work 2.My immediate manager values having individuals in my work group with diverse backgrounds and perspectives 3.I feel able to be myself at work 4.I feel like I belong at Consumers Energy 5.Opportunities for advancement are available to employees regardless of personal background or characteristics
6		**Customer Experience Index**	Customer Experience Index is a survey administered by Forrester (https://go.forrester.com/analytics/) and is a measure of customer service based on 3 questions – Did we meet your needs? Was it easy to do business with us? Was the experience enjoyable.	The metric is calculated by asking those 3 questions of customers on a scale of 1 to 5 with 4s and 5s being positive responses, 1s and 2s being negative responses, and 3s being a neutral response. To calculate the score, the number of negative responses is subtracted by the number of positive responses, which is then divided by the total number of customers responding. The results of the three questions are averaged together to calculate the Customer Experience Index score.
7		**Electric Reliability**	Electric Reliability/SAIDI (System Average Interruption Duration Index) is a utility-industry benchmark; SAIDI measures the total time an average customer experiences a non-momentary power interruption in a one-year period.	Use of IEEE (Institute of Electrical and Electronics Engineers) 2.5beta standard to exclude outlier events/MEDs (Major Event Dates); total customer-minutes of interruption divided by total customers served (i.e. customers on the system).
8		**Methane Emmisions Reduction**	Reduce fugitive methane emissions associated with gas distribution by 422 metric tons. Reductions are obtained as a result of replacing and/or retiring older, aging infrastructure from natural gas distribution.	Summation of reduction in methane emissions associated with Vintage Service Replacements (VSR), Enhanced Infrastructure Replacement Program (EIRP), Other Non-Vintage Replacements (Mains & Services), Well Plug & Abandonment (P&A) and capital replacements from the Leak Back-log. See sub-categories below for more details. **Vintage Service Replacements** - The methane emission reductions are calculated using emission factors (EFs) for the type of service replaced (copper and Bare steel). The EFs and formulas used are consistent with those defined in EPA's Greenhouse Gas Reporting Rule. **EIRP** - The methane emission reductions are calculated using EFs for the type of main or service replaced. EFs for mains are based on miles replaced while services, as with VSRs above, are based on the number of services. The EFs and formulas used are consistent with those defined in EPA's Greenhouse Gas Reporting Rule. **Other Mains & Services** - same calculations as VSR and EIRP. **Well Plug & Abandon** - The methane emission reductions are calculated using emission factors (EFs) for the type of component retired. The EFs and formulas used are consistent with those defined in EPA's Greenhouse Gas Reporting Rule. **Gas Leak Backlog** - same calculation as VSR.

(1) Consumers Energy commercial class assigned to Small C&I and industrial class assigned to Medium / Large C&I
(2) 2024 customer count data based on premises count from OMS system. The model does not take into consideration any changes to customer counts from 2020 to 2024.
(3) Berkeley National Laboratory "Estimated Value of Service Reliability for Electric Utility Customers in the United States", June 2009
(a) Estimates based on 2023 mean costs for 4-hour interruption (Tables 3.2, 4.2, and 5.2) adjusted for inflation
(b) Standard Deviations based on 2021 4-hour interruption (Tables 3.2, 4.2, and 5.2) at 75% confidence level adjusted for inflation
(c) Inflation based on CPI from Bureau of Labor Statistics
(4) Consumers Energy Company Reliability Reports - excluding Major Event Days

	Actual SAIDI
2020	195
2021	228
2022	182
2023	176
2024	170
CAGR (2024 / 2020)	-3.3%

Average annual SAIDI reduction from 2020 to 2024 = -5.0

(5) Average C/(B) to Society = (COI) x (2024 SAIDI x Customers - 2020 SAIDI x Customers)
Minimum C/(B) to Society = (COI - Std Dev) x (2024 SAIDI x Customers - 2020 SAIDI x Customers)
Maximum C/(B) to Society = (COI + Std Dev) x (2024 SAIDI x Customers - 2020 SAIDI x Customers)

[B] In its original U-20309 filing, the Company inadvertently included in its unprotected plant balance a remeasurement of excess deferred taxes associated with AFUDC timing differences. A subsequent reconcilation of the 2019 TCJA balance highlighted this discrepancy. The Company reflected this proposed change in Case No. U-21148 and the Commission subsequently approved the adjustment in it's July 7, 2022 order.

[C] Gross-up change to the regulatory liability balance due to a statutory or apportionment rate change.

[D] Included in Case No. U-21148.

[E] Included in Case No. U-21308.

[F] Included in Case No. U-21490.

This exhibit demonstrates the projected break down for each sub-program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month average (Jan 2023 - Jun 2024) actual percentage of the breakdown of these components in these sub-programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes.

Note: capital “non-labor other” costs include expenses such as pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, non-labor material loadings, contributions/reimbursements and business expenses. WP-LDW-2 page 7 of 7 provides additional details on "non-labor other" costs. Confidence intervals are not used to prepare projections for the above programs.

This exhibit demonstrates the projected break down for each sub-program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month average (Jan 2023 - Jun 2024) actual percentage of the breakdown of these components in these sub-programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes.

Note: capital “non-labor other” costs include expenses such as pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, non-labor material loadings, contributions/reimbursements and business expenses. WP-LDW-2 page 7 of 7 provides additional details on "non-labor other" costs. Confidence intervals are not used to prepare projections for the above programs.

This exhibit demonstrates the projected break down for each sub-program into the cost components shown above. The 2023 amounts are the actual amounts. The cost component projections for 2024 and beyond are based upon the 2023-2024 18 month average (Jan 2023 - Jun 2024) actual percentage of the breakdown of these components in these sub-programs. The Company projects the program expenditures at a total dollar level based upon historical spending and known projects or other changes.

Note: capital “non-labor other” costs include expenses such as pension, administrative/general expenses, indirect non-labor expenses, rent/utility costs, employee benefits, non-labor material loadings, contributions/reimbursements and business expenses. WP-LDW-2 page 7 of 7 provides additional details on "non-labor other" costs. Confidence intervals are not used to prepare projections for the above programs.

Updated Regulatory Rankings

We have updated the regulatory rankings of the 58 jurisdictions in North America across five Tiers (Tier 1 is most constructive, Tier 5 is least constructive). See Figure 3. We rate the jurisdictions using seven criteria. We believe constructive regulation provides a positive feedback loop of consistent and fair outcomes for investors, that also results in better customer service and satisfaction, which is what regulators want to see to constructively regulate. Jurisdictions that moved up are AL, ID, and PA (to Tier 1 from Tier 2), CA, MO, and ND (to Tier 2 from Tier 3), and NY (to Tier 4 from Tier 5). We would also note that while LA remained in Tier 3 it moved up significantly from the bottom to the top of that Tier. Jurisdictions that moved down are IN and MI (to Tier 2 from Tier 1), AK (to Tier 4 from Tier 3), and DC, MS, and NM (to Tier 5 from Tier 4).

Lower Relative Pricing Power a Risk to Regulation and Growth

Our pricing power analysis tends to point to where regulatory strain or growth pressures may develop. We saw this last year when our metric showed lower relative pricing power for EXC, PEG, NI, EMA, D, PCG, WEC, and NEE. Most either lowered or rebased their growth - EXC, PEG, and NI; or, faced material regulatory headwinds - EMA and the rate cap legislation in NS, and D with the overall strategic review and legislation in VA reworking the regulatory construct. For WEC, although the rate case outcome was constructive in WI, the rhetoric during the hearing was not encouraging. Where pricing power did not pressure regulation or earnings growth was for NEE and PCG. We rank FL as the most constructive regulatory jurisdiction in North America and NEE's rates at FPL are set through 2025. We also believe CA regulation is increasingly constructive around wildfire and clean energy policy goals, as evidenced by the move to Tier 2 in this year's jurisdiction rankings. Companies that show lower relative pricing power in our updated analysis that did not in May 2022 are AES, CMS, CNP, DTE, ED, ES, and EVRG. Of these names we are Buy rated on AES mainly for the unregulated story, and CNP, where we think significant customer growth in TX can help alleviate pricing pressures. We are Neutral on the remaining names with lower pricing power in '23 vs. '22 and remain diligent in watching regulatory processes in MI for CMS and DTE, in CT for ES, and in KS for EVRG as well as policy in NY for ED. Names that showed continued lower relative pricing power in '23 vs. '22 are D, EXC, NI, PEG, and WEC where D, EXC, NI, and PEG have either gone into or completed a strategic review and/or lowered/rebased their growth rates. WEC remains in a Tier 1 regulatory jurisdiction in WI, but the LNT rate case in that state, as well as WEC's gas case in IL are worth watching.

Updated Pricing Power Analysis - Affordability Inflation vs. Growth

Our analysis places the group across one of four quadrants, although a little more than half of companies are clustered around the combined medians (see Figure 1). We have overlayed the weighted average regulatory ranking quartile of each company on this matrix indicated by color as noted. Those companies outside the median zone in one of the four quadrants are: (I) Pricing power with lower costs or higher weighted average disposable income growth: PCG, PPL, and SO; (II) Lower pricing power, requiring constructive regulation to maintain growth: AES, CMS, CNP, EXC, ES and NI; (III) Lower pricing power that would require constructive regulation or policy support to accelerate growth: D, DTE, ED, EVRG, PEG, and WEC; (IV) Pricing power and opportunity to accelerate growth if regulation is constructive: EIX, OGE, and PNW.

This report has been prepared by UBS Securities LLC. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES, INCLUDING INFORMATION ON THE QUANTITATIVE RESEARCH REVIEW PUBLISHED BY UBS, BEGIN ON PAGE 8.** UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

ANALYSIS OF PRICING POWER IN REGULATED UTILITIES

Given investor focus on inflation and its potential impacts, and the potential for accelerating capital expenditures and rate base growth into the clean energy transition (Cap-Ex Update: Breakthroughs in Spending, 30 March 2023) we analyzed the "pricing power" of regulated utilities. Instead of just a straight analysis of annual increases in bills, we took the estimated bill increase divided by the weighted average personal income by jurisdiction for each company. We then estimated the total increase in that metric through 2029 and annualized that number. We believe this is a more accurate representation of "pricing power" for a utility as it takes into account the relative affordability of the projected bill increases across the relative incomes of the customer base across a company's jurisdictions.

To calculate bill inflation, we used each company's projected capital plan and extended that at flat capex to 2029 from the end of each company's forecast to determine rate base growth. For fuel expenses, we used forward curves and retired all coal generation by 2028 and replaced it with a third each of solar, wind, and natural gas. We incorporated non-fuel O&M increases of 2%/year, held interest expense at 5.5%, used 30-year depreciation, and an allowed return of 10.2% and a 48% equity ratio. While individual companies may achieve better or worse metrics, we tried to create an average metric across companies over the eight-year time frame. Retail sales growth averaged approximately 1% per year.

To calculate disposable income, we took each state or province's disposable income in 2021 and grew it by forecast gross state or provincial product through 2025 and then held annual gross state or provincial product growth constant through 2029. For each company we weighted this by earnings power by jurisdiction to estimate the weighted average disposable income.

Dividing annual bills by weighted average disposable income projected into 2029 and seeing how much that grew versus the same metric in 2021, and annualizing that growth provides a measure of bill affordability inflation. When we graph this against annualized projected utility and parent only EPS growth, the results are shown in Figure 1 below. We have also overlayed the weighted average regulatory ranking quartile onto this graph through the color of the dots: 1st quartile is green, 2nd quartile is blue, 3rd quartile is yellow, and 4th quartile is red. This relative regulatory quartile is important, as more constructive regulation will likely allow for more EPS growth with more affordability inflation, all else equal.

In Figure 1, about half of the companies end up around the median level of growth and affordability inflation of ~6.3% and just under 1%, respectively. Those outside of the median grouping end up in one of four quadrants: (I) high growth and low affordability inflation - where there is clear pricing power due to lower cost structures or higher disposable income growth; (II) high growth and higher affordability inflation, where pricing power needs to be maintained by constructive regulation or policy support to maintain growth; (III) lower growth and higher affordability inflation - where there is lower relative pricing power and it would require constructive regulation or, more likely a state or provincial energy policy initiative to accelerate growth above the median, and (IV) low growth and low affordability inflation - where there is an opportunity to accelerate growth if regulation is constructive or where a company might get stuck at lower than median growth if regulation is more challenging.

Our pricing power analysis tends to point to where regulatory strain or growth pressures may develop as we saw last year when our metric showed lower relative pricing power for EXC, PEG, NI, EMA, D, PCG, WEC, and NEE. Most either lowered or rebased their growth - EXC, PEG, and NI or faced material regulatory headwinds - EMA and the rate cap legislation in NS; D with the overall strategic review and legislation in VA reworking the regulatory construct. For WEC although the rate case outcome was constructive in WI the rhetoric during the hearing was not encouraging. Where pricing power did not pressure regulation or earnings growth was for NEE and PCG. We rank FL as the most constructive regulatory jurisdiction in North America and NEE's rates at FPL are set through 2025. We also believe CA regulation is increasingly supportive around wildfire and clean energy policy goals, as evidenced by the move to Tier 2 in this year's jurisdiction rankings. Companies that show lower relative pricing power in our updated

analysis that did not in May 2022 are AES, CMS, CNP, DTE, ED, ES, and EVRG. Of these names we are Buy rated on AES mainly for the unregulated story, and CNP, where we think significant customer growth in TX can help alleviate pricing pressures. We are Neutral on the remaining names with lower pricing power in '23 vs. '22 and remain diligent in watching regulatory processes in MI for CMS and DTE, in CT for ES, and in KS for EVRG as well as policy in NY for ED. Names that showed continued lower relative pricing power in '23 vs. '22 are D, EXC, NI, PEG, and WEC where D, EXC, NI, and PEG have either gone into or completed a strategic review and/or lowered/rebased their growth rates. WEC remains in a Tier 1 regulatory jurisdiction in WI, but the LNT rate case in that state, as well as WEC's gas case in IL are worth watching.

Bill inflation is calculated as the increase in annual bills/disposable income, annualized. Disposable income is grown at state forecast GDP, and a weighted average is taken by company.

UPDATED REGULATORY RANKINGS

We are updating our jurisdictional regulatory rankings which we do approximately every 6 months. Our last update was in November 2022 Shifting Reguatory and Growth Quartiles.

We rate the jurisdictions using seven criteria. We believe that constructive regulation provides a positive feedback loop of consistent and fair outcomes for investors, that also results in better customer service and satisfaction, which is what regulators want to see to constructively regulate. At the bottom of Figure 3 we show the average JD Power Customer Service scores, which are mostly consistent with our tiered rankings. Those jurisdictions highlighted in green moved up, and those highlighted in red moved down versus our previous rankings. As a reminder the table reads as an ranking histogram so Florida in Tier 1 is more constructive than British Columbia in Tier 1, and so on.

Figure 3: UBS North America Jurisdictional Regulatory Rankings

UBS REGULATORY JURISDICTION RANKINGS - May 2023 Update

TIER 1	TIER 2	TIER 3	TIER 4	TIER 5
		New Jersey		
		Louisiana		
		Massachusetts		
		Oregon		
		South Carolina		
		Tennessee		
	Arkansas	Washington		
Florida	Indiana	Newfoundland & Labrador	Rhode Island	Alberta

Pennsylvania	Illinois	Hawaii	New York	Arizona
JD Power Average Customer Service Scores				
751	718	727	717	719

Source: S&P Capital IQ Pro, FactSet, JD Power, UBS Equity Research

NOTES: Green indicates moved up a Tier since last rankings, Red indicates moved down a Tier. LA is highlighted given it moved significantly within Tier 3 since the last rankings

The ranking criteria are as follows:

1) Elected vs. Appointed Commissions: Elected commissioners tend to focus more closely on managing customer affordability which can dampen investment vs. appointed commissions that tend to be more policy driven, all else equal.

2) Tendency to Settle vs. Litigate Rate Cases: Settlements have the advantage of being quicker, less risky and less prone to legal appeal than fully litigated rate proceedings. States that regularly settle are preferred by investors.

3) Regulatory Lag: Regulatory lag is the difference between authorized returns on equity and earned returns resulting from time lag between dollars invested in rate base and authorized revenues reflecting that spending. We rank regulatory lag based on the time it takes to reach a decision in rate cases.

4) Rate and Customer Bill Levels: Utilities' prices are often a material factor in state economic development. States with high prices versus their surroundings tend to scrutinize utility investment more closely than states with low bills. We look at the average rate and the average residential bill.

5) Allowed Return Spread: We measure the return spread over 10-year Treasury note of the ordered rate cases since 2010 by jurisdiction. As rate of return setting policies and practices are grounded in decades of case law, jurisdictions that allow high and low return spreads tend to continue with that practice.

6) Regulatory Mechanisms: We include an average of eight mechanisms. These include things like tracking mechanisms, forward test years, formula rate plans, and performance based regulation.

7) UBS Subjective Investor Friendliness Factor: Based on our knowledge of current commission actions.

Biggest Changes to the State Rankings

With this review we highlight the largest positive and negative ranking votes out of 58 total jurisdictions we are covering in the United States and Canada:

Positive Changes

- Alabama. Constructive tracking mechanisms, high ROE spreads, and lower relative rates moved the state into Tier 1 relative to other jurisdictions.
- Idaho. Continued low rates moved the jurisdiction into Tier 1 relative to other jurisdictions.
- Pennsylvania. Relative improvement given other states fell to Tier 2.
- California. Regulatory lag improved from 5th quintile to 4th which moved the state from the top of Tier 3 in our May 2022 analysis into Tier 2.
- Missouri. Regulatory lag improved from 3rd quintile to 2nd, moving the state to Tier 2 from near the top of Tier 3 in our prior analysis.
- North Dakota. Settlements became more common, and historical ROE spread improved to 2nd quintile from 3rd quintile, offset slightly by regulatory lag increasing, moving to the 4th quintile from the 3rd.
- Louisiana. Did not move out of Tier 3, however did have a significant move worth highlighting from the bottom to the top of that Tier. ROE spread to the 10 year improved and it moved to 2nd quintile from 4th in that category.
- New York. Settle vs. Litigate improved to 1st quintile from the 2nd.

Negative Changes

- Indiana. Cost to customers got a bit worse with a move to the 3rd quintile from the 2nd which was enough to move the state to Tier 2 from the bottom of Tier 1 in May 2022.
- Michigan. ROE spread to the 10 year came in to 3rd quintile from 2nd, and we moved our subjectiveness ranking to 2nd quintile vs. 1st quintile.
- Alaska. Moved lower as other states moved higher so lost relative positioning into Tier 3
- District of Columbia. Lower rate of settlements, 5th quintile ROE spreads, and 4th quintile regulatory lag pushed this jurisdiction to the top of Tier 5 relative to other jurisdictions from the bottom of Tier 4 in May 2022.
- Mississippi. Elected commission with higher relative costs to customers average regulatory lag, and 5th quintile ROE spreads versus risk free rates, pushed this state into Tier 5 relative to other jurisdictions.
- New Mexico. Was at the bottom of Tier 4 in our May 2022 analysis and was a relative mover to Tier 5 as New York improved into Tier 4.

Valuation Method and Risk Statement

North America Utilities: Our valuation methodology for the group is price to earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%; 4) Clean Energy Transition: A potential 5% premium for a risk adjusted clean energy transition growth opportunity; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% of unregulated earnings), we perform a sum-of-the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

IPPs: Our valuation methodology is based on mid-cycle EV/EBITDA multiples of 7.1x.

CEG: Our valuation methodology is based on an infrastructure comp on EV/EBITDA.

Water Utilities: Our valuation methodology for the group is price-to-earnings based. Our methodology includes: 1) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; and 2) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%.

North American utilities: We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

IPPs: We identify the following risks for the sector: Power prices, fuel prices, capacity prices, supply and demand for electricity, extreme weather, economic conditions, and cost of financing and collateral hedging.

CEG: We identify the following risks for CEG: Power price volatility above the nuclear PTC price, uranium fuel prices, supply and demand for electricity, cost of financing and nuclear operational risk.

