Company's Response to Data Request U21859-MNSC-CE-0038

Witness Deupree
Case No. U-21859
Exhibit AG-1.5

Question:

22. Refer to Consumers' Application at para. 12, along with the Connolly Testimony at p. 6 line 21 to p. 7 line 2.

a. Describe in detail how Consumers would determine whether to require financial security from a particular data center customer.

b. Identify and explain each factor or benchmark that would go into determining whether to require financial security from a particular data center customer.

c. Identify how the amount of financial security to require would be determined.

d. Explain why Consumers is not proposing to require financial security from every data center customer.

Response:

a. The Company will assess the creditworthiness of each data center customer. The Company will require collateral if the customer is not deemed creditworthy. A customer with a credit rating of at least A- from S&P and A3 from Moody's and liquidity greater than ten times the Collateral Requirement shall be exempt from the Collateral requirement. A Large Load Customer that does not have a credit rating from S&P and Moody's but maintains liquidity greater than ten times the Collateral Requirement shall be exempt from 50 percent of the Collateral Requirements not to exceed an exemption of more than $250 million.

b. Please see response to a.

c. The Company could require collateral in amounts up to the projected cost of providing service for the term of the rate contract.

d. It is unnecessary to require financial security from a customer that has met the criteria described above.

Witness: Laura M. Connolly
Date: April 30, 2025

Company's Response to Data Request U21859-AG-CE-0015

Question:

4. Please provide a list of all requests to serve new data center load the Company has received over the last 12 months, including for each data center:

a. Location of the proposed data center;

b. Requested contract demand;

c. Any contract language for each data center addressing the items described in sub-question 1-3.a-h above (including the entirety of contracts addressing these terms, to the extent they exist);

d. Any determinations the Company has made for financial security measures and any "ramp up period[s]" for such data centers, along with the analyses, studies, and calculations used in making those determinations (including such analyses, studies, and calculations for a data center even if a final determination has not yet been made); and

e. Analyses, studies, and calculations the Company has conducted concerning an assessment of potential stranded asset costs and cost shifting for the data center. To the extent the Company might typically seek a Protective Order concerning material sought by this question and the other questions in this request, it is welcome to propose a draft of such a Protective Order for consideration.

Response:

a. The following chart sets forth the inquiries for potential service Consumers Energy has received in the last twelve months from potential data center customers. Note that these are inquiries, and do not represent commitments to take service from the Company.

Company's Response to Data Request U21859-AG-CE-0064

Question:

15. Please refer to the Company's response to MNSC-CE-0038.

a. For each project inquiry listed in response to AG-CE-0015, please indicate the Company's assessment of credit rating associated with the potential customer, including whether the Company conducted an assessment and the findings and results of the assessment.

b. Please provide the requested documents in electronic form with all spreadsheet links and formulas intact, source data used, and explain all assumptions and calculations used. To the extent the data requested is not available in the form requested, provide the information in the form that most closely matches what has been requested.

Response:

a. The Company has not performed a credit rating assessment for each of the inquiries listed in AG-CE-0015. The Company performed an assessment of one customer that was considered high probability and found their credit rating to be AAA by S&P and Aaa by Moody's with over $20B in cash. This assessment was done using publicly available data and the Company found that no further assessment was needed.

b. Not applicable; the Company did not perform an analysis using spreadsheets or formulas, as it reviewed publicly available credit and financial data regarding the customer.

Company's Response to Data Request U21859-MNSC-CE-0031

Witness Deupree
Case No. U-21859
Exhibit AG-1.8

Question:

15. Did Consumers consider tariff provisions requiring contributions in aid of construction for upgrades to transmission, distribution, and/or generation resources? If so, please explain the basis for not addressing such issues in the proposed tariff revisions. If not, please explain why not.

Response:

Rate GPD has contribution in aid of construction options available as part of Rule C1.4, Extraordinary Facility Requirements and Charges.

Witness: Laura M. Connolly
Date: April 30, 2025

Company's Response to Data Request U21859-MNSC-CE-0035

Witness Deupree
Case No. U-21859
Exhibit AG-1.9

Question:

19. Please describe and identify the range of total interconnection costs for a prospective new customer load of 100 MW or larger.

Response:

The range of total cost for interconnection facilities for a 100 MW load vary greatly on the location of load and the network upgrades required to adequately interconnect the load while maintaining system reliability. Consumers Energy estimates a range of $46.5M to $96M total costs for interconnection facilities for a new 100 MW load. This range is subject to location, existing transmission capacity as determined by the Transmission Owner, and does not include additional costs for energy resources or their interconnection costs to serve the load.

Witness: Laura M. Connolly
Date: April 30, 2025

Company's Response to Data Request U21859-AG-CE-0065

Question:

16. Please refer to the application testimony of Company witness Laura M. Connolly at 4:7-8. For any addition of generation resources the Company might undertake in response to increased demand driven by data center customers, please:

a. Explain how additions of generation resources, including any companybuilt generation resources, have the potential to impact the Company's PSCR factor, including specifically any impact from additional transmission costs.

b. Provide any studies, analyses, or calculations assessing the potential impact of data center demand on the Company's PSCR factor as described in sub-question 16.a above. Please provide the requested documents in electronic form with all spreadsheet links and formulas intact, source data used, and explain all assumptions and calculations used. To the extent the data requested is not available in the form requested, provide the information in the form that most closely matches what has been requested.

Response:

a. The addition of capital investments for generation resources would flow through the Company's PSCR or electric rate case proceeding depending on the asset. In addition, there would likely be a need for transmission network upgrades to accommodate the new generation. The transmission provider would make those upgrades and would also be responsible for determining the additional costs. The transmission provider would have the costs for the upgrades charged to MISO Schedule 9 which then flows through the Company's PSCR.

b. As the Company has not signed a new data center customer at this time, the Company has not yet analyzed the impact of potential data center demand on the Company's PSCR factor.

Witness: Laura M. Connolly
Date: May 29, 2025

Company's Response to Data Request U21859-AG-CE-0013

Question:

2. For the purposes of this request, refer to the Company's Application.
a. Please provide all empirical analyses, studies and other documents supporting the following proposed tariff provisions:
i. Project Proposal Fee of up to $100,000 per project;
ii. Fifteen-year Minimum Contract Term and five-year maximum "ramp up period," including by providing all metrics, calculations, and strategies the Company plans to use to determine what the "ramp up period" will be for each customer;
iii. Minimum Billing Demand equal to 80 percent of contract capacity;
iv. Allowance for a one-time reduction in contract capacity at Consumer's discretion, including by providing all metrics, calculations, and strategies the Company plans to use to assess stranded asset costs and cost shifting;
v. Allowance for Consumers to take action if customer usage exceeds contract capacity by more than 1,000 kW;
vi. Financial security measures, including by providing all metrics, calculations, and strategies the Company plans to use in determining financial security measures;
vii. Exit fee equal to minimum billing demand for remaining contract term.
b. Please provide the requested documents in electronic form with all spreadsheet links and formulas intact, source data used, and explain all assumptions and calculations used. To the extent the data requested is not available in the form requested, provide the information in the form that most closely matches what has been requested.

Response:

a. i. The Company developed the administrative fee based on the estimated costs incurred for the engineering study, supply planning, project management, economic development and rates support needed to develop a project proposal. The attached spreadsheet provides an estimated project proposal fee of $50,000. Consumers proposed to cap the fee at $100,000 to provide flexibility based on each project scope.

ii. The Company proposed the 15 year minimum contract term based on the life/term of the assets needed to serve these customers and benchmarking against other utility rate structures. The Company proposed the five year ramp up period based on the timing needed to procure the assets to serve these customers. The Company will work with each prospective customer to determine the appropriate ramp up schedule based on their needs.

iii. The Company proposed the 80% minimum contract demand requirement based on benchmarking against other utility rate structures.

iv. If a customer requests a one-time reduction in contract capacity, the Company will review the upcoming load expectations to determine if the requested reduction could be supplied to another customer.

v. The proposal to suspend service and/or amend the contract if a customer is using 1,000 kW or more above its contracted capacity amount allows the Company to protect the integrity of its system.

vi. The proposed financial security provides the Company the authorization to require additional financial security from Data Center customers, including other collateral in amounts up to the projected cost of providing service for the term of the rate contract.

vii. The proposed exit fee would be calculated by multiplying the data center customer's minimum billing demand requirement by the number of months remaining in the term of the contract, as of the date the customer eases to take service from the Company.

b. The calculation of the project proposal fee is included in Excel.

Witness: Laura M. Connolly
Date: April 30, 2025

I.U.R.C. NO. 20
INDIANA MICHIGAN POWER COMPANY
STATE OF INDIANA

FIRST REVISED SHEET NO. 21
CANCELS ORIGINAL SHEET NO. 21

TARIFF I.P.
(Industrial Power)

Availability of Service.

Available for general service customers. Customer's monthly billing demands under this tariff shall not be less than 600 kW. The customer shall contract for a sufficient capacity to meet normal maximum requirements with written contracts being required for capacity levels of 1,500 kW and greater.

Rate.

Tariff Code	Service Voltage	Demand Charge ($/kW)	First 410 kWh per kW (¢/kWh)	Over 410 kWh per kW (¢/kWh)	Monthly Service Charge ($)
327	Secondary	16.474	5.703	1.359	180.00
322	Primary	14.089	5.413	1.313	275.00
323	Subtransmission	10.825	5.333	1.296	275.00
324	Transmission	10.194	5.058	1.286	275.00

Reactive Demand Charge / Credit

Reactive demand charge for each kVAr of leading or lagging reactive demand in excess of 50% of the kW metered demand will be charged at $1.50 / kVAr.

Reactive demand charge for each kVAr of leading or lagging reactive demand less than 50% of the kW metered demand will be credited at $1.50 / kVAr.

Minimum Charge.

This tariff is subject to a minimum monthly charge equal to the sum of the Monthly Service Charge, the product of the Minimum Demand Charge and the monthly billing demand, and all applicable riders.

The Minimum Demand Charge under this tariff shall be as follows:

Tariff Code	Service Voltage	Minimum Demand Charge ($/kW)
327	Secondary	20.995
322	Primary	18.472
323	Subtransmission	15.106
324	Transmission	14.700

(Cont'd on Sheet No. 21.1)

ISSUED BY
STEVEN F. BAKER
PRESIDENT
FORT WAYNE, INDIANA

EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER FEBRUARY 19, 2025

ISSUED UNDER AUTHORITY OF THE INDIANA UTILITY REGULATORY COMMISSION DATED FEBRUARY 19, 2025 IN CAUSE NO. 46097

I.U.R.C. NO. 20
INDIANA MICHIGAN POWER COMPANY
STATE OF INDIANA

FIRST REVISED SHEET NO. 21.1
CANCELS ORIGINAL SHEET NO. 21.1

TARIFF I.P.
(Industrial Power)

(Cont'd from Sheet No. 21)

Applicable Riders.

Monthly charges computed under this tariff shall be adjusted in accordance with the applicable Commission-approved rider(s) listed on Sheet No. 44.

Delayed Payment Charge.

All bills under this schedule shall be rendered and due monthly. If not paid within 17 days after the bill is mailed, there shall be added to bills of $3 or less, 10 percent of the amount of the bill; and to bills in excess of $3, there shall be added 10 percent of the first $3, plus 3 percent of the amount of the bill in excess of $3.

Monthly Billing Demand.

The billing demands in kW for each plant shall be taken each month as the single-highest 15-minute integrated peak in kW, as registered at such plant during the month by a demand meter or indicator, subject to the off-peak hour provision, but the monthly demand so established shall in no event be less than 60 percent of the greater of (a) the customer's contract capacity or (b) the customer's highest previously established monthly billing demand during the past 11 months or (c) 1,000 kW. The Metered Voltage adjustment, as set forth below, shall not apply to the customer's minimum monthly billing demand.

Off-Peak Hour Provision.

Demand created during the off-peak hours (as set forth below) shall be disregarded for billing purposes provided that the billing demand shall not be less than 60 percent of the maximum demand created during the billing month nor less than 60 percent of either (a) the contract capacity or (b) the customer's highest previously established monthly billing demand during the past 11 months.

For the purpose of this provision, the on-peak billing period is defined as 7 a.m. to 9 p.m., local time, Monday through Friday. The off-peak billing period is defined as those hours not designated as on-peak hours.

(Cont'd on Sheet No. 21.2)

STATE OF INDIANA

FIRST REVISED SHEET NO. 21.2
CANCELS ORIGINAL SHEET NO. 21.2

TARIFF I.P.
(Industrial Power)

(Cont'd from Sheet No. 21.1)

Adjustments to Rate.

Bills computed under the rates set forth herein will be adjusted as follows:

Metered Voltage

The rates set forth in this tariff are based upon the delivery and measurement of energy at the same voltage, thus measurement will be made at or compensated to the delivery voltage. At the sole discretion of the Company, such compensation may be achieved through the use of loss-compensating equipment, the use of formulas to calculate losses, or the application of multipliers to the metered quantities. In such cases, the metered kWh, kVAr values will be adjusted for billing purposes. If the Company elects to adjust kWh, kW and kVAr based on multipliers, the adjustment shall be in accordance with the following:

(1) Measurements taken at the low-side of a customer-owned transformer will be multiplied by 1.01.

(2) Measurements taken at the high-side of a Company-owned transformer will be multiplied by 0.98.

Terms of Contract.

Contracts under this tariff will be made for an initial period of not less than two years and shall remain in effect thereafter until either party shall give at least one year's written notice to the other of the intention to discontinue service under the terms of this tariff. Where new facilities are required, the Company reserves the right to require initial contracts for periods of greater than two years.

A new initial contract period will not be required for existing customers who increase their contract requirements after the original initial period unless new or additional facilities are required.

The Company shall not be required to supply capacity in excess of that contracted for except by mutual agreement.

(Cont'd to Sheet No. 21.3)

ISSUED BY
STEVEN F. BAKER
PRESIDENT
FORT WAYNE, INDIANA

EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER FEBRUARY 19, 2025

ISSUED UNDER AUTHORITY OF THE INDIANA UTILITY REGULATORY COMMISSION DATED FEBRUARY 19, 2025 IN CAUSE NO. 46097

I.U.R.C. NO. 20
INDIANA MICHIGAN POWER COMPANY
STATE OF INDIANA

FIRST REVISED SHEET NO. 21.3
CANCELS ORIGINAL SHEET NO. 21.3

TARIFF I.P.
(Industrial Power)

(Cont'd from Sheet No. 21.2)

Special Terms and Conditions.

This tariff is subject to the Company's Terms and Conditions of Service.

This tariff is also available to customers having other sources of energy supply who purchase standby or backup service from the Company. Where such conditions exist, the customer shall contract for the maximum amount of demand in kW which the Company might be required to furnish, but not less than 1,000 kW. The Company shall not be obligated to supply demands in excess of that contracted for.

Customers with cogeneration and/or small power production facilities shall take service under Rider NMS (Net Metering Service Rider), Tariff COGEN/SPP or by special agreement with the Company.

Terms and Conditions for Customer at or Over 70 MW Individually or 150 MW in the Aggregate.

Applicability.

These provisions apply to customers whose contract capacity is greater than or equal to 70 MW or is reasonably expected to grow to exceed 70 MW at an individual plant, or 150 MW or reasonably expected to grow to exceed 150 MW at one or more aggregated premises, each of 1 MW or larger ("Large Load Customer"). The Company will exercise reasonable discretion when choosing to aggregate premises, with such discretion based on factors including, but not limited to, premises sharing one or more of the following: common owner(s), a common parent company, common local electrical infrastructure, and common control. Large Load Customer's Initial Contract Term, load ramp, Load Ramp Period, contract capacity, and other terms of service under this Tariff will be defined in the Electric Services Agreement(s) ("ESA(s)"), executed between Company and Large Load Customer. These terms shall only apply to new load, or an expansion of existing load, occurring on or after January 1, 2024.

Contract Term.

The Large Load Customer's Initial Contract Term will be made for a period of not less than 12 years. A Large Load Customer may designate a Load Ramp Period, which can be no greater than five (5) years. If a Load Ramp Period is designated by the Large Load Customer, the Initial Contract Term shall commence after the Load Ramp Period ends. The Load Ramp Period is the later period of time from when: (a) electric service is available to the Large Load Customer or (b) the Large Load Customer is scheduled to begin taking electric service, until the time the Large Load Customer's maximum contract capacity is billed. The Contract Term is the Load Ramp Period plus the Initial Contract Term, and shall remain in effect thereafter unless cancelled or modified pursuant to the terms hereunder. Either party shall give at least 42 months written notice to the other of the intention to discontinue service under the terms of this tariff. Such notice shall not reduce the Contract Term except as provided for in the Exit Fee provision below.

(Cont'd to Sheet No. 21.4)

TARIFF I.P.
(Industrial Power)

(Cont'd from Sheet No. 21.3)

Contract Capacity Reductions.

Large Load Customer may, without payment of an Exit Fee or any penalty, reduce its contract capacity at any time after the first five (5) years of the Contract Term by up to 20%, in total, by giving the Company at least 42 months written notice prior to the beginning of the PJM Delivery Year for which the reduction is sought. For the avoidance of doubt, regardless of the number of notices provided, the total capacity reduction under this provision shall not exceed 20%, unless by mutual agreement between the Large Load Customer and Company, which the Company shall only grant in circumstances that are beneficial, or at least not detrimental, to the Large Load Customer, the Company, and all other customers.

Large Load Customer may terminate its contract or reduce its contract capacity beyond 20% at any time after the first five years of the Contract Term by giving the Company at least 42 months written notice prior to the beginning of the PJM Delivery Year for which the reduction or termination is sought, subject to payment of a capacity reduction/termination fee ("Exit Fee"). The Exit Fee shall be due and payable to the Company upon the effective date of the contract termination or the effective date of the capacity reduction. The Exit Fee shall be calculated as the nominal value of the remaining Minimum Charge for the terminated/reduced capacity in excess of the 20% allowed reduction for the first year of the Exit Fee Period; and for any remaining year of the Exit Fee Period the Exit Fee shall be calculated in the same manner as the first year, minus the OSS/PJM Rider's (or the same cost addressed in another rider's) contribution to the Minimum Charge. The Exit Fee Period is defined as the Large Load Customer's then remaining Initial Contract Term, or any agreed extension. The Exit Fee Period shall not be less than one (1) year and shall not exceed five (5) years. In the event of a permanent closure, the customer shall notify the Company within three (3) business days of making this determination.

Following receipt of proper notice, through the Exit Fee Period, the Company will use reasonable efforts, consistent with its obligations as a public utility, to mitigate the Exit Fee amount owed or paid by the Large Load Customer by evaluating the opportunity to assign the terminated/reduced capacity to serve new Large Load Customers, to expand service to existing Large Load Customers, or otherwise secure offsetting expected revenues. The remainder of any mitigating amounts owed to the Large Load Customer shall be delivered to the Large Load Customer, or its designated successor, after all outstanding balances have been resolved.

(Cont'd to Sheet No. 21.5)

TARIFF I.P.
(Industrial Power)

(Cont'd from Sheet No. 21.4)

If there is an issue concerning the calculation of the Exit Fee or delivery of any mitigation amounts, that either the Company or Large Load Customer view as in need of escalation, either the Company or Large Load Customer may request escalation. Such request shall be made in writing and within 14 business days of the Large Load Customer being notified regarding the Exit Fee calculation. In such instance, management representatives for the Company and for the Large Load Customer will discuss and seek to resolve any issues. The management discussion shall occur within 14 business days of a request, unless otherwise agreed to in writing by the Company and Large Load Customer. The Company and Large Load Customer agree to use this escalation process in good faith, escalating only those matters appropriate for management's consideration. This dispute resolution process does not limit or otherwise affect the ability of either Large Load Customer or the Company to file a formal proceeding requesting the Commission to resolve the dispute.

Large Load Customer shall not assign any of its rights or delegate any of its obligations under the Contract without the written consent of the Company. An assignment will not relieve the Large Load Customer of its financial obligation hereunder unless the Company so consents in writing. Such consent(s) shall not be unreasonably withheld. An assignment or delegation in violation of these Terms and Conditions is null and void.

Monthly Billing Demand.

The Monthly Billing Demands for Large Load Customers in kW for each plant shall be taken each month as the single-highest 15-minute integrated peak in kW, as registered at such plant during the month by a demand meter or indicator, subject to the Off-Peak Hour Provision, but the monthly demand so established shall in no event be less than the greater of (a) 80 percent of the Large Load Customer's contract capacity specified for the applicable time period of the Contract Term; or (b) 80 percent of the Large Load Customer's highest previously established Monthly Billing Demand during the past 11 months. The Metered Voltage adjustment, as set forth above, shall not apply to the Large Load Customer's minimum Monthly Billing Demand.

(Cont'd to Sheet No. 21.6)

I.U.R.C. NO. 20 **ORIGINAL SHEET NO. 21.6**
INDIANA MICHIGAN POWER COMPANY
STATE OF INDIANA

TARIFF I.P.
(Industrial Power)

(Cont'd from Sheet No. 21.5)

Minimum Charge.

Large Load Customers are subject to a minimum monthly charge for each plant equal to the sum of: (a) the Monthly Service Charge; (b) the product of the Minimum Demand Charge and the Monthly Billing Demand; (c) the product of the Step 1 Embedded Capacity Charge and the Monthly Billing Demand; and (d) the sum of the product of each demand charge in all applicable demand related riders in effect at the time and the Monthly Billing Demand. The Step 1 Embedded Capacity Charge rate will be computed as follows: (Block 1 Energy Rate less Block 2 Energy Rate) multiplied by Block 1 Energy Hours less (Minimum Demand Charge less Demand Charge).

The Step 1 Embedded Capacity Charge under this tariff shall be as follows:

Tariff Code	Service Voltage	Step 1 Embedded Capacity Charge ($/kW)
327	Secondary	13.289
322	Primary	12.427
323	Subtransmission	12.271
324	Transmission	10.959

TARIFF I.P.
(Industrial Power)

(Cont'd from Sheet No. 21.6)

Collateral Requirements.

In addition to the terms in Items 4 and 14 of the Company's Terms and Conditions of Service, the Large Load Customer shall provide collateral to the Company ("Collateral Requirement") based upon the creditworthiness of the Large Load Customer and as outlined below. The amount of collateral to be provided is equal to twenty-four (24) multiplied by: (a) during the first year of the contract, the maximum expected monthly non-fuel bill; or (b) after the first year of the contract, the Large Load Customer's previous maximum monthly non-fuel bill. The amount of collateral under the foregoing calculation will be recomputed annually, and the Large Load Customer shall have to provide the recomputed amount if it is 10% or more greater than the current amount held. A Large Load Customer with a credit rating of at least A- from S&P and A3 from Moody's and liquidity greater than ten times the Collateral Requirement shall be exempt from the Collateral Requirements. A Large Load Customer that does not have a credit rating from S&P and Moody's but maintains liquidity greater than ten times the Collateral Requirement (evidenced by providing quarterly financial statements and certification that on the date financial statements are provided that the Large Load Customer's liquidity meets the ten times threshold) shall be exempt from 50 percent of the Collateral Requirements not to exceed an exemption of more than $250 million. The Collateral Requirement must be provided in one or more of the following forms:

a. A guarantee from the ultimate parent or a corporate affiliate of the Large Load Customer for the full Collateral Requirement, so long as the guarantor has both (a) a credit rating of at least A- from S&P and A3 from Moody's and (b) liquidity greater than ten times the Collateral Requirement; or

b. A standby irrevocable letter of credit ("Letter of Credit") for the full Collateral Requirement. The Letter of Credit must be issued by a U.S. bank or the U.S. branch of a foreign bank, which is not affiliated with the Large Load Customer or its guarantor, with a Credit Rating of at least A- from S&P and A3 from Moody's. Such security must be issued for a minimum term of 360 days. The Large Load Customer must cause the renewal or extension of the security for additional consecutive terms of 360 days or more no later than 30 days prior to each expiration date of the security. If the security is not renewed or extended as required herein, the Company will have the right to draw immediately upon the Letter of Credit and be entitled to hold the amounts so drawn as security. The Letter of Credit must be in a format acceptable to and approved by the Company; or

c. Cash for the full Collateral Requirement.