Water Utilities: We identify the following risks: rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 10 May 2023 07:22 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:

Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	54%	22%
Neutral	FSR is between -6% and 6% of the MRA.	36%	21%
Sell	FSR is > 6% below the MRA.	10%	18%
Short-Term Rating	**Definition**	**Coverage[3]**	**IB Services[4]**
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%

Source: UBS. Rating allocations are as of 31 March 2023.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

The Disclaimer relevant to Global Wealth Management clients follows the Global Disclaimer.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas

within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. The information does not apply to, and should not be relied upon by, retail clients. UBS Europe SE is authorised by the European Central Bank (ECB) and regulated by the BaFin and the ECB. **Germany, Luxembourg, the Netherlands, Belgium and Ireland:** Where an analyst of UBS Europe SE has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE. In all cases it is distributed by UBS Europe SE and UBS AG, London Branch. **Turkey:** Distributed by UBS AG, London Branch. No information in this document is provided for the purpose of offering, marketing and sale by any means of any capital market instruments and services in the Republic of Turkey. Therefore, this document may not be considered as an offer made or to be made to residents of the Republic of Turkey. UBS AG, London Branch is not licensed by the Turkish Capital Market Board under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instruments/services may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the Capital Market Board. However, according to article 15 (d) (ii) of the Decree No. 32, there is no restriction on the purchase or sale of the securities abroad by residents of the Republic of Turkey. **Poland:** Distributed by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce regulated by the Polish Financial Supervision Authority. Where an analyst of UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce. **Russia:** Prepared and distributed by UBS Bank (OOO). Should not be construed as an individual Investment Recommendation for the purpose of the Russian Law - Federal Law #39-FZ ON THE SECURITIES MARKET Articles 6.1-6.2.**Switzerland:** Distributed by UBS AG to persons who are institutional investors only. UBS AG is regulated by the Swiss Financial Market Supervisory Authority (FINMA). **Italy:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Italy Branch. Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other

areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosures_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Bahrain: UBS is a Swiss bank not licensed, supervised or regulated in Bahrain by the Central Bank of Bahrain to undertake banking or investment business activities in Bahrain. Therefore, prospects/clients do not have any protection under local banking and investment services laws and regulations. **Brazil**: This report is only intended for Brazilian residents who are directly purchasing or selling securities in the Brazil capital market through a local authorized institution. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Czech Republic**: UBS is not a licensed bank in the Czech Republic and thus is not allowed to provide regulated banking or investment services in the Czech Republic. This communication and/or material is distributed for marketing purposes and constitutes a "Commercial Message" under the laws of Czech Republic in relation to banking and/or investment services. Please notify UBS if you do not wish to receive any further correspondence. **Denmark**: This publication is not intended to constitute a public offer under Danish law. It is distributed only for information purposes to clients of UBS Europe SE, Denmark Branch, filial af UBS Europe SE, with place of business at Sankt Annae Plads 13, 1250 Copenhagen, Denmark, registered with the Danish Commerce and Companies Agency, under No. 38 17 24 33. UBS Europe SE, Denmark Branch, filial af UBS Europe SE is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Danish Financial Supervisory Authority (Finanstilsynet), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Egypt**: Securities or other investment products are not being offered or sold by UBS to the public in Egypt and they have not been and will not be registered with the Egyptian Financial Regulatory Authority (FRA). **France**: This publication is not intended to constitute a public offer under French law, it does not constitute a personal recommendation as it is distributed only for information purposes to clients of UBS (France) S.A., French "société anonyme" with share capital of € 132.975.556, at 69 boulevard Haussmann F-75008 Paris, registered with the "Registre du Commerce et des Sociétés" of Paris under N° B 421 255 670. UBS (France) S.A. is a provider of investment services duly authorized according to the terms of the "Code monétaire et financier", regulated by French banking and financial authorities as the "Autorité de contrôle prudentiel et de résolution" and "Autorité des marchés financiers", to which this publication has not been submitted for approval. **Germany**: This publication is not intended to constitute a public offer under German law. It is distributed only for information purposes to clients of UBS Europe SE, Germany, with place of business at Bockenheimer Landstrasse 2-4, 60306 Frankfurt am Main. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin") and supervised jointly by the European Central Bank, the German Central Bank (Deutsche Bundesbank) and BaFin, to which this publication has not been submitted for approval. **Hong Kong SAR**: This publication is distributed to clients of UBS AG Hong Kong Branch by UBS AG Hong Kong Branch, a licensed bank under the Hong Kong Banking Ordinance and a registered institution under the Securities and Futures Ordinance. UBS AG Hong Kong Branch is incorporated in Switzerland with limited liability. **India**: Distributed by UBS Securities India Private Ltd. (Corporate Identity Number U67120MH1996PTC097299) 2/F, 2 North Avenue, Maker Maxity, Bandra Kurla Complex, Bandra (East), Mumbai (India) 400051. Phone: +912261556000. It provides brokerage services bearing SEBI Registration Number INZ000259830; merchant banking services bearing SEBI Registration Number: INM000010809 and Research Analyst services bearing SEBI Registration Number: INH000001204. UBS AG, its affiliates or subsidiaries may have debt holdings or positions in the subject Indian company/companies. UBS AG, its affiliates or subsidiaries may have financial interests (e.g. like loan/derivative products, rights to or interests in investments, etc.) in the subject Indian company/companies from time to time. Within the past 12 months, UBS AG, its affiliates or subsidiaries may have received compensation for non-investment banking securities-related services and/or non-securities services from the subject Indian company/companies. The subject company/companies may have been a client/clients of UBS AG, its affiliates or subsidiaries during the 12 months preceding the date of distribution of the research report with respect to investment banking and/or non-investment banking securities-related services and/or non-securities services. With regard to information on associates, please refer to the Annual Report at: https://www.ubs.com/global/en/about_ubs/investor_relations/annualreporting.html. **Indonesia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the

e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. In Israel, UBS Switzerland AG is registered as Foreign Dealer in cooperation with UBS Wealth Management Israel Ltd., a wholly owned UBS subsidiary. UBS Wealth Management Israel Ltd. is an Investment Marketing licensee which engages in Investment Marketing and is regulated by the Israel Securities Authority. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. No action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Jersey**: UBS AG, Jersey Branch, is regulated and authorized by the Jersey Financial Services Commission for the conduct of banking, funds and investment business. Where services are provided from outside Jersey, they will not be covered by the Jersey regulatory regime. UBS AG, Jersey Branch is a branch of UBS AG a public company limited by shares, incorporated in Switzerland whose registered offices are at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH 8001 Zurich. UBS AG, Jersey Branch's principal place of business is 1, IFC Jersey, St Helier, Jersey, JE2 3BX. **Luxembourg**: This publication is not intended to constitute a public offer under Luxembourg law. It is distributed only for information purposes to clients of UBS Europe SE, Luxembourg Branch ("UBS Luxembourg"), R.C.S. Luxembourg n° B209123, with registered office at 33A, Avenue J. F. Kennedy, L-1855 Luxembourg. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea (HRB n° 107046), with registered office at Bockenheimer Landstrasse 2-4, D-60306 Frankfurt am Main, Germany, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin") and subject to the joint prudential supervision of BaFin, the European Central Bank and the central bank of Germany (Deutsche Bundesbank). UBS Luxembourg is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render(s) services. **Monaco**: This document is not intended to constitute a public offering or a comparable solicitation under the Principality of Monaco laws, but might be made available for information purposes to clients of UBS (Monaco) S.A., a regulated bank having its registered office at 2 avenue de Grande Bretagne 98000 Monaco operating under a banking license granted by the "Autorité de Contrôle Prudentiel et de Résolution" (ACPR) and the Monegasque government which authorizes the provision of banking services in Monaco. UBS (Monaco) S.A. is also licensed by the "Commission de Contrôle des Activités Financières" (CCAF) to provide investment services in Monaco. The latter has not approved this publication. **Nigeria**: The investment products mentioned in this material are not being offered or sold by UBS to the public in Nigeria and they have not been submitted for approval nor registered with the Securities and Exchange Commission of Nigeria. If you are interested in products of this nature, please let us know. The investment products mentioned in this material are not being directed to, and are not being made available for subscription by any persons within Nigeria other than the selected investors to whom the offer materials have been addressed as a private sale or domestic concern within the exemption and meaning of Section 69(2) of the Investments and Securities Act, 2007 (ISA). This material has been provided to you at your specific unsolicited request and for your information only. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Portugal**: UBS Switzerland AG is not licensed to conduct banking and financial activities in Portugal nor is UBS Switzerland AG supervised by the portuguese regulators (Bank of Portugal "Banco de Portugal" and Portuguese Securities Exchange Commission "Comissão do Mercado de Valores Mobiliários"). **Qatar**: UBS Qatar LLC is authorized by the Qatar Financial Centre Regulatory Authority, with QFC no. 01169, and has its registered office at 14th Floor, Burj Alfardan Tower, Building 157, Street No. 301, Area No. 69, Al Majdami, Lusail, Qatar. UBS Qatar LLC neither offers any brokerage services nor executes any order with, for or on behalf of its clients. A client order will have to be placed with, and executed by, UBS Switzerland AG in Switzerland or an affiliate of UBS Switzerland AG, that is domiciled outside Qatar. It is in the sole discretion of UBS Switzerland AG in Switzerland or its affiliate to accept or reject an order and UBS Qatar LLC does not have authority to provide a confirmation in this respect. UBS Qatar LLC may however communicate payment orders and investment instructions to UBS Switzerland AG in Switzerland for receipt, acceptance and execution. UBS Qatar LLC is not authorized to act for and on behalf of UBS Switzerland AG or an affiliate of UBS Switzerland AG. This document and any attachments hereto are intended for eligible counterparties and business customers only. **Russia**: This document or information contained therein is for information purposes only and constitutes neither a public nor a private offering, is not an invitation to make offers, to sell, exchange or otherwise transfer any financial instruments in the Russian Federation to or for the benefit of any Russian person or entity and does not constitute an advertisement or offering of securities in the Russian Federation within the meaning of Russian securities laws. The information contained herein is not an "individual investment recommendation" as defined in Federal Law of 22 April 1996 No 39-FZ "On Securities Market" (as amended) and the financial instruments and operations

specified herein may not be suitable for your investment profile or your investment goals or expectations. The determination of whether or not such financial instruments and operations are in your interests or are suitable for your investment goals, investment horizon or the acceptable risk level is your responsibility. We assume no liability for any losses connected with making any such operations or investing into any such financial instruments and we do not recommend to use such information as the only source of information for making an investment decision. **Saudi Arabia**: UBS Saudi Arabia is authorised and regulated by the Capital Market Authority to conduct securities business under licence number 08113-37. **Singapore**: Clients of UBS AG Singapore branch are asked to please contact UBS AG Singapore branch, an exempt financial adviser under the Singapore Financial Advisers Act (Cap. 110) and a wholesale bank licensed under the Singapore Banking Act (Cap. 19) regulated by the Monetary Authority of Singapore, in respect of any matters arising from, or in connection with, the analysis or report. UBS AG is incorporated in Switzerland with limited liability. UBS AG has a branch registered in Singapore (UEN S98FC5560C). This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved or endorsed by any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Sweden**: This publication is not intended to constitute a public offer under Swedish law. It is distributed only for information purposes to clients of UBS Europe SE, Sweden Bankfilial, with place of business at Regeringsgatan 38, 11153 Stockholm, Sweden, registered with the Swedish Companies Registration Office under Reg. No 516406-1011. UBS Europe SE, Sweden Bankfilial is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Swedish supervisory authority (Finansinspektionen), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Taiwan**: This material is provided by UBS AG, Taipei Branch in accordance with laws of Taiwan, in agreement with or at the request of clients/prospects. **Thailand**: This communication and any offering material, term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication were done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Turkey**: The information in this document is not provided for the purpose of offering, marketing or sale of any capital market instrument or service in the Republic of Turkey. Therefore, this document may not be considered as an offer made, or to be made, to residents of the Republic of Turkey in the Republic of Turkey. Topic	Confronting Credit Headwinds , Seeking Energy & Climate Resilience , Outlook 2024

View Analyst Contact Information

Table of Contents

Key Takeaways

- We are updating our 2024 outlook on the investor-owned North American regulated utility industry to negative.
- Given the relatively high percentage of companies with negative outlooks, we expect that 2024 will likely be the fifth consecutive year that downgrades outpace upgrades.
- The industry faces rising physical risks and high cash flow deficits that may not be sufficiently funded in a credit-supportive manner.
- Still, we expect that the utility industry will maintain a median investment-grade rating of 'BBB+'.
- We also expect that a smaller percentage of companies rated 'BBB' or lower are more likely to implement measures to maintain or even improve credit quality.

Credit quality for North American investor-owned regulated utilities has weakened over the past four years, with downgrades outpacing upgrades by more than three times. We expect downgrades to again surpass upgrades in 2024 for the fifth consecutive year. In the decade prior to 2020, upgrades generally outpaced downgrades in the industry.

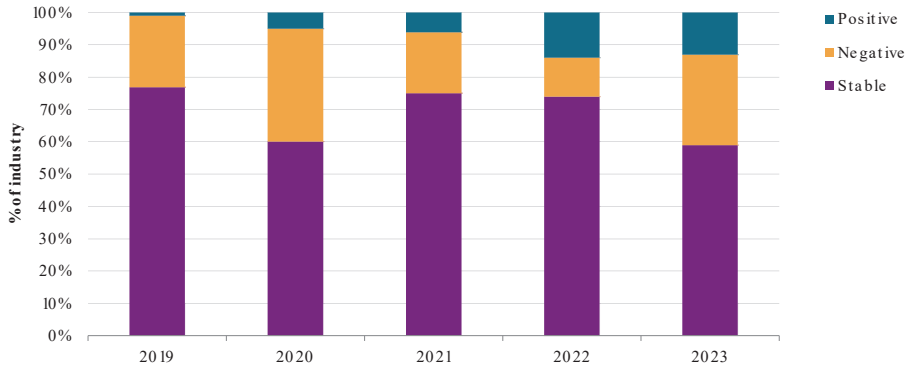
High Percentage Of Negative Outlooks

Currently, about 28% of the industry has a negative outlook or is listed on CreditWatch with negative implications. This is now the third time in the past five years that the year-end percentage of negative outlooks and CreditWatch listings has exceeded 20%. Given the current high percentage of negative outlooks it is increasingly likely that credit quality will again weaken in 2024.

Chart 2

Outlooks for the North American regulated utilities industry
At year end.



Source: S&P Global Ratings.
Copyright © 2024 by Standard & Poor's Financial Services LLC. All rights reserved.

Future rating actions are typically correlated with our outlooks. The industry's share of negative outlooks reached a record high of 35% at year-end 2020, and the following year saw a record 43 downgrades. The industry's current percentage of negative outlooks is significantly larger than it was at year-ends 2021 and 2022, when downgrades still materially outpaced upgrades the following year. As such, given the current high percentage of negative outlooks, we anticipate that 2024 will be another challenging year for the industry's credit quality.

Chart 3

Median Credit Rating To Remain Investment Grade

The median rating among North American investor-owned regulated utilities is 'BBB+'. Despite our expectations for downgrades to again outpace upgrades in 2024, we expect that the median rating will remain 'BBB+'. To weaken the median rating to 'BBB', the industry would need about 70 downgrades to 'BBB' from the 'BBB+' level or above. This degree of credit weakening is well above our base-case expectations for 2024. However, this magnitude of weakening could occur over the next three years if this negative pace persists.

Chart 4

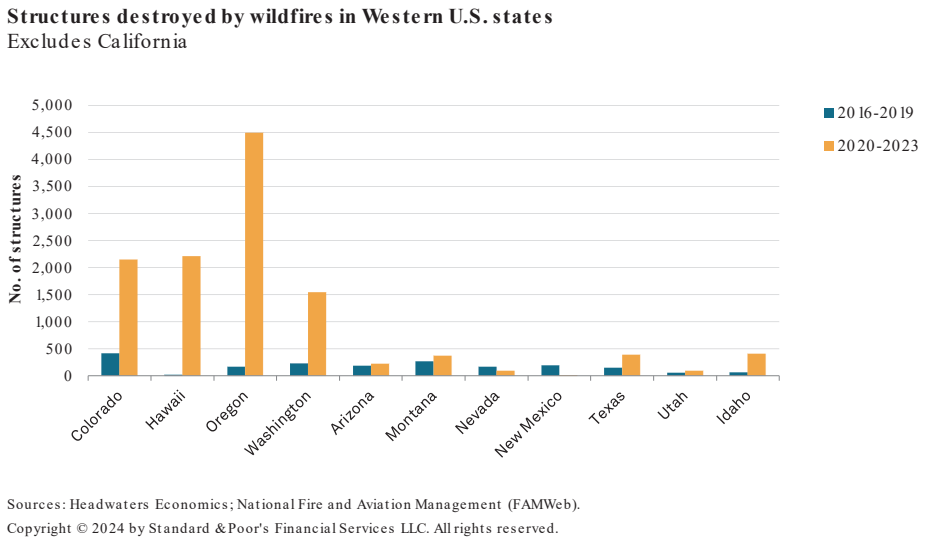
Headwinds To Credit Quality

The industrywide negative outlook reflects rising physical risks as well as financial measures, which are weakening due to rising capital spending and cash flow deficits that are not funded in a sufficiently credit supportive manner. Furthermore, much of the industry operates with minimal financial cushion from their downgrade threshold. This increases the susceptibility to a downgrade if negative events occur beyond our base case.

Increase in physical risk

Climate change and an increase in wildfire risks are threatening credit quality. Wildfire risk was generally limited to California utilities just five years ago but has spread over the past several years.

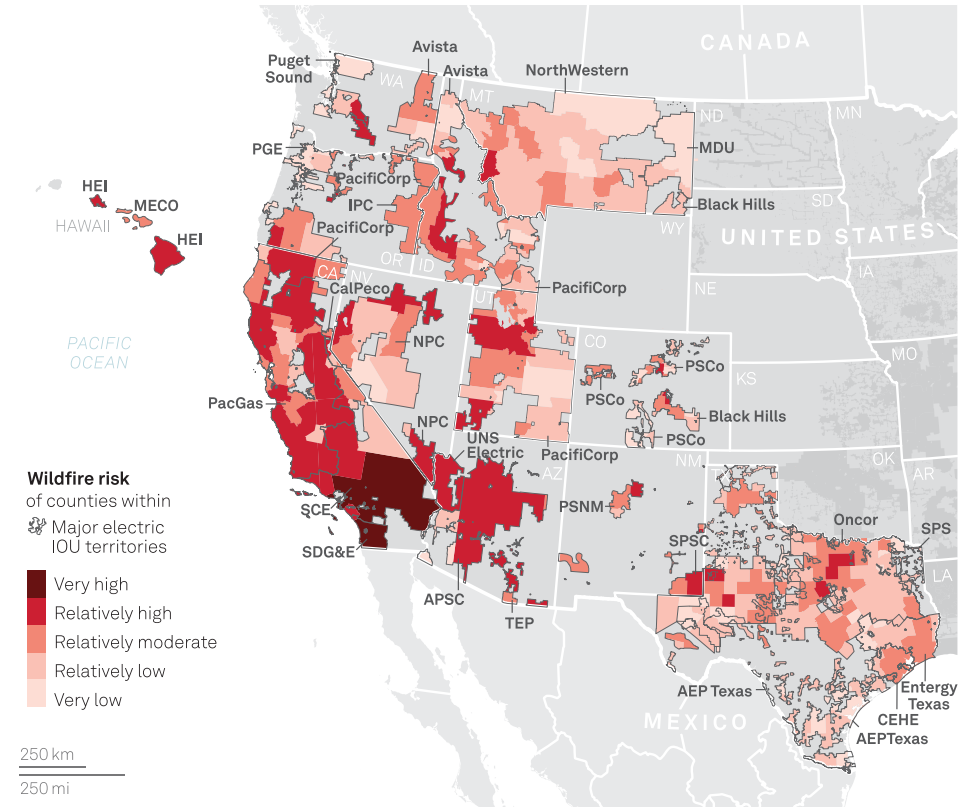
Chart 5



Sources: Headwaters Economics; National Fire and Aviation Management (FAMWeb).
Copyright © 2024 by Standard & Poor's Financial Services LLC. All rights reserved.

Since 2020, the number of structures destroyed by wildfires in Colorado, Hawaii, Idaho, Oregon, Washington, and Texas have all increased by more than 100% compared to 2016-2019. Meanwhile, Arizona, Montana, and Utah have each experienced increases of at least 20% over the same timeframe. Additionally, areas designated as high fire risk continue to increase across the Western U.S. due to climate change. To reduce these risks, many utilities are actively implementing mitigation plans designed to reduce wildfire exposure and litigation risks.

Wildfire risk across West Coast electricity territories



Source: FEMA, S&P Global Market Intelligence.

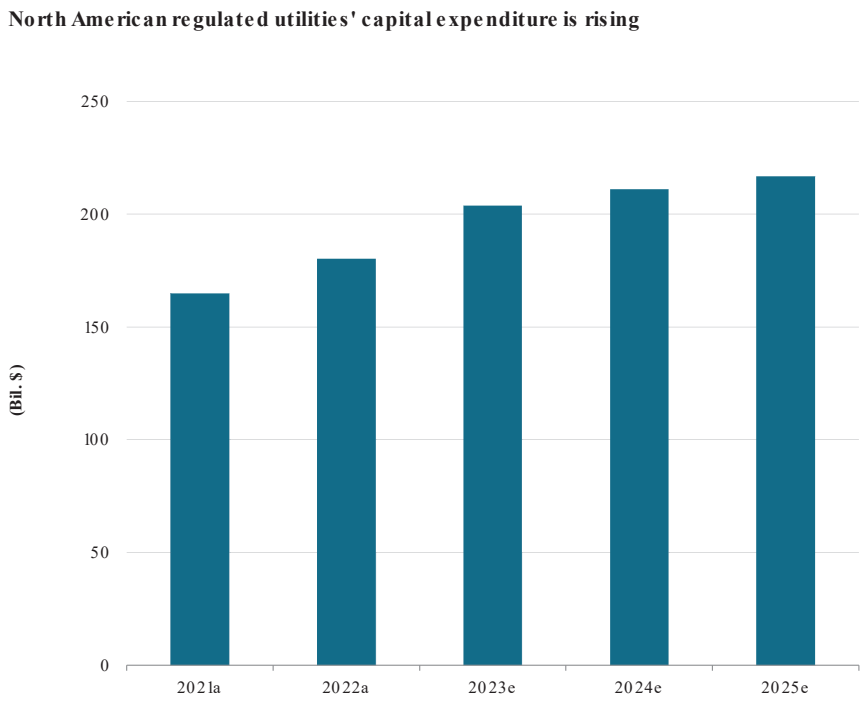
Increase in capital expenditure and cash flow deficits

The industry's capital spending remains at record levels, supporting initiatives for safety, reliability, energy transition, and growth. We consider these trends long term and expect that capital spending will only continue to increase over this decade.

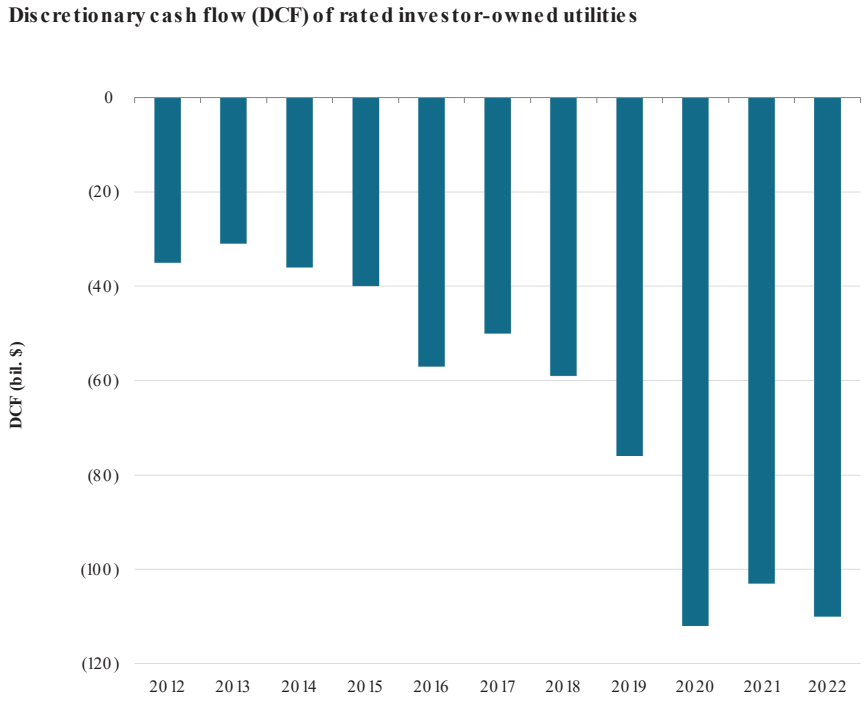
Chart 6



a--Actual. e--Estimate. Source: S&P Global Ratings.

Accordingly, cash flow deficits have increased, pressuring the industry's credit quality. For 2024, our base case assumes that the industry will fund its approximate $85 billion of cash flow deficits with about $40 billion in asset sales and equity issuance.

Chart 7



Source: S&P Global Ratings.
Copyright © 2024 by Standard &Poor's Financial Services LLC. All rights reserved.

For 2023, the industry's actual equity issuance was considerably below our expectations, resulting in a weakening of financial performance and credit quality. If this trend persists, credit quality will again likely experience pressure in 2024.

Strained financial cushion

About 35% of the industry is sustaining performance with minimal financial cushion, reflecting funds from operations (FFO) to debt that is less than 100 basis points (bps) above their downgrade threshold. The limited financial cushion affects a company's ability to absorb unexpected events beyond the base case for our ratings, increasing its susceptibility to a downgrade. Such unexpected events include higher interest rates, changes to inflation, delays to offshore wind projects, and rising taxes.