RE: MPSC Case No. U-21859 – In the Matter of the Application of Consumers Energy Company for Ex Parte Approval of Certain Amendments to Rate GPD.

Dear Mr. Wollenzien:

Attached to this letter are copies of the following documents:

- A copy of your July 17, 2025 interrogatories with our internal numbering system annotated in the margins; and
- Consumers Energy Company's response to 21859-AG-CE-0139 through 0143.

A Proof of Service has been electronically filed in this docket. Please contact me if you have any questions regarding this matter.

Sincerely,

CC Parties Per Attachment 1 to the Proof of Service

STATE OF MICHIGAN

BEFORE THE MICHIGAN PUBLIC SERVICE COMMISSION

In the Matter of the Application of Consumers Energy Company for Ex Parte Approval of Certain Amendments to Rate GPD. MPSC No. U-21859
/

THE ATTORNEY GENERAL'S FIFTH DISCOVERY REQUEST TO CONSUMERS ENERGY COMPANY

The Attorney General of Michigan, Dana Nessel, requests that Consumers Energy Company ("CECo" or "the Company") respond to the following discovery requests in accordance with the discovery response time established by the Administrative Law Judge in this case.

In the event the Company asserts that any data requested is deemed to be privileged or proprietary, then the Company in its written response should identify any such data, and any supporting documents, by date and general content, as well as identify all persons, inside or outside the Company, who received a copy or read or examined any such document. In addition, the Company should specify with particularity why the data is privileged and describe the basis upon which the privilege is claimed.

Please email an electronic copy of all responses and attachments.

DEFINITIONS AND INSTRUCTIONS

The following definitions and instructions apply to the interrogatories and requests for production:

a. Continuing Request.

These interrogatories and requests for production are to be reasonably supplemented as required by MCR 2.302(E).

b. Exhibit Numbers/Bates Stamps.

When the identification or production of a document has been requested, please state whether the document has previously been produced and, if so, provide the exhibit and/or Bates stamp number(s).

c. Controlling Persons.

In providing a document, please furnish all documents or items in CECo's physical possession or custody, as well as the documents under the physical possession, custody or control of any other person acting or purporting to act on behalf of CECo or any of its employees or representatives, whether as an agent, independent contractor, attorney, consultant, witness, or otherwise.

d. Partial Response.

To the extent a requested document cannot be provided in full, please provide it to the extent possible, with an indication of the portion of the document that is being withheld and the reasons for such withholding.

To the extent that a request calls for more than one document, but all of the requested documents cannot be provided, please provide the documents requested

to the extent possible with an indication of the documents withheld and the reasons for such withholding.

To the extent that an interrogatory cannot be answered in full, please answer it to the extent possible, with an indication of the portion that cannot be answered and the reasons therefore.

e. Name.

" Consumers Energy Company," "the Company," “CECo,” or "You" means Consumers Energy Company as a corporate entity, its employees (including officers and directors) and its agents.

f. Identify.

"Identify" or "state the identity of" means as follows:

(1) when used in reference to an individual person, to state (a) his/her full name, (b) present or last known position and business affiliation at the time in question;

(2) when used in reference to a person other than an individual, to state (a) the person's full name (b) type of entity (e.g., corporation, partnership, single proprietorship), and (c) the names of the individual who has knowledge of relevant facts.

(3) when used in reference to a communication means to state (a) its date, (b) the place where it occurred, (c) the type of communication (e.g., telephone conversation, meeting), (d) its substance, (e) the identity of the

person who made it, (f) the identity of each person who received it and all other persons who were present.

(4) when used in reference to a document means to state (a) the date, (b) author or addresser, (c) addressee and recipients of all copies, (d) type of document (e.g., letter, memorandum, telegram, chart, photograph, brochure) or some other means of identifying it, (e) its title, if any, and (f) its present location or custodian. If any document was, but no longer is, in your possession or subject to the Company's control, state what disposition was made of it and the identity of the person you reasonably believe to be the present custodian.

g. Documents.

(1) The term "document" as used in the Attorney General's requests is used in its broad sense, and includes, without limitation, any kind of printed, recorded, written, graphic, computerized or photographic matter and things similar to any of the foregoing, regardless of their author or origin.

(2) If the documents containing the exact information requested do not exist, but documents do exist which contain portions thereof or which contain substantially similar information, the definition of "document" includes the documents which do exist.

h. Communication.

The term "communication" means any transmission of information by oral, graphic, written, pictorial, or otherwise perceptible means, including, but not limited to, telephone conversations, letters, telegrams, and personal conversations.

i. Substance.

The "substance" of a communication or act includes the essence, purport or meaning of the same, as well as the exact words or actions involved.

j. Singular/Plural.

Words expressing the singular number shall be deemed to express the plural number; those expressing the masculine gender shall be deemed to express the feminine and neuter genders; those expressing the past tense shall be deemed to express the present tense; and vice versa.

k. Or/And.

The term "or" and the term "and" shall be construed either conjunctively or disjunctively so as to include all the information described in the request rather than to exclude any of it.

l. Person.

The unqualified term "person" shall mean an individual, corporation, partnership, unincorporated association or other business or governmental entity.

m. E.G.

The term "e.g." indicates illustration by example, not limitation.

n. Numbering.

If your numbering system differs from the Attorney General's, please indicate for each item, both the Company's number and the Attorney General's number.

o. Sources for Responses.

If the response to a request comes from knowledge of correspondence, a writing, or other material furnished to the individual making the answer, or from a response by another employee or agent of Consumers Energy Company, or from an interview with an employee or agent of CECo such that the person responding is not able to provide a complete explanation of why a transaction or event occurred or how the data or information was derived, then identify the documents and persons that can provide those answers.

p. Service of Copies.

Please send a copy of all responses and attachments to the following individuals:

Lucas Wollenzien
Michigan Attorney General
Special Litigation Division
P. O. Box 30755
Lansing, MI 48909
Email: WollenzienL@**michigan.gov**

q. Format of Responses

Pursuant to Rule 317 of the Michigan Public Service Commission's Rules of Practice and Procedure [1992 MAC, R 460.17317] and MCR 2.309(B)(1), answer each numbered request separately and completely in writing and have each person providing an answer execute each answer under oath. If you do not have complete information with respect to any request, so state and give as much information as you do have with respect to the matter inquired about and identify each person whom you believe may have additional information with respect to each request.

Pursuant to Rule 317 of the Michigan Public Service Commission's Rules of Practice and Procedure [1992 MAC, R 460.17317] and MCR 2.309(B)(2), repeat the request at the beginning of each answer or sub-question immediately before the answer to it. To the extent that the Company's responses involve calculations or analyses that were prepared using a spreadsheet program such as Microsoft Excel, please include a complete copy of the electronic files, with formulas, calculations, macros, and cell references intact. Any supporting spreadsheets, files, and data should be included with the Company's response. **For each response, please identify the responding witness and date the response was prepared.**

Please provide the requested information in electronic format, such as an Excel spreadsheet (with all inputs, formulas, macros and graphics intact) or a Word document, when available.

The AG's Fifth Discovery Request

To Consumers Energy Company

21859-AG-CE-0139

17. Refer to the Company's Discovery Response U21859-MNSC-CE-0035, and specifically it's description of an estimated "range of $46.5M to $96M total costs for interconnection facilities….":

    a. How much of this projected interconnection cost does the Company estimate to be transmission cost?

    b. How much of this projected interconnection cost does the Company estimate to be distribution cost?

    c. Does this "$46.5M to $96M" cost-range include all categories of transmission and distribution costs the Company expects for interconnecting such customers? If not, identify any other categories of interconnection costs (including identifying whether the Company considers them to be transmission or distribution costs) and any amount-estimations for each of those other categories.

    d. Produce any calculations and analyses used in determining your answers to Sub-Questions 17.a-c above, along with all inputs and assumptions for such calculations and analyses and the results therefrom.

21859-AG-CE-0140

18. Refer to the Company's Discovery Response U21859-DCC-CE-0006, and specifically it's description of "$730-$780 million" in infrastructure investment:

    a. What portion of that cost-range would be from interconnection costs as might be included in the Company's description of such costs in its discovery response U21859-MNSC-CE-0035?

    b. What portion of that cost-range would be from transmission costs from generation build-out, such as might be included in the Company's description of such costs in its discovery response U21859-AG-CE0065.a?

    c. To the extent this cost-range encompasses other categories of costs than those described in Sub-Questions 18.a-b, above, identify those other categories and for each explain what portion of the "$730-$780 million" cost range would be for that category.

    d. Produce any calculations and analyses used in determining your answers to Sub-Questions 18.a-c above, along with all inputs and

assumptions for such calculations and analyses and the results therefrom.

21859-AG-CE-0141

19. Refer to the Rebuttal Testimony of Laura Connolly at page 12:1-19:

    a. Confirm if witness Connolly's rebuttal testimony is recommending that tariff language considered in this case would not require any project proposal fee from prospective customers as was described in Paragraph 7 of the Company's Application in this case.

    b. If you answer yes to Sub-Question 19.a above, would the Company still expect to require some administrative fee from some data center customers? If yes: in what contexts, under what terms, and for what amounts?

    c. If you answer yes to Sub-Question 19.a above, how would the Company account for costs described in Paragraph 7 of its Application in this matter (e.g. "costs incurred by the Company for the engineering study, supply planning, project management, project development, and rates support….") as part of the ratemaking process?

21859-AG-CE-0142

20. Referring to the transmission costs referenced in Consumers Energy's discovery response U21859-AG-CE-0065.a:

    a. Confirm that some portions of these costs are not subject to allocation in a rate case.

    b. To the extent that Consumers believes any portions of these costs are subject to allocation in a rate case, explain what portions would be subject to such allocation, including by confirming whether the amounts of such portions of the costs will be definite in each rate case and where such definite amounts would be identified in each rate case.

    c. For any portions of these costs that Consumers believes are not subject to allocation in a rate case, explain how Consumers understands those portions of the costs to be accounted for in the ratemaking process.

21859-AG-CE-0143

21. Refer to the Rebuttal Testimony of Laura Connolly in this matter, including specifically at 11:1-14 and 5:10-13:

    a. Confirm whether witness Connolly's Rebuttal Testimony opposes the recommendation in Attorney General witness Deupree's Direct testimony at 25:26-28 for: "[r]evised tariff language stating that prospective data center customers, and customers taking service under

these provisions that seek additional capacity, will be responsible for covering all direct interconnection costs…." To the extent witness Connolly's testimony opposes this recommendation, explain why.

b. Please explain which portions of the interconnection costs described in Consumers Energy's discovery response U21859-MNSC-CE-0035 Consumers believes are directly attributable to the data center customer being interconnected. To the extent Consumers answers that only some portion of those costs are directly attributable to the data center customer, identify which portions Consumers believes are directly attributable and explain why, and further provide all calculations and analyses supporting that distinction along with all inputs and assumptions for those calculations and analyses and results therefrom.

c. Identify all sections of Consumers' tariff sheets, or any other material, that Consumers deems to constitute Consumers' CIAC provisions and/or any "Contribution in aid of Construction agreement" as referenced on page 5 of witness Connolly's rebuttal testimony (all of such tariff sheets and materials referred to hereafter as "the CIAC Provisions").

d. Identify which categories of the interconnection costs Consumers Energy describes in discovery response U21859-MNSC-CE-0035, and any other categories of interconnection costs identified in response to Sub-Question 17.c above, that Consumers believes would be eligible for contributions from a data center customer under the CIAC Provisions, and explain Consumers' reasoning for these identifications.

e. Confirm that the CIAC Provisions do not present a strict requirement that a customer pay for the portions of interconnection costs identified in response to Sub-Question 21.d above. To the extent you do not confirm this, please explain why.

f. Confirm that the CIAC Provisions do not strictly require a customer to pay the entirety of its interconnection costs identified in response to Sub-Question 21.d above under the CIAC Provisions, even if the Company asks it to pay some portion of those interconnection costs under the CIAC Provisions. To the extent you do not confirm this, please explain why.

Respectfully submitted,

Dana Nessel

Question:

17.Refer to the Company's Discovery Response U21859-MNSC-CE-0035, and specifically it's description of an estimated "range of $46.5M to $96M total costs for interconnection facilities .... ":

a. How much of this projected interconnection cost does the Company estimate to be transmission cost?

b. How much of this projected interconnection cost does the Company estimate to be distribution cost?

c. Does this "$46.5M to $96M" cost-range include all categories of transmission and distribution costs the Company expects for interconnecting such customers? If not, identify any other categories of interconnection costs (including identifying whether the Company considers them to be transmission or distribution costs) and any amount-estimations for each of those other categories.

d. Produce any calculations and analyses used in determining your answers to Sub-Questions 17.a-c above, along with all inputs and assumptions for such calculations and analyses and the results therefrom.

Response:

a. Please see response to U21859-MNSC-CE-0123.

b. Please see response to U21859-MNSC-CE-0123.

c. The “$46.5M to $96M” cost estimate range includes all categories of transmission and distribution facility costs to interconnect such customers. Transmission and/or distribution facility costs for additional generation, if needed, to serve load growth is not included in the estimate and not directly tied to infrastructure costs of connecting an individual load. Please see response to U21859-DCC-CE-0026.

d. Please see response to U21859-MNSC-CE-0123.

Witness: Laura M. Connolly
Date: July 21, 2025

Question:

18.Refer to the Company's Discovery Response U21859-DCC-CE-0006, and specifically it's description of"$730-$780 million" in infrastructure investment:

a. What portion of that cost-range would be from interconnection costs as might be included in the Company's description of such costs in its discovery response U21859-MNSC-CE-0035?

b. What portion of that cost-range would be from transmission costs from generation build-out, such as might be included in the Company's description of such costs in its discovery response U21859-AGCE0065. a?

c. To the extent this cost-range encompasses other categories of costs than those described in Sub-Questions 18.a-b, above, identify those other categories and for each explain what portion of the "$730-$780 million" cost range would be for that category.

d. Produce any calculations and analyses used in determining your answers to Sub-Questions 18.a-c above, along with all inputs and assumptions for such calculations and analyses and the results therefrom.

Response:

a. Please refer to Company’s Discovery Response U21859-MNSC-CE-0123.

b. Please refer to Company's Discovery Response U21859-DCC-CE-0006.

c. Sub-Question 18.a references Company’s Discovery response U21859-MNSC-CE-0035 which relates to distribution and transmission facility costs to support a 100 MW load interconnection. Estimates received for Transmission infrastructure investments to connect loads larger than ~100 MW would be included in the Company's Discovery Response U21859-DCC-CE-0006 but not in costs referenced in Sub-Question 18.a. The portion of the “$730-$780 million” would be the difference between Company's Discovery Response U21859-DCC-CE-0006 and information provided in Company’s Discovery response U21859-MNSC-CE-0035.

d. Please refer to Sub-Question 18.c response.

Witness: Laura M. Connolly
Date: July 21, 2025

Question:

19.Refer to the Rebuttal Testimony of Laura Connolly at page 12:1-19:

a. Confirm if witness Connolly's rebuttal testimony is recommending that tariff language considered in this case would not require any project proposal fee from prospective customers as was described in Paragraph 7 of the Company's Application in this case.

b. If you answer yes to Sub-Question 19.a above, would the Company still expect to require some administrative fee from some data center customers? If yes: in what contexts, under what terms, and for what amounts?

c. If you answer yes to Sub-Question 19.a above, how would the Company account for costs described in Paragraph 7 of its Application in this matter (e.g. "costs incurred by the Company for the engineering study, supply planning, project management, project development, and rates support .... ") as part of the ratemaking process?

Response:

a. Confirmed
b. No
c. These costs would be included as part of normal operation and maintenance expenses as they are today for any studies the Company performs for new customer inquiries.

Witness: Laura M. Connolly
Date: July 22, 2025

Question:

20.Referring to the transmission costs referenced m Consumers Energy's discovery response U21859-AG-CE-0065.a:

a. Confirm that some portions of these costs are not subject to allocation in a rate case.

b. To the extent that Consumers believes any portions of these costs are subject to allocation in a rate case, explain what portions would be subject to such allocation, including by confirming whether the amounts of such portions of the costs will be definite in each rate case and where such definite amounts would be identified in each rate case.

c. For any portions of these costs that Consumers believes are not subject to allocation in a rate case, explain how Consumers understands those portions of the costs to be accounted for in the ratemaking process.

Response:

a. Confirmed.

b. The transmission expenses would flow through the PSCR. A portion of PSCR is covered in base rates, which is subject to cost allocation in a general rate case. The remaining costs are collected through the PSCR factor. All customers pay the same PSCR factor. The base PSCR amounts collected in a general rate case would be identified in the exhibits of Company witness Eugene Breuring and allocated in the exhibits of Company witness Emily Davis.

c. See response to b.

Witness: Laura M. Connolly
Date: July 21, 2025

Question:

21.Refer to the Rebuttal Testimony of Laura Connolly in this matter, including specifically at 11:1-14 and 5:10-13:

a. Confirm whether witness Connolly's Rebuttal Testimony opposes the recommendation in Attorney General witness Deupree's Direct testimony at 25:26-28 for: "[r]evised tariff language stating that prospective data center customers, and customers taking service under these provisions that seek additional capacity, will be responsible for covering all direct interconnection costs .... " To the extent witness Connolly's testimony opposes this recommendation, explain why.

b. Please explain which portions of the interconnection costs described in Consumers Energy's discovery response U21859-MNSC-CE-0035 Consumers believes are directly attributable to the data center customer being interconnected. To the extent Consumers answers that only some portion of those costs are directly attributable to the data center customer, identify which portions Consumers believes are directly attributable and explain why, and further provide all calculations and analyses supporting that distinction along with all inputs and assumptions for those calculations and analyses and results therefrom.

c. Identify all sections of Consumers' tariff sheets, or any other material, that Consumers deems to constitute Consumers' CIAC provisions and/or any "Contribution in aid of Construction agreement" as referenced on page 5 of witness Connolly's rebuttal testimony (all of such tariff sheets and materials referred to hereafter as "the CIAC Provisions").

d. Identify which categories of the interconnection costs Consumers Energy describes in discovery response U21859-MNSC-CE-0035, and any other categories of interconnection costs identified in response to Sub-Question 1 7 .c above, that Consumers believes would be eligible for contributions from a data center customer under the CIAC Provisions, and explain Consumers' reasoning for these identifications.

e. Confirm that the CIAC Provisions do not present a strict requirement that a customer pay for the portions of interconnection costs identified in response to Sub-Question 21.d above. To the extent you do not confirm this, please explain why.

f. Confirm that the CIAC Provisions do not strictly require a customer to pay the entirety of its interconnection costs identified in response to Sub-Question 21.d above under the CIAC Provisions, even if the Company asks it to pay some portion of those interconnection costs under the CIAC Provisions. To the extent you do not confirm this, please explain why.

Response:

a. The Company’s rebuttal testimony does not take a position specific to Attorney General witness Deupree’s recommendation related to tariff language requiring prospective data center customers to be responsible for covering all direct interconnection costs. The Company’s rebuttal testimony

recommended any determination on cost assignment be handled in the context of an electric general rate case.

b. All of the costs estimated in U21859-MNSC-CE-0035 are directly attributable to the hypothetical 100 MW load addition.

c. The Company's CIAC provisions can be found on Tariff Sheet No. C-3.00 through C-4.00, section C1.4 "Extraordinary Facility Requirements and Charges" and Tariff Sheet No. C-26.20 through C-34.00, section C6.2 "Underground Policy".

d. The full interconnection cost would qualify under the CIAC Provision, subject to the customer's minimum demand commitment and CIAC contract term.

e. Confirmed.

f. Confirmed.

Witness: Laura M. Connolly
Date: July 21, 2025

Question:

21859-DCC-CE-0026.

Please refer to U21859-DCC-CE-0005. "The Company has engaged with the Transmission 0wner for 2.65 GW of large load additions, which the Transmission 0wner estimated would necessitate a transmission infrastructure investment of $730-$780 million to support the load interconnections. This estimate does not include additional transmission infrastructure required to interconnect additional generation to support the load." Please also refer to U21859-MNSC-CE-0035. "The range of total cost for interconnection facilities for a 100 MW load vary greatly on the location of load and the network upgrades required to adequately interconnect the load while maintaining system reliability. Consumers Energy estimates a range of $46.5M to $96M total costs for interconnection facilities for a new 100 MW load.

In response to U21859-DCC-CE-0005 the Company estimates incremental transmission costs equal to $730-$780 million for 2,650 MW of large load additions, which results in a proportional cost of $27.5-$29.4 million per 100 MW of large load additions.

1. Please reconcile this estimate with the Company's estimate of $46.5-$96 million of interconnection costs to interconnect a new 100 MW load.

2. Please explain whether the difference in interconnection cost estimates is attributable entirely to estimated distribution interconnection costs.

3. Please confirm that Michigan Electric Transmission Company (METC) is the "Transmission 0wner."

4. Please provide the Company's best estimate of the range of transmission costs related to the interconnection of additional generation. Please provide all supporting workpapers and analyses supporting the Company's estimate.

Response:

1. The $730 - $780 million to serve 2.65 GW of large load additions in response U21859-DCC-CE-0005 was the estimated transmission investment to serve the large load additions and did not include distribution or additional transmission infrastructure to interconnect additional generation to support the load. The $46.5M to $96M estimate provided in response to U21859-MNSC-CE-0035 was the total interconnection cost for the transmission and distribution facilities. This range did not include additional costs for transmission infrastructure to interconnect additional generation.
2. Yes, the difference is attributable to the distribution interconnection costs.
3. Michigan Electric Transmission Company (METC) is not the only “Transmission Owner” that Consumers Energy interconnects with.
4. Specific costs associated with building and interconnecting new generation to serve new large loads were not included in analyses presented in this case and is still under development. The requested information will be presented in the Company’s next integrated resource plan (“IRP”) filing, which is anticipated in quarter 2 of 2026.

Witness: Laura M. Connolly
Date: May 30, 2025

Question:

4. Refer to U21859-MNSC-CE-0035, estimating a range of $46.5M to $96M total costs for interconnection facilities for a new 100 MW load.

a. Please provide an explanation of the basis for the Company's estimated range of $46.5M to $96M total costs for interconnection facilities for a new 100 MW load.

b. In live, unlocked Excel file format with all links and formula intact, provide all workpapers and calculations underlying the estimated range.

c. To the extent that the estimated range includes both transmission and distribution costs, please specify separate ranges for transmission and distribution costs.