Upcoming debt maturities amid higher interest rates

The industry has considerable near-term debt maturities that must be refinanced, as well as rising discretionary cash flow deficits that are mostly funded with debt. Because of the regulatory lag, which is the timing difference between when a utility incurs costs and when it's recovered from ratepayers, rising interest rates weaken financial performance. S&P Global economists expect the federal funds rate will stabilize in 2024 and then begin to modestly decrease. Accordingly, as interest rates stabilize, it will ease pressure on the industry's financial performance.

Additionally, the spread between the 10-year treasury and the average authorized return on equity (ROE) has narrowed. Over the past three years, the 10-year treasury has increased by about 250 bps to about 4.0% from about 1.5% at year-end 2020. At the same time, average authorized ROE has essentially remained flat at about 9.5%. The narrowing of this spread directly hinders the industry's financial performance.

Elevated inflation rates

Although the rate of inflation has slowed from 2022 levels, it remains elevated relative to historical levels. We anticipate this will result in higher operations and maintenance (O&M) costs that could weaken financial performance. While some utilities have interim mechanisms that reduce the regulatory lag, most will have to file rate cases on a more frequent basis if inflation remains higher over the longer term.

Delayed renewable energy projects

Recently, several large offshore wind projects were delayed or canceled because of rising costs for these more challenging projects. For example, we recently placed Eversource Energy's ratings on CreditWatch with negative implications directly related to its share of higher costs associated with its offshore wind projects.

Alternative minimum tax (AMT)

The Inflation Reduction Act of 2022 includes a 15% corporate AMT that we expect will weaken the financial measures of only about 10% of the industry. This is because the ATM is applicable to corporations with at least $1 billion of income that also do not have sufficient offsetting tax credits. Accordingly, we expect that most fully integrated large utilities with a growing or significant renewable generation portfolio will use their renewable tax credits to minimize or eliminate the AMT. However, the AMT could weaken financial measures of large electric transmission and distribution utilities, large natural gas local distribution companies, and large water utilities.

Lower-Rated Companies Will Likely Protect Credit Quality

We expect a majority of the industry's future downgrades will come from companies that are currently rated 'BBB+' or higher, as about 30% of companies in this category have a negative outlook. Overall, these higher-rated companies account for about 75% of the industry's portfolio. Conversely, we expect companies rated 'BBB' or lower will likely take measures to support or improve credit quality. This reflects the more than 30% of companies in this category that have a positive outlook.

Consequently, there is a broad industry trend that is bifurcating higher-rated and lower-rated companies that will likely result in weakening credit quality for the higher-rated companies and stable to improving credit quality for the smaller percentage of lower-rated companies. We believe this trend is consistent with the industry's current economic conditions of robust growth, cash flow deficits, and higher interest rates. Some higher-rated companies are determining that, under current conditions, they have excess credit capacity while lower-rated companies believe it is most optimal for them to operate at a higher rating.

MICHIGAN PUBLIC SERVICE COMMISSION
Consumers Energy Company
Development of Rates for Transportation ATL Services

Case No.: U-21806
Exhibit No.: A-108 (SAS-6)
Page: 1 of 1
Witness: SASmith
Date: December 2024

Line No.	(a) Description	(b) Storage Revenue Requirement ($000) [1]	(c) Transportation Throughput (MMcf) [2]	(d) Storage Cost Per Mcf of Throughput (b / c)	(e)	(f)
1	Storage Related Cost	$ 22,241	81,455	$ 0.2730		

	ATL as a Percent of ACQ	Present Rates	Proposed Per Mcf of Throughput Adjustment	Storage Cost Difference from Average Per Mcf by ATL Level	Initial Adjusted ATL Throughput Adjustment	Percentage Adjustment To Match XXLT 4% [3]
2	2.00%	$ (0.0732)	$ (0.0781)	$ (0.1905)	$ (0.2680)	29.13%
3	4.00%	$ (0.0507)	$ (0.0540)	$ (0.1081)	$ (0.1856)	29.13%
4	6.50%	$ (0.0225)	$ (0.0240)	$ (0.0050)	$ (0.0825)	29.13%
5	7.50%	$ (0.0113)	$ (0.0120)	$ 0.0363	$ (0.0412)	29.13%
6	8.50%	$ -	$ -	$ 0.0775	$ -	29.13%
7	9.50%	$ 0.0113	$ 0.0120	$ 0.1187	$ 0.0412	29.13%
8	10.50%	$ 0.0225	$ 0.0240	$ 0.1600	$ 0.0825	29.13%
11					XXLT Adjustment [3]	$ (893.31)
12						$ (893.31)
						$ -

Notes

[1] Exhibit A-16 (SMG-2), Schedule F-1.1, page 2, line 5, columns (i) - (l)

[2] Exhibit A-15 (MA-7), Schedule E-3

[3] Adopted methodology from MPSC Staff approved in Case No. U-20322. Directly adjusted the per Mcf storage cost based on the ratio of the ATL tiers and the average ATL of 6.6% (Calculated in WP-SAS-4). This results in a cost per Mcf for each tier of ATL. Then adjusted each of the tiers' adjustments by the percentage necessary to result in the same storage cost adjustment for XXLT at a 4% ATL.

U21806-SA-CE-409
Requested By: Brittney M. Klocke (BMK-11 - 1)
Respondent: Stacy H. Baker
Date of Response: 3/19/2025
Page **1** of **1**

Question:

1) What is the current status of the Company's website redesign?

Response:

The Company has put the website redesign on hold due to extended support of the current on-premises Sitecore web content management system and the Company's SAP S/4HANA planned implementation.

The previous timing for the website redesign was developed with the expectation that the Company would need to migrate to the cloud/Software-as-a-Service (SaaS) version of the Sitecore system based on Sitecore's published product support lifecycle at that time. This would have been a major reason to initiate the website redesign. Since then, Sitecore has extended mainstream support for the on-premises version 10.4 to December 31, 2027, giving the Company more flexibility in its migration schedule.

In addition, the Company's implementation of the SAP S/4HANA system will be a major undertaking, which will significantly impact the design of integration between the Company's website and SAP. The Company plans to complete the S/4HANA implementation before starting the website redesign.

U21806-AG-CE-0615
Page **1** of **1**

Question:

233. Refer to lines 26-38 on page 61 of Ms. Baker's direct testimony on the ARP-OT Support Gas. Please:

a. Describe the problems experienced with servers in the last three years and identify the number of problems experienced.

b. Explain why a 5-year replacement cycle is necessary and whether it could be extended to 7 years with no significant repercussions.

c. If the Company is on a 5-year replacement cycle, why is there a significant variance in capital expenditures from year to year, which vary from $245,000 in 2023 to $2.5 million for the projected test year.

Response:

Objection of Counsel: Consumers Energy Company objections to this discovery request because it is argumentative and requires the adoption of an assumption. Without waiving this objection, Consumers Energy responds as follows:

a. Following are the incidents experienced with servers in the last three years for the ARP-OT Support Gas.

Incident Description	Number of Incidents
Memory and storage failures	5
Power Supply issues	3
Network and connectivity issues	5
Hardware faults and failures	4

b. A five-year refresh cycle for server hardware is considered necessary due to increased risks of hardware failure, performance degradation, and the expiration of support. For a natural gas compressor station, maintaining a reliable local control system is critical for ensuring continuous and safe gas flow.

Extending the refresh cycle to seven years has potential risks such as increased hardware failures, higher maintenance costs, security vulnerabilities, and performance issues. Compliance with TSA regulatory requirements, such as those outlined in API 1164, is crucial. API 1164 mandates regular updates to control system software and firmware to protect against known vulnerabilities and threats.

c. The costs vary from 2023 to the projected test year for the ARP-OT Support Gas project due to the need to refresh assets implemented as a part of the Pipeline SCADA project.

Witness: Stacy H. Baker
Date: March 21, 2025

U21806-AG-CE-0616 Revised
Page **1** of **1**

Question:

234. Refer to lines 16-40 on page 62 and lines 1-5 on page 63 of Ms. Baker's direct testimony on the ARP-Physical Security. Please:

a. Identify the problems experienced with security assets in the last three years and the number of problems experienced.

b. Explain why the Company needs advanced door systems and how these systems differ from current door systems.

c. Regarding security cameras, gate and lock systems, confirm that these devices and systems are already in place at the Company. If confirming, explain what is being proposed for the additional expenditures. If not confirming, explain why these devices and systems are not already being used.

d. Regarding Alternatives 1 and 2, what are the specific risks that would exist?

Response:

a. Incidents experienced with physical security assets include cameras no longer working, wiring issues, require cleaning, transmitter failures, hard drive failures, reader failures, door strike failures, and control board failures. Following is a table with the number of incidents for the last three years related to physical security assets.

Year	Number of Incidents
2022	758
2023	554
2024	568

b. Referring to the ARP-Physical Security project starting on page 62, line 16 through page 63, line 5, the Company ~~requires~~ needs to refresh advanced door systems to avoid physical security vulnerabilities and meet FERC requirements. These systems are the same as the current door systems.~~, as the current badges can be easily cloned by off the shelf equipment leading to security vulnerabilities. This project would upgrade badge readers and control boards with encryption.~~

c. Yes, the Company currently uses security cameras, motorized gates, and exterior pedestrian doors at occupied facilities controlled by badge readers for access. Referring to the ARP-Physical Security project starting on page 62, line 16 through page 63, line 5, this project refreshes existing devices to reduce physical security vulnerabilities and meet FERC requirements. ~~This project would upgrade badge readers and control boards with encryption to reduce security vulnerabilities.~~

d. By not refreshing physical security assets or deferring a portion of the asset refreshes, the Company risks utilizing older, unsupported equipment, which results in continued security vulnerabilities and increased O&M costs to maintain older equipment.

Witness: Stacy H. Baker
Date: ~~3/21/2025~~ 5/6/2025

U21806-SA-CE-176
Requested By: Emma Zichi (EZ-4 - 41)
Respondent: Stacy H. Baker
Date of Response: 2/7/2025
Page **1** of **1**

Question:

41. Regarding A-22 (SHB-7), the "ARP-Local Area Network" project:
a. Please provide a breakdown for the costs in line 11 and 30 "Software, labor, contractor and overhead and other costs" to show which categories make up the total cost for 2024, 2025 and 2026.
b. Why did the "Avg. Unit Cost" (column b) for the following significantly increase for 2025 and 2026, compared to 2023 and 2024?
i. Line 1 "LAN Switch A", line 2 "LAN Switch B", line 3 "LAN Switch C", line 5 "LAN Switch E".
c. Why are the materials costs the exact same in Exhibit A-20 (SHB-5) when the breakdown of materials shown in Exhibit A-22 is $225,000 for 2025 and $375,000 for 2026

Response:

a. The gas allocation cost breakdown for software, labor, contractor, non-labor overhead, and non-labor other costs in Exhibit No. A-22 (SHB-7), page 6, lines 11 and 30 for 2024, 2025, and 2026 for the ARP-Local Area Network project are provided in Exhibit A-20 (SHB-5), lines 178, 269, and 349 in columns m, o, p, q, and r.

b. The material naming convention used – for example, LAN Switch A, LAN Switch B, LAN Switch C, etc. - is solely to differentiate each model within a given calendar year. The actual models associated with these designations may change from year to year, which can result in variations in unit pricing.

    i. Refer to part b response.

c. In Exhibit A-20 (SHB-5), lines 269 and 349, column n, the gas allocation material costs for 2025 and 2026 are $108,518 and $180,863 respectively. These amounts are not the same. In Exhibit A-22 (SHB-7), page 6, lines 1 through 10, columns e and f, the total Company material costs for 2025 and 2026 are $225,000 and $375,000 respectively. Exhibit A-20 (SHB-5) provides the gas allocation amounts, while Exhibit A-22 (SHB-7) provides the total Company amounts.

U21806-CUB-CE-0121
Page **1** of **1**

Question:

17. Refer to Baker, pp. 54-55, discussing changes in the projected costs of the Gas SCADA Software Solutions project from previous projections in Case No. U-21490. Baker states, "The contractor costs increased because the vendor professional services were underestimated in the ROM estimate." Please explain how and why the contractor costs were underestimated.

Response:

17. The contractor costs for the vendor professional services were not fully known until the Company conducted a Request for Proposal and received vendor cost estimates based on detailed requirements. Additionally, as discussed in my direct testimony on page 55, lines 4-5, the Company determined that additional third-party resources were required to support testing this new technology.

Witness: Stacy H. Baker
Date: February 20, 2025

U21806-CUB-CE-0122
Page **1** of **1**

Question:

18. Refer to Baker, pp. 54-55, discussing changes in the projected costs of the Gas SCADA Software Solutions project from previous projections in Case No. U-21490. Baker states, "The contractor costs increased because the vendor professional services were underestimated in the ROM estimate." Please explain what services the contractors perform.

Response:

18. The professional services vendor is responsible for providing product and industry experience, building the new solution, which includes, but is not limited to, configuring their products, creating new SCADA screen displays, developing an automated, repeatable process to migrate SCADA information from the current system, configuring and building interfaces to the Historian and Geographic Information System (GIS) systems, and conducting the corresponding testing and project management to ensure a quality solution. Additionally, the Company found that it lacked sufficient internal resources and skills to support user acceptance and parallel testing. Therefore, the Company contracted a third-party to provide additional resources to assist, guide, and support testing of the solution.

Witness: Stacy H. Baker
Date: February 20, 2025

U21806-CUB-CE-0123
Page **1** of **1**

Question:

19. Refer to Baker, pp. 54-55, discussing changes in the projected costs of the Gas SCADA Software Solutions project from previous projections in Case No. U-21490. Baker states, "The contractor costs increased because the vendor professional services were underestimated in the ROM estimate." Please explain why the services the contractors perform cannot be performed in-house.

Response:

19. Building and implementing the new solution requires a level of expertise and resources that necessitates leveraging outside services. The Company lacks the internal gas resources with the necessary expertise and experience to implement the software products.

Witness: Stacy H. Baker
Date: February 20, 2025

U21806-CUB-CE-0124
Page **1** of **1**

Question:

20. Refer to Baker, pp. 54-55, discussing changes in the projected costs of the Gas SCADA Software Solutions project from previous projections in Case No. U-21490. Baker states, "The software licensing costs increased because the ROM estimate planned for a five-year period, but the project required six years of software subscriptions due to the length of the implementation." Please explain why the implementation is taking longer than planned.

Response:

20. The reason the software licensing costs increased is not because the implementation is taking longer than planned, but rather because the planned implementation is more than two years. The Company requires that a software asset have at least a three-year expected life after implementation for capitalization. As the Company refined the initial cost projections it identified that due to the implementation being more than two years, the Company was required to purchase six years of software subscriptions to ensure there was a three-year expected life.

Witness: Stacy H. Baker
Date: February 20, 2025

U21806-CUB-CE-0125
Page **1** of **1**

Question:

21. Refer to Baker, pp. 54-55, discussing changes in the projected costs of the Gas SCADA Software Solutions project from previous projections in Case No. U-21490. Baker states, "The material costs increased because the ROM estimate planned to purchase physical servers, but the Company decided to purchase virtual servers. The Company utilizes virtual servers because they provide cost efficiency, maximize the use of available resources, and offer more flexibility." Please explain how switching to more cost-efficient virtual servers resulted in increased material costs.

Response:

21. The virtual servers cost more upfront due to the hypervisor software licensing required for the hardware to function. The cost efficiencies gained are less on-going support and the flexibility to maximize the use of available server resources without purchasing additional servers. Managing the life cycle of virtual servers is more efficient. For example, rolling out firmware, operating system (OS) upgrades, and patches is more efficient with virtual servers, as it can be done once and deployed automatically and dynamically across many virtual servers. In contrast, physical servers require scheduling an outage, taking down each server, and applying the firmware and OS upgrades one by one.

Witness: Stacy H. Baker
Date: February 20, 2025

U21806-CUB-CE-0126
Page **1** of **1**

Question:

22. Refer to Baker, pp. 54-55, discussing changes in the projected costs of the Gas SCADA Software Solutions project from previous projections in Case No. U-21490. Baker states, "The material costs increased because the ROM estimate planned to purchase physical servers, but the Company decided to purchase virtual servers. The Company utilizes virtual servers because they provide cost efficiency, maximize the use of available resources, and offer more flexibility." Please explain why the Company did not identify virtual servers as the better option during the ROM estimate phase.

Response:

22. The Company did not identify virtual servers during the initial cost projection development because it implemented the new operational technology standard to utilize virtual servers afterward.

Witness: Stacy H. Baker
Date: February 20, 2025

U21806-AG-CE-0613
Page **1** of **1**

Question:

231. Refer to page 54 of Ms. Baker's direct testimony on the SCADA project. Please:

a. Provide the current phase of development of the project.

b. Identify the start and completion dates of the detailed requirements phase of the project.

c. Provide the actual amount spent in 2024 for capital expenditures and O&M expense and the forecasted amount of capital expenditures for the 10 months ending October 2025 and for the projected test year.

d. Provide the amount of capital expenditures and O&M expense to be incurred in future years past 2025 by year.

Response:

a. The Gas SCADA Software Solution project is currently in the Execute phase.

b. The detailed requirements occurred from 04/1/22 to 10/31/22.

c. Refer to Attachment No. U21806-AG-CE-0613_ATT 1 for the updated total projected project costs including the preliminary actual 2024 capital expenditures and O&M expense. The projected gas allocation capital expenditures for the 10 months ending October 2025 are $4,220,803 and $3,080,968 for the projected test year.

d. Refer to part c response.

U21806-AG-CE-0614
Page **1** of **2**

Question:

232. Refer to pages 50 and 51 of Ms. Baker's direct testimony on the SCADA project. Please:

a. Identify by how much and by what percentage the contractor costs were underestimated and explain why.

b. Confirm that the SCADA project was competitively bid to various vendors. Identify the number of vendors contacted, the number of bids received, and which vendor was selected and why.

c. Provide a copy of the bids received and the analysis showing why the chosen vendor was selected.

d. Explain why a third-party consultant is needed for expertise with the technology when the vendor should provide the needed expertise for the technology they sell.

e. Provide the name pf the third-party and the amount to be paid to this party by year and whether it is included in O&M expense or capital expenditures.

f. Explain whether the Company issued requests for proposals for the third-party, the number of bids received. Provide a copy of the bids received and the analysis showing why the chosen vendor was selected.

g. Identify the length of the implementation. Did the Company consider spreading the implementation over a longer time period to reduce the impact on capital expenditures in the next few years?

h. Explain how the Company uses virtual servers and with whom. If virtual servers are cost efficient, why did they increase the cost of the project?

Response:

a. Refer to Attachment No. U21806-AG-CE-0613_ATT 1 for the updated total projected project costs including the preliminary actuals 2024 capital expenditures and O&M expense. The current projected contractor costs are $4.66 million, which is consistent with the $4.63 million projected in Case No. U-21490.

b. The Gas SCADA Software Solution project conducted a Request for Proposal (RFP) to competitively bid to six vendors. Of the six vendors, three elected not to participate, one vendor could not meet the full requirements, and the vendor selected was Open Systems International, Inc. (now Aspentech).

c. Refer to Attachments U21806-AG-CE-0614_ATT_1_CONF, U21806-AG-CE-0614_ATT_2_CONF, U21806-AG-CE-0615_ATT_3_CONF, and U21806-AG-CE-0615_ATT_4_CONF for a copy of the bids received and the analysis showing why the chosen vendor was selected.

d. Black and Veatch is uniquely qualified to perform the execution and testing support services. Their prior services were key to building the project's detailed requirements that were used in the RFP to ultimately select the best solution. A large part of their services are requirements traceability, ensuring that all requirements have been met in the vendor-built solution and that all testable requirements are indeed tested. Black and Veatch will be building and executing scripts to do parallel

testing, validation to ensure the new solution behaves the same as the existing solution for retrieval of SCADA data from our many endpoints. Further, they will be creating the User Acceptance Test (UAT) testing scripts for the Company to perform to ensure a fully tested solution and readiness for go-live. Both require a deep understanding of our existing gas SCADA environment as well as a solid understanding of our Gas SCADA project requirements. Given the Black and Veatch history on this project, along with the continuity of their personnel, Black and Veatch is uniquely positioned for this testing work.

e. The table below provides the third-party consultant, Black and Veatch, costs total company capital expenditures and O&M expense by year.

Year	Capital	O&M
2025	$625,000	$35,000
2026	$75,000	$35,000
Total	**$700,000**	**$70,000**

f. The Company did not conduct a request for proposal for the third-party.

g. The capital expenditures started for this project in 2023 and are currently planned through February 2026. The original planned Go Live in December 2025 has been extended to February 2026 due to resource availability during the field construction season. Refer to my direct testimony, page 50, line 7 through page 51, line 33, for why the Company determined the current implementation timeline was necessary, as the current system is operating well beyond its original design specifications.

h. The virtual servers cost more upfront due to the hypervisor software licensing required for the hardware to function. The cost efficiencies gained are less on-going support and the flexibility to maximize the use of available server resources without purchasing additional servers. Managing the life cycle of virtual servers is more efficient. For example, rolling out firmware, operating system (OS) upgrades, and patches is more efficient with virtual servers, as it can be done once and deployed automatically and dynamically across many virtual servers. In contrast, physical servers require scheduling an outage, taking down each server, and applying the firmware and OS upgrades one by one.

Witness: Stacy H. Baker

U21806-AG-CE-0847
Page **1** of **2**

Question:

397. Refer to discovery response AG-CE-0614 on the SCADA IT project. Please:

a. The answer to subpart (a) is not responsive to the question. Line 1 of page 55 of Ms. Baker's direct testimony states that contractor costs represented $4.4 million of the $6.6 million total increase in costs. Provide the initial contractor costs before the $4.4 million increase.

b. Regarding the response to subpart (h), who owns and runs the virtual servers? Explain how virtual servers differ from cloud computing.

c. Provide the total SCADA project costs by component as originally estimated at time of approval compared to the costs now and justify in detail any variance of 10% or greater in Excel.

Response:

a. The total Company and gas allocation initial contractor costs from the initial estimate of the Gas SCADA Software Solution project in Case No. U-21308 was $1,800,000 capital expenditures.

b. The Company owns and operates the virtual servers on-premises in our data center for the Gas SCADA Software Solution project because the system is critical for providing safe and reliable gas service. These virtual servers are physically located in the Company's data center, while virtual servers in the cloud are located in Azure's data center, for example, that the Company would subscribe to.

c. The table below provides increase/decrease between the total project costs for the initial estimate provided in Case No. U-21308 and the current estimate provided in response No. U21806-AG-CE-0614. Following are explanations for cost category increases greater than 10%.

The software licensing costs increased because they were initially underestimated and the initial estimate planned for a five-year period, but the project required six years of software subscriptions due to the length of the implementation. The material costs increased because the initial estimate planned to purchase physical servers, but the Company decided to purchase virtual servers. The Company utilizes virtual servers because they provide cost efficiency, maximize the use of available resources, and offer more flexibility. The contractor costs increased because the vendor professional services were underestimated in the initial estimate. Additionally, the Company determined that a third-party was required to support internal resources with testing, as the technology is new to the Company. In U-21308 Overheads & Other Costs were one cost category. In this case, U-21806, the Company began using two cost categories, Non-Labor Overhead and Non-Labor Other. There is a net decrease between the initial estimate for Overheads & Other Costs and the current estimate for Non-Labor Overhead and Non-Labor Other.

Refer to U21806-CUB-CE-0123 through U218096-CUB-CE-0126, for additional variance explanation.

U21806-AG-CE-0847
Page **2** of **2**

Refer to Attachment No. U21806-AG-CE-0847_ATT_1 for the detailed total Company and gas allocation initial estimate by year for the Gas SCADA Software Solution project in Case No. U-21308. Refer to Attachment No. U21806-AG-CE-0614_ATT_1 for the current detailed total Company and gas allocation estimate by year for this project.

	U-21308		Current Estimate		Increase/(Decrease)

Industry Credit Outlook 2025

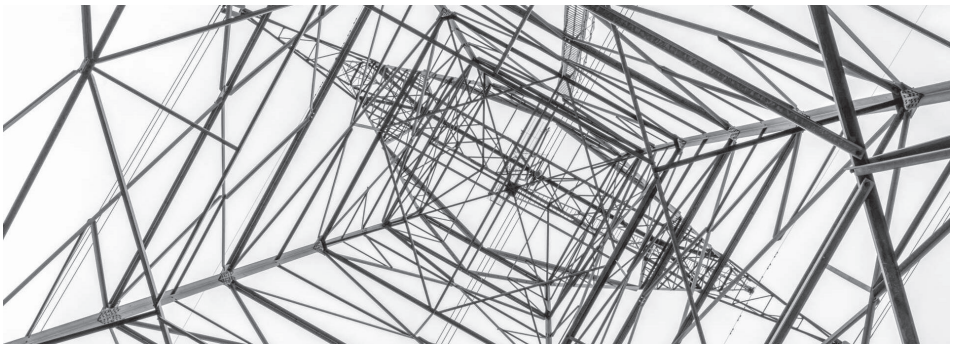
S&P Global Ratings

North America Regulated Utilities

Capex and climate change pressures credit quality

January 14, 2025

This report does not constitute a rating action.



What's changed?

Lower ratings headroom. A high percentage of companies are operating with only minimal financial cushion from our downgrade threshold.

Rising capital spending, higher cash flow deficits, and increased wildfire risks led to downgrades outpacing upgrades for the fifth consecutive year.

Data centers spur electricity sales growth at about 1% annually, which will provide modest support to credit quality.

What are the key assumptions for 2025?

High cash flow deficits of about $100 billion, which could harm financial performance if not funded in a credit-supportive manner.

Robust dividends of about $50 billion for 2025 and at a dividend payout ratio of about 60%.

Record amount of hybrid securities. The industry issued $26 billion of them in 2024, and we expect this trend will persist.

What are the key risks around the baseline?

Rising wildfire risks stemming from climate change.

Tax legislation could weaken financial measures if the new Republican administration lowers the corporate tax rate, reduces tax credits, or eliminates their transferability.

Common equity issuance is below our base-case expectations, and has been for the last several years, leading to weaker financial measures.

Forecasts are converted at the last financial year-end spot rate. FFO—Funds from operations. Most recent (2024) figures for cash flow and primary uses and return on capital employed use the last 12 months' data.

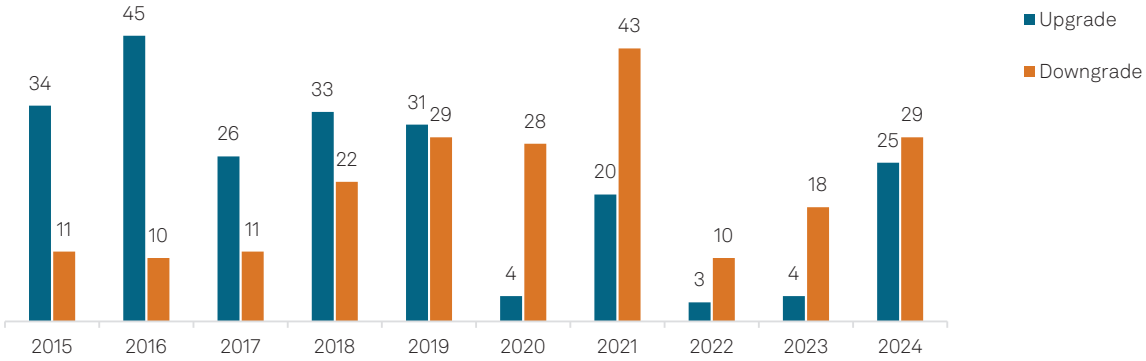
Industry Outlook

Ratings trends and outlook

In 2024, downgrades among North America's investor-owned regulated utilities outpaced upgrades for the fifth consecutive year (see chart 8). Most were directly attributable to rising wildfire risks, robust capital spending, and challenging regulatory constructs. We expect these risks will persist for 2025, further pressuring the industry's credit quality.

Chart 8

North America regulated utilities' upgrades and downgrades



Source: S&P Global Ratings.

Main assumptions about 2025 and beyond

1. Record capital spending.

The industry is heavily investing in safety, reliability, energy transition, and data centers. We expect this spending will exceed $300 billion before the end of the decade.

2. Management of regulatory risk.

This includes constructive rate case orders, minimizing regulatory lag, and earning the authorized return on equity (ROE).

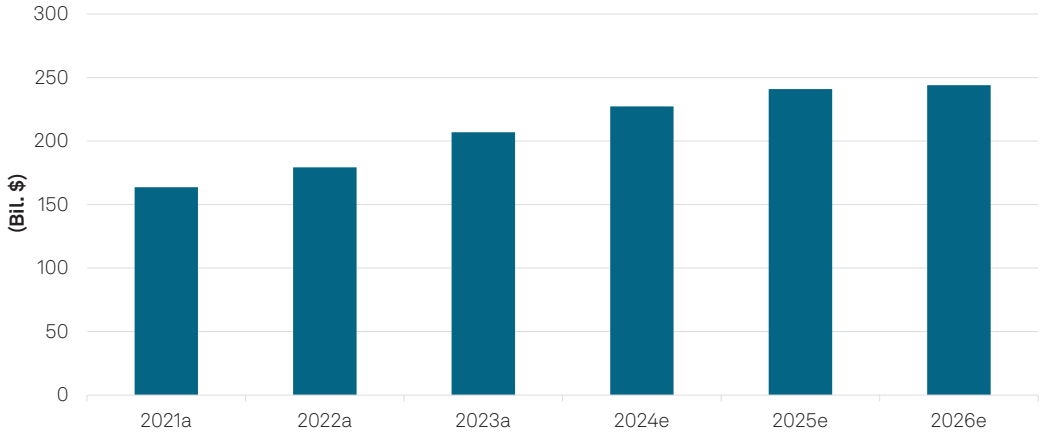
3. Climate change increases risks.

The growing frequency of devastating physical events, including hurricanes, storms, and wildfires, is elevating the industry's credit risks.

Capital spending continues to break records. We expect capital spending for North America's electric, gas, and water utilities will grow by a compound annual growth rate (CAGR) of about 10%. Accordingly, we expect 2025 capital spending to reflect about $240 billion (see chart 9). To date, the industry's capital spending has been primarily focused on safety, reliability, and energy transition.

Chart 9

North America regulated utilities' rising capital expenditures

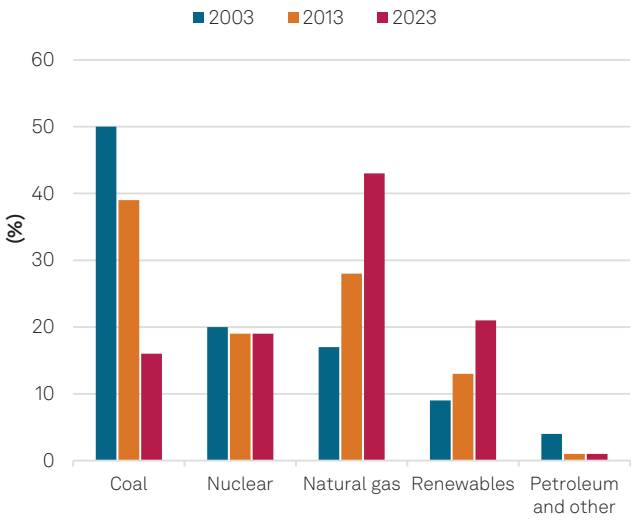


a—Actual. e—Estimate. Capital expenditures represent North American investor-owned electric gas, and water utilities.
Source: S&P Global Ratings.

Energy transition remains key. Over the past decade the industry has invested billions on reducing its reliance on coal-fired generation by about 50% (see chart 10), and today, coal represents only about 15% of total electric generation. Most of the coal was replaced with natural gas, which has about half the carbon emissions. We expect the industry will replace most of its remaining coal-fired generation by about 2030 with renewables and batteries, further reducing its carbon and greenhouse gas (GHG) emissions. The industry has reduced its GHG emissions by nearly 30% over the past decade (see chart 11), and we expect it will reduce them by another 30% by 2035.

Chart 10

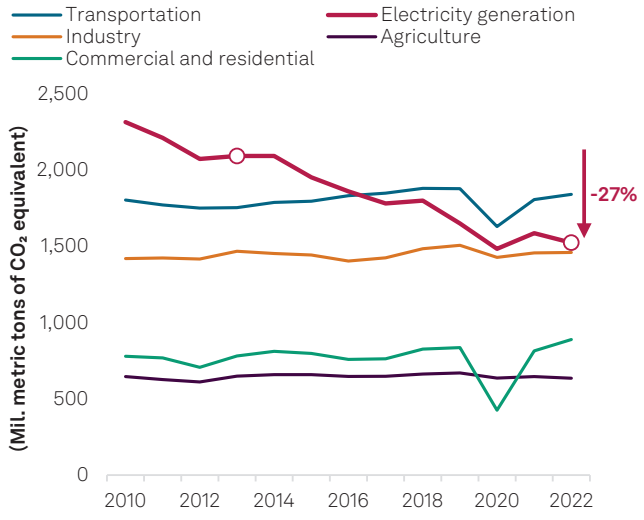
U.S. generation transformation



Source: U.S. Energy Information Administration.

Chart 11

GHG emissions by economic sector (2010-2022)

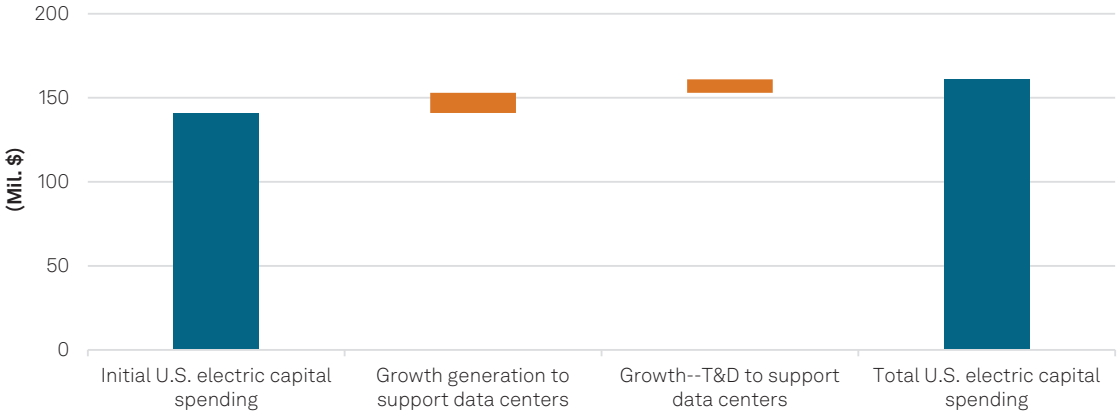


Source: U.S. Environmental Protection Agency.

Data center growth is relatively new, and our current base-case assumptions do not fully incorporate the incremental spending necessary for it. The higher spending for data centers is more likely to begin in 2026. Accordingly, 2026 capex could potentially increase by about another 15% above our current base case (see chart 12).

Chart 12

Data center growth will increase U.S. electric utility annual capital spending by about 15%

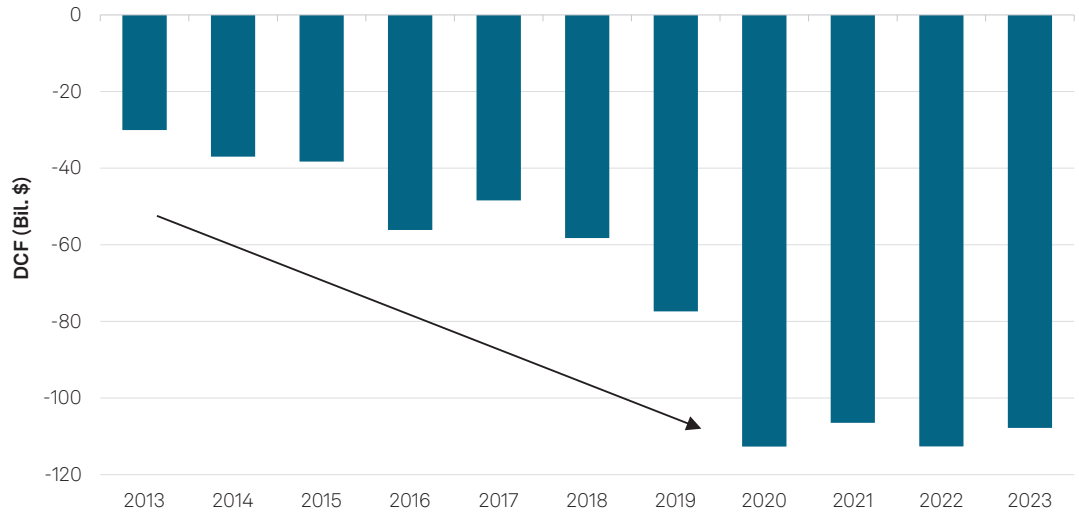


T&D—Transmission and distribution. Source: S&P Global Ratings.

Cash flow deficits will rise as a result, increasing the pressure on the industry's credit quality. Over the past decade the industry's cash flow deficits have grown from about $50 billion to consistently over $100 billion (see chart 13), and we expect this trend will continue.

Chart 13

North America regulated utilities' cash flow deficits



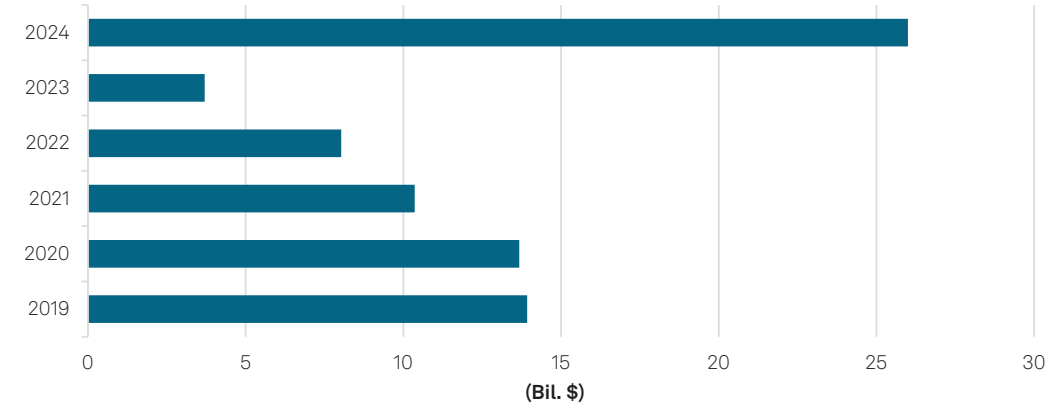
DCF—Discretionary cash flow. Sources: S&P Global Capital IQ, S&P Global Ratings.

Hybrid security issuance reached an all-time high of about $26 billion in 2024, far exceeding the previous record of about $14 billion in 2019 (see chart 14). We expect the industry will maintain this level of issuance in 2025 given its increased capital spending. This robust issuance supported the industry's 2024 financial measures because we typically assess hybrid securities as more

credit supportive than debt, with most of these securities having intermediate (50%) or high (100%) equity content.

Chart 14

North America regulated utilities' annual hybrid securities issuance

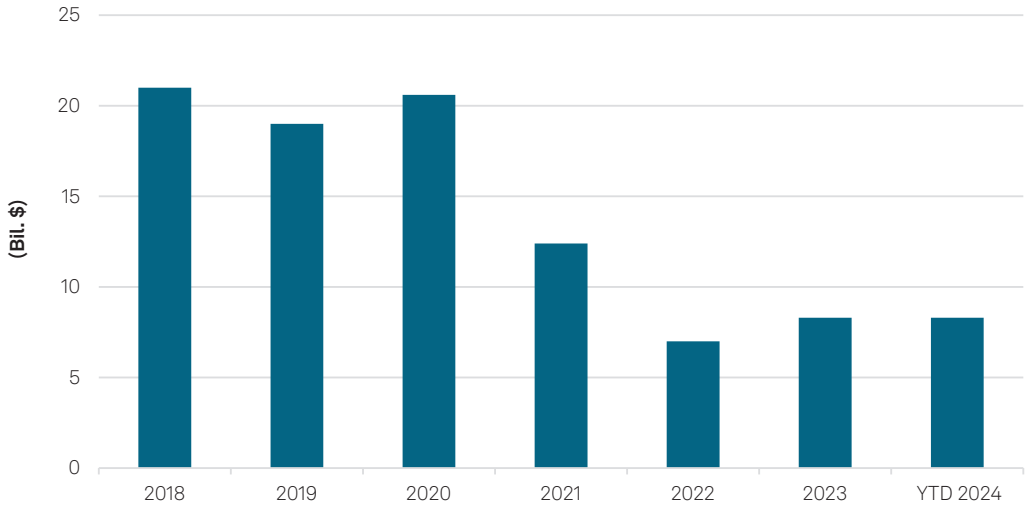


Sources: S&P Global Ratings, S&P Global Market Intelligence.

Common equity issuance has been weak and consistently below our expectations since 2021, pressuring the industry's financial measures. It raised only about $8 billion in 2024, and we estimate that the full year will reflect only about $10 billion. This is well below the industry's average run rate of about $20 billion annually between 2018-2020 (see chart 15). We expect 2025 common equity issuance will again be relatively weak and more reflective of 2024 levels. Without significantly more common equity issuance, we expect the industry's financial measures will continue to weaken, albeit gradually, supporting our negative outlook.

Chart 15

North America regulated utilities' common equity issuance



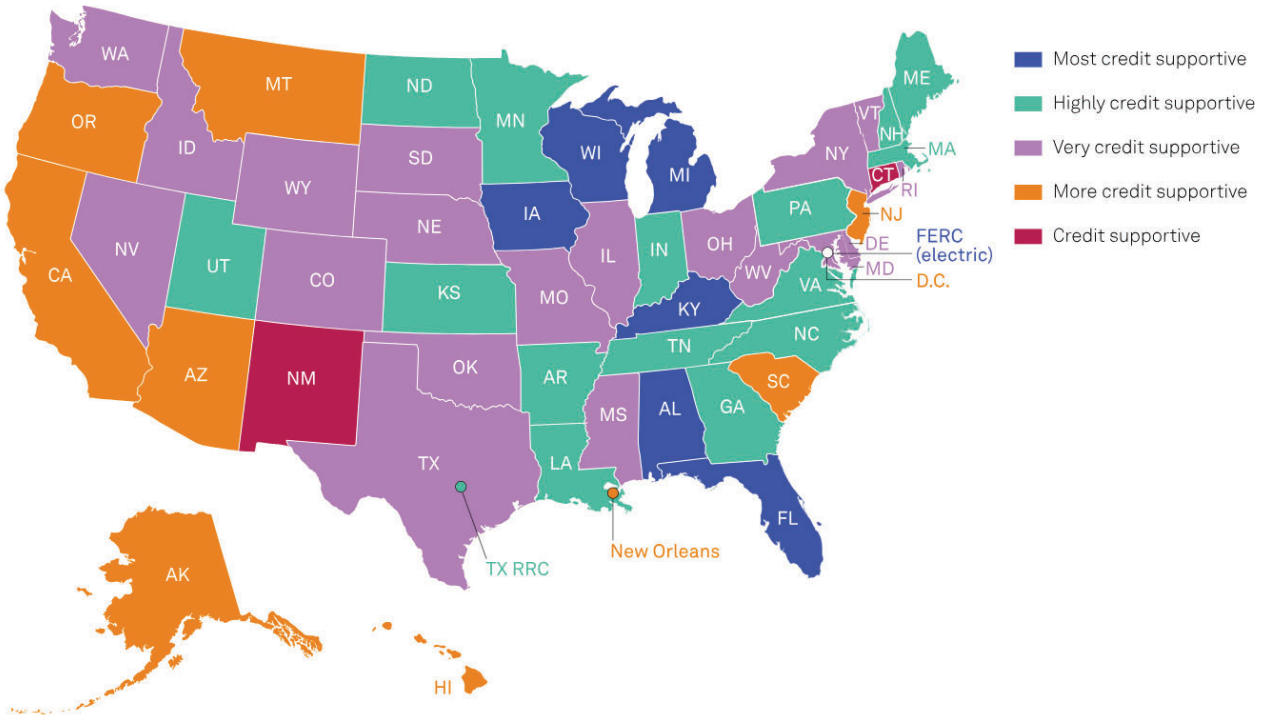
YTD—Year-to-date as of Dec. 15, 2024. Sources: S&P Global Ratings, S&P Global Market Intelligence.

Effective management of regulatory risk will continue. We assess all North America's regulatory jurisdictions as credit supportive or better, reflecting the industry's generally stable and predictable cash flows (see chart 16). Over the past decade much of the industry has implemented regulatory mechanisms such as decoupling, interim rates, capital trackers, formula rate plans, forward test years, muti-year rate case filings, and regulatory riders to significantly improve cash flow stability while minimizing regulatory lag (that is, the timing difference between when a utility incurs costs and when it's recovered from ratepayers).

Chart 16

Regulatory assessment by state

As of November 2024



Source: S&P Global Ratings.