Response:

a. For the Distribution asset estimates, the Company took 5 typical projects (this excluded projects that had unique aspects that would falsely inflate the average of a typical project) and determined the average cost per transformer. The Company then took this average and calculated the number of transformers required at each voltage to serve 100 MWs. The rounded result became the average high and low range for distribution cost.

   Estimates for transmission facilities required to interconnect a new 100 MW load utilized transmission cost estimates provided by the impacted Transmission Owner(s) for recent ~100 MW projects in the Company's service territory. 2 projects fell within range of the 100 MW size requested. A third project, representing a smaller load addition, was also included in the cluster to present a potential low-end transmission interconnection facility requirement assuming existing transmission infrastructure could reliably handle 100 MW of additional load.

b. See attached file.

c. The estimated range for distribution upgrades excluding outliers used was $28.0 Million - $34.0 Million. The estimated range for Transmission upgrades used was $18.5 Million - $62.0 Million. For a total average range of $46.5 Million - $96 Million.

   As noted in the response to U21859-MNSC-CE-0035, interconnection facilities for a 100 MW load can vary greatly based on location and network upgrades required to adequately interconnect the load while maintaining system reliability.

RE: MPSC Case No. U-21859 – In the Matter of the Application of Consumers Energy Company for Ex Parte Approval of Certain Amendments to Rate GPD.

Dear Mr. Abrams:

Attached to this letter are copies of the following documents:

- A copy of your July 21, 2025 interrogatories with our internal numbering system annotated in the margins; and
- Consumers Energy Company's response to 21859-AG-CE-0147 through 0149.

A Proof of Service has been electronically filed in this docket. Please contact me if you have any questions regarding this matter.

Sincerely,

CC Parties Per Attachment 1 to the Proof of Service

STATE OF MICHIGAN

BEFORE THE MICHIGAN PUBLIC SERVICE COMMISSION

In the Matter of the Application of Consumers Energy Company for Ex Parte Approval of Certain Amendments to Rate GPD. MPSC No. U-21859
/

THE ATTORNEY GENERAL'S SIXTH DISCOVERY REQUEST TO CONSUMERS ENERGY COMPANY

The Attorney General of Michigan, Dana Nessel, requests that Consumers Energy Company ("CECo" or "the Company") respond to the following discovery requests in accordance with the discovery response time established by the Administrative Law Judge in this case.

In the event the Company asserts that any data requested is deemed to be privileged or proprietary, then the Company in its written response should identify any such data, and any supporting documents, by date and general content, as well as identify all persons, inside or outside the Company, who received a copy or read or examined any such document. In addition, the Company should specify with particularity why the data is privileged and describe the basis upon which the privilege is claimed.

Please email an electronic copy of all responses and attachments.

DEFINITIONS AND INSTRUCTIONS

The following definitions and instructions apply to the interrogatories and requests for production:

a. Continuing Request.

These interrogatories and requests for production are to be reasonably supplemented as required by MCR 2.302(E).

b. Exhibit Numbers/Bates Stamps.

When the identification or production of a document has been requested, please state whether the document has previously been produced and, if so, provide the exhibit and/or Bates stamp number(s).

c. Controlling Persons.

In providing a document, please furnish all documents or items in CECo's physical possession or custody, as well as the documents under the physical possession, custody or control of any other person acting or purporting to act on behalf of CECo or any of its employees or representatives, whether as an agent, independent contractor, attorney, consultant, witness, or otherwise.

d. Partial Response.

To the extent a requested document cannot be provided in full, please provide it to the extent possible, with an indication of the portion of the document that is being withheld and the reasons for such withholding.

To the extent that a request calls for more than one document, but all of the requested documents cannot be provided, please provide the documents requested

to the extent possible with an indication of the documents withheld and the reasons for such withholding.

To the extent that an interrogatory cannot be answered in full, please answer it to the extent possible, with an indication of the portion that cannot be answered and the reasons therefore.

e. Name.

" Consumers Energy Company," "the Company," “CECo,” or "You" means Consumers Energy Company as a corporate entity, its employees (including officers and directors) and its agents.

f. Identify.

"Identify" or "state the identity of" means as follows:

(1) when used in reference to an individual person, to state (a) his/her full name, (b) present or last known position and business affiliation at the time in question;

(2) when used in reference to a person other than an individual, to state (a) the person's full name (b) type of entity (e.g., corporation, partnership, single proprietorship), and (c) the names of the individual who has knowledge of relevant facts.

(3) when used in reference to a communication means to state (a) its date, (b) the place where it occurred, (c) the type of communication (e.g., telephone conversation, meeting), (d) its substance, (e) the identity of the

person who made it, (f) the identity of each person who received it and all other persons who were present.

(4) when used in reference to a document means to state (a) the date, (b) author or addresser, (c) addressee and recipients of all copies, (d) type of document (e.g., letter, memorandum, telegram, chart, photograph, brochure) or some other means of identifying it, (e) its title, if any, and (f) its present location or custodian. If any document was, but no longer is, in your possession or subject to the Company's control, state what disposition was made of it and the identity of the person you reasonably believe to be the present custodian.

g. Documents.

(1) The term "document" as used in the Attorney General's requests is used in its broad sense, and includes, without limitation, any kind of printed, recorded, written, graphic, computerized or photographic matter and things similar to any of the foregoing, regardless of their author or origin.

(2) If the documents containing the exact information requested do not exist, but documents do exist which contain portions thereof or which contain substantially similar information, the definition of "document" includes the documents which do exist.

h. Communication.

The term "communication" means any transmission of information by oral, graphic, written, pictorial, or otherwise perceptible means, including, but not limited to, telephone conversations, letters, telegrams, and personal conversations.

i. Substance.

The "substance" of a communication or act includes the essence, purport or meaning of the same, as well as the exact words or actions involved.

j. Singular/Plural.

Words expressing the singular number shall be deemed to express the plural number; those expressing the masculine gender shall be deemed to express the feminine and neuter genders; those expressing the past tense shall be deemed to express the present tense; and vice versa.

k. Or/And.

The term "or" and the term "and" shall be construed either conjunctively or disjunctively so as to include all the information described in the request rather than to exclude any of it.

l. Person.

The unqualified term "person" shall mean an individual, corporation, partnership, unincorporated association or other business or governmental entity.

m. E.G.

The term "e.g." indicates illustration by example, not limitation.

n. Numbering.

If your numbering system differs from the Attorney General's, please indicate for each item, both the Company's number and the Attorney General's number.

o. Sources for Responses.

If the response to a request comes from knowledge of correspondence, a writing, or other material furnished to the individual making the answer, or from a response by another employee or agent of Consumers Energy Company, or from an interview with an employee or agent of CECo such that the person responding is not able to provide a complete explanation of why a transaction or event occurred or how the data or information was derived, then identify the documents and persons that can provide those answers.

p. Service of Copies.

Please send a copy of all responses and attachments to the following individuals:

Lucas Wollenzien

q. Format of Responses

Pursuant to Rule 317 of the Michigan Public Service Commission's Rules of Practice and Procedure [1992 MAC, R 460.17317] and MCR 2.309(B)(1), answer each numbered request separately and completely in writing and have each person providing an answer execute each answer under oath. If you do not have complete information with respect to any request, so state and give as much information as you do have with respect to the matter inquired about and identify each person whom you believe may have additional information with respect to each request.

Pursuant to Rule 317 of the Michigan Public Service Commission's Rules of Practice and Procedure [1992 MAC, R 460.17317] and MCR 2.309(B)(2), repeat the request at the beginning of each answer or sub-question immediately before the answer to it. To the extent that the Company's responses involve calculations or analyses that were prepared using a spreadsheet program such as Microsoft Excel, please include a complete copy of the electronic files, with formulas, calculations, macros, and cell references intact. Any supporting spreadsheets, files, and data should be included with the Company's response. **For each response, please identify the responding witness and date the response was prepared.**

Please provide the requested information in electronic format, such as an Excel spreadsheet (with all inputs, formulas, macros and graphics intact) or a Word document, when available.

The AG's Sixth Discovery Request

To Consumers Energy Company

21859-AG-CE-0147

22. Refer to the Rebuttal Testimony of Company witness Connolly in this matter at 13:11-13, along with the Company's discovery response U21859-CEO-CE-0115:

    a. Confirm that the "Industrial LED" sales forecast of 8,691,153 referenced in Case U-21816 Exhibit A-6, column f, for 2032, and also referenced in discovery request U21859-CEO-CE-0115, is the highest yearly sales estimate for "Industrial LED" (column f) listed from years 2025-2045 in Exhibit A-6 in Case U-21816.

    b. Further referring to the Company's response to U21859-DCC-CE-0005, confirm whether the 2.65 GW of "large load additions" includes the 1,145 MW in load as referenced in discovery response U21859-CEO-CE-0115.a concerning the U-21816 Exhibit A-6 "Industrial LED" sales in 2032.

21859-AG-CE-0148

23. Referring to the sales forecast amount of 8,691,153 MWh for "Industrial LED" discussed in the Company's discovery response U21859-CEO-CE-0115, Confirm whether this sales forecast is projected in relation only to customers who are eligible for service under Rate LED. To the extent it is partially in relation to customers who are eligible for service under Rate LED, identify the percentage of the 8,691,153 estimate that is projected to relate to customers who are eligible for service under Rate LED.

21859-AG-CE-0149

24. Confirm whether the Company expects to add greater than 2.65 GW in load between 2025 and 2045 from data center customers who would take service on a rate other than Rate LED. If so, identify what amount of such load the Company expects to add in that time frame, and further produce the calculations and analyses used in determining that amount, along with the inputs and assumptions for those calculations and analyses and results therefrom.

Respectfully submitted,

Dana Nessel
Attorney General

Question:

22. Refer to the Rebuttal Testimony of Company witness Connolly in this matter at 13:11-13, along with the Company's discovery response U21859-CEO-CE-0115:

a. Confirm that the "Industrial LED" sales forecast of 8,691,153 referenced in Case U-21816 Exhibit A-6, column f, for 2032, and also referenced in discovery request U21859-CEO-CE-0115, is the highest yearly sales estimate for "Industrial LED" (column f) listed from years 2025-2045 in Exhibit A-6 in Case U-21816.

b. Further referring to the Company's response to U21859-DCC-CE-0005, confirm whether the 2.65 GW of "large load additions" includes the 1,145 MW in load as referenced in discovery response U21859-CEO-CE-0115.a concerning the U-21816 Exhibit A-6 "Industrial LED" sales in 2032.

Response:

A. Confirmed
B. Confirmed

Witness: Laura M. Connolly
Date: July 23, 2025

U21859-AG-CE-0148

Question:

23. Referring to the sales forecast amount of 8,691,153 MWh for "Industrial LED" discussed in the Company's discovery response U21859-CEO-CE-0115, Confirm whether this sales forecast is projected in relation only to customers who are eligible for service under Rate LED. To the extent it is partially in relation to customers who are eligible for service under Rate LED, identify the percentage of the 8,691,153 estimate that is projected to relate to customers who are eligible for service under Rate LED.

Response:

Confirmed

Witness: Laura M. Connolly
Date: July 23, 2025

Question:

24. Confirm whether the Company expects to add greater than 2.65 GW in load between 2025 and 2045 from data center customers who would take service on a rate other than Rate LED. If so, identify what amount of such load the Company expects to add in that time frame, and further produce the calculations and analyses used in determining that amount, along with the inputs and assumptions for those calculations and analyses and results therefrom.

Response:

At this time, the Company has not signed any data center contracts under the proposed provision and therefore is unsure what data center load additions could be added between 2025 and 2045.

Witness: Laura M. Connolly
Date: July 23, 2025

Question:

5. Please refer to the Direct Testimony of Laura M. Connolly, p. 9 lines 15-16. Provide the sizes in MW – or summary statistics of the sizes – of the Company's current Rate GPD customers.

Response:

See attached.

Re: *In the Matter of the Application of* ***Consumers Energy Company*** *for Ex Parte Approval of Certain Amendments to Rate GPD*
MPSC Case No. U-21859

Attached are Staff's responses to the Michigan Attorney General's first round of discovery to Staff in this case. The responses are being served by e-mail. In providing these responses, Staff does not necessarily concede that the requested information is relevant or material to these proceedings. Staff reserves the right to raise objections to the introduction into evidence, through cross-examination or otherwise, of any material supplied in response to discovery.

Staff intends to supplement a prior response if it becomes aware of a material error in the response or if it becomes aware that there has been a significant change in circumstances that would change the prior response in a material way. Staff does not, however, keep prior responses under continuous review.

Sincerely,

Amit T. Singh (P75492)
Assistant Attorney General
Public Service Division

Telephone: (517) 284-8140

DATED: July 18, 2025

MPSC Staff's Answer to the Attorney General's First Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

1. Refer to the direct testimony and exhibits of Staff witness Isakson filed in this proceeding on June 12, 2025 ("Staff's Direct Testimony"), along with the direct testimony of Consumers' witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

    a. Identify and explain each recommendation in Staff's Direct Testimony that would require data center customers to procure or fund, or be responsible for procuring or funding, any specific amount or specific minimum amount of renewable or clean energy as a requirement for taking service.

    b. For each recommendation identified in response to Sub-Question 1.a above, produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) showing how and the specific extent to which each such recommendation would result in procurement of renewable or clean energy to meet PA 235's compliance standards (including as described in MCL 460.1028(1)) to accommodate each additional data center load.

Answer:

a. Staff did not make any recommendations that would require data center customers to procure or fund any specific amount or specific minimum amount of renewable or clean energy as a requirement for taking service.

b. Not applicable.

MPSC Staff's Answer to the Attorney General's First Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

2. Refer to Staff's Direct Testimony, along with the direct testimony of Consumers' witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

   a. Identify and explain any recommendations in Staff's Direct Testimony that address the possibility of Consumers Energy requesting a surcharge (such as it might request under the premise of MCL 460.1045) to recover any portion of compliance costs under PA 235 driven by an increase in data center load.

   b. For each recommendation identified in response to Sub-Question 2.a above, produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) as to how such recommendation addresses the possibility of a requested surcharge.

Answer:

   a. Staff did not make any recommendations that address the possibility of Consumers Energy requesting a surcharge to recover any portion of compliance costs under PA 235 driven by an increase in data center load.

   b. Not applicable.

MPSC Staff's Answer to the Attorney General's First Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

3. Refer to Staff's Direct Testimony, along with the direct testimony of Consumers' witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

   a. Identify and explain any points in Staff's Direct Testimony that address the added transmission costs from development of generation resources to meet increased demand driven by data center customers as referenced in Consumers Energy's discovery response U21859-AG-CE-0065.

   b. For each recommendation identified in response to Sub-Question 3.a above, produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) as to how such recommendation addresses transmission costs as described in discovery response U21859-AG-CE-0065.

Answer:

a. Staff witness David W. Isakson discusses transmission costs on page 5, lines 11-14 and page 25, lines 13-19 of his Direct Testimony:

   i. "As the Company points out in its application, this means that a customer could enter service and significantly increase the Company's current peak demand, and thus require substantial investments in generation capital, purchase power agreements, distribution infrastructure, and/or higher transmission expense to serve that load." (page 5, lines 11-14).

   ii. "The ex parte filing should confirm that other customers will not be made to pay for any negative effects the reduction in load has on transmission expense. If a large load customer reduces its contract capacity or exits service, then other customers should not be burdened with paying for

transmission service for the missing load. Staff is not only concerned about remaining customers having to pay for stranded assets of the retail utility, but also how stranded investment in the transmission system may be allocated to the Company or other customers." (page 25, lines 13-19).

b. Not applicable.

MPSC Staff's Answer to the Attorney General's First Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

4. Identify and explain any other recommendations in Staff's Direct Testimony not identified in response to Questions No. 1-3 above that address the risks of cost-of-compliance shifting onto other customers for compliance with PA 235 in accommodating new data center loads. For each such recommendation, further produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) as to how each such recommendation addresses the risks of cost-of-compliance shifting.

Answer:

4. Staff did not make any recommendations that address the risks of cost-of-compliance shifting onto other customers for compliance with PA 235 in accommodating new data center loads.

MPSC Staff's Answer to the Attorney General's First Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

5. Refer to Staff's Direct Testimony, as well as the interconnection costs described in Consumers Energy's discovery response U21859-MNSC-CE-0035:

   a. Identify and explain any recommendations in Staff's Direct Testimony that would assign each data center customer responsibility to cover their direct interconnection costs such as described in discovery response U21859-MNSC-CE-0035.

   b. To the extent not addressed in response to Sub-Question 5.a above, identify and explain any other recommendations in Staff's Direct Testimony that would address the direct interconnection costs for each data center customer such as described in discovery response U21859-MNSC-CE-0035.

   c. For each recommendation identified in response to Sub-Questions 5.a-b above, produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) as to how such recommendation addresses direct interconnection costs for each data center customer such as described in discovery response U21859-MNSC-CE-0035.

Answer:

   a. Staff did not make any recommendations that address the direct interconnection costs for each data center customer such as described in discovery response U21859-MNSC-CE-0035.

   b. Staff did not make any recommendations that would assign each data center customer responsibility to cover their direct interconnection.

   c. Not applicable.

July 18, 2025

Question:

6. Referring to the Direct and Rebuttal Testimony filed on behalf of MPSC staff ("Staff") in this matter:

   a. Provide all calculations and analyses as to expected costs for adding any portion of the new data center load considered in this proceeding, along with the inputs and assumptions for those calculations and analyses and results therefrom. Staff's response should include both the total of any such expected costs as well as the total amounts for components of the overall costs, including total generation investment costs, total transmission costs associated with that additional generation (such as described in Consumers Discovery response U21859-AG-CE-0065), total distribution interconnection costs, and total transmission interconnection costs, along with any other categories of costs considered as part of the total cost calculations. Refer to the direct testimony and exhibits of Staff witness Isakson filed in this proceeding on June 12, 2025 ("Staff's Direct Testimony"), along with the direct testimony of Consumers' witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

Answer 6:

   a. Staff did not perform such an analysis.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

b. Provide all calculations and analyses as to how expected revenue from any portion of the new data center load considered in this proceeding would account for expected costs for the same portion of new data center load, along with the inputs and assumptions for those calculations and analyses and results therefrom.

Answer:

b. Staff did not perform such an analysis.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

c. To the extent not included in response to Sub-Question 1.b above, produce all calculations and analyses as to how Staff's recommended exit fee terms for any portion of new data center load referred to in Sub-Question 1.b above would account for expected costs for that load referred to in Sub-Question 1.b above, along with the inputs and assumptions for those calculations and analyses and results therefrom.

Answer:

c. Staff did not perform such an analysis.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

d. Produce all work papers supporting the responses to Sub-Questions 1.a-c above with all formula and links intact.

Answer:

d. Not applicable.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

7. Refer to the Direct and Rebuttal Testimony filed on behalf of Staff in this matter, including specifically the Rebuttal Testimony of Staff witness Isakson at 1:10 – 2:13:

   a. Please explain why and which portions of the interconnection costs described in Consumers Energy's discovery response U21859-MNSC-CE-0035 Staff believes are directly attributable to the data center customer being interconnected. To the extent Staff answers that only some portion of those costs are directly attributable to the data center customer, explain which portions are directly attributable and provided all calculations and analyses supporting that distinction, along with all inputs and assumptions for those calculations and analyses and results therefrom.

Answer:

   a. Per Staff witness Nicholas Revere's rebuttal testimony "Under standard ratemaking, costs are allocated to customers based on measures of how they contribute to the load that needs to be served by the Company in total." (Page 11, lines 7-9). However, parties may propose, and the Commission may approve, alternate cost allocation or rate recovery methods in general rate cases. Staff cannot determine which portions of the interconnection costs described in Consumers Energy's discovery response U21859-MNSC-CE0035 are directly attributable to the data center customer being interconnected because Staff does not have the data necessary to do so.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

b. Identify all sections of Consumers' tariff sheets, or any other material, that Staff deems to constitute Consumers' CIAC provisions (referred to hereafter as "the CIAC Provisions").

Answer:

b. The Company's CIAC provisions can be found in section C1.4 "Extraordinary Facility Requirements and Charges" found on Tariff Sheet No. C-3.00 through C-4.00 and in section C6.1 "Overhead Extension Policy" and C6.2 "Underground Policy" of the Company's rate book on Tariff Sheet No. C-26.20 through C- 34.00.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

c. Confirm that the CIAC Provisions do not present a strict requirement that a customer pay for its interconnection costs through the CAIC Provisions. To the extent you do not confirm this, please explain why.

Answer:

c. Confirmed. While there is no "strict requirement" as described in this discovery request, interconnection costs may be deemed by the Company to require an extraordinary facilities charge as described on Tariff Sheet No. C-3.00, section C1.4.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

d. Confirm that the CIAC Provisions do not strictly require a customer to pay the entirety of their interconnection costs under the CIAC Provisions, even if the Company asks them to pay some portion of their interconnection costs under the CIAC provisions. To the extent you do not confirm this, please explain why.

Answer:

d. Confirmed. Extraordinary facilities charges may be offset by the CIAC allowance schedule found on Tariff Sheet No. C-4.00.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

e. Identify which portions of the interconnection costs Consumers Energy describes in discovery response U21859-MNSC-CE-0035 that Staff believes would be eligible for contributions from a data center customer under the CIAC Provisions, and explain Staff's reasoning for this identification.

Answer:

e. Whatever costs deemed by the Company to require an extraordinary facilities charge would be eligible for contributions from a data center customer under the CIAC provisions. Those costs may be offset by the applicable CIAC allowance determined on the CIAC allowance table on Tariff Sheet No. C-4.00.

MPSC Staff's Answer to the Attorney General's Second Discovery Request
MPSC Case No. U-21859
July 18, 2025

Question:

8. Referring to the transmission costs referenced in Consumers Energy's discovery response U21859-AG-CE-0065:

   a. Confirm that some portion of these costs are not subject to allocation in a rate case.

Answer:

   a. The Company projects transmission costs for the test year in a rate case. These costs are allocated to the classes (currently on a 12 CP basis). Rates approved by the Commission in rate cases will include the amount of projected transmission costs the Commission deems appropriate for such inclusion, as allocated. To the extent that actual transmission costs differ from these projections over the relevant time frame, the difference will flow through the PSCR reconciliation. For the purposes of a rate case, the PSCR factor is generally assumed to be zero (unless a PSCR base change is proposed). To the extent that, over the relevant period, the actual PSCR factor is something other than zero, identifying the portion of that factor (positive or negative) that may be due to differences in actual vs. projected transmission costs is effectively impossible, as the PSCR factor is essentially used to minimize total over or under collections from any source (revenue or expense). Any transmission costs that could be considered as collected through the PSCR factor have an effective allocation based on energy, as the PSCR factor is a uniform per kWh charge or credit for all classes.:

Respondent: Nicholas M. Revere 10

Counsel to Data Center Coalition

CC: Parties to Case No. U-21859

MPSC Case No.: U-21859
Requester: AG
Question No.: AG-DCC-2.5
Respondent: Shana Ramirez
Date of Response: July 29, 2025
Page: 1 of 1

QUESTION:
Referring to DCC witness Ramirez's rebuttal testimony, including specifically Table 2 of her testimony:

a. Did witness Ramirez consider the direct testimony of MPSC Staff witness Isakson at 22:15 – 23:3 and his Exhibit S-2 as referenced in his direct testimony concerning provisions at issue in Ohio Power Company's Data Center Tariff settlement?

b. Has witness Ramirez otherwise reviewed, at any point in this matter, the terms of Ohio Power Company's "Schedule DCT" tariff, either as was pending during this case or as made effective (the effective version is attached hereto as Attachment A)?

RESPONSE:
a. Yes.
b. Yes.

P.U.C.O. NO. 21

SCHEDULE DCT
(Data Center Tariff)

Definitions

For purposes of this schedule:

"Contract" means the service agreement entered into by the customer and the Company in accordance with this schedule.

"Contract Capacity" means the mutually agreed amount of monthly peak load requirements for each month during the remaining term after the Load Ramp Period as set forth in the contract for service, whereby the Company agrees to provide all of the components of retail electric service (which could include either default SSO supply or access to CRES provider supply of generation service) subject to the terms and conditions in its tariffs and the customer agrees to purchase service at that level for the stated term of the contract under the same terms and conditions."

"Data Center" means a centralized facility (a) used primarily or exclusively for electronic information services such as the management, storage, processing, and dissemination of electronic data and information through the use of computer systems, servers, networking equipment, and related components that (b) has an aggregate monthly maximum demand of greater than 25,000 kW. Unless otherwise specified, the term "Data Center" shall include "Mobile Data Center."

"Mobile Data Center" means a centralized facility (a) used primarily or exclusively for electronic information services such as the management, storage, processing, and dissemination of electronic data and information (including mining of cryptocurrency) through the use of computer systems, servers, networking equipment, and related components that (b) has an aggregate monthly maximum demand of greater than 25,000 kW and has load that is portable and/or distributable, including but not limited to structures that are not affixed to the ground or are easily removed from a location.

"Single Location" refers to an area that is owned, operated, or leased by the Data Center customer with the metering point for the customer's metering point. A contiguous lot (or lots) to the area with the customer's metering point may be considered the customer's premises regardless of easements, public thoroughfares, transportation rights-of-way, or utility rights-of-way, so long as it would not create an unsafe or hazardous condition.

"Load Ramp Contract Capacity" means the mutually agreed monthly peak load requirements associated with the Load Ramp Period. The Load Ramp Contract Capacity shall not be less than:

In Year 1, 50% of Contract Capacity.
In Year 2, 65% of Contract Capacity.
In Year 3, 80% of Contract Capacity.
In Year 4, 90% of Contract Capacity.

"Load Ramp Period" refers to the time of commencement of service until the customer reaches full contract capacity, which shall not exceed four years.

P.U.C.O. NO. 21

SCHEDULE DCT
(Data Center Tariff)

"Existing Load" means Data Center load for which a letter of agreement or electric service agreement has already been signed by the effective date of Schedule DCT.

"New Load" means Data Center load for which a letter of agreement or electric service agreement has not been signed before the effective date of Schedule DCT.

Availability of Service

Service pursuant to this schedule is available for general service to customers that operate a Data Center that will use, within the initial contract term, a monthly maximum demand of greater than 25,000 kW at a Single Location or an aggregated Total Customer Contract Capacity in Service Territory of greater than 25,000 kW as described below.

Customers qualifying for this schedule that execute an electric service agreement with the Company or expand their current contracted capacity after the effective date of this tariff are required to take service under this schedule and will not be permitted to take service under other general service tariffs.

Schedule DCT does not apply to Existing Load above 25,000 kW that has already signed a letter of agreement or electric service agreement by the effective date of Schedule DCT, so long as the Existing Load does not expand by more than 25,000 kW above the contracted capacity under the existing electric service agreement following the effective date of Schedule DCT. Schedule DCT will apply to an Existing Load that signs a new electric service agreement to expand its Existing Load by more than 25,000 kW of New Load above the contract capacity under the existing electric service agreement after the effective date of Schedule DCT. At the customer's request, AEP Ohio will use reasonable efforts to separately meter the New Load to which Schedule DCT applies, but it may not be technically feasible to do so. If it is technically feasible to separately meter, the customer will pay all costs reasonably incurred by AEP Ohio to complete such separate metering. If the load is not separately metered, then the Existing Load will lose its Existing Load status and become subject to Schedule DCT.

If the customer facility operates one or more Data Centers with a monthly maximum demand of greater than 25,000 kW and has non-Data Center load (that would otherwise be billed under the General Service or other applicable Schedule) at a Single Location, Schedule DCT will apply to all electric distribution service to that customer, provided, however, that the customer shall have the option of separately metering its Data Center and non-Data Center loads (if technically feasible) and paying for those loads through separate customer accounts. In such situation, the customer shall be responsible for all metering and other costs necessary to separate its load into separate customer accounts.

The terms and conditions of service under this this schedule shall apply upon a request for service by an eligible customer but service to customers under this schedule will not commence until the Company has sufficient capacity to meet the contractual load requirements.

With Commission approval, service to a Schedule DCT customer may be suspended by AEP Ohio if customer usage exceeds its Contract Capacity by more than 1,000 kW. If the Company determines that additional capacity is available from AEP Ohio to serve additional load at the customer site, the Company

P.U.C.O. NO. 21

SCHEDULE DCT
(Data Center Tariff)

may also seek mutual agreement to adjust the Contract Capacity and reserves the right to raise the issue before the Commission if there is no agreement.

Monthly Rate

Schedule Code	Service Voltage	Distribution Demand Charge ($/kW)	Excess Reactive Demand ($/kVA)	Customer Charge ($)
296,796	Secondary	$7.01	$1.25	$9.40
295,795	Primary	$6.33	$1.21	$138.50

Schedule Code	Service Voltage	Distribution Demand Charge ($/kW)	Excess Reactive Demand* ($/kVAR)	Customer Charge ($)
297,797	Transmission	--	$0.70	$3,600

*For each kVAR of reactive demand, leading or lagging, in excess of 50% of the kW metered demand.

Minimum Charges

The minimum monthly charge under this schedule shall be the sum of the customer charge, the product of the distribution demand charge and the monthly distribution billing demand, and all Commission-approved riders shown on Sheet Number 104-1.

Monthly Billing Demand

Billing demand in kW shall be taken each month as the single highest 30-minute integrated peak in kW as registered during the month by a 30-minute integrating demand meter or indicator, or at the Company's option, as the highest registration of a thermal-type demand meter. The customer will have no more than the Load Ramp Period to reach full contract capacity, during which time monthly billing demand shall not be less than 85% of the customer's Load Ramp Contract Capacity. After the Load Ramp Period, monthly billing demand established hereunder shall not be less than the greater of (a) 85% of the customer's highest previously established monthly billing demand during the past 11 months or (b) the customer's "Minimum Demand" as set forth below:

Total Customer Contract Capacity in Service Territory	Minimum Demand
25,001 kW to 75,000 kW	15,000 kW plus 85% of marginal amount over 25,000 kW

P.U.C.O. NO. 21

SCHEDULE DCT
(Data Center Tariff)

75,001 kW and above	57,500 kW plus 100% of marginal amount over 75,000 kW; provided, however, that the minimum demand will not exceed 85% of the total contract capacity.

All New Loads of affiliated companies and companies with common ownership greater than 25,000 kW will be considered in the aggregate for purposes of determining the “Total Customer Contract Capacity in Service Territory” and calculating the “Minimum Demand” in the chart above that will be included for the full term of each Contract for New Load under this Schedule DCT. Existing Load will not be considered as part of the “Total Customer Contract Capacity in Service Territory.” All affiliated New Load will be stacked in order of the energization date so the Minimum Demand can be applied based on multiple Contracts, as applicable. If there are multiple New Loads at a Single Location of less than 25,000 kW (but the aggregate total load is greater than 25,000 kW), all of those New Loads will be subject to Schedule DCT.

Unless otherwise mutually agreed by the Company and the customer, the customer shall be billed under the provisions of this tariff using the Contract Capacity during all months of the initial term of contract should the customer fail to energize service. The monthly billing demand defined hereunder shall apply for purposes of billing under all applicable riders, regardless of any conflicting provision in the rider.

Delayed Payment Charge

Bills are due and payable in full by mail, checkless payment plan, electronic payment plan or at an authorized payment agent of the Company within 21 days after the mailing of the bill. On all accounts not paid by the due date, an additional charge of 2.5% of the unpaid balance will be due.

Applicable Riders

Monthly Charges computed under this schedule shall be adjusted in accordance with the Commission-approved riders on Sheet Number 104-1 that apply to Demand Metered commercial and industrial service. Nothing in this tariff excepts eligible customers from other riders or applicable tariffs.

Generation Service

Customers receiving service under this schedule may select competitive service from a CRES Provider or Standard Offer Service. The Company requires that Company-owned metering be installed to monitor the customer's load.

Transmission Service

Customers receiving service under this schedule shall pay the charges established for Demand Metered Service under the Basic Transmission Cost Rider (“BTCR”). New Loads receiving service under this schedule are not eligible to participate in the 1CP or 6CP BTCR Programs or any successor programs.

Terms of Contract

Filed pursuant to Order dated July 9, 2025 in Case No. 24-508-EL-ATA

P.U.C.O. NO. 21

SCHEDULE DCT
(Data Center Tariff)

Contracts under the Schedule shall be made for an initial period of not less than the Load Ramp Period plus 8 years. By way of example, the initial period of a Contract for a Data Center with a 4-year Load Ramp Period will be 12 years. If electric infrastructure is not in place to serve the customer by the Contract's estimated in-service date, the customer may petition the Commission for an adjustment to the contract term based on the facts and circumstances presented at that time (but will otherwise remain the Load Ramp Period plus 8 years).

After the initial term, Contracts shall remain in effect unless terminated by either party by providing written notice to the other party no later than three (3) years prior to the requested date of termination. After the initial term, either party may request a modification to the Contract Capacity by providing written notice to the other party no later than three (3) years prior to the requested modification date. During the initial term of the Contract, the customer will be financially responsible to pay the minimum charges regardless of the customer choosing to curtail, reduce, suspend, or terminate service. If after completion of the fifth year of the Contract after the Load Ramp Period the customer chooses to pay an exit fee equal to minimum charges for 36 months after notice of termination, the customer can thereafter terminate the contract. By way of example, a customer with a 3-year Load Ramp Period may pay the exit fee and terminate the contract only after Year 8 of the Contract.

The customer shall agree with the Company in advance its Load Ramp Contract Capacity and a final Contract Capacity value to be used for the remaining initial term of the contract. A new contract will be required for any load additions in excess of 100 kW.

The Company shall not be required to supply capacity in excess of the Contract Capacity except by mutual agreement.

Nothing in this Schedule limits the requirement that a customer sign a Letter of Agreement for network and customer specific investment prior to energization or Contribution in Aid of Construction agreement for customer-specific investment.

To sign a contract under this Schedule, the customer must designate a specific site at which its Data Center project will be constructed and served by the Company, and the customer must own or have the exclusive right to use the land for this purpose.

Collateral Requirement

For purposes of the collateral requirement under this section, "customer" shall include both the customer and the customer's financial sponsor as long as the sponsor is a co-signer on the contract with AEP Ohio The customer, if not having both (a) a credit rating of at least A- from S&P Global Inc. ("S&P") and A3 from Moody's Corporation ("Moody's") and (b) cash and cash equivalents on an audited balance sheet prepared in accordance with Generally Accepted Accounting Principles ("GAAP") ("Liquidity") greater than ten times the Collateral Requirement, must provide a guarantee or collateral at the time of signing the contract equal to 50% of the total minimum charges for the full term of the contract ("Collateral Requirement"), calculated based on AEP Ohio's rates in effect at the time the Collateral Requirement is provided. The Collateral Requirement must be provided in one or more of the following forms:

P.U.C.O. NO. 21

SCHEDULE DCT
(Data Center Tariff)

1. A guarantee from the ultimate parent or a corporate affiliate of the customer for the full Collateral Requirement, so long as the guarantor has both (a) a credit rating of at least A- from S&P and A3 from Moody's and (b) Liquidity greater than ten times the Collateral Requirement; or

2. A standby irrevocable letter of credit ("Letter of Credit") for the full Collateral Requirement. The Letter of Credit must be issued by a U.S. bank or the U.S. branch of a foreign bank, which is not affiliated with the customer or its guarantor, with a Credit Rating of at least A- from S&P and A3 from Moody's. Such security must be issued for a minimum term of 360 days. The customer must cause the renewal or extension of the security for additional consecutive terms of 360 days or more no later than 30 days prior to each expiration date of the security. If the security is not renewed or extended as required herein, the Company will have the right to draw immediately upon the Letter of Credit and be entitled to hold the amounts so drawn as security. The Letter of Credit must be in a format acceptable to and approved by the Company.

3. Cash for the full Collateral Requirement.

The amount of the Collateral Requirement will be reduced by one year's minimum charges for each year the customer is energized and makes on-time electric service payments under the contract.

If the financial condition of the customer or guarantor changes – or market conditions (including ownership/structural changes) change – over the term of the contract, the Company may request updated information to reevaluate the customer and its collateral requirements, which may be adjusted accordingly.

Customer-Owned Generation and Emergency Conditions

Consistent with Ohio Administrative Code Chapter 4901:1-22, Schedule DCT Customers shall enter into an interconnection agreement between the Company and the Customer in advance of connecting any source of power other than the delivery point specified in the Contract. Emergency or backup generation that is not designed to operate in parallel with the Company's system is not subject to the additional requirements in this section.

With Commission approval, service to any customer using behind-the-meter generation to serve some or all of its demand that elects not to offset its Contract Capacity with output from its behind-the-meter generation may be suspended by AEP Ohio if customer usage exceeds its Contract Capacity by more than 1,000 kW.

If the customer elects to use its behind-the-meter generation to offset the customer's Contract Capacity (either in initially establishing service or in the context of a subsequent load expansion or behind-the-meter generation expansion at the same site, as reflected in a new or updated Contract Capacity), the following requirements will apply. In order to ensure that the Customer's election to net does not result in it exceeding its Contract Capacity, equipment must be in place and maintained through the term of the Electric Service Agreement to instantaneously curtail load equal to or greater than the behind-the-meter generation output, subject to the then-current technical requirements of the transmission provider. If the

P.U.C.O. NO. 21

SCHEDULE DCT
(Data Center Tariff)

equipment fails and results in the customer exceeding its Contract Capacity, the Company reserves the right to raise before the Commission any unresolved reliability or safety concerns based on the facts and circumstances presented at that time.

Nothing in this paragraph affects AEP Ohio's right to disconnect or curtail load in accordance with Section 26 of the Terms and Conditions of Service in the Company's tariff and Ohio Administrative Code 4901:1-10-16.

Special Terms and Conditions

This schedule is subject to the Company's Terms and Conditions of Service.

Customers served under this tariff agree to written attestation as part of its Contract that the customer will follow all applicable technical operating requirements, such as not intentionally or unintentionally cycling load in a way that creates an imbalanced or unacceptable system frequency, and other requirements that will be maintained and periodically updated for the safety of the larger system. Upon detection of any activities outside of the technical requirements, the Company has the right to disconnect.

With Commission approval, service may be suspended by AEP Ohio to a customer under Schedule DCT (including a customer with behind-the-meter generation that has elected not to net its Contract Capacity) if the customer usage exceeds its Contract Capacity by more than 1,000 kW. If additional capacity is available at the customer site, the Company may also seek mutual agreement to adjust the Contract Capacity and reserves the right to raise the issue before the Commission if there is no resolution. Nothing in this paragraph affects the provision above regarding behind the-meter generation or is intended to preclude the Company from disconnecting service or curtailing load to a Schedule DCT customer without Commission approval in accordance with Section 26 of the Terms and Conditions of Service in the Company's tariff and Ohio Administrative Code 4901:1-10-16.

Prior to receiving service, Mobile Data Center customers will be required to provide a sworn statement, under penalty of perjury, that neither the customer nor its corporate parent or affiliates are affiliated with or acting on behalf of any foreign adversary as defined in 15 C.F.R. § 7.4. If AEP Ohio has a good faith belief that a Mobile Data Center customer has provided false information in response to this requirement, AEP Ohio has the right to immediately disconnect service to the Mobile Data Center permanently or until adequate proof is shown to satisfy AEP Ohio that the Mobile Data Center customer meets this requirement.

I. INTRODUCTION

Q. State your name, occupation, and business address.

A. My name is Shana Ramirez, and I am a Director at Energy and Environmental Economics, also known as E3. My business address is 44 Montgomery Street, Suite 1500, San Francisco, CA 94104.

Q. On whose behalf are you filing testimony?

A. I am filing testimony on behalf of the Data Center Coalition ("DCC").

Q. Describe your professional background and experience.

A. I bring over a decade of experience in the energy industry, with a focus on regulatory policy, load forecasting, rate design, and renewable energy development. Prior to joining E3, I held several positions at NV Energy, including in the Rates, Load Forecasting, and Regulatory Affairs departments. Most recently, I served as Program Development Director in the Renewables Department.

In that role, I led a team responsible for advancing innovative power supply solutions and tariff designs for large-load customers, including data centers and other energy-intensive users such as casinos and mines. This work required close coordination with internal regulatory, legal, and resource planning teams, as well as extensive engagement with external stakeholders such as customers, developers, and regulatory staff.

A key outcome of this work was the design and successful regulatory approval of the Clean Transition Tariff by the Public Utilities Commission of Nevada. This tariff enables large load customers to procure renewable energy resources to meet their operational needs while aligning customer preferences with state policy objectives. My

role also involved negotiating and structuring contracts that included thorough assessments of financial security requirements and risk mitigation provisions.

Earlier in my career, I worked in the insurance sector where I performed actuarial analysis focused on risk assessment and modeling. These skills continue to inform my approach to evaluating utility programs and contract structures.

Q. Please describe E3.

A. E3 is an economic consulting firm with more than 30 years of experience specializing in the North American power sector. The firm provides data-driven insights and objective recommendations to a diverse range of clients, including utilities, regulatory agencies, government entities, project developers, investors, and non-profit organizations.

Through its work across all segments of the energy industry, E3 offers a comprehensive understanding of energy markets, resource planning, public policy, regulation, and environmental considerations. The firm is committed to producing clear and impartial analyses. That is why my recommendations are fair and balanced, addressing the needs of both the utility and large-load customers.

Q. Have you previously testified before the Missouri Public Service Commission ("Commission")?

A. I have not. However, I recently provided testimony before the Michigan Public Service Commission[1] and Virginia State Corporation Commission,[2] both on behalf of DCC. Those testimonies addressed topics similar to the topics I address in this testimony.

Q. What topics are you addressing in your testimony?

A. My testimony addresses financial security requirements for large load customers, including data centers. I review Evergy Metro, Inc., d/b/a Evergy Missouri Metro and Evergy Missouri West, Inc., d/b/a Evergy Missouri West's (collectively, "Evergy" or the "Company") proposal, outline best practices for credit and collateral frameworks, and recommend a holistic risk-appropriate financial security approach to the Commission. The objective is to protect ratepayers while enabling equitable and scalable integration of large loads into Evergy's system.

Q. How is your testimony structured?

A. My testimony is organized in 4 sections:

Section 1: Introduction

This section presents my professional qualifications and describes E3's expertise in electric infrastructure planning, rate design, strategic planning, load forecasting, and market analytics. It also outlines the purpose of my testimony.

[1] In the Matter of the Application of Consumers Energy Company for *Ex Parte* Approval of Certain Amendments to Rate GPD, Michigan Public Service Commission, Case No. U-21859, *Rebuttal Testimony of Shana Ramirez* (July 9, 2025).

[2] Application of Virginia Electric and Power Company For a 2025 Biennial Review of the Rates, Terms and Conditions for the Provision of Generation, Distribution and Transmission Services Pursuant to § 56-585.1 A of the Code of Virginia, Virginia State Corporation Commission, Case No. PUR-2025-00058, *Direct Testimony of Shana Ramirez* (Jul. 16, 2025).

Section 2: Large Load Interconnections & Financial Security Best Practices

This section identifies and discusses the financial and operational challenges introduced by large load interconnections. It sets forth core principles for designing effective credit and collateral frameworks and assesses the relevance of these principles in the context of Evergy's service territory. Specific areas of focus include customer creditworthiness, exemptions from collateral requirements, the adequacy of collateral forms, exit or capacity-reduction charges, and the importance of ongoing reporting and oversight mechanisms. The section concludes with a summary of my testimony's key insights, emphasizing recommended actions for utilities and regulators to improve financial risk management, enable sustainable infrastructure development, and promote equitable cost outcomes for all customer classes.

Section 3: Evergy's Financial Security Proposal and Industry Benchmarking

This section presents a qualitative review of Evergy's current credit and collateral proposal as part of this proceeding. It compares Evergy's approach to those of peer utilities across other regions, assessing alignment with industry standards, effectiveness in mitigating financial risk, and opportunities for refinement. It also highlights policy design features that reflect best practices, such as transparency, scalability, and balanced risk allocation, with a view to supporting beneficial load growth while protecting ratepayers.

Section 4: Recommendation to the Commission

The final section offers recommendations to the Commission. These recommendations address improvements to Evergy's credit and collateral policies to better manage financial risks, encourage responsible data center integration, and support long-term system planning objectives.

Q. Before summarizing your recommendations, do you fully understand the Company's financial security proposal?

A. No, there is a discrepancy between the financial security proposal described by Company witness Mr. Lutz and the language contained in the Large Load Power Service ("LLPS") tariff included in Schedule BDL-1. In fact, the discrepancies are significant, as illustrated in Table 1 in the following question and answer. The tariff language is more favorable to large load customers than the provisions outlined in Mr. Lutz's testimony.

Q. Please summarize your recommendations to the Commission.

A. Table 1 below summarizes my financial security recommendations to the Commission. I recommend that the Commission direct Evergy to revise its proposed credit and collateral framework to better align with actual financial risk, reflect established regulatory principles, and support continued data center and large-load development in Missouri. In light of the discrepancies described above, I have incorporated both proposed requirements as outlined in Mr. Lutz's testimony and the LLPS tariff language in Schedule BDL-1 into Table 1.