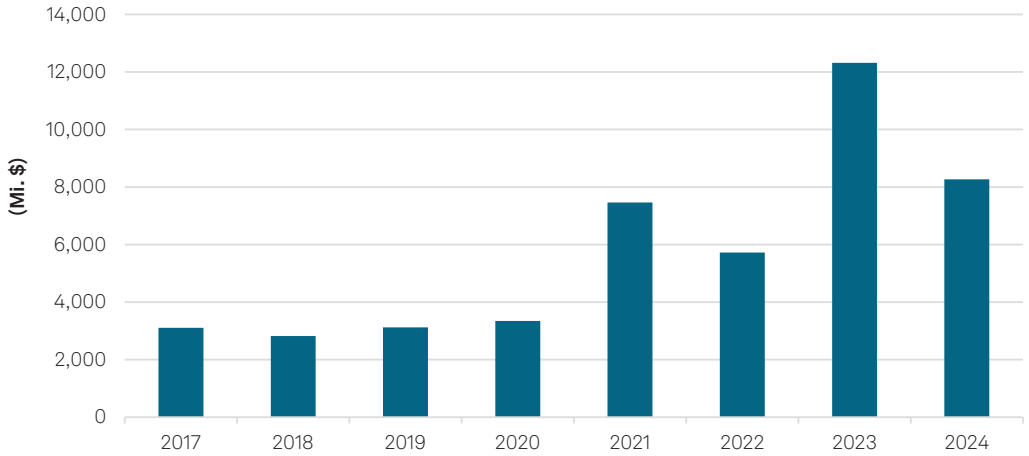
In general, we expect utilities will operate in a regulatory jurisdiction that is supportive of their credit quality by allowing for the full recovery of all their operating and capital costs in a timely manner. We also expect the regulatory jurisdiction will provide a consistent and predictable regulatory framework that results in cash flow stability. Our view of the industry's regulatory constructs supports the industry's mostly investment-grade ratings despite the industry continuing to operate with material cash flow deficits.

Recently, we revised downward our assessment of Connecticut's regulatory construct to credit supportive from more credit supportive. We now expect the state's regulated utilities will be increasingly subject to below-average authorized ROEs, regulatory lag, and an inconsistent ability to earn their lower authorized ROEs. These developments will increase the utilities' cash flow volatility, decrease the stability of their financial performances, and weaken their ability to consistently manage regulatory risk. Other regulatory jurisdictions that we continue to carefully monitor include Arizona, Colorado, District of Columbia, Illinois, Maryland, Michigan, New Mexico, Texas, and West Virginia.

Regulatory rate case order increases have substantially risen over the past four years, reflecting the industry's robust capital spending. Rate case increases for 2021-2024 have increased by more than 2.5x compared to 2017-2020 (see chart 17), and there are more than 100 U.S. rate cases pending, for which utilities are requesting over $16 billion more in revenue. This is in line with our base case that this year's rate case orders will again be robust and most likely in the top three years for rate case order increases.

Chart 17

U.S. rate case orders

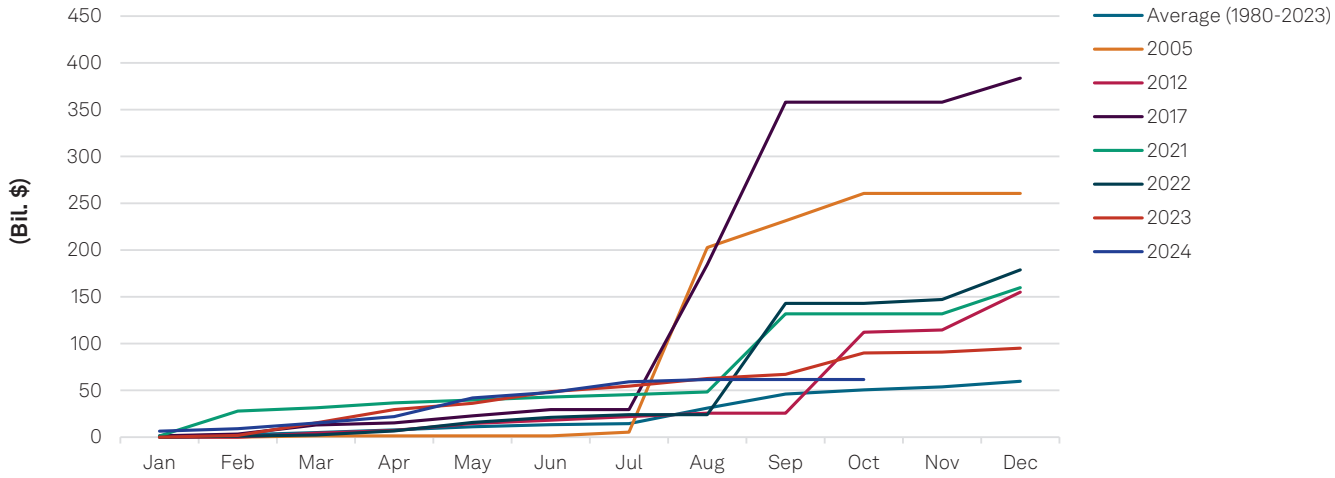


Source: S&P Global Commodity Insights.

Utilities' exposure to physical risks are increasing. According to the National Oceanic and Atmospheric Administration (NOAA), on an inflation-adjusted basis, 2021 and 2022 represent two of the most destructive years for extreme weather events since 1980 (see chart 18). We assume these trends will persist, magnifying physical risks for the utility industry.

Chart 18

U.S. billion-dollar weather disaster year-to-date event cost (CPI-adjusted)



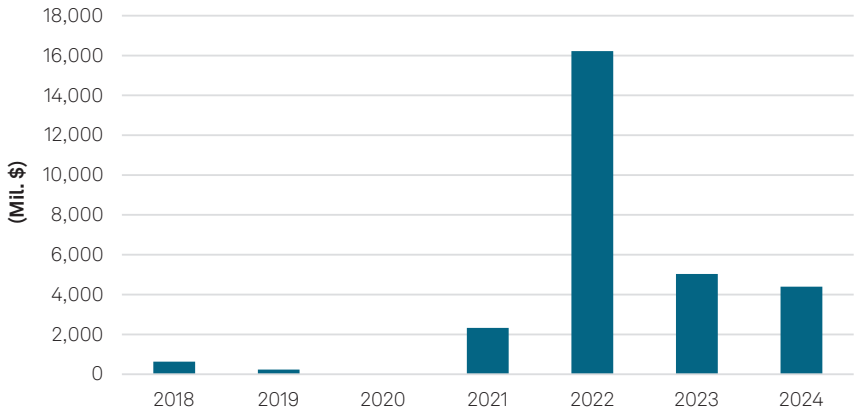
Source: National Ocean and Atmospheric Administration.

Drier, hotter weather has increased the acreage designated as high-fire-risk across the U.S. This is already taking a toll on credit ratings. For example, in 2024 we downgraded parent Xcel Energy Inc. and subsidiary Southwestern Public Service Co. (SPS) because of the scale and severity of the wildfires in the Texas panhandle, which highlights their increasing wildfire exposure. Overall, because of climate change, we expect the industry's wildfire risk will increase.

Securitization increased, which we assess as supportive of credit quality (see chart 19). Securitization allows for the issuance of debt secured by a non-bypassable charge to the customer's bill, allowing the utility to fully recover storm-related costs at a lower interest rate for customers. Because the debt is secured by the high likelihood of customers paying their bills, the associated interest costs are typically lower. We often deconsolidate such debt, resulting in stronger credit measures.

Chart 19

S&P Global Ratings-rated utility-related securitization issuance (2018-2024)



Source: S&P Global Ratings.

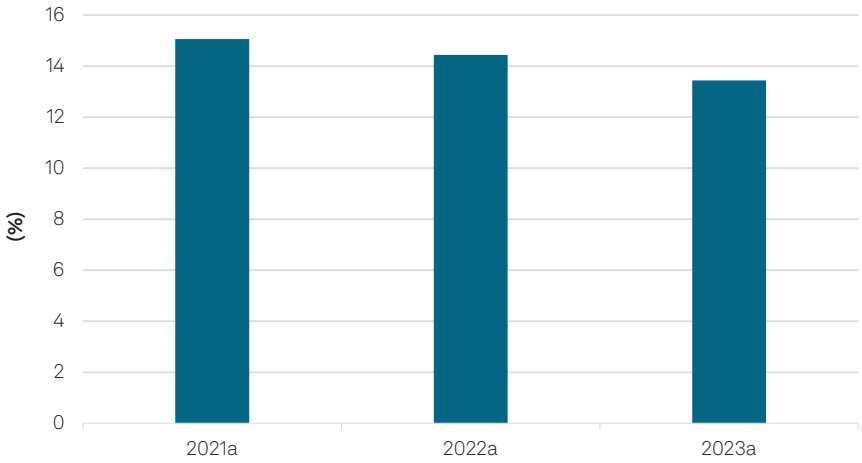
We expect securitization will remain an effective tool that the industry will continue to use. Our base case includes increasing severe natural disasters and weather events as well as continued efforts to decarbonize the energy sector, which sometimes requires securitization to fully recover under-depreciated retiring fossil-fuel generating plants.

Credit metrics and financial policy

We expect rising capital spending and increasing cash flow deficits that are not sufficiently funded in a credit-supportive manner will continue to pressure the industry's financial performance. Its average funds from operations (FFO) to debt was about 15% in 2021 and has gradually fallen to about 13.5%, primarily reflecting rising leverage (see chart 20). Given our expectations for continued increasing capital spending over the next decade, we expect financial performance and credit quality will continue to be pressured.

Chart 20

North American regulated utilities' average FFO to debt



a—Actual. Source: S&P Global Ratings.

Key risks or opportunities around the baseline

1. Wildfire mitigation efforts.

Wildfire risk mitigation, while clearly a credit positive, may not fully address the threats associated with extreme weather events.

2. Data centers and sales growth.

Data center electricity demand will likely boost revenues at North American investor-owned regulated utilities and provide modest support for the industry's credit quality.

3. Managing the customer bill.

The average electric customer bill is about 2% of U.S. median household income, which represents good value for customers relative to other typical household bills. Preserving this value is critical for the industry to maintain credit quality.

Wildfire risk has expanded. Recent events in the Northeast U.S. lead us to believe wildfire risk has spread and now potentially affects nearly every utility across North America. (About 15 years ago, it was primarily limited to just Southern California.)

Wildfire risk is highly negative for credit quality. The scale of potential liabilities, unpredictable nature of exposures, and frequency of events have materially increased wildfire risk for many utility stakeholders. From a credit standpoint, litigation risk is more problematic than risk of damage to infrastructure because it is difficult to predict or quantify and is so far without sufficient mitigation or containment. Also, wildfire-related litigation payments are typically not recoverable in rates or through other regulatory mechanisms, making them more problematic than physical risk.

Additional wildfire risks to credit quality include:

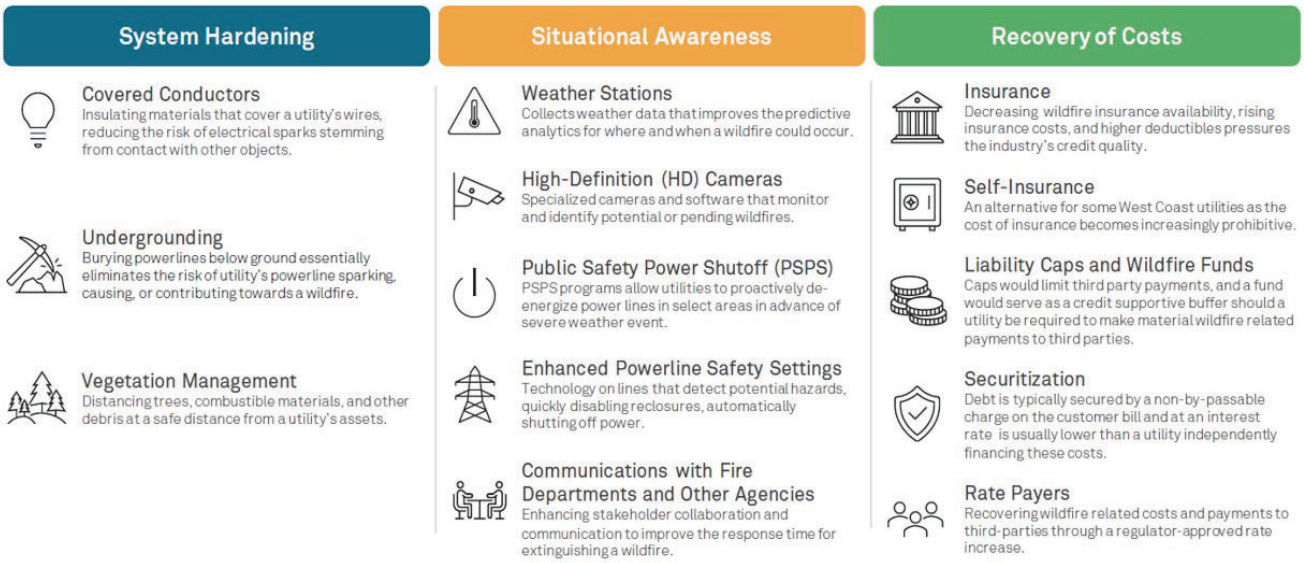
- Insurance is becoming more expensive and less available.
- It only requires a relatively small percentage of damaged or destroyed structures from a wildfire to have a material negative effect on a utility's credit quality.

- The utility industry's relatively high leveraged balance sheets and modest authorized ROEs are not a backstop for wildfire risk.
- Utilities that are impacted by a catastrophic wildfire and material third-party claims typically cannot implement other strategic initiatives.

Mitigation strategies. We expect the industry will develop plans that reduce damages, minimize litigation risk, and expand capabilities for cost recovery from wildfires. We believe the industry will be able to implement much of these strategies over the nearer term because most are not predicated on the development of new technologies or products. That said, because the industry operates in many different service territories and topographies, we expect each utility's mitigation plan will be customized to its unique exposure. Chart 21 represents an array of wildfire mitigation strategies that either have or are being implemented by many utilities across North America.

Chart 21

North American regulated utilities' wildfire mitigation efforts



Source: S&P Global Ratings.

Data centers will likely deliver a return to electricity sales growth. We expect electricity sales will increase at a CAGR of about 1.1%. This reflects our view that systematic and careful planning across the investor-owned utility sector will likely limit its realistic capability to grow at a substantially faster pace. In general, the expansion of utility infrastructure assets is a long-term planning process that requires permitting, siting, and regulatory approvals.

However, even a 1% CAGR for electricity sales will likely prove transformative for the utility industry, which has experienced flat sales growth over the past two decades. In particular, the growing number of data centers will allow the industry to spread its fixed costs over a wider base. We anticipate this will provide some cushion for the industry to effectively manage regulatory risk and maintain credit quality without necessarily requiring that every rate case order is highly supportive of credit quality.

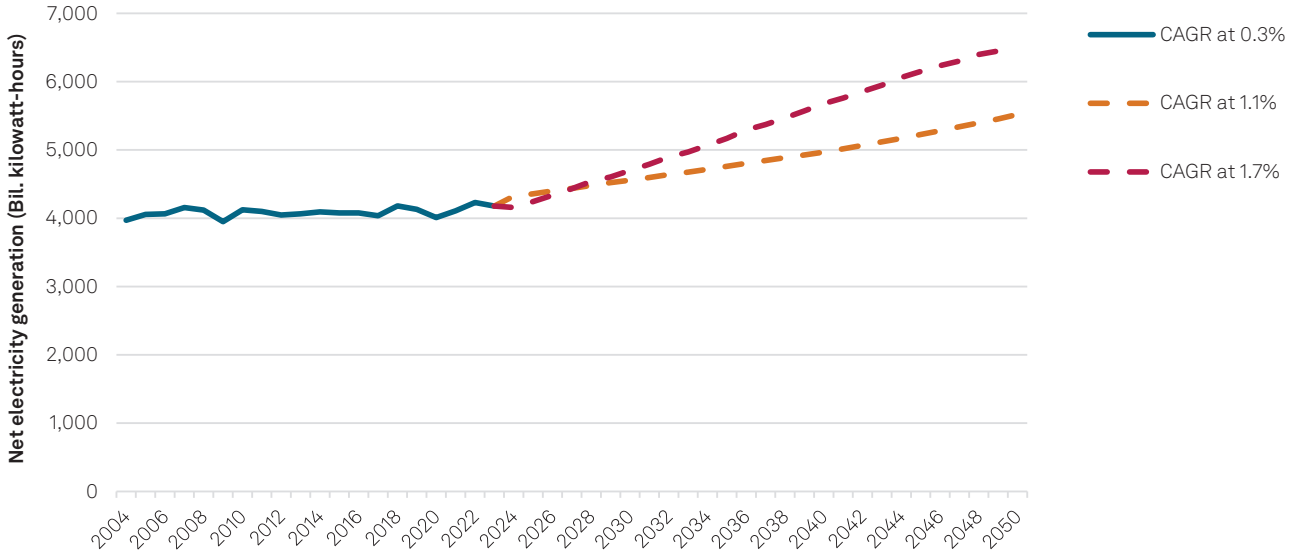
We also expect electric utilities' sales CAGR will be maintained over the longer term (see chart 22), which will support the industry's long-term credit quality. We expect growth in data center numbers will support most of the industry's growth through 2030. In the following decade,

increased onshoring of manufacturing and wider spread adoption of electric vehicles will also support growth.

Chart 22

Growth will be transformative for utilities used to stagnation

Electricity demand: U.S. regulated electric utilities



Data as of June 2024. CAGR—Compound annual growth rate. Sources: U.S. Energy Information Administration (historical and 1.1% CAGR) and S&P Global Commodity Insights (1.7% CAGR).

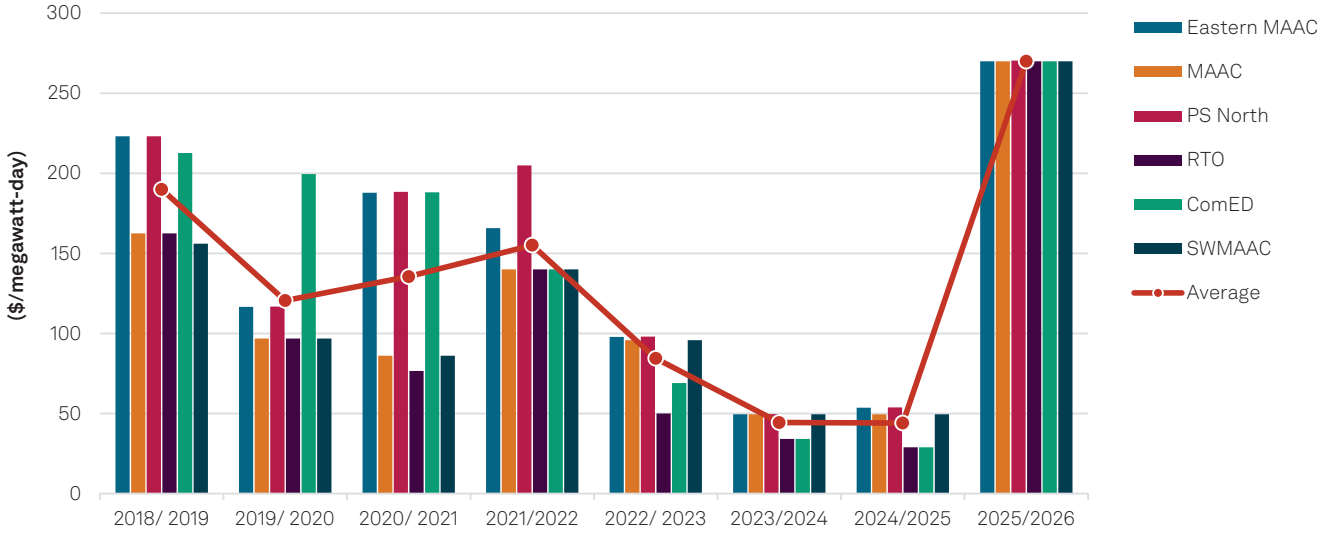
Data center credit risks. The industry must structure rates and contracts to ensure that the new data center customers are paying their share of electricity costs. Meeting the demands of relatively few, but very large, data center customers will require significant capital spending and infrastructure investments. If utilities assign a significant portion of data center-related infrastructure costs to existing residential customers, customer bills would increase. This, in turn, pressures regulators to limit rate case increases, which can negatively affect the industry's ability to effectively manage regulatory risk.

Therefore, we expect the increased capital spending needed to accommodate data center growth will be primarily recovered from data center customers over decades. Such a plan comes with risks. For example, a technological breakthrough that reduces or eliminates the need for data centers could shift the recovery of these long-term infrastructure investments onto residential customers.

Capacity prices. Pennsylvania-New Jersey-Maryland (PJM) Interconnection capacity prices materially increased during its latest capacity auction (see chart 23). These higher prices are directly passed onto customers, significantly increasing the electric utility bill. If these higher prices persist, it will likely result in higher customer complaints, pressuring regulators to limit increases to other areas of the customer bill that could potentially pressure a utility's ability to effectively manage regulatory risk.

Chart 23

PJM capacity auction results



Source: PJM website.

U.S. Environmental Protection Agency (EPA). In 2024 the EPA released final rules aimed at reducing pollution from fossil fuel-fired power plants, which included carbon pollution standards and effluent limitation guidelines and standards for coal-fired power plants. These rules would have increased costs for utilities, specifically regarding the requirement to install carbon capture and sequestration or storage technology on coal-fired power plants intending to operate beyond 2039.