Table 1: Financial Security Recommendation Versus Evergy's Proposal

Category	Testimony Proposal Bradley D. Lutz' testimony[3]	Tariff Proposal LLPS Tariff Language in Schedule BDL-1[4]	DCC Recommendation to the Commission
Collateral Amount	Equal to two years of minimum monthly bills, recalculated annually	Equal to three years of maximum monthly bill, recalculated annually; customer to provide the recomputed amount if it is 10% or higher, greater than the current amount held	Equal to two years of minimum monthly bills, starting at ESA execution; ramps with investment, reaches full collateral at energization through the load ramp, then declines over the contract term
Exemption Criteria	None	Full exemption if company is rated at an investment grade of at least A- from S&P and A3 by Moody's, and holds liquidity of at least 10x the collateral amount	Full exemption if company is rated at an investment grade of at least A- from S&P or A3 by Moody's, and holds liquidity of at least 10x the collateral amount with no maximum
Partial Exemption	50% reduction if company is rated at an investment grade of at least A- from S&P or A3 by Moody's, and holds liquidity of at least 10x the collateral amount up to a $150M maximum *or* 40% reduction if the customer does not qualify the credit rating threshold but hold liquidity of at least 10x the collateral amount up to a $125M maximum	50% reduction if the company does not qualify for the credit rating threshold but maintains liquidity of at least 10x the collateral amount up to a $250M maximum	50% reduction if company or parental, affiliate, tenant or 3rd party with financial interest in the customer guarantor holds liquidity equal to 5X the required collateral amount o*r* 30% reduction if: - The company or parental, affiliate, tenant or 3rd party with financial interest in the customer guarantor maintains liquidity equal to at least 2X the required collateral amount with no maximum, *or* - Company provides a signed lease for the full ESA term and shows >50% of facility capacity is contracted to a qualified tenant. Tenant must meet credit rating threshold, not be on credit watch, a or maintain liquidity ≥ 2X required collateral
Acceptable Forms	Guarantee from parent/affiliate, full-value irrevocable letter of credit, or full cash deposit	Guarantee from parent/affiliate if guarantor, full-value irrevocable letter of credit, or full cash deposit. is rated at an investment grade of at least A- from S&P and A3 by Moody's, and holds liquidity of at least 10x the collateral amount	In addition to the forms proposed there should be alternative collateral options such as short/medium-term deposits, debt service reserve accounts (with interest), or bespoke insurance products. Customer may also post a guarantee from a parent, affiliate, tenant, or financially interested entity.
Interest Accrual	None – collateral does not accrue interest while held	None – collateral does not accrue interest while held	Should accrue interest and be accrued interest should be returned to the customer on a quarterly basis

II. LARGE LOAD INTERCONNECTIONS & FINANCIAL SECURITY BEST PRACTICES

Q. What is financial security?

A. Financial security refers to assets, credit instruments, collateral, or contractual assurances provided by large-load customers to the utility. It serves to mitigate the risk of non-payment or stranded assets, helping ensure that the cost of service is recovered and not shifted to other ratepayers.

Q. What risks do large loads, including data centers, pose to utilities and other ratepayers?

A. Large loads, such as data centers, pose several potential risks related to system reliability, cost impacts, and regulatory compliance. Rapid and substantial load growth can strain existing generation resources and create congestion on transmission and distribution networks. These pressures not only challenge the short-term reliability of the system but also complicate long-term resource and infrastructure planning.

From a financial standpoint, utilities may need to undertake significant capital investments in infrastructure upgrades, including new substations, transmission lines, and distribution enhancements along with investments to both maintain existing generation resources and to build new ones, to accommodate such loads. Should the customer reduce operations unexpectedly or exit the service territory, these investments may become stranded assets. In such cases, the financial burden could shift to other ratepayers, especially if adequate financial security protections are not in place to mitigate the impact.

[3] Missouri Public Service Commission Case No. EO-2025-0154, *Direct Testimony of Bradley D. Lutz*, pp. 19-20 (Feb. 14, 2025).
[4] *Id*. at Schedule BDL-1, p. 38.

The risk of non-payment or partial recovery of infrastructure costs also poses a liability for the utility and its broader customer base.

Q. What are the potential benefits of large load customers taking service in Evergy's territory?

A. Large load customers, including data centers, manufacturing facilities, and emerging industries, provide substantial economic, operational, and strategic benefits to the utility and the broader community. Economically, they contribute to job creation, attract private investment, expand the tax base, and stimulate regional economic development. From a system reliability perspective, their presence may support and even accelerate necessary utility investments in aging infrastructure, ultimately enhancing service quality for all customers.

Multi-year service commitments from large load customers enhance the utilization of both existing and new generation and transmission assets. These customers also contribute stable, long-term demand, which supports more efficient resource planning and system modernization efforts.

Financially, large loads can increase and stabilize utility revenues by expanding overall system usage. A higher total sales volume allows the utility to distribute fixed system costs across more kilowatt-hours, which may help reduce costs for other ratepayers.

From a policy and compliance standpoint, many large load customers are actively pursuing ambitious sustainability objectives. This creates opportunities for meaningful collaboration on clean energy procurement, energy efficiency initiatives, and innovative grid solutions. Furthermore, large, consistent loads may catalyze the deployment of emerging technologies, such as advanced geothermal or nuclear power, hydrogen-based

fuels, and grid-scale energy storage as well as supporting a variety of grid-enhancing technologies. By serving as anchor customers or project sponsors, these entities can help advance alternative pathways to achieving the utility's clean energy and decarbonization goals especially if they are willing to take on more risk such as supporting first-of-a-kind technologies that is not appropriate for a utility to bear but could provide future benefits when those technologies are potentially de-risked.

Q. What is your position on requiring financial security for large load customers?

A. I support requiring financial security from large load customers as a means of protecting utilities and their ratepayers from potential financial risks, including stranded assets, project delays, and customer default. Large load projects often require substantial infrastructure investment. If such projects are canceled, delayed, or significantly reduced, the resulting sunk costs may ultimately be shifted to other ratepayers. Financial assurances such as collateral, guarantees, or prepayments work in tandem with others rate payer protections such as capacity reduction penalties and exit fees. These mechanisms collectively ensure that customers assume appropriate responsibility for the risks they introduce and that the utility can recover its costs.

Q. At a high level, how should the utility approach the design of financial security requirements for large load customers?

A. Utilities should design financial security requirements that are proportionate to the specific risks associated with each large-load project. In many cases, these customers are supported by financially stable sponsors and long-term commercial commitments. Applying a uniform or overly rigid approach to all customers may unintentionally discourage low-risk,

high-value projects. A more effective framework would recognize differences in project profiles and adopt a flexible, risk-based approach to credit assurance.

One recommended strategy is a staged or milestone-based structure, in which financial security requirements begin conservatively but evolve over time. As customers advance their projects, demonstrate meaningful progress, and commit capital, the utility's exposure to financial risk diminishes. Accordingly, financial requirements should adjust to reflect that reduced risk. This approach encourages responsible project development while still protecting the utility and its ratepayers.

Utilities should also offer a range of acceptable credit instruments, including surety bonds, parent guarantees, and upfront financial contributions. Providing flexibility in the form and timing of collateral allows creditworthy customers to meet requirements without unnecessary liquidity strain. Tailoring financial security to the customer's credit quality and project status promotes transparency, supports scalable growth, and reduces the likelihood of inefficient capital allocation.

In addition, utilities should consider evaluating financial risk at the cluster level when appropriate. Similar to how interconnection studies assess multiple projects based on shared geographic or operational characteristics, financial risk can also be aggregated and managed across groups of customers. This can be particularly useful in areas where many similar large-load projects are requesting service simultaneously.

Finally, the utility's financial security framework should account for how customers perceive risk in the service territory. Excessive or inflexible collateral requirements, particularly when combined with uncertainty in interconnection timelines or lack of procedural transparency, can materially increase the cost of development. Customers

incorporate these factors into their risk assessments when deciding whether to move forward with a project or cite a project in a specific utility territory. If the perceived risk outweighs the potential benefit, projects may be delayed, reprioritized, or abandoned. This can lead to reduced load growth, underutilized infrastructure, and unintended consequences for ratepayers.

Q. Is there a risk aligned framework that can be replicated when designing credit and collateral requirements?

A. Yes, E3 has created a risk aligned framework that I will detail below that recognizes the risks associated with large load interconnections while enabling responsible large load growth. I recommend the Commission consider the following core design principles when considering Evergy's financial security proposal:

1. Balance

Credit and collateral frameworks should be calibrated to reflect genuine financial risk, including the potential for stranded costs or revenue volatility. A well-balanced structure considers the specific characteristics of the load, the development phase of the project, the financial standing of the sponsor, and the degree of capital commitment. A balanced framework should:

- Distinguish between perceived risks and those supported by objective data, historical performance, or clear precedent.
- Align both the timing and magnitude of collateral requirements with the utility's true financial exposure. This helps address the asymmetry that may exist between the utility's understanding of demand risk and the data center's

understanding of utility-related risks, such as delays or infrastructure constraints.

- Include clear and predictable mechanisms for reducing or releasing collateral as the customer's risk profile improves over time. This may occur through demonstrated performance, credit enhancements, or progression through defined project milestones.

2. Equity

While large loads such as data centers may introduce new operational profiles, the application of established regulatory principles remains paramount. Specifically, the principles of cost causation and nondiscriminatory treatment must guide policy design. An equitable framework should:

- Avoid the use of arbitrary thresholds or the imposition of sector-specific requirements that are not clearly tied to measurable risk.
- Apply consistent standards to similarly situated customers. Large, high-load-factor customers in the industrial, manufacturing, or other commercial sectors should be treated comparably in terms of financial security requirements.
- Align with regulatory expectations for fairness in cost allocation, access to service, and the design of rates and terms. This ensures that customers are not unfairly disadvantaged based on industry classification or business model.

3. Optionality

Rigid or one-size-fits-all credit requirements may unintentionally exclude financially sound projects that are structured differently. Introducing optionality into credit

frameworks allows utilities and customers to address risks pragmatically and equitably. An optionality-based approach should:

- Allow the use of various credit instruments, including but not limited to Contributions in Aid of Construction ("CIAC"), surety bonds, irrevocable letters of credit, guarantors and liquidity. These tools provide flexibility while still securing the utility's financial interests.
- Enable utilities to match credit instruments to the specific type and timing of risk. For example, requirements may differ between construction-phase exposure and longer-term credit risk during ongoing operations.

4. Scalability

As Missouri experiences sustained growth in large load interconnection requests, Evergy's credit and collateral policies must evolve accordingly. Scalability is essential to ensuring timely and efficient processing without compromising risk mitigation or fairness. A scalable policy framework should include:

- Objective eligibility benchmarks and project development milestones that determine when collateral is required, in what amount, and under what conditions.
- Streamlined administrative processes for credit evaluation, application submission, and ongoing compliance, ensuring timely review and reducing resource burdens on both the utility and the customer.
- Transparent communication of expectations, responsibilities, and timelines, ensuring all parties have a shared understanding of the process and requirements.

Q. What are the best practices that define the risk aligned framework identified by E3?

A. The best practices within the risk aligned framework aim to ensure cost recovery, support responsible load growth, and promote fair treatment of all customers.

A key principle is aligning financial security requirements with actual risk exposure. This involves using a phased or milestone-based structure in which collateral levels adjust based on the project's stage and the utility's financial commitment. Early-stage projects, which carry higher risk, should provide greater upfront security that can be reduced as the project advances through permitting, financing, construction, and operation.

Another best practice is offering a standardized set of acceptable collateral instruments. Utilities should accept various forms of security, such as surety bonds; guarantees from a parent, affiliate, tenant, or other entity with a financial interest in the customer; sponsor support agreements; and CIAC. This flexibility accommodates different customer financial structures while maintaining utility protection.

Avoiding redundancy is also important. Utilities should not impose overlapping forms of security that address the same risk, such as combining CIAC, exit fees, and demand guarantees without clear justification. Credit frameworks should include evaluation tools, such as a credit efficiency index or "scorecard," to assess the adequacy of existing protections and calibrate requirements appropriately.

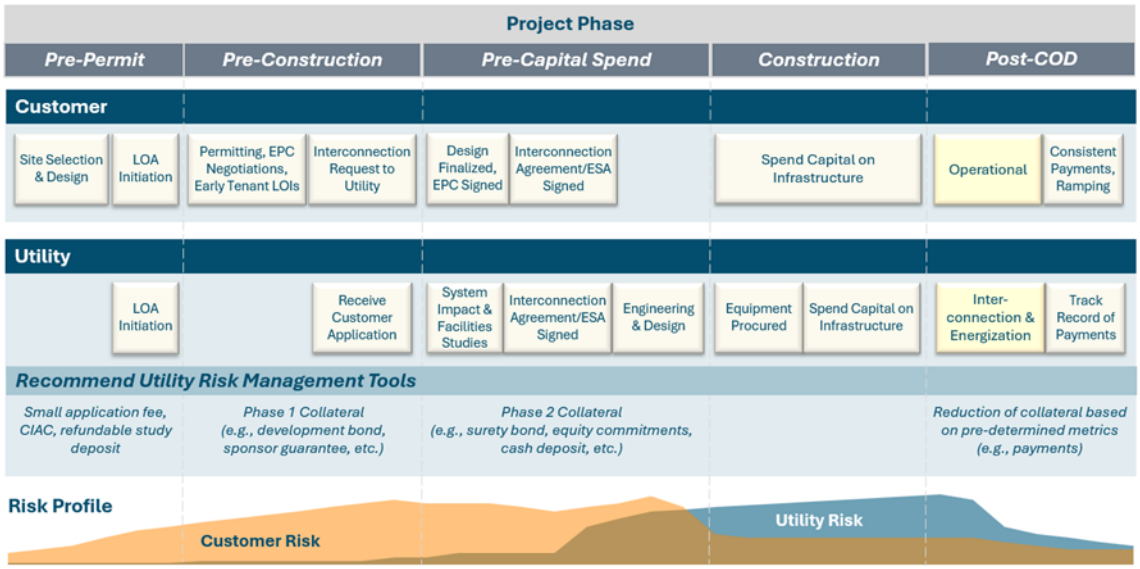

Transparency and consistency are essential. Utilities should define clear credit evaluation criteria, including liquidity thresholds, credit ratings, and exemption standards. Frameworks must also be scalable and adaptable to accommodate growing and evolving large load interconnection requests.

Together, these practices provide a disciplined and balanced approach that protects ratepayers, supports infrastructure investment, and ensures a fair and efficient interconnection process.

Q. Please provide more details on the milestone-based approach.

A. A milestone-based approach to financial security ties the level and type of collateral to key stages in the development of a large load project and the customer's lifecycle. Rather than imposing a fixed collateral requirement, this approach adjusts financial security obligations as the utility's exposure evolves over time. Figure 1 demonstrates the risk borne by the customer and utility at project milestones and risk management tools correlating with the milestone.

Figure 1: Project Development Timeline from the Utility and Customer Perspective

Financial security requirements should begin when the utility starts making financial commitments on behalf of the customer and increase as those investments grow. Financial security requirements could be in the form of partial collateral or, as is the case

with Evergy, other forms of financial assurances. At the customers' facility commercial operation date and throughout the load ramp period, full collateral should be held to incentivize customers to meet their ramp targets and to mitigate the risk of underutilized assets. Once the customer has fully ramped their load, collateral should be gradually reduced to reflect the declining risk to the utility and ratepayers. This reduction should continue month by month as the customer meets its contractual obligations, aligning financial security with actual performance and risk.

The milestone-based framework offers a transparent, scalable, and disciplined way to manage financial security. It balances ratepayer protection with flexibility for responsible, creditworthy customers and aligns financial obligations with both project risk and utility investment timing.

Q. Please expand on the standardized menu of acceptable collateral instruments.

A. A standardized menu of acceptable collateral instruments is essential to a transparent and effective financial security framework for large load customers. It provides clarity and consistency by listing approved financial tools that customers may use to meet collateral obligations. This approach promotes fairness and allows customers to select instruments that align with their financial structure, while ensuring the utility remains protected.

Common instruments include letters of credit, guarantees, surety bonds, and cash deposits. Letters of credit must be issued by a U.S. bank or a U.S. branch of a foreign bank with a minimum credit rating, typically BBB- or higher from S&P and a Baa3 or higher from Moody’s. These letters must meet requirements for term length and automatic renewal. Parent or affiliate guarantees must come from entities with sufficient credit quality and liquidity to support the obligation. Surety bonds, issued by qualified insurers, can be a

cost-effective option. Cash collateral, though less flexible, offers strong security and is universally accepted.

Including these instruments, along with clear eligibility standards, ensures the utility's financial exposure is adequately managed without imposing excessive burdens on customers. The availability of multiple options supports a range of financial profiles and simplifies compliance and enforcement. This structure helps maintain equitable treatment, operational efficiency, and a balanced approach to risk management.

Q. Should there be collateral exemptions?

A. Yes. Collateral exemptions are appropriate because financial security requirements should reflect the actual risk posed by each customer. Applying uniform collateral across all large load customers can lead to overcollateralization and create unnecessary barriers, particularly for financially stable and low-risk entities.

Exemptions should be based on objective criteria as discussed in the previous answer. For example, a customer with an investment-grade rating and liquidity exceeding ten times the required collateral should not be subject to the same obligations as a customer with speculative credit and low liquidity. Customers without formal ratings but with strong liquidity and financial transparency should also qualify for partial exemptions.

Establishing structured, risk-based exemptions allows utilities to maintain necessary protections while promoting fairness and investment. A balanced exemption framework ensures accountability, avoids unnecessary cost burdens, and protects ratepayers without discouraging viable large load development.

Q. What is your stance on collateral reduction?

A. Collateral reduction is a critical component of a well-designed financial framework. As a large-load project advances through development, enters commercial operation, and the utility begins recovering its capital investment, the financial risk to the utility and its ratepayers declines. Collateral requirements should be structured to reflect this declining risk, decreasing over time or upon the achievement of clearly defined milestones.

For example, once a customer has completed construction, initiated commercial operations, and established a record of timely payments, the likelihood of default or early termination is significantly reduced. Continuing to require the full collateral amount beyond this point imposes unnecessary capital constraints on the customer.

Holding millions of dollars in collateral for the full term of the Electric Service Agreement restricts the customer's ability to deploy capital toward other productive investments, including those that support reliability, innovation, or sustainability. A declining collateral schedule that tracks actual risk exposure helps ensure that financial security policies are both protective and practical.

Q. Do you recommend a certain form of collateral?

A. No. There is no single form of collateral suitable for all utilities or large load customers. Risk preferences vary by utility, and customer financial structures differ widely. A rigid, uniform approach is often impractical and may lead to unintended consequences.

Collateral options should include cash deposits, standby letters of credit from investment-grade institutions, surety bonds from qualified insurers, and guarantees from a parent, affiliate, tenant or other entity with a financial interest in the customer and

supported by strong credit and liquidity. Each instrument carries distinct costs, risks, and administrative considerations.

Providing a standardized menu of approved collateral types allows utilities to manage risk effectively while giving customers flexibility to meet requirements in a manner consistent with their financial strategy. This approach encourages participation, streamlines project development, and upholds ratepayer protection through enforceable, risk-aligned instruments.

Q. Why are scalability and adaptability in credit frameworks important?

A. Scalability and adaptability are essential for managing the increasing number and diversity of large load customers, including data centers, electric vehicle charging hubs, hydrogen production facilities, and other emerging technologies. This framework is also applicable to existing manufacturers and new industrial large loads. A scalable credit framework enables utilities to apply consistent processes across a wide range of project sizes and customer types. This promotes efficiency, reduces administrative burden, and supports fair and timely evaluation of interconnection requests.

Adaptability ensures that the credit framework remains responsive to changes in market conditions, regulatory objectives, and customer risk profiles. As new customer categories emerge or financial conditions evolve, utilities must have the ability to adjust credit thresholds, collateral requirements, and exemption criteria without overhauling the entire policy structure. This flexibility allows utilities to maintain a consistent approach while addressing unique risk characteristics in a practical and efficient manner.

Together, scalability and adaptability provide the foundation for a stable, transparent, and future-ready credit policy. They allow utilities to protect ratepayers from

financial exposure while facilitating the reliable and equitable integration of large loads into the electric grid. Importantly, credit policies should not be limited to near-term concerns or tailored narrowly to one customer segment. Rather, they should be designed with a long-term, system-wide perspective that supports the anticipated growth and diversification of large load interconnections. A forward-looking framework that is both scalable and adaptable will enable utilities to manage emerging risks effectively while supporting innovation, investment, and sustained grid reliability.

Q. How transferable are these credit and collateral best practices across utilities of different sizes, ownership model, interconnection queues, or regulatory jurisdictions?

A. The principles of effective credit and collateral policy, such as proportionality, transparency, and flexibility, are broadly applicable across utilities regardless of size, ownership, or jurisdiction. While implementation may vary, these practices can be adapted to reflect local conditions.

The key factor is the relative scale of the interconnecting load. For example, a 50 megawatt ("MW") data center may present similar financial risk to a small municipal utility as a 500 MW cluster would to a large investor-owned utility. In each case, credit policies should reflect the utility's actual exposure rather than applying a uniform standard.

Utilities with smaller interconnection queues or less experience may require more conservative protections, while those with larger queues and more established procedures may support more flexibility. Ownership structure influences internal requirements, but risk-based credit frameworks can be designed to suit any utility model.

Across jurisdictions, adaptable best practices have proven effective in managing risk and enabling large load development. A tailored approach aligns financial safeguards with actual risk, benefiting utilities, ratepayers, and customers alike.

III. EVERGY'S FINANCIAL SECURITY PROPOSAL AND INDUSTRY BENCHMARKING

Q. Earlier in your testimony, you noted a discrepancy between Evergy's financial security proposal as described by Mr. Lutz and the language in the LLPS tariff contained in Schedule BDL-1. How do you intend to address this issue?

A. As noted previously, there is a significant discrepancy between the financial security provisions described in Mr. Lutz's testimony and those set forth in the LLPS tariff. In the remainder of my testimony, I will examine both versions of the proposal in detail. I will begin by describing the financial security provisions outlined in the LLPS tariff included in Schedule BDL-1, followed by a description of the financial security framework as presented in Mr. Lutz's testimony. I will then highlight the key differences between the two, including how each would impact large load customers. Finally, I will provide my evaluation and position on both proposals, including whether either is appropriate and justified in the context of the LLPS offering.

Q. What is your understanding of Evergy's financial security proposal language in the LLPS tariff in Schedule BDL-1?

A. Under the LLPS tariff contained in Schedule BDL-1, Evergy proposes a collateral requirement equal to three years of maximum monthly bills, to be held for the duration of the 15-year contract term. This amount would be recalculated annually, with the customer

required to provide additional collateral if the updated amount exceeds the previous year's requirement by 10 percent or more.

Customers with a credit rating of at least A- from S&P and A3 from Moody's, and with liquidity exceeding ten times the collateral requirement, would be fully exempt from the collateral requirement. Customers who do not meet the credit rating thresholds but maintain liquidity greater than ten times the collateral requirement would be eligible for a 50 percent exemption, capped at $250 million.

Acceptable forms of collateral include a parental or affiliate guarantee meeting the same credit rating and liquidity thresholds, a full-value irrevocable letter of credit, or a full cash deposit.

Q. What is your understanding of the collateral requirements proposed in the testimony of Mr. Bradley Lutz?

A. Mr. Lutz's testimony refers to two years of maximum bill as collateral requirement with no option for a full exemption. He proposed exemptions of 50% up to a maximum of $150 million for customers credit rating of at least A- from S&P and A3 from Moody's, and with liquidity exceeding ten times the collateral requirement and a 40% exemption if the customers do not have a credit rating but hold ten times liquidity with the exemption maximum of $125 million. He does not state if the guarantee from a parent or affiliate are subject to credit or liquidity terms and the other forms of collateral are the same as the tariff.

Q. What is your position on both of Evergy's proposals?

A. As demonstrated above, the proposals presented in the tariff and in Mr. Lutz's testimony differ significantly. From a risk management perspective, the tariff language reflects a more

reasonable and balanced approach, even though it does not fully align with best practices. A requirement of two years of maximum monthly bills, as proposed by Mr. Lutz, is generally consistent with industry norms. However, the three-year requirement described in the tariff is not unreasonable when paired with flexible exemption provisions.