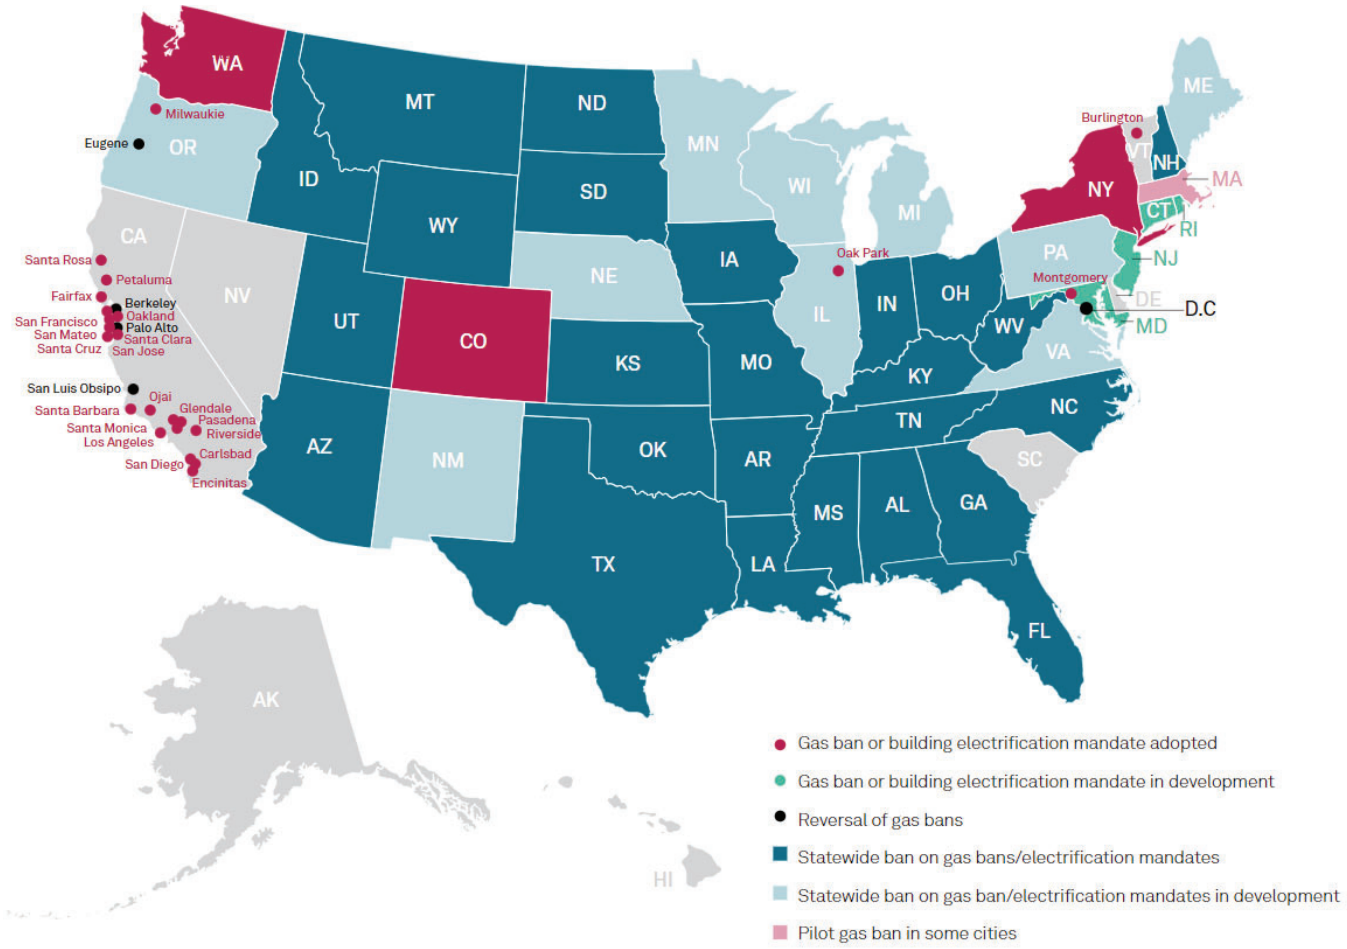
However, we note that the incoming U.S. presidential administration and Republican majority in congress could modify or eliminate these rules. We will monitor executive, legislative, or legal actions that could impact the industry's credit quality.

Full electrification. We expect the longer-term credit quality for some natural gas local distribution companies (LDC) will become increasingly challenging, especially for utilities that operate in warmer climates or whose cities or states have banned new gas connections, severely limiting the growth of natural gas LDCs (see chart 24). We expect this trend will also gradually persist through the passage of local city and town building codes that limit carbon and other emissions.

Offsetting some of this risk is that a majority of states have imposed a ban on the ban of new gas connections. Furthermore, gas LDCs are attempting to reduce their environmental risks by decreasing their carbon footprint through investing in renewable natural gas, blending hydrogen, and initiating various hydrogen infrastructure projects.

Chart 24

Gas bans and electrification mandates



Data as of April 26, 2024. *Municipalities shown on map are a subset of municipalities in the U.S. that have gas ban policies or electric reach codes in place. §Colorado and Burlington mandates target emissions requirements set out in respective laws or regulations. Source: S&P Global Commodity Insights.

Cybersecurity. While cybersecurity breaches against infrastructure assets have been relatively low, we believe the threat of cyberattacks remains high. The 2024 cybersecurity breach against American Water Works Co. Inc. underscores the risks. But the sector has heavily invested to limit this risk. We believe the sector's ongoing vigilance in this area is critical to maintaining credit quality.

Anne M. Uitvlugt
Consumer Energy Company
One Energy Plaza
Jackson, MI 49201

Re: In the matter of **Consumers Energy Company** for authority to increase its rates for the distribution of natural gas and for other relief.
MPSC Case No. U-21806

Dear Ms. Uitvlugt:

Attached are Staff's responses to Consumer Energy Company's second round of discovery to Staff in this case. The responses are being served by e-mail. In providing these responses, Staff does not necessarily concede that the requested information is relevant or material to these proceedings. Staff reserves the right to raise objections to the introduction into evidence, through cross-examination or otherwise, of any material supplied in response to discovery.

Staff intends to supplement a prior response if it becomes aware of a material error in the response or if it becomes aware that there has been a significant change in circumstances that would change the prior response in a material way. Staff does not, however, keep prior responses under continuous review.

Sincerely,

Anna B. Stirling
Assistant Attorney General
Public Service Division

DATED: May 7, 2025

MPSC Staff's Answer to the Company's Second Discovery Request
MPSC Case No. U-21806
May 7, 2025

Question:

21806-CE-ST-0004: Refer to the box at the bottom of Mr. Megginson's Exhibit S-4, Schedule D-2. Please provide support for the 2025 and 2026 projected credit spread of 1.00%.

Answer:

The Company's last 30-year debt issuance was in August 2022, with a credit spread of 125 basis points. The Company's recent $700 million debt issuances in August 2024 was a 6-year issuance at a credit spread of 68 basis points. The Company's January 2024, 5-year issuance was at a credit spread of 73 basis points. The Company averaged an 83 basis points spread for its 2023 debt issuances. Thus, a reasonable credit spread is somewhere between 75-125 basis points. Staff provides a 100 basis-point credit spread in its long-term debt cost rate projections in this case.

Respondent: Kirk Meggison

MPSC Staff's Answer to the Company's Second Discovery Request
MPSC Case No. U-21806
May 7, 2025

Question:

21806-CE-ST-0005: Refer to page 10, lines 5 through 13 of Mr. Megginson's direct testimony which refers to a revenue decoupling mechanism and several gas infrastructure improvement and replacement programs with surcharge payment mechanisms in place at Consumers Energy:

i. Please identify the MPSC case number which authorizes the revenue decoupling mechanism currently in place as referenced in Mr. Megginson's testimony.

ii. Please individually list the "several gas infrastructure improvement and replacement programs" the Company has in place as referenced in Mr. Megginson's testimony along with the associated MPSC case numbers.

Answer:

As Staff explained on page 7, lines 13-16 of Mr. Megginson's testimony on the Company's enhanced infrastructure replacement program (EIRP) was authorized by the Commission in Case No. U-20322. The Company also provided a January 29, 2025 audit response (U21806-SA-CE-101), with respect to the Company's riders and other revenue recovery mechanisms currently in place in Consumers' gas division. The Company responded that it currently has a Gas Cost Recovery mechanism as well as an Energy Waste mechanism in place. Staff also provided the Company's response in Case No. U-21148 to the Company's Gas Utility - Regulatory Assets & Liabilities as Exhibit S-4, Schedule D-6, page 1 of 2.

Respondent: Kirk Meggison

MPSC Staff's Answer to the Company's Second Discovery Request
MPSC Case No. U-21806
May 7, 2025

The Company's revenue decoupling mechanism (RDM) was approved by the Commission in Case No. U-20322 and reapproved in Case No. U-20650. The Company requested an updated RDM in December 2021 in its gas rate case, Case No. U-21148, which was approved by the Commission and took effect on October 1, 2023. In the Company's December 2022 gas rate case, Case No. U-21308, the Company did not request an updated RDM because the Company noted that the RDM was discovered to be immaterial given the cadence of filing annual rate cases. (See audit response U21308-SA-CE-128-Partial-Wehner). Thus, the RDM may have discontinued sometime in 2024.

Respondent: Kirk Meggison

Credit Highlights

Overview

Key strengths	Key risks
Monopolistic vertically integrated electric utility and gas distribution utility operations.	Lack of operating diversity that makes the company largely depend on Michigan regulators to sustain its credit quality.
Favorable regulatory construct in Michigan.	Energy transition risks due to its dependence on natural gas and coal-fired generation (about 75% of electricity generated or purchased in 2023), partially mitigated by a plan to retire coal in 2025.
Large customer base of 1.9 million electric and 1.8 million gas customers.	Negative discretionary cash flow, reflecting robust capital spending, which indicates external funding needs.
Insulated subsidiary of its parent, CMS Energy Corp., allowing us to rate it one notch above the parent.	Susceptibility to adverse weather events, including winter storms and convective storms.
	Exposure to cyclical commercial and industrial customers, which account for about 45%-50% of electric utility revenues and 20%-25% of gas utility revenues.

We expect Consumers Energy Co. (CE) to continue to effectively manage its regulatory risk. We believe Michigan's regulatory construct is above average compared with peers because of the benefit of a streamlined 10-month rate case process. Other constructive rate mechanisms include the use of forward test-years, power supply cost rider adjustments, and natural gas

cost rider adjustments. These mechanisms help the company earn its allowed return on equity (ROE) and minimize regulatory lag.

CE is in the middle of an electric rate case and just received a settlement approval in its recent gas rate case. The company filed for a $325 million electric rate increase based on a 10.25% ROE in May and reached a settlement with various intervenors and received an order from the Michigan Public Service Commission (MPSC) for a $35 million gas rate increase based on a 9.90% ROE. The gas rate increase granted was about only a quarter of the rate increase requested. However, this difference was partially because the commission authorized bill credits of $27.5 million per year over four years related to the gain on the sale of CE's appliance service plan business, which happened after and was not a part of the company's case filing.

Consumers Energy Co. rate case details

	Electric rate case		Gas rate case	
	Present case: requested by company 5/31/2024	Previous case: authorized by MPSC 3/1/2024	Authorized by MPSC 7/23/2024	Requested by company 12/15/2023

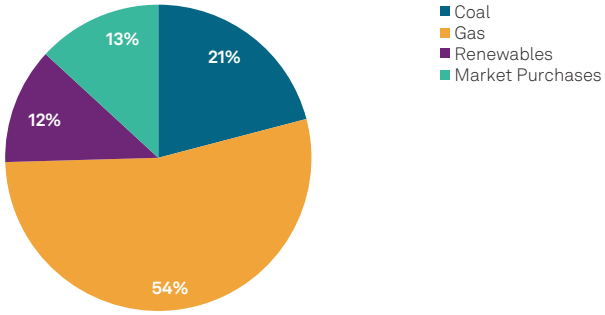
*Company assumption under settlement. Source: S&P CapitalIQ Pro. MPSC--Michigan Public Service Commission.

The company's elevated capital spending plan prioritizes infrastructure upgrades, and its energy transition plans. Over the next five years, CE plans to spend about $17 billion to maintain and upgrade its gas infrastructure and electric distribution systems and reduce its carbon emissions. The capital plan includes investment of about $6.3 billion in the gas segment and about $10.7 billion in electric (of which, about two thirds are dedicated to distribution-related spending). The company also intends to reduce its carbon exposure in line with its Integrated Resource Plan (IRP), which the MPSC approved in June 2022. The plan includes a goal to reach net-zero carbon emission by 2040 and a goal to retire CE's owned coal-fired generation plants in 2025. Furthermore, the company's IRP targets a gradual reduction in its gas-fired generation dependence after 2025, as well as meeting 90% of its customer needs with clean energy sources by 2040. The company also announced a net-zero greenhouse gas emissions target by 2050 and a zero methane emissions target by 2030 for its gas distribution system.

Consumers Energy Co.

CE's 2023 generated and purchased electricity supply by source



Source: Company filings.

The company's credit metrics were weak in 2023, largely because of weather-related issues. Mild weather impaired sales for the company's gas operations, and the company saw heightened winter and convective storm activities. While the company has effectively recovered storm costs in past rate case proceedings, it has not been able to defer storm costs into regulatory assets, which introduced regulatory lag.

A portion of CE's service territory has a relatively high wildfire risk classification from the Federal Emergency Management Agency (FEMA). This area is contiguous and has a population of about 10,000-15,000 people, 7,000-9,000 housing units, of which about 40%-60% are occupied, and median home values if $100,000-$150,000 according to U.S. Census data. Part of the company's capital spending plan is focused on smart electric systems and anticipates pursuing further undergrounding pilots, with the potential to underground up to 400 miles of electric lines per year, starting in 2027, to address some of its climate-related risks. While CE has not been found culpable for any wildfires in its service territory and is not currently party to any such litigation, we will continue to monitor the company's ability to effectively manage its risks associated with adverse weather events.

We expect CE's credit measures to remain within the significant financial risk profile category. Throughout our base-case scenario, we expect funds from operations (FFO) to debt of 17%-19%.

Outlook

The stable rating outlook on CE reflects our expectation that management will focus on its core utility operations and reach constructive regulatory outcomes to avoid increasing business risk. We expect CE will maintain stand-alone financial measures consistent with the middle of the range for its financial risk profile category, specifically FFO to debt of 17%-19%.

Downside scenario

We could lower our rating on CE if:

- The stand-alone financial measures weaken such that FFO to debt weakens to consistently below 15%; or

- We lower our rating on parent CMS Energy.

Upside scenario

Although less likely, we could raise our rating on CE if we raise our rating on CMS Energy and CE's stand-alone financial measures improve, reflecting FFO to debt consistently above 20%.

Our Base-Case Scenario

Assumptions

- Consistent rate case filings and use of existing regulatory mechanisms;
- Elevated capital spending over the forecast period averaging $2.8 billion-$3.0 billion annually;
- Annual dividends averaging about $1 billion-$1.1 billion annually;
- All debt maturities refinanced; and
- Continued negative discretionary cash flow financed in a balanced manner to support the regulated capital structure.

Company Description

CE is a subsidiary of CMS Energy and operates as an electric and gas utility serving about 1.9 million electric and 1.8 million natural gas million customers in Michigan. CE's electric business operates as a vertically integrated utility that generates, distributes, and sells electricity. The electric utility sources about 40%-50% of its generation from purchased power, rather than from its own plants. The company also sells, stores, and transports natural gas. It is based in Jackson, Mich. CE contributes to about 95% of CMS' EBITDA.

Business Risk

Our assessment of CE's business risk profile reflects the company's monopolistic electric and natural gas utility operations and effective management of regulatory risk. The MPSC regulates CE, and we view the regulatory environment in Michigan as above average compared with peers. This is demonstrated through the company's use of forward-looking test years and a streamlined 10-month rate case process. Furthermore, CE benefits from other constructive rate mechanisms, such as the Power Supply Cost Recovery adjustment rider, and the Gas Cost Recovery adjustment rider.

In 2023, the state also passed a law that allows electric utilities in the state to earn a return equal to their pre-tax weighted average cost of capital on payments made under new purchased-power agreements. These constructive rate mechanisms enable CE to generally earn its allowed ROE and minimize regulatory lag.

The company actively manages its gas supply to reduce the effects of price volatility and to support its gas system operations by injecting natural gas into storage during the summer months for use during the winter months. During 2023, 45% of the natural gas supplied to all customers during the winter months came from storage. Additionally, CE's large customer base

of about 1.9 million electric customers and about 1.8 million natural gas customers throughout Michigan bolsters the company's business risk profile. This said, the company is exposed to cyclical commercial and industrial customers for its electric operations, which contribute about 45%-50% of the company's electric revenues.

Financial Risk

We assess CE's financial measures using our medial volatility table, reflecting the company's lower-risk regulated electric and gas utility operations and its effective management of regulatory risk. Under our base-case scenario, we expect:

- Elevated capital spending averaging $2.8 billion-$3.0 billion annually over the forecast period;
- Dividends averaging $1 billion-$1.1 billion annually;
- Equity injections by the parent to maintain the company's capital structure;
- Continued use of existing regulatory mechanisms;
- Negative discretionary cash flow; and
- The refinancing of all debt maturities.

As such, we anticipate financial measures to be consistent with the middle of the range for the significant financial risk category. Specifically, we forecast FFO to debt of 17%-19%.

Liquidity

We assess CE's liquidity as adequate, with sources covering uses by 1.1x over the coming 12 months, and that its sources cover uses even if forecast consolidated EBITDA declines 10%. We believe the supportive regulatory framework provides manageable cash flow stability for the company even in times of economic stress, supporting our use of slightly lower thresholds to assess liquidity.

In addition, CE can absorb high-impact, low-probability events, in our view, as the company maintains about $1.1 billion in committed credit facilities through 2027, another $250 million in committed credit facilities through November 2025, and can likely lower its capital spending (averaging $2.8 billion-$3.0 billion annually) during stressful periods, indicating a limited need for refinancing under such conditions. CE can borrow $500 million from the parent CMS Energy as per its renewed credit agreement in December 2023.

Furthermore, our assessment reflects the company's prudent risk management and sound relationships with its banking group. Overall, we believe that the company can withstand adverse market circumstances over the next 12 months with sufficient liquidity to meet its obligations. The company has around $200 million of long-term debt maturities in 2025, and we expect the company to proactively address these maturities well in advance of their scheduled due dates.

Principal liquidity sources

- Cash FFO of about $2.4 billion;
- Credit facilities of about $1.3 billion;
- Working capital inflows of about $70 million; and
- Available cash of about $1.3 billion following the company's recent debt issuance.

Principal liquidity uses

- Debt maturities of about $772 million over the next 12 months;
- Estimated maintenance capital spending of about $2.7 billion; and
- Dividends of about $900 million.

Covenant Analysis

Requirements

CE's credit agreements contain a covenant for CE to maintain debt to capitalization below 65%.

Compliance expectations

In our base-case scenario, we expect CE to remain compliant with this covenant and have sufficient headroom.

Environmental, Social, And Governance

Environmental factors are a negative consideration in our credit rating analysis of CE. The company's use of fossil fuel generation sources exposes it to heightened energy transition risks. Its generation portfolio's capacity comprises about 36% natural gas, 20% coal, 17%

hydroelectric, 17% oil and gas, and 9% wind and solar as of Dec. 31, 2023. The company's accelerated coal retirement plan for its utility slightly mitigates this risk. It includes a goal to be coal-free in 2025 and have 90% of its utility's capacity portfolio sourced from clean energy resources by 2040.

Furthermore, the company has experienced heightened winter and convective storm activities in recent years. While the company has effectively recovered storm costs in past rate case proceedings, it has not been able to defer storm costs into regulatory assets, which could introduce regulatory lag especially if costs are outsized.

While CMS has not been found culpable for any wildfires in its service territory and is not currently party to any litigation concerning these matters, a portion of its service territory has a relatively high wildfire risk classification from FEMA. This area is contiguous and has a population of about 10,000-15,000 inhabitants, 7,000-9,000 housing units, of which about 40%-60% are occupied, and median home values of $100,000-$150,000 according to U.S. Census data. Part of the company's capital spending plan is focused on smart electric systems and anticipates pursuing further undergrounding pilots, with the potential to underground up to 400 miles of electric lines per year starting in 2027. We will continue to monitor the company's ability to effectively manage its risks associated with adverse weather events.

Group Influence

Under our group rating methodology, we consider CMS Energy to be the parent of the group with a group credit profile (GCP) of 'bbb+'. We assess CE as a core subsidiary of CMS Energy largely because we view the utility as integral to the group's identity, highly unlikely to be sold and having a strong commitment from management, given the company's emphasis on maintaining the size of the regulated utility operations relative to the nonutility businesses.

Given CE's stand-alone credit profile, and because CE is operationally separate and maintains sufficient insulating measures, we rate the utility one notch above the GCP. Some of the key insulating measures are:

- CE is a separate and stand-alone legal entity that functions independently (both financially and operationally), files its own rate cases, and is independently regulated by MPSC;
- CE has its own records and books, including stand-alone audited financial statements;
- The utility has its own funding arrangements, including issuing its own long-term debt, and it has a separate committed credit facility to cover its short-term funding needs;
- CE does not comingle funds, assets, or cash flow with parent CMS Energy or its other subsidiaries, and it does not participate in a money pool;
- We believe there is a strong economic basis for CMS Energy to preserve CE's credit strength, reflecting CE's low-risk, profitable, and regulated utility business model. CE is also a significant portion of CMS Energy, accounting for about 95% of the consolidated company; and
- There are no cross-default provisions between parent CMS Energy and CE that could directly lead to a default at the utility.

Issue Ratings--Subordination Risk Analysis

Capital structure

CE's capital structure consists of about $12.5 billion of long-term debt, including about $11.7 billion in first-mortgage bonds (FMBs), $787 million of securitized debt (all of which is deconsolidated from our credit metrics), and about $110 million of tax-exempt revenue bonds.

Analytical conclusions

We rate the company's senior unsecured debt 'A-', in-line with the long-term issuer credit rating on CE as the rated issuances are senior unsecured debt issued by a qualifying investment grade utility as per our criteria.

We base our 'A-2' short-term rating on our 'A-' issuer credit rating.

Issue Ratings--Recovery Analysis

Key analytical factors

- We assign recovery ratings to FMBs issued by U.S. utilities, which can result in issue ratings being notched above an issuer credit rating on a utility, depending on the rating category and the extent of the collateral coverage. The FMBs issued by U.S. utilities are a form of secured utility bonds that qualify for a recovery rating as defined in our criteria.
- CE's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating one notch above the issuer credit rating.

Consumers Energy Company

Update to credit analysis

Summary

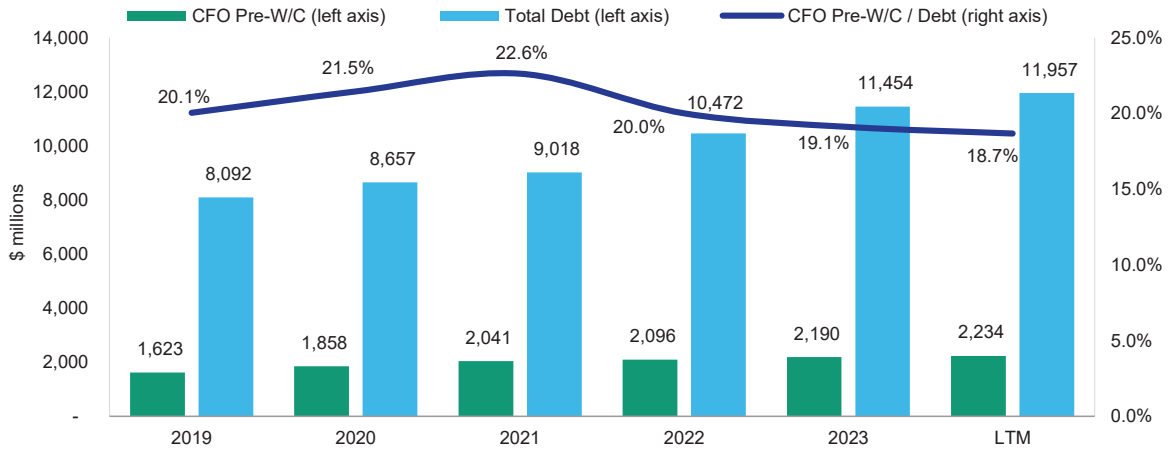
Consumers Energy Company's (Consumers Energy) credit profile reflects its business risk as a vertically integrated electric and gas utility operating in the credit supportive regulatory environment of Michigan. We expect the utility to maintain a stable financial profile with cash flow from operations before changes in working capital (CFO pre-WC) to debt averaging around 20-21%, including an adjustment to exclude securitization debt, over the next 2-3 years. At the end of the latest twelve month (LTM) period ending 31 March 2024, Consumers Energy's CFO pre-WC to debt ratio was 20%, including the adjustment to exclude securitization bonds. The company will continue to execute its robust capital investment plan and have an active regulatory calendar over this period. Based on the Michigan regulatory framework, we expect the utility to recover its investment costs on a timely basis and to earn an appropriate return on its investments.