The tariff allows for a full exemption for companies that meet high credit quality and liquidity thresholds. Specifically, a company must have a credit rating of at least A- from S&P and A3 from Moody's, and liquidity greater than ten times the collateral requirement. This approach is consistent with standard business practices in other industries. Companies that meet these criteria present very low risk of default or non-payment, especially when combined with other protective measures proposed in this proceeding, such as early termination fees and minimum monthly bills.

Mr. Lutz's proposal, by comparison, is more restrictive. It does not provide a full exemption under any circumstances. Instead, it allows for only partial exemptions, with stricter credit requirements and caps on the exemption amounts. These caps, set at $150 million and $125 million depending on credit status, may exclude larger projects that otherwise meet the risk criteria. This cap-based approach is problematic because it does not apply a consistent, risk-based standard. A customer either qualifies or does not. Imposing a cap is effectively discriminatory toward larger projects, whose minimum monthly bills could easily exceed the exemption limits. There is no evidence suggesting that larger projects pose greater risk than smaller ones. Neither proposal allows for the collateral to be returned prior to the termination of the contract as the risk of stranded or underutilized assets is reduced with multiple years of on time payments and appropriate demand.

Further, Mr. Lutz does not clarify whether a parent or affiliate guarantee must meet the same credit or liquidity thresholds. The limited options for providing collateral under both proposals could also hinder participation from a diverse set of large load customers. Finally, the absence of interest accrual on posted collateral is inconsistent with basic financial principles.

Q. Are you aware of any quantitative risk analysis done by Evergy that underlines their collateral proposal?

A. No, I am not aware of any quantitative risk analysis conducted by Evergy to support the specific structure or level of collateral proposed. The absence of such analysis suggests that Evergy's perceived risk is likely different than its actual risk, particularly with collateral exemptions and reductions. In the absence of data and analysis that suggests otherwise, the Commission should consider a more moderate and calibrated collateral structure.

Q. Why should the Commission consider additional flexibility in the Evergy financial security proposals?

A. Missouri's regulatory framework includes an additional layer of oversight through the Certificate of Convenience and Necessity ("CCN") process. As noted in the testimony of Mr. Gunn, the CCN requirement can extend the timeline needed to secure new capacity, particularly as the size and complexity of the interconnection queue grow.[5] While I do not take a position on the necessity of the CCN process itself, it is important to recognize that delays in energization represent a material risk for large load customers when evaluating where to site projects. The combination of a lengthy regulatory approval process and

[5] Missouri Public Service Commission Case No. EO-2025-0154, *Direct Testimony of Kevin D. Gunn*, p. 9 (Feb. 14, 2025).

stringent financial security requirements may discourage high-quality projects from selecting Missouri as a host jurisdiction. Introducing greater flexibility in Evergy's financial security provisions could help offset the potential deterrent effect of these regulatory hurdles and improve the state's competitiveness in attracting large load development.

Q. What gaps or limitations exist within Evergy's current approach to collateral and risk management when compared with other industry-wide practices?

A. Evergy's current approach to collateral and risk management reflects several notable gaps and limitations when assessed against risk assessment best practices. While the objective of safeguarding ratepayers from financial exposure is appropriate, the means by which Evergy seeks to achieve that objective are more restrictive and less flexible than necessary given the risk profile associated with qualified customers, particularly once they are fully ramped. These limitations fall into several key areas: (1) misalignment between collateral requirements and actual risk exposure; (2) limited collateral exemptions and stringent liquidity guidelines; (3) insufficient forms of collateral; and (4) asymmetrical collateral flexibility.

Q. Please explain what you mean by "misalignment between collateral requirements and actual risk exposure."

A. Collateral should be tied to specific and time-based risks, such as the risk of non-performance during project construction or failure to meet ramped load commitments. Evergy's approach collects collateral and holds it throughout the entire contract term, without regard to risk reduction over time.

Once a customer is fully ramped, operating at its contracted demand, and has established a record of timely payment, the financial risk to the utility declines significantly. Yet, under the current proposal, the collateral remains unchanged. This failure to reduce collateral in response to reduced risk does not reflect best practices, where collateral is adjusted based on credit performance, service history, or operational milestones.

By retaining collateral indefinitely, the policy overstates the utility's exposure and may discourage otherwise viable projects. A more appropriate approach would align collateral with actual risk: initiating requirements closer to when capital is committed and scaling them back as customers demonstrate reliability and financial strength.

Q. Please explain what you mean by "limited collateral exemptions and stringent liquidity guidelines."

A. Limiting the total amount of collateral exemption is arbitrary and unnecessary, suggesting misalignment between perceived and actual risk. This policy creates an uneven playing field that unfairly discriminates against larger customers and may limit investment from well-qualified customers.

Further, Evergy's requirement that customers demonstrate liquidity greater than or equal to ten times the collateral amount in order to qualify for an exemption is unreasonably stringent. This threshold excludes otherwise creditworthy entities, including those with strong ratings, reliable capital structures, and long-term commitments to the region. Such customers may not maintain that level of available liquidity as a matter of financial policy, yet they pose minimal risk to the utility or its ratepayers.

Q. Please explain what you mean by "insufficient forms of collateral."

A. Evergy's proposed financial security framework fails to recognize alternative forms of collateral that may be available to customers. These include guarantees from entities with a direct financial interest in the customer, such as a parent company, affiliate, tenant, or third party. In addition, customers may be able to demonstrate substantial lease commitments from creditworthy tenants that align with the term of the Energy Service Agreement ("ESA"). Such arrangements materially reduce the customer's risk profile and provide meaningful assurance of payment performance. By excluding these risk-mitigating mechanisms from its credit policy, Evergy's proposal adopts an overly prescriptive approach that may discourage participation from a diverse set of large load customers with varying financial structures.

Q. Please explain what you mean by "asymmetrical collateral flexibility."

A. The tariff language proposed by Evergy grants the utility the unilateral right to request additional collateral on an annual basis if the recalculated value of a customer's maximum bills exceeds the amount currently held by 10 percent or more. It is unclear whether Mr. Lutz supports this provision, as it is not addressed in his testimony. Notably, the proposed tariff does not appear to include a reciprocal mechanism that would allow customers to recover excess collateral in the event that their recalculated obligation falls below the amount previously posted. This lack of symmetry in the treatment of financial adjustments creates an imbalance in how financial risk is allocated and is fundamentally inequitable to the customer.

IV. RECOMMENDATION TO THE COMMISSION

Q. Based on the financial security best practices framework explained earlier, what are your recommendations on financial securities in this case?

A. Evergy should adopt the collateral framework I describe below, which balances ratepayer protection with proportionality, transparency, and administrative efficiency. It is also a solid middle ground approach until Evergy has the data or complete analysis that show what actual risk large load customers pose to the Company. I recommend the following structure:

1. **Collateral Amount and Duration:** The collateral amount should be equal to two years of minimum monthly bills which is consistent with what Mr. Lutz proposes in his testimony. This amount reflects a reasonable estimate of potential financial exposure to the utility in the event of customer default. The actual collateral required from any individual customer would be contingent on whether that customer qualifies for a credit rating-based exemption or reduction. Customers that meet the exemption criteria would have their collateral obligations adjusted accordingly, ensuring that the requirements remain proportionate to the customer's financial risk profile. Evergy should require 10% at ESA execution, ramp up linearly with investments made for interconnection, and reach the full amount at energization. This collateral should remain in place through the load ramp-up period.

This level of collateral provides sufficient "skin in the game" to demonstrate the customer's commitment to project development. Maintaining the collateral during the ramp period also serves as an incentive for the customer to achieve full load ramp, thereby reducing the risk of cost shifts to other customers. Although instances of customer default are rare, in such cases, two years of non-fuel revenue would be

sufficient to cover the carrying costs of underutilized assets until the associated capacity can be reassigned to one or more new customers and those customers become operational. Additionally, the use of two years of minimum monthly bills as a collateral benchmark is increasingly common across the industry, as more utilities including Evergy propose similar requirements in their filings.

2. **Ramp-Down Schedule**: After one year of operations at contracted capacity, collateral should be reduced by 10 percent annually, reaching zero by the end of the contract term. If the contract is extended, no new collateral should be required unless additional utility investments are necessary. The 10 percent reduction annually mirrors the reduced risk to Evergy and ratepayers of non-payment or stranded assets.

3. **Credit Rating-Based Exemptions:** The following are my recommendations for financial security exemptions:

   I. Accept Evergy's proposal that customers holding credit rating of at least A- (S&P) or A3 (Moody's), and liquidity of at least ten times the collateral amount, should be eligible for a full exemption without limit. These entities should be required to certify their rating and liquidity annually.

   II. Where a customer or the customer's guarantor (which can be a parent, affiliate, tenant or third party with financial interest in the customer) maintains liquidity of at least five times the collateral amount, the customer should be eligible for a 50 percent exemption from the collateral requirement. These entities should be required to certify liquidity annually. This represents a more reasonable and inclusive threshold than Evergy's proposed requirement of ten times the collateral amount, while still providing meaningful financial assurance to the utility.

III. Rather than adopting the 40 percent exemption level as proposed by Evergy, I recommend lowering the exemption to 30 percent while increasing the flexibility of eligibility criteria. This adjustment balances risk management with broader access and will allow a more diverse range of customers to qualify.

Customers should qualify for a 30 percent exemption from the collateral requirement if any of the following conditions are met:

i) The customer or their guarantor maintains liquidity equal to two times the required collateral amount, subject to annual certification, or

ii) The customer provides a signed lease agreement for the full term of the Electric Service Agreement and demonstrates that more than 50 percent of the facility's capacity is contracted to a qualified tenant. The tenant should be required to have an investment grade credit rating of at least BBB from S&P or Baa3 from Moody's, should not be on credit watch, and should be required to maintain liquidity equal to at least two times the required collateral amount. This arrangement must also be supported by annual certification.

There should be no maximum dollar thresholds for collateral reduction.

4. **Case-by-Case Bilateral Financial Assurance with Commission Review:** Evergy and a customer should be permitted to enter into a bilateral agreement that outlines alternative financial assurances or other structural terms. These agreements should reflect the specific risk profile of the customer and may result in partial or full exemption, as appropriate. The proposed terms should be submitted to the Commission for review and approval to ensure consistency with public interest objectives and adequate protection for ratepayers.

5. **Additional Forms of Collateral and Guarantees**: Evergy should consider alternative forms of collateral such as short/medium term deposits or debt service reserve account that provide interest or bespoke insurance products. The customer should have the option of posting collateral in the form of a guarantee from a parent, affiliate, tenant or other entity with a financial interest in the customer. Imposing overly prescriptive limitations on acceptable forms of collateral may unnecessarily restrict customer participation, particularly when there is no demonstrated risk-based justification for denying reasonable flexibility. Such rigidity can have a negative impact on the diversity of large load customers, limiting Evergy's ability to attract a broad range of financially viable projects with varying corporate structures.
6. **Collateral in the form of Cash:** If collateral is posted in the form of cash, it should accrue interest while held by Evergy. Any accrued interest should be returned to the customer on a regular basis, such as through quarterly payments or credits. This treatment aligns with standard financial practices and ensures that customers are not unfairly penalized for providing liquid collateral.

   Additionally, the Commission should require Evergy to clearly explain how cash collateral will be safeguarded in the event of utility insolvency or bankruptcy. Customers providing cash should have confidence that these funds are protected and recoverable under such circumstances. This clarification is essential to ensure the integrity of the financial security framework and to prevent unintended financial harm to customers in the event of unforeseen utility distress.
7. **Drawing Collateral at Default:** Evergy should be required to exhaust all collection remedies prior to drawing down collateral in the event of default.

8. **Use of Collateral Proceeds:** If Evergy draws on posted collateral, the proceeds should be used to offset costs for remaining ratepayers to ensure the financial security serves its intended purpose to offset costs for all ratepayers.

This structure protects ratepayers while avoiding excessive financial obligations for large customers. It ensures recovery of utility costs through a fair, risk-based mechanism that supports investment and operational equity.

Q. Provide an example of the difference in what a customer would pay under Evergy's proposal as compared to your recommendation.

A. Consider an illustrative data center customer with a contracted demand of 100 MW and a typical load factor of 85 percent. Under Evergy's Proposed LLPS Rate, an estimate of the customer's annual cost for electric service would be approximately $28 million.[6]

Under Evergy's proposal, which requires collateral equal to 2 years of expected, non-energy revenues, this customer would be obligated to provide $56 million in collateral to the utility for a period of 15 years. Assuming Evergy's pre-tax weighted average costs of capital ("WACC") of 8.9 percent as the discount rate over the 15-year term, the net present cost of this collateral commitment would be approximately $36 million.

A more proportionate and risk-aligned collateral framework considers the same $56 million in anticipated customer non-energy charges over two years; however, a milestone approach can be used to gradually step down the collateral commensurate with declining risk following the initial ramp period. Applying the same WACC to these assumptions and

[6] The minimum monthly bill includes Customer Charge, Grid Charges, and Demand Charges.

modeling a return of collateral in equal monthly installments over a 10-year period, the net present cost to the customer would be approximately $28 million.

This example of collateral posted in cash form, held by the utility without accruing interest, underscores the significant financial burden imposed by the proposed collateral structure. This highlights the need for a more balanced and scalable approach to credit requirements. While cash collateral imposes an immediate and direct strain on a customer's liquidity, alternative forms of collateral such as letters of credit or performance bonds can provide equivalent financial security with significantly less impact on cash flow.

As shown in Table 2 below, excessive collateral obligations may deter investment by increasing the cost of capital and creating financial uncertainty. This risk is amplified if the utility does not meet interconnection timelines, as customers may be forced to carry collateral for extended periods, resulting in substantial carrying costs. In some cases, this could result in project delays or abandonment.

A well-calibrated, risk-based collateral framework helps mitigate these risks by aligning financial requirements with the actual creditworthiness of the customer and the project's development stage. Such an approach protects ratepayers and preserves utility financial integrity, while also supporting investment in large load projects that can improve grid efficiency and long-term affordability.

Table 2: Collateral Cash Flow Illustrative Example

Period (Year)	Cash Flow		
	2-Yr Collateral & No Recovery	**2-Yr Collateral & 10-Yr Recovery**	
1	$ (56)	$ (56)	*Upfront Collateral*
2	$ 0	$ 0	*Credit*

DIRECT TESTIMONY

OF

SHANA RAMIREZ

ON BEHALF OF THE

DATA CENTER COALITION

July 16, 2025

Summary of the Direct Testimony of Shana Ramirez on Behalf of the Data Center Coalition

Shana Ramirez, a Director at Energy and Environmental Economics (E3), provided direct testimony before the Virginia State Corporation Commission on behalf of the Data Center Coalition in the 2025 biennial review of Dominion Energy's rates and policies. Her testimony focuses on the utility's proposed financial security requirements for large-load electric customers, particularly data centers. Drawing on her extensive experience in regulatory policy, tariff design, and risk analysis, Ms. Ramirez evaluates the proposal's potential impacts on ratepayers, project development, and the broader energy market in Virginia.

Ms. Ramirez begins by outlining her professional background, which includes over a decade of leadership in utility strategy and renewable energy development. She explains the concept of financial security as a tool to safeguard utilities and customers from potential losses caused by large-load customer default or project withdrawal. While she supports the use of credit and collateral mechanisms, she asserts that Dominion's proposed requirement of $1.5 million per megawatt is overly rigid and not proportionate to the actual risks presented by the data center industry in Northern Virginia.

Her testimony critiques the uniform and inflexible nature of Dominion's approach. Ms. Ramirez proposes an alternative framework guided by four core principles: balance, equity, optionality, and scalability. She advocates for a milestone-based collateral structure that adjusts over time in accordance with project development and customer performance. She also recommends a menu of acceptable credit instruments, including letters of credit, surety bonds, and guarantees, to provide flexibility for customers while preserving financial protections for the utility.

Ms. Ramirez compares Dominion's proposal to those of peer utilities across the region and finds that Dominion's requirements are among the most restrictive. She highlights the absence of supporting quantitative analysis and notes that Dominion's policy does not reflect the relative maturity, financial strength, or operational stability of Virginia's data center sector. She urges the Commission to require Dominion to undertake a formal risk assessment based on its own customer data and interconnection experience.

In addition to these structural concerns, Ms. Ramirez identifies several gaps in Dominion's proposal, including the lack of a process for reducing collateral as project risks decline, stringent liquidity thresholds that exclude otherwise creditworthy entities, and the failure to incorporate other safeguards already present in Dominion's tariffs. She stresses that these shortcomings may deter investment, increase development costs, and limit the deployment of emerging technologies.

Ms. Ramirez concludes by offering a detailed set of recommendations, including a collateral requirement equal to two years of non-fuel revenues, a defined refund schedule, expanded exemption pathways, and allowances for alternative forms of collateral. She also recommends accrual of interest on cash collateral and a provision that ensures drawn collateral is used to offset costs for other ratepayers. Her testimony presents a practical and balanced framework that aligns financial safeguards with actual risk and supports the integration of large loads into the grid in a fair and sustainable manner.

DIRECT TESTIMONY
OF
SHANA RAMIREZ
ON BEHALF OF THE
DATA CENTER COALITION
BEFORE THE
STATE CORPORATION COMMISSION OF VIRGINIA
CASE NO. PUR-2025-00058

I. WITNESS IDENTIFICATION AND QUALIFICATIONS, AND PURPOSE OF TESTIMONY

Q1. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Shana Ramirez and I am a Director at Energy and Environmental Economics, also known as E3. My business address is 44 Montgomery Street, Suite 1500 San Francisco, CA 940104.

Q2. PLEASE STATE THE PARTY ON WHOSE BEHALF YOU ARE OFFERING THIS TESTIMONY.

A. I am filing testimony on behalf of the Data Center Coalition.

Q3. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE STATE CORPORATION COMMISSION OF VIRGINIA?

A. I have not.

Q4. PLEASE DESCRIBE YOUR PROFESSIONAL QUALIFICATIONS AND EXPERIENCE AS THEY RELATE TO LARGE-LOAD CUSTOMER INTERCONNECTION AND THE ESTABLISHMENT OF CREDIT AND COLLATERAL REQUIREMENTS.

A. I bring over a decade of experience in the energy industry, with a focus on regulatory policy, load forecasting, rate design, and renewable energy development. Prior to joining E3, I held several positions at NV Energy, including in the Rates, Load Forecasting, and Regulatory Affairs departments. Most recently, I served as Program Development Director in the Renewables Department.

In that role, I led a team responsible for advancing innovative power supply solutions and tariff designs for large-load customers, including data centers and other energy-intensive users such as casinos and mines. This work required close coordination with internal regulatory, legal, and resource planning teams, as well as extensive engagement with external stakeholders such as customers, developers, and regulatory staff.

A key outcome of this work was the design and successful regulatory approval of the Clean Transition Tariff by the Public Utilities Commission of Nevada. This tariff enables large-load customers to procure renewable energy resources to meet their operational needs while aligning customer preferences with state policy objectives. The role also involved negotiating and structuring contracts that included thorough assessments of financial security requirements and risk mitigation provisions.

Earlier in my career, I worked in the insurance sector where I performed actuarial analysis focused on risk assessment and modeling. These skills continue to inform my approach to evaluating utility programs and contract structures.

Q5. WHAT TOPICS ARE YOU ADDRESSING IN YOUR TESTIMONY?

A. My testimony addresses financial security requirements for large load customers, including data centers. I review Dominion's proposal, outline best practices for credit and collateral

frameworks, and recommend a holistic risk-appropriate financial security approach to the Commission. The objective is to protect ratepayers while enabling equitable and scalable integration of large loads into Dominion's system.

Q6. HOW IS YOUR TESTIMONY STRUCTURED?

A. My testimony is structured in five sections:

Section 1: Witness Identification and Qualifications, and Purpose Of Testimony

This section introduces my qualifications and the purpose of my testimony.

Section 2: Background on E3

This section introduces E3 and outlines its expertise in electric infrastructure planning, rate design, strategic planning, load forecasting, and market analytics. It highlights E3's direct experience analyzing the impacts of rapidly expanding large-load customers, particularly data centers, on electric utilities and retail customer rates within the PJM region.

Section 3: Large Load Interconnections & Financial Security Best Practices

This section identifies and discusses the financial and operational challenges introduced by large load interconnections. It sets forth core principles for designing effective credit and collateral frameworks and assesses the relevance of these principles in the context of Dominion Energy's service territory. Specific areas of focus include customer creditworthiness, exemptions from collateral requirements, the adequacy of collateral forms, exit or capacity-reduction charges, and the importance of ongoing reporting and oversight mechanisms. The section concludes with a summary of the testimony's key insights, emphasizing recommended actions for utilities and regulators to improve

financial risk management, enable sustainable infrastructure development, and promote equitable cost outcomes for all customer classes.

Section 4: Dominion's Financial Security Proposal and Industry Benchmarking

This section presents a qualitative review of Dominion's current credit and collateral policies as part of the utility's biennial review process. It compares Dominion's approach to those of peer utilities across other regions, assessing alignment with industry standards, effectiveness in mitigating financial risk, and opportunities for refinement. It also highlights policy design features that reflect best practices, such as transparency, scalability, and balanced risk allocation, with a view to supporting beneficial load growth while protecting ratepayers.

Section 5: Recommendation to the Commission

The final section offers my recommendations to the Virginia State Corporation Commission. These recommendations address improvements to Dominion's credit and collateral policies to better manage financial risks, encourage responsible data center integration, and support long-term system planning objectives.

Q7. PLEASE SUMMARIZE YOUR RECOMMENDATIONS TO THE COMMISSION.

A. Table 1 below summarizes my financial security recommendations to the Commission. I recommend that the Commission direct Dominion to revise its proposed credit and collateral framework to better align with actual financial risk, reflect established regulatory principles, and support continued data center and large-load development in the Commonwealth.

Table 1: Financial Security Recommendation versus Dominion's Proposal

Attribute	Dominion Energy Virginia's Current Proposal	Recommendation
Collateral Requirement	$1.5M / MW	Equal to two years of non-fuel revenue, starting at ESA execution. If collateral is preferred on a $/MW basis, divide the total of two years' bills by the customer's contracted capacity. • After one year at contracted capacity, reduce collateral by 10 percent annually, reaching zero by contract end.
Credit Exemption / Reduction	70% reduction if customer is rated at an investment grade of at least BBB-/Baa3 or 10X guaranty from parental, affiliate, tenant or other entity with a financial interest in the customer	i) 70% reduction if customer or their guarantor maintains an investment-grade of at least BBB- from S&P or Baa3 from Moody's, or hold liquidity equal to 5X the required collateral amount. or ii) 50% reduction if: - The customer or customer's guarantor maintains liquidity equal to at least 2X the required collateral amount ,or - Customer provides a signed lease for the full ESA term and shows >50% of facility capacity is contracted to a qualified tenant. Tenant must meet credit rating threshold, not be on credit watch, a or maintain liquidity ≥ 2X required collateral.
Forms of Collateral	Guaranty from parent, affiliate, tenant or other entity with a financial interest in the customer guaranty, standby irrevocable letter of credit, surety bond, cash deposit	Alternative Collateral Options: Acceptable forms include short/medium-term deposits, debt service reserve accounts (with interest), or bespoke insurance products. Customer may also post a guarantee from a parent, affiliate, tenant, or financially interested entity. Cash collateral should accrue interest while held by Dominion.
Use of Collateral Proceeds	-	Proceeds that Dominion draws on posted collateral should be used to offset costs for remaining ratepayers

II. BACKGROUND ON E3

Q8. PLEASE DESCRIBE E3.