Consumers Energy's stand-alone financial performance has historically been affected by the significant debt at its parent company CMS Energy Corporation (CMS, Baa2 stable). However, CMS has made notable progress in reducing the percentage of parent debt in its capital structure in recent years. We now estimate that the percentage of parent debt will remain below 25% of total consolidated debt. All of Consumer Energy's outstanding debt obligations are secured.

Recent development

In November 2023, Michigan enacted a new energy law (2023 Energy Law), which raised the state's renewable energy standard while providing additional authority to the Michigan Public Service Commission (MPSC). Consumer Energy's operations are under the purview of MPSC. In general, we view this development to be constructive because the utilities in the state will now outline a renewable energy plan with greater transparency, and the MPSC will have an expanded scope of consideration for various factors influencing Consumers Energy' plan to decarbonize.

Exhibit 1
Historical CFO Pre-WC, Total Debt and CFO Pre-WC to Debt



When we adjust the total debt to exclude securitization debt, Consumers Energy's CFO pre-WC/debt would be 20.3%, 20.4% and 20.0% in 2022, 2023 and LTM ending 31 March 2024, respectively.
Source: Moody's Financial Metrics

Credit strengths

» Credit supportive regulatory environment in Michigan

» Transparent and timely cost recovery

» Stable financial profile

Credit challenges

» Robust capital investment plan

» Maintaining regulatory support for these capital investments

» Lack of geographic and regulatory diversity with single state service territory

Rating outlook

The stable outlook reflects our expectation that financial metrics will remain stable and that Consumers Energy will continue to benefit from a consistent and generally credit supportive regulatory environment. The stable outlook also incorporates our view that Consumers Energy will maintain prudent financial policies while managing through its robust investment cycle and that debt levels at the parent will not increase materially.

Factors that could lead to an upgrade

A rating upgrade could be considered if credit metrics improve such that CFO pre-WC to debt is above 21% on a sustained basis. In addition, if the Michigan regulatory framework becomes even more formulaic, transparent or timely with its suite of cost recovery mechanisms for Consumers Energy, a rating upgrade could be possible.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on https://ratings.moodys.com for the most updated credit rating action information and rating history.

Factors that could lead to a downgrade

A rating downgrade could be considered if there is a material deterioration in the credit supportiveness of the Michigan regulatory environment; or if the CFO pre-WC to debt ratio declines below 18% on a sustained basis.

Key indicators

Exhibit 2

Consumers Energy Company

	2019	2020	2021	2022	2023	LTM
CFO Pre-W/C + Interest / Interest	6.2x	6.6x	7.5x	7.1x	5.8x	5.6x
CFO Pre-W/C / Debt	20.1%	21.5%	22.6%	20.0%	19.1%	18.7%
CFO Pre-W/C – Dividends / Debt	12.7%	14.1%	14.6%	12.7%	13.0%	13.0%

Profile

Consumers Energy is a vertically integrated electric and gas utility serving approximately 1.9 million electric and 1.8 million gas customers in the state of Michigan with an average rate base of $25 billion in 2023. Consumers Energy's electric operations account for approximately two thirds of its revenue, cash flow and asset base. The utility is a wholly-owned subsidiary of CMS and, as the primary subsidiary of the parent company, it represents over 95% of CMS's consolidated earnings. In addition to Consumers Energy, CMS has a subsidiary called NorthStar Clean Energy, a non-utility domestic independent power producer and marketer.

Detailed credit considerations

Credit supportive regulatory environment

Consumers Energy is regulated by the MPSC, which has a regulatory framework that we view to be more credit supportive than most other states. As a result of 2008 and 2016 energy legislation in Michigan, the regulatory framework has been streamlined, improving both the rate case process and the timeliness of cost recovery. The 2016 legislation provided additional assurance of utility investment recovery by expanding the certificate of necessity (CON) process, which had already included pre-construction approval for large

generating resources, into an integrated resource planning (IRP) process. The IRP process considers a wide range of factors including fuel costs, demand forecasts, resource adequacy, competitive pricing, environmental mandates and transmission options before the construction of major projects.

In November 2023, new energy legislation (2023 Energy Law) was enacted. Under the new law, the state's renewable energy standards were raised to 50% by 2030 and 60% by 2035 from the previous 15% by 2021 requirement. It also set a clean energy standard of 80% by 2035 and 100% by 2040. Under the law, zero to low-carbon emitting sources, such as nuclear generation and natural gas generation with carbon capture, are considered clean energy sources. Along with these new standards, the new legislation expanded the authority of the MPSC to oversee their implementation. CMS's utility subsidiary Consumers Energy will file updates to its renewable energy plans in 2024 and its Clean Energy Plan in or before 2027. Given the existing regulatory framework in Michigan, we expect the company's collaborative dialogue with both stakeholders and regulator to continue under the new legislation.

In June 2022, Consumers Energy and key stakeholders in Michigan reached a settlement related to the company's latest IRP. The settlement included the retirement of all of its remaining coal power plants (all three units at the Campbell power plant site) in 2025 as a result of the 2021 IRP. Consumers Energy will be able to record approximately $1.3 billion of the remaining book value of these power plants as a regulatory asset and earn a 9% return on equity (ROE) through the remaining life. Instead of securitizing the remaining book value, the settlement will minimize the impact of the accelerated coal retirements on Consumers Energy's credit metrics. We view this settlement to be constructive and evidence of continued credit supportiveness in Michigan.

Timeliness of cost recovery based on a prescriptive suite of recovery mechanisms

Michigan utilities benefit from numerous formulaic rate adjustment mechanisms that provide a high degree of cash flow stability and assurance of recovery. For example, Consumers Energy has forward-looking Power Supply Cost Recovery (PSCR) and Gas Cost Recovery (GCR) mechanisms that are intended to ensure that it can recover prudently incurred power and gas supply costs. The PSCR covers fuel and purchased power costs as well as transmission and emission allowance costs. Differences between actual and forecast costs are deferred for recovery or refunded in the following year. The PSCR is a surcharge mechanism and provides a degree of base rate and cash flow stability, a credit positive. The GCR mechanism may be adjusted monthly within a capped range to minimize over/under recoveries, although interim gas inventory buildup could substantially increase the company's working capital financing when gas prices increase sharply.

Gas utilities in the state also benefit from programs designed to assure recovery of needed infrastructure improvements. Consumers Energy's RDM compares and adjusts for differences between weather normalized actual and authorized revenues. The company's enhanced infrastructure replacement program (EIRP) is a MPSC authorized 25-year incremental investment program to upgrade natural gas infrastructure, including replacing less than 250 miles of cast iron pipe and other high-risk components.

Active rate case filing cadence

Consumers Energy maintains an active regulatory schedule with its electric and gas general rate cases typically filed annually in an alternating pattern. The utility currently has its gas rate case pending before the MPSC, and filed its request for an electric rate increase on 31 May 2024. Over the last three years, Consumers Energy experienced downward pressure on its allowed ROE in its rate cases although the company was able to maintain a 9.9% allowed ROE. We expect Consumers Energy to maintain a stable financial profile because there are other offsetting mechanisms such as usage of forward test year to allow the utility to earn appropriate returns and to recover investment costs on a timely basis. However, further deterioration of the allowed ROE is likely to put negative pressure on the company's overall financial profile.

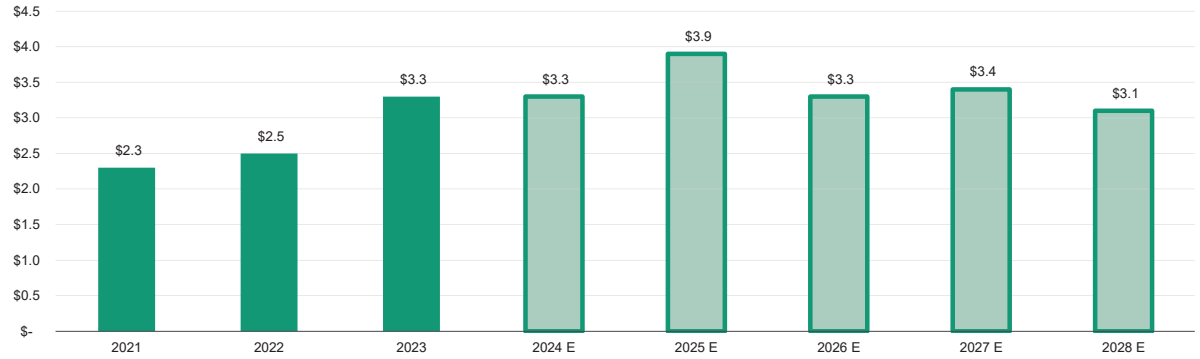
On 1 March 2024, the commission authorized a $92 million increase based on a 9.9% ROE, 50.02%% equity capital structure and a $13.67 billion rate base value. Also, the final order approved an Investment Recovery Mechanism (IRM) rider for distribution reliability projects totaling $99 million over two years.

On 15 December 2023, the utility filed a gas rate case, seeking a $136 million increase based on a projected test year for the 12-month period ending 30 September 2025, requesting a 10.25% ROE, 51.5% equity capital structure and a rate base value estimated around $10.97 billion. In April 2024, the MPSC Staff recommended an $70.77 million increase based on a 9.85% ROE, 49.92% equity capital structure and a $10.88 billion rate base value. A final decision is expected by 15 October 2024.

Stable credit metrics expected to be maintained through its high capital investment cycle

Consumers Energy's capital spending continues to be robust as it is currently in the midst of a large capital investment plan. The company increased its five-year capital expenditure plan through 2028 to $17 billion, approximately $1.5 billion higher than the previous plan. Consumers Energy will invest approximately $6.3 billion primarily to maintain and upgrade its gas utility infrastructure; $7.3 billion related to its electric distribution and other infrastructure; and $3.4 billion related to clean energy generation. These investments should enhance the company's reliability and safety as well as help it execute its decarbonization plan.

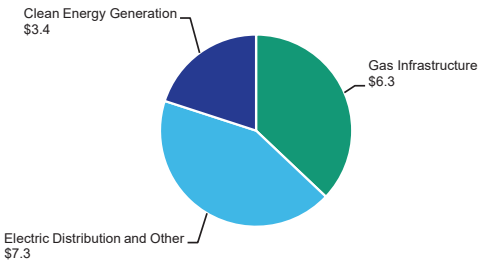
Exhibit 4
Consumers Energy's elevated capital program will extend at least through 2028
$ billions



Source: Company 10K

Through this period, Consumers Energy plans to keep rate increases modest, which should help to maintain regulatory support for investment cost recovery. Funding for these investments will be provided by internally generated cash flow, the issuance of debt at Consumers Energy and equity contributions from CMS. We expect Consumers Energy to maintain its CFO pre-WC to debt at around 20%-21% on average over the next 2-3 years. At the end of 2023 and for the LTM period ending 31 March 2024, Consumers Energy produced a CFO pre-WC to debt ratio of 20.5% and 20%, respectively, excluding securitization debt.

Exhibit 5
Planned Capital Expenditures 2024 - 2028
$ billions



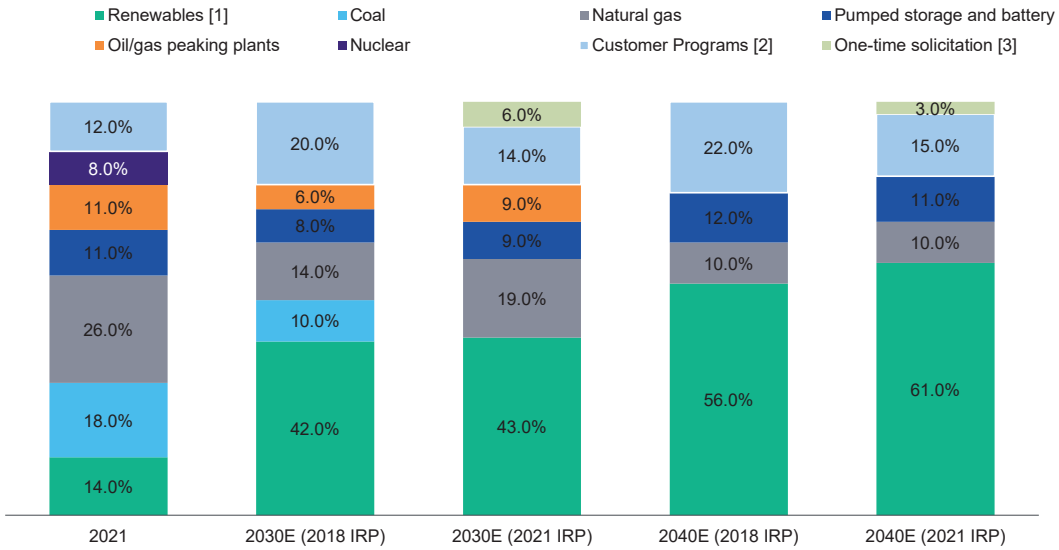
Source: Company 10K

Based on Consumers' latest IRP approved in 2022, the utility will add up to 8 GW of solar power, which is 2 GW more than what was approved in the company's 2018 IRP. As a result, by 2040, more than 60% of Consumers Energy's generation capacity will be from renewable sources. In order to replace the retiring coal capacity, the utility acquired the Covert natural gas-fired power plant for

approximately $815 million in 2023. It issued requests for proposals (RFP) for two purchased power agreements (PPA) for 500 MW of dispatchable generation and 200 MW of clean energy sources.

Exhibit 6

Based on the latest IRP settlement, more than 60% of Consumers Energy's generation sources will be renewables by 2040



[1] Does not include renewable RECs.
[2] Includes energy waste reduction, demand response, and conservation voltage reduction program.
[3] One-time solicitation to acquire approximately 700 MW of capacity from sources in Michigan's Lower Peninsula beginning in 2025.

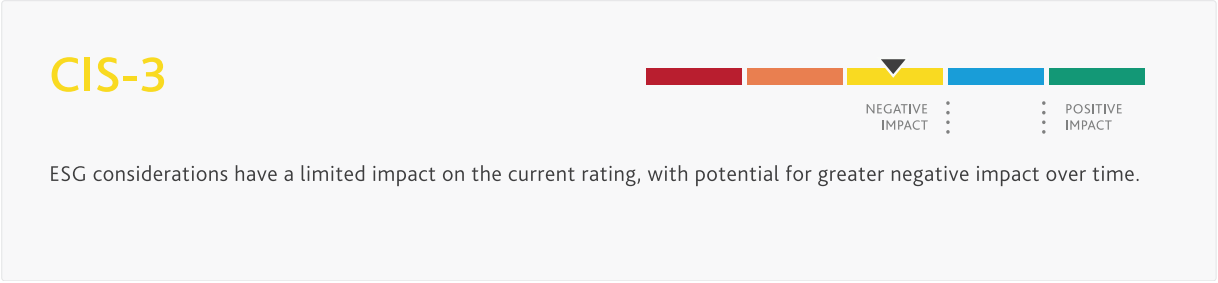
ESG considerations

Consumers Energy Company's ESG credit impact score is CIS-3

Exhibit 7

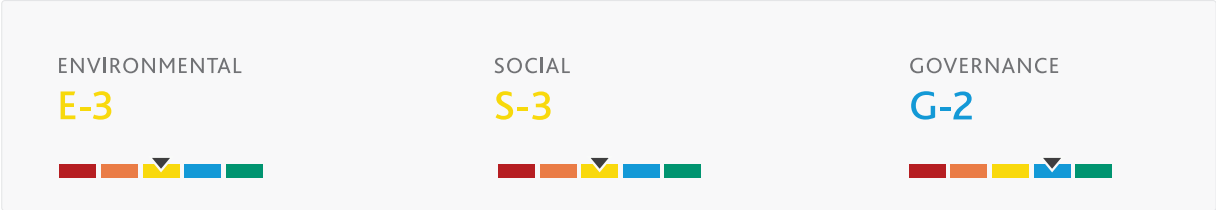
ESG credit impact score



Source: Moody's Ratings

Consumers Energy's **CIS-3** indicates that ESG considerations have limited impact on the current credit rating with greater potential for negative impact over time. It reflects some exposure to physical climate risk and moderating carbon transition risk. It also incorporates social risks stemming from inherent risk associated with regulated utilities and governance risk that is not a material driver.

Exhibit 8
ESG issuer profile scores



Source: Moody's Ratings

Environmental

Consumers Energy's **E-3** issuer profile score reflects its moderate position for the carbon transition with tangible strategies and plans in place that substantially mitigate its carbon transition exposure. The utility is currently in a transition to phase out its coal-fired generation and targets zero coal-fired generation output in 2025, accelerated from its prior target of 2039. The utility also established a goal of net zero methane emission for its gas delivery system by 2030; net zero carbon emissions for its electric business by 2040, including MISO market purchases and PPAs; and net zero greenhouse gas emissions for its entire business, including customer and supplier emissions, by 2050. Michigan's regulatory framework supports the utility's transition plan by allowing certain investment cost recovery and renewable energy plan surcharges, for example.

Social

S-3 issuer profile score for Consumers Energy is primarily related to its customer and regulatory relations as well as demographic and societal trends. The utility's regulatory environment, as well as its interaction with the Michigan Public Service Commission, are important in considering the utility's social risk. Also, the safety and reliability of its operations are important social considerations.

Governance

Consumers Energy's **G-2** issuer profile score reflects our view that its governance does not pose a particular risk and is not a material driver in the company's overall credit profile. It also incorporates its position as a subsidiary of CMS whose corporate governance considerations including financial policy and risk management influence Consumers Energy.

ESG Issuer Profile Scores and Credit Impact Scores for the rated entity/transaction are available on Moodys.com. In order to view the latest scores, please click here to go to the landing page for the entity/transaction on MDC and view the ESG Scores section.

Liquidity analysis

We expect Consumers Energy's liquidity profile to be adequate over the next 12-18 months.

Consumers Energy's external liquidity sources include a $1.1 billion secured revolving credit facility expiring in December 2027 and, as of 31 March 2024, net availability was $1.073 billion with $27 million of letters of credit outstanding. Consumers Energy also maintains a $250 million secured credit facility terminating in November 2025 and had $197 million available as of 31 March 2024. Both facilities are secured by first mortgage bonds. These credit facilities provide support for working capital needs and act as a backstop to Consumer Energy's $500 million commercial paper program. At 31 March 2024, the company had no commercial paper notes outstanding under the program. The credit facilities do not include a material adverse change representation for new borrowings, and have only one financial covenant, setting the maximum debt to capital at 65%. At 31 March 2024, debt to capital was 50%.

These facilities includes sustainability linked pricing metrics, which permits pricing adjustments for meeting targets related to sustainability. Targets include renewable generation and diverse supplier spend, highlighting its commitment to shifting its exposure to a greater renewable content and to supplier diversity.

The utility's continuing capital expenditure program and dividend policy will result in negative free cash flow for the foreseeable future. However, the company has a reasonable amount of external liquidity, demonstrated market access, and regularly receives capital contributions from its parent.

For the LTM period ended 31 March 2024, Consumers generated approximately $2.3 billion of cash from operations, invested $3.2 billion and distributed $673 million of dividends to CMS, resulting in negative free cash flow of approximately $1.6 billion. Given its robust investment plan, we expect Consumers Energy to maintain its negative free cash flow position over the 12-18 months.

In January 2024, Consumers Energy issued $600 million first mortgage bonds with 4.6% rate maturing in May 2029.

MPSC Case No.	**U-21806**
Responding Party:	Attorney General
Respondent:	Sebastian Coppola
Requestor:	CECo
Question No.:	**3-CE-AG-5**

3-CE-AG-5

On page 125 of his direct testimony, Mr. Coppola addresses Company witness Bleckman's Exhibit A-32 (MRB-10) - Peer Company Commission Authorized Equity Ratios. Mr. Coppola claims that "commissions in those jurisdictions also included a permanent layer of short-term debt as part of the permanent capital structure." With regard to this statement, please:

i. Identify all companies included in Mr. Bleckman's Exhibit A-32 (MRB-10) that employ short-term debt as a permanent financing tool along with supporting evidence.

ii. What criteria did Mr. Coppola apply to determine whether or not a given company's short-term debt is "permanent"?

Response:
i and ii.

In the past two years, the companies and related utility subsidiaries that have used short-term debt to meet permanent financing (long-term) needs are NiSource, One Gas, Spire Missouri, and WEC Energy. My criterion in evaluating each individual situation was that if a company had substantial short-term debt for five consecutive quarter ends, then the company was using short-term debt to supplement long-term debt. This is similar to how the accounting profession views long-term liabilities. All of these companies meet this criterion. The quarterly balances below for each of the companies were sourced from SEC filings. It should be recognized that WEC Energy, and NiSource act as the financing arm for their utility subsidiaries and therefore it is these companies' financial statements that are relevant and not the subsidiaries where debt coming in from the parent companies can also be categorized as common equity capital at the utility subsidiary. Similarly, One Gas operates on a divisional basis and therefore its financial statements are the relevant source of debt/equity capitalization for the utility divisions. Spire Missouri's financial statements are filed with its parent company on Form 10-K and 10-Q reports.

Quarter End Short-Term Debt (Millions of Dollars)

	WEC Energy 2023-2024	NiSource 2023-2024	One Gas 2023-2024	Spire Mo. 2023-2024

MPSC Case No.	**U-21806**
Responding Party:	Attorney General
Respondent:	Sebastian Coppola
Requestor:	CECo
Question No.:	**3-CE-AG-6**

3-CE-AG-6

Refer to page 126 of Mr. Coppola's direct testimony which states that "Smaller utilities tend to have higher equity ratios to sustain them during potential volatility in their business, which larger utilities can better manage." Please provide all analyses, studies, or reports Mr. Coppola relied on in making this statement.

Response:

In establishing that smaller utilities tend to have higher equity ratios, Mr. Coppola relied on his knowledge and experience accumulated over the past nearly 50 years that he has been involved in the utility industry. Appendix A to Mr. Coppola's direct testimony shows his vast background as Chief Financial Officer, Treasurer, and financial manager involved in various aspects of financing and managing large and small utilities.

Mr. Coppola has also relied on research and a publication issued by financial expert, Dr. Roger A. Morin. The attached excerpt from Dr. Morin's book New Regulatory Finance provides supporting evidence on the higher business and financial risks faced by smaller utilities. See 3-CE-AG-6 Attach 1.