A. E3 is an economic consulting firm with more than 30 years of experience specializing in the North American power sector. The firm provides data-driven insights and objective recommendations to a diverse range of clients, including utilities, regulatory agencies, government entities, project developers, investors, and non-profit organizations.

Through its work across all segments of the energy industry, E3 offers a comprehensive understanding of power markets, resource planning, rate design, economic analyses, public policy, regulation, and environmental considerations. The firm is committed to producing clear and impartial analyses. That is why my recommendations are fair and balanced, addressing the needs of both the utility and large-load customers.

Q9. PLEASE DESCRIBE E3'S SCALE AND SCOPE OF OPERATIONS IN THE VIRGINIA (PJM) REGION.

A. E3 has established a significant presence in the Virginia segment of the PJM Interconnection region, with work that reflects both analytical depth and regional relevance. In 2024 E3 conducted a first-of-its-kind study that quantitatively assessed the implications of ongoing data center development in Virginia, currently recognized as the global leader in data center capacity. The analysis was undertaken within the context of Virginia's statutory clean energy goals and examined both system-level and customer-level impacts associated with this growth.

E3 collaborated with the Weldon Cooper Center for Public Service at the University of Virginia and the Commonwealth of Virginia's Joint Legislative Audit and Review

Commission ("JLARC") to evaluate both the electric grid and ratepayer impacts data center load growth to date and over time into the future.[1] In addition to its work in Virginia, E3 has advised major electric utilities throughout the United States on strategies for planning and interconnecting large new loads, including data centers. This work spans established data center hubs as well as emerging markets.

III. LARGE LOAD INTERCONNECTIONS & FINANCIAL SECURITY BEST PRACTICES

Q10. WHAT IS FINANCIAL SECURITY?

A. Financial security refers to assets, credit instruments, collateral, or contractual assurances provided by large-load customers to the utility. It serves to mitigate the risk of non-payment or stranded assets, ensuring that the cost of service is recovered and not shifted to other ratepayers.

Q11. WHAT RISKS DO LARGE LOADS POSE TO UTILITIES AND OTHER RATEPAYERS?

A. Large loads, such as data centers, pose several potential risks related to system reliability, cost impacts, and regulatory compliance. Rapid and substantial load growth can strain existing generation resources and create congestion on transmission and distribution networks. These pressures not only challenge the short-term reliability of the system but also complicate long-term resource and infrastructure planning.

From a financial standpoint, utilities may need to undertake significant capital investments in infrastructure upgrades, including new substations, transmission lines, and distribution

[1] *Virginia's Data Center Boom: E3 Report Analyzes Gid Strain and Customer Impacts*, Energy and Environmental Economics, Inc. (Dec. 10, 2024), available at https://www.ethree.com/jlarc-load-growth/.

enhancements, to accommodate such loads. Should the customer reduce operations unexpectedly or exit the service territory, these investments may become stranded assets. In such cases, the financial burden could shift to other ratepayers, especially if adequate financial mechanisms such as collateral, exit fees, capacity reduction fees and minimum demand charges are not in place to mitigate the impact. The risk of non-payment or partial recovery of infrastructure costs also poses a liability for the utility and its broader customer base.

From a state and utility voluntary compliance perspective, the accelerated growth in electricity demand associated with large load customers may outpace the utility's ability to procure or develop sufficient clean energy resources, implicating statutory or regulatory clean energy and emission reductions targets along with the utility's own voluntary objectives.[2]

Q12. WHAT ARE THE POTENTIAL BENEFITS OF LARGE LOAD CUSTOMERS TAKING SERVICE IN DOMINION'S TERRITORY?

A. Large load customers, including data centers, manufacturing facilities, and emerging industries, provide substantial economic, operational, and strategic benefits to the utility and the broader community up to and including the national level. Economically, they contribute to job creation, attract private investment, expand the tax base, and stimulate regional economic development. From a system reliability perspective, their presence may

[2] *See* I. Riu, D. Smiley & S. Bessasparis, K. Patel, *Load Growth Is Here to Stay, but Are Data Centers?: Strategically Managing the Challenges and Opportunities of Load Growth*, Energy and Environmental Economics, Inc. (July 2024), available at https://www.ethree.com/wp-content/uploads/2024/07/E3-White-Paper-2024-Load-Growth-Is-Here-to-Stay-but-Are-Data-Centers-2.pdf.

support and even accelerate necessary utility investments in aging infrastructure, ultimately enhancing service quality for all customers.

Multi-year service commitments from large load customers enhance the utilization of both existing and new generation and transmission assets. These customers also contribute stable, long-term demand, which supports more efficient resource planning and system modernization efforts.

Financially, large loads can increase and stabilize utility revenues by expanding overall system usage. A higher total sales volume allows the utility to distribute fixed system costs across more kilowatt-hours, which may help reduce costs for other ratepayers.

From a policy and compliance standpoint, many large load customers are actively pursuing ambitious sustainability objectives. This creates opportunities for meaningful collaboration on clean energy procurement, energy efficiency initiatives, and innovative grid solutions. Furthermore, large, consistent loads may catalyze the deployment of emerging technologies, such as advanced geothermal or nuclear power, hydrogen-based fuels, and grid-scale energy storage as well as supporting a variety of grid-enhancing technologies. By serving as anchor customers or project sponsors, these entities can help advance alternative pathways to achieving the utility's clean energy and decarbonization goals especially if they are willing to take on more risk such as supporting first-of-a-kind technologies that is not appropriate for a utility to bear but could provide future benefits when those technologies are potentially de-risked.

Q13. WHAT IS YOUR POSITION ON REQUIRING FINANCIAL SECURITY FOR LARGE LOAD CUSTOMERS?

A. I support requiring financial security from large load customers as a means of protecting utilities and their ratepayers from potential financial risks, including stranded assets, project delays, and customer default. Large load projects often require substantial infrastructure investment. If such projects are canceled, delayed, or significantly reduced, the resulting sunk costs may ultimately be shifted to other ratepayers or utility shareholders. Financial assurances such as collateral, guarantees, or prepayments work in tandem with others rate payer protections such as capacity reduction penalties and exit fees. These mechanisms collectively ensure that customers assume appropriate responsibility for the risks they introduce and that the utility can recover its costs.

Q14. AT A HIGH LEVEL, HOW SHOULD A UTILITY APPROACH THE DESIGN OF FINANCIAL SECURITY REQUIREMENTS FOR LARGE LOAD CUSTOMERS?

A. Utilities should design financial security requirements that are proportionate to the specific risks associated with each large-load project. In many cases, these customers are supported by financially stable sponsors and long-term commercial commitments. Applying a uniform or overly rigid approach to all customers may unintentionally discourage low-risk, high-value projects. A more effective framework would recognize differences in project profiles and adopt a flexible, risk-based approach to credit assurance.

One recommended strategy is a staged or milestone-based structure, in which financial security requirements begin conservatively but evolve over time. As customers advance their projects, demonstrate meaningful progress, and commit capital, the utility's exposure to financial risk diminishes. Accordingly, financial requirements should adjust to reflect that reduced risk. This approach encourages responsible project development while still protecting the utility and its ratepayers.

Utilities should also offer a range of acceptable credit instruments, including surety bonds, parent guarantees, and upfront financial contributions. Providing flexibility in the form and timing of collateral allows creditworthy customers to meet requirements without unnecessary liquidity strain. Tailoring financial security to the customer's credit quality and project status promotes transparency, supports scalable growth, and reduces the likelihood of inefficient capital allocation.

In addition, utilities should consider evaluating financial risk at the cluster level when appropriate. Similar to how interconnection studies assess multiple projects based on shared geographic or operational characteristics, financial risk can also be aggregated and managed across groups of customers. This can be particularly useful in areas where many similar large-load projects are requesting service simultaneously.

Finally, the utility's financial security framework should account for how customers perceive risk in the service territory. Excessive or inflexible collateral requirements, particularly when combined with uncertainty in interconnection timelines or lack of procedural transparency, can materially increase the cost of development. Customers incorporate these factors into their risk assessments when deciding whether to move forward with a project or cite a project in a specific utility territory. If the perceived risk outweighs the potential benefit, projects may be delayed, reprioritized, or abandoned. This can lead to reduced load growth, underutilized infrastructure, and unintended consequences for ratepayers.

Q15. SHOULD FINANCIAL SECURITY REQUIREMENTS ONLY APPLY TO DATA CENTERS?

A. No and I support Dominion's proposal to include all large loads in their financial security proposal. Limiting financial security requirements to data centers while exempting other large load customers is both inequitable and unjustified. All large loads, whether from new or existing customers, including manufacturing facilities and other high-demand users, can pose similar financial and operational risks to utilities. These risks include project cancellations, delays, underperformance, or abrupt departures, any of which can result in stranded costs or unrecovered infrastructure investments.

Imposing stricter financial requirements solely on data centers unfairly targets a sector that often includes financially stable entities with strong institutional backing, consistent high load factors, and long-term service commitments. At the same time, other large customers with comparable or even greater risk profiles may not be held to the same standards.

It is also important to evaluate the risk characteristics of individual data centers rather than generalizing across the entire industry. The data center sector is diverse, encompassing a range of business models such as hyperscalers, colocation providers, and enterprise-owned facilities. It also includes widely varying financial and ownership structures. For this reason, a uniform approach to financial security is not appropriate. Instead, policies should be structured based on measurable risk factors and applied consistently across all large load customers, regardless of industry classification.

A risk-based framework should consider project maturity, customer financial strength, and the scale of potential exposure. Applying consistent criteria in this way promotes fairness, protects ratepayers, and upholds transparency and nondiscriminatory utility practices.

Q16. IS THERE A RISK ALIGNED FRAMEWORK THAT CAN BE REPLICATED WHEN DESIGNING CREDIT AND COLLATERAL REQUIREMENTS?

A. Yes, E3 has created a risk aligned framework that I will detail below that recognizes the risks associated with large load interconnections while enabling responsible large load growth, I recommend the Commission consider the following core design principles when considering Dominion's financial security proposal:

Balance

Credit and collateral frameworks should be calibrated to reflect genuine financial risk, including the potential for stranded costs or revenue volatility. A well-balanced structure considers the specific characteristics of the load, the development phase of the project, the financial standing of the sponsor, and the degree of capital commitment. A balanced framework should:

- Distinguish between perceived risks and those supported by objective data, historical performance, or clear precedent.

- Align both the timing and magnitude of collateral requirements with the utility's true financial exposure. This helps address the asymmetry that may exist between the utility's understanding of demand risk and the data center's understanding of utility-related risks, such as delays or infrastructure constraints.

- Include clear and predictable mechanisms for reducing or releasing collateral as the customer's risk profile improves over time. This may occur through demonstrated

performance, credit enhancements, or progression through defined project milestones.

Equity

While large loads such as data centers may introduce new operational profiles, the application of established regulatory principles remains paramount. Specifically, the principles of cost causation and nondiscriminatory treatment must guide policy design. An equitable framework should:

- Avoid the use of arbitrary thresholds or the imposition of sector-specific requirements that are not clearly tied to measurable risk.
- Apply consistent standards to similarly situated customers. Large, high-load-factor customers in the industrial, manufacturing, or other commercial sectors should be treated comparably in terms of financial security requirements.
- Align with regulatory expectations for fairness in cost allocation, access to service, and the design of rates and terms. This ensures that customers are not unfairly disadvantaged based on industry classification or business model.

Optionality

Rigid or one-size-fits-all credit requirements may unintentionally exclude financially sound projects that are structured differently. Introducing optionality into credit frameworks allows utilities and customers to address risks pragmatically and equitably. An optionality-based approach should:

- Allow the use of various credit instruments, including but not limited to Contributions in Aid of Construction (CIAC), surety bonds, irrevocable letters of credit, guarantors and liquidity. These tools provide flexibility while still securing the utility's financial interests.

- Enable utilities to match credit instruments to the specific type and timing of risk. For example, requirements may differ between construction-phase exposure and longer-term credit risk during ongoing operations.

Scalability

As Virginia experiences sustained growth in large-load interconnection requests, Dominion's credit and collateral policies must evolve accordingly. Scalability is essential to ensuring timely and efficient processing without compromising on risk mitigation or fairness. A scalable policy framework should include:

- Objective eligibility benchmarks and project development milestones that determine when collateral is required, in what amount, and under what conditions.

- Streamlined administrative processes for credit evaluation, application submission, and ongoing compliance, ensuring timely review and reducing resource burdens on both the utility and the customer.

- Transparent communication of expectations, responsibilities, and timelines, ensuring all parties have a shared understanding of the process and requirements.

Q17. WHAT ARE THE BEST PRACTICES THAT DEFINE THE RISK ALIGNED FRAMEWORK IDENTIFIED BY E3?

A. The best practices within the risk aligned framework aim to ensure cost recovery, support responsible load growth, and promote fair treatment of all customers.

A key principle is aligning financial security requirements with actual risk exposure. This involves using a phased or milestone-based structure in which collateral levels adjust based on the project's stage and the utility's financial commitment. Early-stage projects, which carry higher risk, should provide greater upfront security that can be reduced as the project advances through permitting, financing, construction, and operation.

Another best practice is offering a standardized set of acceptable collateral instruments. Utilities should accept various forms of security, such as surety bonds; guarantees from a parent, affiliate, tenant, or other entity with a financial interest in the customer; sponsor support agreements; and contributions in aid of construction. This flexibility accommodates different customer financial structures while maintaining utility protection.

Avoiding redundancy is also important. Utilities should not impose overlapping forms of security that address the same risk, such as combining CIAC, exit fees, and demand guarantees without clear justification. Credit frameworks should include evaluation tools, such as a credit efficiency index or "scorecard", to assess the adequacy of existing protections and calibrate requirements appropriately.

Transparency and consistency are essential. Utilities should define clear credit evaluation criteria, including liquidity thresholds, credit ratings, and exemption standards.

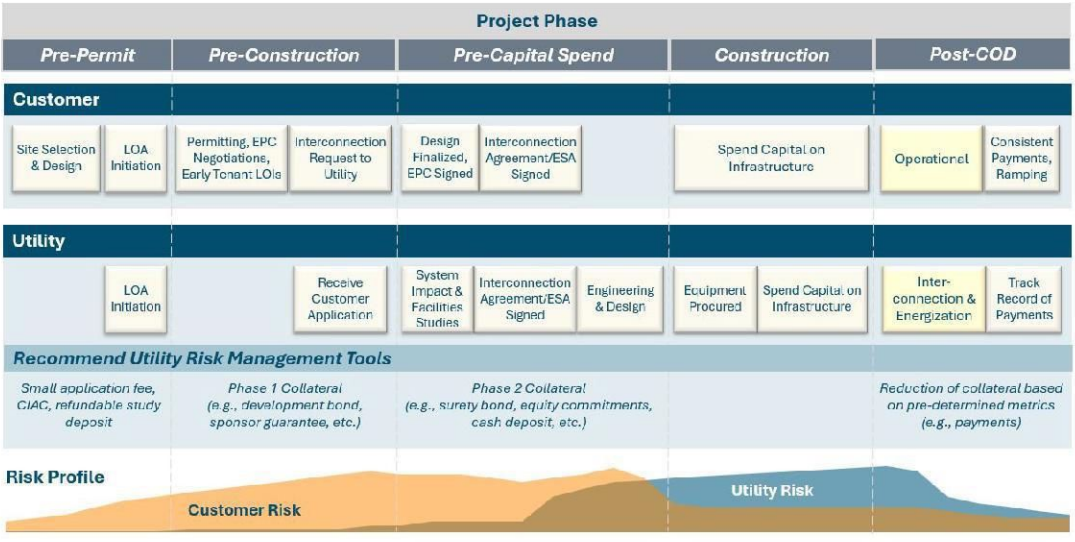

Frameworks must also be scalable and adaptable to accommodate growing and evolving large load interconnection requests.

Together, these practices provide a disciplined and balanced approach that protects ratepayers, supports infrastructure investment, and ensures a fair and efficient interconnection process.

Q18. PLEASE PROVIDE MORE DETAILS ON THE MILESTONE-BASED APPROACH.

A. A milestone-based approach to financial security ties the level and type of collateral to key stages in the development of a large load project and the customer's lifecycle. Rather than imposing a fixed collateral requirement, this approach adjusts financial security obligations as the utility's exposure evolves over time. Figure 1 demonstrates the risk borne by the customer and utility at project milestones and risk management tools correlating with the milestone.

Figure 1: Project Development Timeline from the Utility and Customer Perspective

Financial security requirements should begin when the utility starts making financial commitments on behalf of the customer and increase as those investments grow. Financial security requirements could be in the form of partial collateral or as is the case with Dominion, other forms of financial assurances. At the customers' facility commercial operation date and throughout the load ramp period, full collateral should be held to incentivize customers to meet their ramp targets and to mitigate the risk of underutilized assets. Once the customer has fully ramped their load, collateral should be gradually reduced to reflect the declining risk to the utility and ratepayers. This reduction should continue month by month as the customer meets its contractual obligations, aligning financial security with actual performance and risk.

The milestone-based framework offers a transparent, scalable, and disciplined way to manage financial security. It balances ratepayer protection with flexibility for responsible, creditworthy customers and aligns financial obligations with both project risk and utility investment timing.

Q19. PLEASE EXPAND ON THE STANDARDIZED MENU OF ACCEPTABLE COLLATERAL INSTRUMENTS.

A. A standardized menu of acceptable collateral instruments is essential to a transparent and effective financial security framework for large load customers. It provides clarity and consistency by listing approved financial tools that customers may use to meet collateral obligations. This approach promotes fairness and allows customers to select instruments that align with their financial structure, while ensuring the utility remains protected.

Common instruments include letters of credit, guarantees, surety bonds, and cash deposits. Letters of credit must be issued by a U.S. bank or a U.S. branch of a foreign bank with a minimum credit rating, typically BBB- or higher from S&P and a Baa3 or higher from Moody's. These letters must meet requirements for term length and automatic renewal. Parent or affiliate guarantees must come from entities with sufficient credit quality and liquidity to support the obligation. Surety bonds, issued by qualified insurers, can be a cost-effective option. Cash collateral, though less flexible, offers strong security and is universally accepted.

Including these instruments, along with clear eligibility standards, ensures the utility's financial exposure is adequately managed without imposing excessive burdens on customers. The availability of multiple options supports a range of financial profiles and simplifies compliance and enforcement. This structure helps maintain equitable treatment, operational efficiency, and a balanced approach to risk management.

Q20. SHOULD THERE BE COLLATERAL EXEMPTIONS?

A. Yes. Collateral exemptions are appropriate because financial security requirements should reflect the actual risk posed by each customer. Applying uniform collateral across all large load customers can lead to overcollateralization and create unnecessary barriers, particularly for financially stable and low-risk entities.

Exemptions should be based on objective criteria as discussed in the previous answer. For example, a customer with an investment-grade rating and liquidity exceeding ten times the required collateral should not be subject to the same obligations as a customer with

speculative credit and low liquidity. Customers without formal ratings but with strong liquidity and financial transparency should also qualify for partial exemptions.

Establishing structured, risk-based exemptions allows utilities to maintain necessary protections while promoting fairness and investment. A balanced exemption framework ensures accountability, avoids unnecessary cost burdens, and protects ratepayers without discouraging viable large load development.

Q21. WHAT IS YOUR STANCE ON COLLATERAL REDUCTION?

A. Collateral reduction is an essential element of a sound financial security framework. As a large load project progresses and the utility recovers capital investments, financial risk declines. Collateral requirements should decrease accordingly, either over time or upon reaching performance milestones. For example, once a customer completes construction, begins commercial operation, and demonstrates payment reliability, the likelihood of default or early termination diminishes. A declining collateral schedule ensures alignment with actual risk and prevents unnecessary capital burdens on the customer.

This mechanism should be clearly outlined in the tariff or service agreement, with reductions triggered automatically by defined criteria such as contract term progression or ongoing compliance. Collateral reduction reflects prudent credit practice, enhances investment efficiency, and maintains protection for ratepayers.

Q22. DO YOU RECOMMEND A CERTAIN FORM OF COLLATERAL?

A. No. There is no single form of collateral suitable for all utilities or large load customers. Risk preferences vary by utility, and customer financial structures differ widely. A rigid, uniform approach is often impractical and may lead to unintended consequences.

Collateral options should include cash deposits, standby letters of credit from investment-grade institutions, surety bonds from qualified insurers, and guarantees from a parent, affiliate, tenant or other entity with a financial interest in the customer and supported by strong credit and liquidity. Each instrument carries distinct costs, risks, and administrative considerations.

Providing a standardized menu of approved collateral types allows utilities to manage risk effectively while giving customers flexibility to meet requirements in a manner consistent with their financial strategy. This approach encourages participation, streamlines project development, and upholds ratepayer protection through enforceable, risk-aligned instruments.

Q23. WHY ARE SCALABILITY AND ADAPTABILITY IN CREDIT FRAMEWORKS IMPORTANT?

A. Scalability and adaptability are essential for managing the increasing number and diversity of large load customers, including data centers, electric vehicle charging hubs, hydrogen production facilities, and other emerging technologies. A scalable credit framework enables utilities to apply consistent processes across a wide range of project sizes and customer types. This promotes efficiency, reduces administrative burden, and supports fair and timely evaluation of interconnection requests.

Adaptability ensures that the credit framework remains responsive to changes in market conditions, regulatory objectives, and customer risk profiles. As new customer categories emerge or financial conditions evolve, utilities must have the ability to adjust credit thresholds, collateral requirements, and exemption criteria without overhauling the entire

policy structure. This flexibility allows utilities to maintain a consistent approach while addressing unique risk characteristics in a practical and efficient manner.

Together, scalability and adaptability provide the foundation for a stable, transparent, and future-ready credit policy. They allow utilities to protect ratepayers from financial exposure while facilitating the reliable and equitable integration of large loads into the electric grid. Importantly, credit policies should not be limited to near-term concerns or tailored narrowly to one customer segment. Rather, they should be designed with a long-term, system-wide perspective that supports the anticipated growth and diversification of large load interconnections. A forward-looking framework that is both scalable and adaptable will enable utilities to manage emerging risks effectively while supporting innovation, investment, and sustained grid reliability.

Q24. HOW TRANSFERABLE ARE THESE CREDIT AND COLLATERAL BEST PRACTICES ACROSS UTILITIES OF DIFFERENT SIZES, OWNERSHIP MODEL, INTERCONNECTION QUEUES, OR REGULATORY JURISDICTIONS?

A. The principles of effective credit and collateral policy, such as proportionality, transparency, and flexibility, are broadly applicable across utilities regardless of size, ownership, or jurisdiction. While implementation may vary, these practices can be adapted to reflect local conditions.