Responding Party:	Attorney General
Respondent:	Sebastian Coppola
Requestor:	CECo
Question No.:	**3-CE-AG-7**

3-CE-AG-7

On page 127 of his direct testimony, Mr. Coppola addresses Company witness Bleckman's Exhibit A-32 (MRB-10) – Peer Company Commission Authorized Equity Ratios. Mr. Coppola claims that the Company's analysis is inflated due to the fact that "utilities on the east coast of the United States were not represented in Mr. Bleckman's exhibit, where equity ratios and ROEs tend to be lower and more conservative." Please provide all analyses, studies, or reports Mr. Coppola relied on in making this statement.

Response:

The following information sourced from S&P Global (Regulatory Research Associates Division) shows ROE decisions from regulatory commissions pertaining to several east coast utilities. This information is also included in Exhibit AG-48. The Common Equity ratios reported by Regulatory Research Associates from related rate cases are also shown below.

	Utility	State	ROE Date	ROE	Equity Ratio
a.	Consolidated Edison of NY	NY	Jul 20, 2023	9.25%	48%
b.	Northern Utilities	ME	Sep 20, 2023	9.35%	52%
c.	New York State Elec. & Gas	NY	Oct 12, 2023	9.20%	48%
d.	Rochester Gas & Electric	NY	Oct 12, 2023	9.20%	48%
e.	Central Hudson Gas & Elec.	NY	Jul 18, 2024	9.50%	48%
f.	KeySpan Gas East	NY	Aug 15, 2024	9.35%	48%
g.	Brooklyn Union Gas	NY	Aug 15, 2024	9.35%	48%
h.	Connecticut Nat. Gas	CT	Nov 9, 2024	9.15%	53%
i.	Southern Connecticut Gas	CT	Nov 9, 2024	9.15%	53%
j.	New Jersey Natural Gas	NJ	Nov 16, 2024	9.60%	54%
k.	National Fuel Gas	NY	Dec 4, 2024	9.70%	48%

Respondent:	Sebastian Coppola
Requestor:	CECo
Question No.:	**3-CE-AG-8**

3-CE-AG-8

Refer to page 103, lines 1 through 4, and page 104, lines 5 through 11, of Mr. Coppola's direct testimony which refers to an analysis that the Company performed to use as a basis for its 1% of revenues measure for projecting the test year cash balance. Please state the specific testimony and/or exhibit along with the relevant case number that contains the Company's analysis Mr. Coppola is referring to.

Response:

Refer to the direct and rebuttal testimony of Company witness Andrew Donato and Exhibit A-93 filed in Case No. U-17990. This information should already be available to the Company.

Agenda

- *Introductions*
- *Meeting Purpose*
- *Review 2021-2022 CAP changes*
- *Discuss Assumptions and Updates*
- *Q&A*

Consumers Energy
Count on Us

Introductions

- *Dean Beach – Executive Director, Customer Energy Management*
- *Luther Bonner – CEM Process, Performance, & Technology Lead*
- *Chad Ammerman – CEM Process, Performance, & Technology*
- *Tyler Haney – CEM Data & Analytics*
- *Mike Rampe – Legal*
- *Doug Chapel – Regulatory Affairs*

Consumers Energy
Count on Us

Meeting Purpose

- ***July 2022 Gas Rate Case Settlement:***

  "Consumers Energy agrees to meet with MNS and Staff to review and update the line extension assumptions within 90 days of the Commission issuing and order in this case. Consumers Energy additionally agrees to transition to a new line extension model that is transparent and capable of being shared with stakeholders for review to be completed by the end of 2022."

- ***Assumptions raised in Gas Rate Case:***
  - *Free footage*
  - *Gas throughput/consumption*

- ***Today, we will discuss data underlying these assumptions and our status on analyzing this data***

Consumers Energy
Count on Us

2021 Rates – No Change for 2022

Residential	Service		2" Main		4" Main		6" Main
Gas Only	$ 29.47		$ 17.13		$ 54.01		$ 61.58
Joint	$ 25.60		$ 22.49		$ 68.13		$ 44.66
Directional Bore	Addl $8.80/ft		$ 53.15		$ 104.21		$ 182.17
Non-Residential

Re-cap - Why No Change for 2022?

- ***COVID Impacts in 2020/2021***
  - *Out of normal construction practices from previous years*
    - *Review of the new normal, how this impacts costs*
  - *In Support of Providing an exceptional customer experience*
    - *Hold off on rate increase during unprecedented times*
- ***2022 will be a transition year for the model***
  - *Existing model is approx. 20 years old*
    - *Outdated software*
    - *Manual data pulls, scrubbing and calculations*
    - *3 different software tools used to provide analysis*
  - *New Model being built in 2022*
    - *Using Current software technology thru a .NET application*
      - *Ability to be enhanced as technology evolves*
    - *Updating assumptions based on data analysis and current construction practices*
    - *Synced to Company Data Tables*
      - *Consistent data structure through query of data tables*
      - *Calculations built into software to provide analysis for leadership*
      - *Simple structure for updating costs through analysis*
    - *1 tool, 1 set of data, 1 analysis with options/recommendations based on data for rate adjustments*

Current CAP Assumptions

- ***Tariff C8 Customer Attachment Program***
  - *Model Assumptions to review*
    - *Incremental Revenue*
      - *Residential - Fixed table from study completed over 20 years ago*
    - *Incremental Costs*
      - *Plant in Service*
        - » *Determined by 3-year average costs (Service/Main) Size and installation method*

Status of Incremental Revenue Assumptions

- ***Data Analysis***
  - *Building Report View of all customer consumptions from Aug 2021 – July 2022*
    - *Completed*
      - *Consumption Data identified and included (monthly/Sum to annual)*
      - *Customer Location Data identified and included (city/county)*
      - *Number of installations per premise included (quantity to determine if single family home or multi unit)*
      - *Customer Rate Code data*
    - *In Progress*
      - *Customer Meter Size and Meter Location*
      - *Date of installation or date of contract account/decision on Removal of no usage from average*
  - *Report Query will be set up to pull based on a range in time to reduce size of data set*
  - *Report will be run annually to determine if incremental revenues applied should be adjusted*
  - *Views will be built to view data in different slices*
    - *(previous 12 months/3 year average) In Progress*
      - *Average consumption during heating season for each rate/meter size*
      - *Average consumption yearly for each rate/meter size*

- ***Data analysis will help us better understand assumptions and any potential updates that are needed***

Consumers Energy
Count on Us

Status of Incremental Cost Assumptions

- ***Pulling data to review Cost Variability***
  - *Joint and non joint*
  - *Installation Method (trench, boring, plowing etc.)*
  - *Timing of installation (spring, summer, winter)*
  - *Contractors (contracts change) and internal crews*
  - *Variability in Volume of pipe installed year over year*
  - *Restoration costs in right of way*
  - *Location of installation and difficulty installing*
- *Cost variables will help determine the time period for an average cost*

- ***Data analysis will help us better understand assumptions and any potential updates that are needed***

2021/2022

Residential Category		Allowable Footage Gas Only		Joint
	Primary 250	158		227
	Primary 425	544		672
	Primary 800	1071		1278
	Seasonal	0		24
	Mobile Home	52		105

- **Seasonal**
  - **No specific data field available to segment seasonal loads**
  - **Consumptions 40mcf annually or lower equate to 10% of Customer Base, removal does not change average**
- **Mobile**
  - **No specific data field available to segment mobile loads**
  - **Modular homes are less efficient then stick built, makes sense to offer and include within the overall average**
- **425 & 800**
  - **Consumptions 400 and greater annually equate to .001% of Customer Base, removal does not change average**
  - **13% of the 10,500 new meters installed in 2021 were 425/800. 10,500/1,300,000 = .008% - .001% = .007%/.008% = 12.5% of the 13% consume the annual MCF allotted, 87.5% of 425/800 meters installed in 2021 fall within the average of 97 annually**
- **Apartments (Apt)**
  - **Including Apts changes average from 97 to 93, 10% of customer base, already use the same service line limits**

Customer Impacts

- **38% of NBS Customers & 27% of NJS Customers with longer service requirements will see higher costs due to excess service charges per ft after the service line limit**

- **Average residential customer will see $736.40 increase based on average service length**
  - **62% of NBS customers within the past 3 years would have had no impact**
  - **73% of NJS customer within the past 3 years would have had no impact**

- **20 lot Subdivision scenario –**
  - **$86,196.39 increase using the service line limit 92'**
  - **$88,783.94 increase using the average service length of 112'**
  - **$78,174.94 Typical Subdivisions have an average of 30' services for subdivisions**

- **Developments with larger lots & longer service requirements will see increase in upfront costs**
- **Customers requiring larger meters will only see increase in costs if service length exceeds limit**
- **Company is truing up recovery of costs of service based on current consumption data (2-year average) and current construction costs (3-year average)**

DEPARTMENT OF PUBLIC SERVICE REGULATION
BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MONTANA

IN THE MATTER OF the Joint Application for Approval to Change and Establish Natural Gas Delivery Service Rates for Energy West Montana, Inc. and Cut Bank Gas Company	)))))	REGULATORY DIVISION DOCKET NO. D2017.9.80 ORDER NO. 7575c

FINAL ORDER

PROCEDURAL HISTORY

1. On September 29, 2017, Energy West Montana, Inc. ("EWM") and Cut Bank Gas Company ("CBGC") submitted their Joint Application to the Montana Public Service Commission ("PSC" or "Commission") for authority to increase and establish natural gas delivery service rates for each utility's service territory ("Joint Application"). EWM and CBGC request that the Commission: authorize EWM and CBGC to change their existing rates and establish new rates as set forth in their Joint Application and supporting testimony; authorize EWM and CBGC to establish the rate design described in the direct testimony filed in support of their Joint Application; and provide such other processes and relief as the Commission deems necessary for final resolution of the issues raised in their Joint Application and supporting testimony. EWM proposed an increase in total operating revenues of $1,526,960 or an increase of 6.53%. This would result in increases in the typical residential bills of EWM and West Yellowstone residential customers of 7.03% and 2.29% respectively. CBGC proposed an increase in total operating revenues of $183,284 or an increase of 14.23%. This would result in an increase in the CBGC typical residential bill of 5.42%. Test. Schulz 2 (Feb. 22, 2018).

2. EWM and CBGC stated the factors contributing to their application to increase rates are: increased investment in physical plant (a significant portion of which relates to the purchase of the Southern Montana Electric Cooperative ("SME") pipeline), general inflation, a new enterprise resource software planning ("ERP") system, which is a Systems, Applications, and Products Software ("SAP"), and decreased consumption by customers. In addition, the

Company proposes to introduce a Gas Infrastructure Reliability Clause ("GIRC") and an accompanying rate adjustment mechanism to fund the GIRC. Test. Degenstein 15 (Sept. 29, 2017).

3. On October 3, 2017, the Commission issued a *Notice of Application and Intervention Deadline*. On October 27, 2017, the Commission issued a *Notice of Staff Action Granting Intervention* to the Montana Consumer Counsel ("MCC"). On October 24, 2017, the Joint Applicants submitted the Supplemental Testimony of Charles E. Loy, making the Joint Application complete and compliant per Commission rules. *See* Mont. Admin. R. 38.2.315 (2017).

4. On November 20, 2017, the Commission issued Procedural Order 7575 setting deadlines for discovery. The Commission established March 8, 2018, as the final day for the Commission to identify additional issues in this docket.

5. On February 22, 2018, EWM/CBGC filed supplemental testimony incorporating the impact of the December 2017 Federal Tax Cut and Job Act ("TCJA") and an increase to the Additions to Plant Account due to a lease buyout of the SAP software from Verilease. These changes reduced the revenue increases requested by EWM and CGBC to $1,361,817 and $178,328, respectively.

6. The final revenue requirement increases submitted by EWM and CBGC incorporating certain of the adjustments suggested by the MCC were $1,144,172 for EWM and $177,964 for CBGC. These represent increases in Operating Revenues of 4.7% and 11.0%, respectively. Hr'g. Ex. JA-12, updated version of JDH-CBG-2R and Hr'g. Ex. JA-13, updated version of JDH-EWM-2R.

7. MCC submitted intervenor testimony on February 22, 2018, which concluded that EWM's requested annual revenue increase was excessive and recommended that the Commission approve a revenue increase of no more than $316,134. MCC recommended CBGC should be authorized an increase of no more than $109,367. These MCC increases did not incorporate the impact of the TCJA. Test. Schulz 2.

8. At a regularly scheduled work session held on March 6, 2018, the Commission voted to identify EWM's line extension policy as an additional issue, requesting additional testimony. The Commission issued a *Notice of Commission Action* providing direction on this

decision. Accordingly, on March 15, 2018, the Commission issued a revised procedural schedule to allow for testimony and discovery.

9. The Commission held a public hearing in this matter on May 9 and 10, 2018, in Great Falls, Montana.

10. At the hearing the MCC had not yet provided an update to rate base or revenue requirements incorporating the TCJA. MCC later provided its updated recommendations in post-hearing exhibits which include the impact of the TCJA. With these updates, MCC recommends a $133,017 increase for EWM and a $70,534 increase for CBGC. MCC Post Hrg. Provides (June 6, 2018).

DISCUSSION AND FINDINGS OF FACT

Gas Infrastructure Replacement Clause (GIRC)

11. EWM and CBGC are requesting the Commission approve a new cost recovery and infrastructure replacement program referred to as the GIRC. The Pipeline and Hazardous Materials Safety Administration ("PHMSA") required EWM/CBGC to establish a Distribution Integrity Management Plan ("DIMP"). The DIMP requires EWM/CBGC to identify and prioritize infrastructure that constitutes a public safety concern for maintenance and replacement. EWM states that "[t]he GIRC plan is a rate mechanism that would allow EWM/CBGC to accelerate DIMP associated capital investment with limited regulatory lag while avoiding the need for more frequent rates." Test. Degenstein 15. Mr. Degenstein states that "[a]n infrastructure replacement mechanism puts structure around activities that are going to take place regardless of rate treatment, as proven by the track record of EWM and CBGC . . . ." *Id.* at 18. Degenstein testifies that without the accelerated investment from the GIRC program, and based on historical replacement rates and current staffing, it would take approximately 45 years to replace the infrastructure identified in its DIMP. With the GIRC, the replacement could be accomplished in 10-12 years. *Id.* at 16. He argued that the lines would eventually leak. Hr'g Tr. 54:11-15 (May 9, 2018). Mr. Degenstein testified that he would accept a sunset provision in the GIRC that would require rate cases at three to five-year intervals. Hr'g Tr. 91:1-12. He also stated that if EWM replaces infrastructure that doesn't need to be replaced, via the GIRC, the Commission has the authority to deny it. Hr'g Tr. 95:20-23.

12. Under the GIRC, there would be an annual filing each year which would allow EWM/CBGC a return on and recovery of the GIRC capital investment from the previous year

(subject to certain tests within the mechanism). Test. Loy, Ex. CEL-EWM-2 (Sept. 29, 2017). The GIRC investment is cumulative on a going-forward basis and every year the associated revenue requirement increases. Per the testimony of EWM, assuming 2018 is the first year of the GIRC investment to be recovered in 2019, and GIRC investment continues for five years in similar amounts, the GIRC revenue requirement grows from $2.34 per year per customer in 2019 to $20.26 per year per customer in 2023. The proposed rate structure includes the same amounts for each customer rate class that would be recovered via a special tariffed GIRC rider. (Test. Loy, Table 2, p. 12).

13. MCC's witness, Mr. Donkin, argues that the GIRC would involve single-issue ratemaking. Donkin states that with or without the GIRC, EWM and CBGC have an obligation, as public utilities, to provide safe and reliable natural gas distribution service to their customers. This suggests they should pursue a proactive mains and services replacement program with or without the GIRC. Mr. Donkin states, "This obligation does not rest on its agreement with Commission rate setting decisions such as trackers like the GIRC proposal, authorized equity returns or other allowances." Test. Donkin 51 (Feb. 22, 2018).

14. The Commission finds that the GIRC program is in the public interest and is approved with a number of necessary modifications. The Commission appreciates the MCC's arguments regarding single-issue ratemaking and the fact that the program will be completed without a GIRC. The Commission agrees with MCC and expects the companies which have the privilege of monopoly to deploy capital at an accelerated pace when it is necessary to meet safety goals, so long as the Commission establishes a fair return on that investment, as this Order does. *Infra* ¶¶ 112-148. However, the Commission is also aware that in circumstances where anticipated incremental capital investment significantly outpaces the recovery of the utility's historic invested capital, the process of filing rate cases may impose such transaction costs and time lag that it may result in a misalignment of a firm's financial incentive with the goals of public utility regulation. Here, several factors combine to warrant the Commission's approval of the GIRC, which is single-issue ratemaking albeit subject to several key protections which protect consumers from the negative phenomena associated with other trackers. First, the spending in question is closely tied to specifically identified goals and discrete from other lines of capital spending by virtue of PHMSA's particularized requirements on natural gas local distribution companies. Test. Degenstein 15-19. Second, the transaction costs associated with a

rate case for companies the size of the Joint Applicants are significant. In this case, rate case expenses for the Joint Applicants are $350,000, which if amortized over five years, results in an annual increase of the revenue requirement for just the rate case expenses in the amount of $70,000. Rebut. Test. Henthorne 8 (Apr. 9, 2018). Although this rate case has allowed a thorough evaluation of the Joint Applicants, and has led the Commission to disallow substantial requests of the utilities in question, it is clear that the transaction costs are significant. Third, the incremental capital investments in question, while no doubt welcomed by a firm that seeks to invest capital and be paid a return largely assured by government for doing so, is being invested pursuant to legal requirements associated with public safety, which alongside affordability is the Commission's foremost priority.

15. In order to remedy the MCC's concerns, the Commission accepts the Joint Applicants' proposal that the GIRC be limited to incremental capital spending net of depreciation and be subject to an earnings test, although the Commission finds that these are unartfully described in the Joint Applicants' proposed tariff. The Commission orders more precise language for these calculations. In the GIRC tariff the Commission approves, language has been added specifying the rate of return used in the earnings test, specifying how the excess accumulated deferred income tax ("EDIT") amortization credit to the GIRC will be quantified, how the annual current year depreciation will be calculated, and how the current year average GIRC plant will be calculated. Likewise, a welcome attribute of the Joint Applicants' proposed GIRC is that its collections in rates are in arrears, only after the spending is made, and not made on projections. The Commission also approves this feature, but adds a reporting requirement of the utilities' anticipated spending, together with a rate filing, which the Commission believes will allow for greater regulatory oversight in both the ongoing surveillance of the GIRC and at that time when the spending is ultimately proposed for inclusion permanently in rate base through a general rate case. In order to cabin the specific programmatic costs, and to prevent the GIRC from becoming a catch-all mechanism for any spending said to be undertaken for the omnibus cause of public safety, the Commission includes specific, identifiable property elements within the tariffs. *See* Attachment A. These are tied to Mr. Degenstein's representations about the need for this program. To ensure transparency on an accounting level, the company will also be required to clear plant to specifically designated FERC accounts. Finally, while the Joint Applicants propose that this surcharge become active with respect to incremental capital

spending undertaken during the 2018 construction season, the Commission defers the implementation of the program by one year; the first year in which incremental capital spending under the GIRC is subject to be surcharged is 2019. The Commission does this in recognition of the fact that the construction season for 2018 is nearly passed, and because the Commission's requirements for the GIRC includes pre-submittal of a plan for each year's deployments, to ensure that the program is fully transparent and subject to ongoing surveillance. Clearly it would not be possible to effectuate such protection if the program were started in reference to 2018.

16. The Commission approves several additional features to the GIRC. First, because the GIRC is designed to avoid transaction costs of more frequent rate cases, it will include an automatic termination provision if either or both of the Joint Applicants file a rate case prior to several years' operation of the GIRC surcharge. Second, it will facilitate a review of whether the investments, in both their need and in the manner in which they have been deployed, were prudentially deployed and in fact used and useful. It does so by including an automatic termination provision for the surcharge after five years of its operation, before which time the Joint Applicants should again file a rate case if they desire these costs to be permanently included in rates. Finally, the GIRC surcharge will likewise automatically terminate if the either or both of the Joint Applicants file a proposal pursuant to Mont. Code Ann. § 69-3-308 (state and local tax tracker). One of the reasons the Commission is granting these utilities a GIRC is their unique regulatory setting, where they have chosen not to use tax tracking mechanisms. While the Joint Applicants are clearly legally entitled to use such a tax tracker, nothing in law permits to them the unilateral right to obtain the GIRC here approved, and because the Commission recognizes that the nature of its decision here is made relative to the overall regulatory setting facing the Joint Applicants, it conditions the GIRC's continued existence on the premise that all else in the regulatory setting is held even. These sunset provisions are an essential consumer protection without which the GIRC might ceaselessly grow without the normal rigors of oversight; without these provisions, the Commission would not approve the GIRC.

17. The Joint Applicants propose to recover the costs of the GIRC through a monthly surcharge on each customer's bill, which is not differentiated by customer class. The Commission, consistent with its discussion of the allocated cost of service of the utility, rejects the proposal insofar as it would charge each customer, regardless of its size, the same surcharge. *Infra* ¶ 158. Instead, the Commission will differentiate the size of the surcharge based on the

allocation factors established in this proceeding. *Id.* The Commission otherwise approves the rate design. While there may be arguments that such incremental capital investment is best recovered through a rate which is partially billed on the sale of gas volumes, such a design would be complex to administer, necessitating deferred accounts to remedy weather-driven over collections or under collections, and would thus frustrate the intention of making the GIRC straightforward but transparent. The Commission, meanwhile, considers the likely presence of a monthly fixed surcharge in the coming years in its decision to hold the existing charge at its present level. *Infra* ¶¶ 157-160.

18. Part of the tax benefits resulting from the Tax Cut and Jobs Act will constitute an offset of the programmatic costs of GIRC. The Commission applies the ongoing effects of the statutory rate reduction into the general rates it sets in this proceeding. *Infra* ¶ 50. The EDIT, which varies significantly year to year, is a coincidental but happy match against a program of variable spending, such as GIRC. The Commission will apply proceeds under EDIT to the program on a matched-year basis, in order to comply with IRS normalization requirements. Meanwhile, for the deferred tax savings that the Commission requires from the effective date of the Act to the date in which rates established under this order are effective, those 2018 savings will be applied to the 2019 spending under GIRC. Likewise, the EDIT from 2018 will be applied against the 2019 spending under GIRC. All of these tax benefits will be treated as customer-contributed capital, reducing the overall incremental capital investments made before a revenue requirement is calculated with respect to the balance. If, during GIRC, there is a year where the incremental capital spending does not meet the earnings test or the net-of-depreciation provision, the GIRC will be allowed to function as a vehicle to refund these tax benefits, although otherwise the surcharge never would be a negative value.