The key factor is the relative scale of the interconnecting load. For example, a 50 megawatt data center may present similar financial risk to a small municipal utility as a 500 megawatt

cluster would to a large investor-owned utility. In each case, credit policies should reflect the utility's actual exposure rather than applying a uniform standard.

Utilities with smaller interconnection queues or less experience may require more conservative protections, while those with larger queues and more established procedures may support more flexibility. Ownership structure influences internal requirements, but risk-based credit frameworks can be designed to suit any utility model.

Across jurisdictions, adaptable best practices have proven effective in managing risk and enabling large load development. A tailored approach aligns financial safeguards with actual risk, benefiting utilities, ratepayers, and customers alike.

IV. DOMINION'S FINANCIAL SECURITY PROPOSAL AND INDUSTRY BENCHMARKING

Q25. WHAT IS YOUR UNDERSTANDING OF DOMINION'S FINANCIAL SECURITY PROPOSAL?

A. Under Dominion's large-service tariff proposal, data center interconnections are governed by a customized Electric Service Agreement that includes specific collateral requirements. New large-load customers are required to post $1.5 million in collateral for each contracted megawatt of capacity. Customers considered stronger counterparties are defined as those with a credit rating of at least BBB- from S&P or Baa3 from Moody's, those supported by a parent guarantee at that level, or those with available liquidity equal to at least ten times the collateral obligation. These customers qualify for a 70 percent reduction and are required to post only 30 percent of the full collateral amount. Dominion accepts various forms of collateral, including standby irrevocable letters of credit, surety bonds issued by highly rated U.S. insurers, parental guarantees, and cash deposits. The utility retains the

right to request additional or replacement collateral if there is a deterioration in the creditworthiness of the customer or guarantor. If a customer does not post collateral at time of the ESA execution or anytime after then they may be subject to disconnection of service.

Q26. AT A HIGH LEVEL, WHAT IS YOUR POSITION ON DOMINION'S PROPOSAL?

A. I support Dominion's objective to manage the financial risks associated with large-load interconnections. A well-constructed credit and collateral framework is necessary to protect the utility and its customers from exposure to stranded costs and revenue uncertainty. However, I do not agree with the overall structure Dominion proposes, as the specific provisions related to collateral requirements, credit oversight, and the criteria for exemption or reduction are not commensurate with the risks they are intended to mitigate.

When combined with other protective mechanisms such as exit fees, minimum billing demand provisions, and long-term service agreements, the proposed collateral requirement imposes an excessive financial burden. This level of collateral may deter investment and delay the development of beneficial projects that support broader system goals.

Many of the customers likely to take service under the proposed tariff will have investment-grade credit ratings and long-term commitments. For these customers, imposing uniformly high collateral requirements is not justified. I support a more flexible approach in which collateral obligations are calibrated to each customer's specific risk profile. This approach should be implemented within a transparent, standardized framework that reflects industry best practices.

Adopting this more tailored methodology would allow Dominion to manage financial risk effectively while also encouraging sustainable load growth and ensuring fair treatment of all customers.

Q27. ARE DOMINION'S PROPOSED COLLATERAL REQUIREMENTS COMMENSURATE WITH THE ACTUAL FINANCIAL RISKS FACED BY THE UTILITY AND ITS RATEPAYERS?

Dominion's proposed collateral requirements are not commensurate with the actual financial risks faced by the utility and its ratepayers. The rationale for imposing such high collateral levels appears to assume a significant risk of default or stranded cost exposure from new large-load customers, particularly data centers. However, Dominion's own evidence indicates that this assumption does not reflect current market conditions or operational realities.

Dominion witness Blackwell highlights that Virginia hosts the largest data center market in the world. Industry research cited in his testimony shows that Northern Virginia exceeds the combined size of the next five largest domestic data center markets and that approximately 70 percent of global internet traffic flows through the region[3]. This context underscores the maturity, stability, and continued long-term growth prospects of the data center industry in Dominion's territory. I agree with this assessment.

Given these conditions, the risk of non-performance or early withdrawal by customers is relatively low. The scale and financial strength of the data center industry in Virginia suggest that most customers will be creditworthy and committed to long-term operations.

[3] Direct Testimony of Stan Blackwell at 3.

Dominion's proposed requirement of $1.5 million in collateral per megawatt of contracted demand is disproportionately high when weighed against this demonstrated stability and investment profile.

In addition, Dominion's interconnection queue reflects deep market demand. According to Mr. Blackwell's testimony, the utility currently has approximately 40 gigawatts of capacity requests, including many individual projects ranging from 300 megawatts to as much as 7 gigawatts[4]. This large and diverse queue gives Dominion significant flexibility to reallocate capacity in the event of customer default or project withdrawal. That flexibility reduces the likelihood of stranded or underutilized assets and limits the potential cost impact on ratepayers.

In this context, collateral requirements should correspond to the actual probability of financial loss. While high collateral may be justified in speculative or high-risk circumstances, those conditions are not present here. Dominion serves a region anchored by established, investment-grade infrastructure customers. Uniformly high collateral requirements under these circumstances impose excessive burdens, deter load growth that potentially supports local economic development, and may misallocate capital that could otherwise be used for risk reducing development.

Further, Section XXVII of Dominion's proposed Terms and Conditions supports this assessment. It authorizes the utility to disconnect service not only for non-payment but also for failure to comply with collateral requirements **at any point** after interconnection. This provision implies that Dominion is confident in its ability to reassign capacity efficiently.

[4] *Id.* at 5.

If the risk of stranded assets were substantial, the utility would not propose a policy that allows disconnection over a collateral deficiency, since doing so could shift unrecovered costs to other ratepayers. Instead, this policy suggests that Dominion expects to manage capacity reallocation without systemic cost impacts.

For these reasons, I recommend that Dominion revise its credit and collateral framework to better reflect the lower-risk profile of the data center sector in its service territory. A more proportional, risk-based approach would maintain necessary ratepayer protections while encouraging responsible infrastructure investment and long-term system planning.

Q27. ARE YOU OPPOSED TO A UTILITY ADDRESSING FINANCIAL SECURITY THROUGH INDIVIDUAL AGREEMENTS WITH CUSTOMERS?

A. No, I am not opposed. I view bilateral negotiations and a defined collateral framework as complementary approaches that serve the same underlying objective: protecting ratepayers while supporting the integration of large new loads in a responsible and efficient manner. Bilateral agreements allow utilities and customers to develop solutions that reflect the specific financial and operational characteristics of a given project. As Dominion witness Wishart correctly noted in his testimony, this approach is a common practice across the industry[5].

At the same time, a standardized and well-structured framework provides consistency, transparency, and administrative efficiency, particularly in cases where individual negotiations may not be practical or scalable. Including financial security provisions in the tariff, as Dominion proposes, is a valid method for addressing risk. However, I recommend

[5] Direct Testimony of Stephen Wishart at 10.

that Dominion also consider permitting bilateral negotiations in circumstances where doing so would result in more appropriately tailored risk management solutions. This flexibility would allow the utility to better match financial security requirements to actual customer risk, while preserving fairness and protecting ratepayers.

Q28. ARE YOU AWARE OF ANY QUANTITATIVE RISK ANALYSIS DONE BY DOMINION THAT UNDERLIES THEIR COLLATERAL PROPOSAL?

A. No, I am not aware of any quantitative risk analysis conducted by Dominion to support the specific structure or level of collateral proposed. The absence of such analysis is particularly concerning given that Dominion operates in the most mature and concentrated data center market in the world. With decades of operational experience and access to detailed customer performance data, Dominion is uniquely positioned to conduct an informed, data-driven assessment of financial risk associated with large-load interconnections.

While external stakeholders and utilities in other jurisdictions may lack access to detailed empirical data, Dominion has the internal visibility to assess key indicators such as ramp rates, defaults, project attrition, and capacity replacement trends within its own service territory. The lack of transparency and supporting data suggests that the proposed collateral requirement is not grounded in an objective or risk-based assessment. Nevertheless, Dominion has proposed one of the highest collateral thresholds in the industry.

This disconnect raises important concerns. If Dominion believes that its ratepayers or the utility itself are exposed to elevated financial risk, it should present that conclusion with evidence. In the absence of such justification, the proposed policy appears overly

conservative. Until Dominion provides a clear, quantitative basis for its approach, a more moderate and calibrated collateral framework would be appropriate.

Q29. WHAT GAPS OR LIMITATIONS EXIST WITHIN DOMINION'S CURRENT APPROACH TO COLLATERAL AND RISK MANAGEMENT WHEN COMPARED WITH OTHER INDUSTY WIDE PRACTICES?

A. Dominion's current approach to collateral and risk management reflects several notable gaps and limitations when assessed against risk assessment best practices. While the objective of safeguarding ratepayers from financial exposure is appropriate, the means by which Dominion seeks to achieve that objective are more restrictive and less adaptable than necessary given the current data center market and current capacity requests in the queue. These limitations fall into several key areas:

Misalignment Between Collateral Requirements and Actual Risk Exposure

Collateral should be tied to specific and time-based risks, such as the risk of non-performance during project construction or failure to meet ramped load commitments. Dominion's approach collects collateral before these risks are present and holds it throughout the entire contract term, without regard to risk reduction over time.

Once a customer is fully ramped, operating at its contracted demand, and has established a record of timely payment, the financial risk to the utility declines significantly. Yet, under the current proposal, the collateral remains unchanged. This failure to reduce collateral in response to reduced risk does not reflect best practices, where collateral is adjusted based on credit performance, service history, or operational milestones.

By retaining collateral indefinitely, the policy overstates the utility's exposure and may discourage otherwise viable projects. A more appropriate approach would align collateral with actual risk: initiating requirements closer to when capital is committed and scaling them back as customers demonstrate reliability and financial strength.

Elevated Collateral Thresholds and Stringent Liquidity Guidelines

Dominion's proposed collateral requirement of $1.5 million per megawatt is among the highest in the industry. Compared to practices employed by other utilities, including those operating in markets with smaller or less mature data center footprints, this level of financial obligation appears excessive. It does not correspond to the credit quality, operational reliability, or financial performance of many prospective customers. As a result, the policy may disproportionately burden smaller projects and developers that hold investment-grade credit ratings and are prepared to make long-term commitments in the Commonwealth.

Dominion's current practice for commercial customers outside of the proposed GS-5 rate structure is significantly less restrictive. The existing approach generally requires a security deposit that may be refunded after 12 months of satisfactory payment history.[6] While it is reasonable for the utility to seek additional protections for customers that require significant infrastructure investment, the shift from a refundable security deposit to long-term collateral held for the entire contract duration marks a sharp and arguably punitive departure from standard practice.

[6] *See Start or Add Additional Service*, Dominion Energy, available at https://www.dominionenergy.com/virginia/start-stop-service/start-service.

In addition, Dominion's requirement that customers demonstrate liquidity equal to ten times the collateral amount in order to qualify for a reduction is unreasonably stringent. This threshold excludes otherwise creditworthy entities, including those with strong ratings, reliable capital structures, and long-term commitments to operating in Virginia. Such customers may not maintain that level of available liquidity as a matter of financial policy, yet they pose minimal risk to the utility or its ratepayers.

This policy creates an uneven playing field that favors a narrow set of financial models while discouraging broader participation from capable and committed entities. By failing to accommodate alternative credit structures or more moderate liquidity requirements, Dominion's proposal risks deterring investment, slowing data center growth, and increasing the cost of entry for otherwise viable projects.

Insufficient Integration with Other Risk Mitigation Tools

Dominion's framework places undo emphasis on collateral without fully recognizing the risk-reducing value of other safeguards already embedded in the tariff, such as exit fees, minimum billing demand provisions, and long-term service contracts. These mechanisms also serve to protect the utility from revenue loss and stranded asset risk and, in many jurisdictions, are considered sufficient to justify lower collateral obligations. By not integrating these protections into its overall credit policy, Dominion's approach results in an overly conservative posture that does not align with actual exposure.

Asymmetrical Collateral Flexibility

Dominion's proposal grants the utility the right to request additional or replacement collateral if there is a decline in the creditworthiness of the customer or guarantor. However, the proposal does not appear to provide a corresponding mechanism for customers to request a reduction or exemption in collateral if their credit position improves. This lack of reciprocity creates an imbalance in how financial risk is managed and is fundamentally unfair to the customer.

Collateral should serve as a tool to reduce risk, not as a permanent or punitive requirement. If a customer or guarantor demonstrates a material improvement in creditworthiness, such as attaining investment-grade status or significantly increasing liquidity, there should be a clear process by which the collateral obligation can be reviewed and potentially reduced.

A fair and transparent framework must allow for both increases and decreases in collateral requirements based on objective financial indicators. Without this balance, the policy may discourage credit improvements and impose unnecessary burdens on customers who no longer present the same level of risk to the utility or its ratepayers.

Q30. WHAT CREDIT AND COLLATERAL REQUIREMENTS DO OTHER UTILITIES IN THE REGION HAVE FOR LARGE LOAD CUSTOMERS?

A. Table 2 summarizes the credit and collateral requirements of selected regional utilities for large load customers.

Table 2: Credit and Collateral Proposed or Approved Requirements of Regional Utilities

Attribute	Indiana Michigan Power	Evergy Kansas & Missouri	ComEd	Consumers Energy	Dominion Energy Virginia
Customer Type	Loads ≥70 MW or 150 MW aggregated	Large Commercial >100 MW	Large Commercial / Industrial	Data centers ≥100 MW	GS-Customers ≥25 MW & ≥75% load factor
Collateral Requirement	24×max monthly bill	24×max monthly bill	Negotiated under PJM ESA	Negotiated; up to 100% of projected cost	$1.5M / MW
Credit Exemption / Reduction	Full waiver if credit & liquidity requirements met, partial waiver if only liquidity requirement met	50% or 40% waived if credit & liquidity requirements met	Waived / reduced under PJM standards	Waived / reduced with guarantees or rating	70% reduction if credit & liquidity requirements met
Forms of Collateral	LOC, guarantee, cash	LOC, surety bond, cash, parent guarantee	Negotiated (LOC, guarantee, bond)	Negotiated (LOC, guarantee, bond)	LOC, surety bond, cash, parent guarantee

Q31. WHAT DOES TABLE 2 DEMONSTRATE?

A. Table 2 illustrates the diverse strategies employed by utilities to manage credit and collateral requirements for large-load customers. These approaches vary based on factors such as utility size, risk tolerance, customer composition, and regulatory context. The table demonstrates that there is no universal standard applicable across all jurisdictions. Rather,

it highlights the importance of using best practices as a guiding framework for credit and collateral policy design.

Best practices serve to promote consistency, fairness, and transparency, while also providing the necessary flexibility to reflect local market conditions and operational realities. They offer a practical foundation for utilities seeking to mitigate financial risk without creating undue barriers to load growth.

Additionally, Table 1 shows that many utilities with significantly smaller customer bases and lower levels of data center interconnection requests than Dominion have adopted more proportionate and flexible approaches to financial security. This comparison suggests that Dominion's assessment of risk, as reflected in its proposed collateral requirements, does not align with the actual level of financial exposure faced by the utility or its ratepayers.

Overall, the information presented in Table 1 supports the conclusion that Dominion's current proposal is more conservative than warranted and that a recalibrated approach would better balance risk mitigation with the need to support beneficial, long-term infrastructure development.

V. RECOMMENDATION TO THE COMMISSION

Q32. BASED ON THE FINANCIAL SECURITY BEST PRACTICES FRAMEWORK EXPLAINED EARLIER, WHAT ARE YOUR RECOMMENDATIONS ON FINANCIAL SECURITIES IN THIS CASE?

A. The recommended approach should balance ratepayer protection with proportionality, transparency, and administrative efficiency. I recommend the following structure:

Collateral Amount and Duration: Customers should post collateral equal to two years of non-fuel revenue, beginning at ESA execution. Dominion is collecting deposits and other up-front payments prior to the ESA that mitigate early project risk for procurement and construction investment.

The collateral should remain in place through the load ramp-up. This level of collateral provides sufficient "skin in the game" to demonstrate the customer's commitment to project development. Maintaining the collateral during the ramp period also serves as an incentive for the customers to achieve full load ramp, thereby minimizing the risk of cost shifts to other customers. While instances of customer default are rare, in such cases, two years of non-fuel revenue would be sufficient to cover the costs associated with underutilized assets until the capacity can be reassigned to a new customer and that customers becomes operational.

Two years is a reasonable period for a defaulting customer to be replaced by another customer from the extensive interconnection queue. Dominion states that the time required to serve new electric data center service requests "depends on customer needs and location characteristics of each new data center development." On its service request website, the utility explains that "electric service provided to a new data center occurs in stages that match the expected energy usage as the facility ramps into its final loading capacity," which suggests that the full scope of resources are not committed prior to interconnection. Dominion's "bridging solution" approach allows for initial service to the facility to commence while the final power plan is completed, concurrent with final planning, permitting, and construction of the facility. Dominion states that new data centers

leveraging existing infrastructure can navigate this process from initial planning conversations to interconnection in 1-2 years.[7]

If Dominion and the Commission prefer the collateral on a $/MW basis, I recommend converting the summation of the two years of bills by the customers' contracted capacity to arrive at the $/MW charge.

Ramp-Down Schedule: After one year of operations at contracted capacity, collateral should be reduced by 10 percent annually, reaching zero by the end of the contract term as proposed by DCC witness Kevin Higgins. If the contract is extended, no new collateral should be required unless additional utility investments are necessary. The 10 percent reduction annually mirrors the reduced risk to Dominion and ratepayers of stranded assets.

Additional Flexibility in Credit Rating-Based Exemptions: I recommend that Dominion adopt additional flexibility in its credit rating-based collateral exemption policy to reflect the diversity of large-load customers. These customers vary in ownership structure, financial profile, and access to credit ratings. A rigid exemption framework may exclude customers that present low financial risk but do not meet narrowly defined eligibility criteria. Providing multiple, clearly defined pathways for exemption would promote equity and transparency without undermining risk management objectives.

There should be two primary exemption pathways:

[7] *Data Center Requests*, Dominion Energy, available at https://www.dominionenergy.com/virginia/large-business-services/data-center-requests.

1. 70 percent Collateral Exemption Criteria: Customers or their guarantors that maintain an investment-grade credit rating of at least BBB- from S&P or Baa3 from Moody's, or customers that hold liquidity equal to at least five times the required collateral amount, should be eligible for a 70 percent exemption. To retain this status, the customer must submit annual certification of its credit rating and liquidity.

2. 50 percent Collateral Exemption Criteria: Customers without formal credit ratings may qualify for a 50 percent exemption under either of the following conditions:

i. The customer or customer's guarantor maintains liquidity equal to at least two times the required collateral amount, subject to annual certification.

ii. The customer provides a signed lease agreement for the full term of the Electric Service Agreement and demonstrates that more than 50 percent of the facility's capacity is contracted to a qualified tenant. The tenant must meet the credit rating threshold, must not be on credit watch, and must maintain liquidity equal to at least two times the required collateral amount. This arrangement must also be supported by annual certification.

This flexible framework ensures that the collateral policy remains risk-informed, scalable, and inclusive, while continuing to uphold the utility's financial integrity and protect its customers.

Case-by-Case Bilateral Financial Assurance with Commission Review: Dominion and a customer may enter into a bilateral agreement that outlines alternative financial assurances or other structural terms. These agreements should reflect the specific risk profile of the customer and may result in partial or full exemption, as appropriate. The proposed terms must be submitted to the Commission for review and approval to ensure consistency with public interest objectives and adequate protection for ratepayers.

Additional Forms of Collateral and Guarantees: Consider alternative forms of collateral such as short/medium term deposits or debt service reserve account that provide interest or bespoke insurance products. Customer should have the option of posting collateral in the form of a guarantee from a parent, affiliate, tenant or other entity with a financial interest in the customer.

Collateral in the form of Cash: If collateral is posted in the form of cash, it should accrue interest while held by Dominion. Any accrued interest should be returned to the customer on a regular basis, such as through quarterly payments or credits. This treatment aligns with standard financial practices and ensures that customers are not unfairly penalized for providing liquid collateral.

Additionally, the Commission should require Dominion to clearly explain how cash collateral will be safeguarded in the event of utility insolvency or bankruptcy. Customers providing cash should have confidence that these funds are protected and recoverable under such circumstances. This clarification is essential to ensure the integrity of the financial security framework and to prevent unintended financial harm to customers in the event of unforeseen utility distress.

Drawing Collateral at Default: Dominion should be required to exhaust all collection remedies prior to drawing down collateral in the event of default.

Use of Collateral Proceeds: If Dominion draws on posted collateral, the proceeds should be used to offset costs for remaining ratepayers to ensure the financial security serves its intended purpose to offset costs for all ratepayers.

Q33. ARE THERE ADDITIONAL RECOMMENDATIONS YOU HAVE FOR THE COMMISSION?

A. Yes. To more effectively calibrate financial risk and avoid unjustified or potentially discriminatory treatment of GS-5 customers, I recommend that Dominion undertake a detailed and transparent quantitative risk-based study to assess the actual risks associated with their current large-load customers prior the filing of its next biennial review. This study should include empirical analysis of key factors such as load ramp rates, customer defaults, and the frequency and timeline for capacity replacement following customer exits.

Dominion has substantial experience serving data center customers and is well-positioned to lead such an effort. The results of this analysis should be shared with stakeholders for review and feedback through a structured workshop process. This setting would allow parties to fully review and evaluate the data, including how it supports or challenges the assumptions embedded in Dominion's current credit and collateral policies. Following the workshop, Dominion should update its collateral framework to reflect the study's quantitative findings and ensure that requirements are proportionate to demonstrated risk.

In addition, I recommend that Dominion explore the use of cluster-based risk assessment techniques for GS-5 customers. Similar to methods applied in interconnection studies,

where groups of resources are evaluated collectively based on shared characteristics, Dominion could analyze the aggregate risk of large-load customers by grouping them by geography, size, facility type, or other relevant attributes. This approach would allow Dominion to more accurately assess systemic risk rather than relying solely on individual project-level evaluations.

These steps would support the development of a more data-driven, transparent, and equitable credit policy that protects ratepayers while encouraging responsible large-load development within Dominion's service territory.

Q34. PROVIDE AN EXAMPLE OF THE DIFFERENCE IN WHAT A CUSTOMER WOULD PAY UNDER DOMINION'S PROPOSAL AS COMPARED TO YOUR RECOMMENDATION.

A. Consider an illustrative data center customer with a contracted demand of 100 megawatts and a typical load factor of 85 percent. Under Dominion's proposed GS-5 rate, the customer's estimated annual electric demand cost would be approximately $10.6 million.[8]

Under Dominion's proposal, which requires $1.5 million in collateral for each megawatt of contracted demand, this customer would be obligated to provide $150 million in collateral. For well-qualified customers eligible for the 70 percent reduction, the requirement would be $45 million. Using a pre-tax weighted average cost of capital

[8] Representative minimum bill is estimated based on system demand using GS-5 rates, as inferred from Exhibit PBH-3 attached to Dominion witness Paul B. Haynes' direct testimony ("GS-5 Placeholder Proposed Revenue-Neutral Rates") and active GS-4 rates (effective Jan 1 2025). In Exhibit PBH-3, Dominion reports that GS-5 demand charges will be priced about 5-8% above GS-4 rates; therefore, a mid-point escalator of 6.5% is applied to approximate this anticipated increase. System demand charges are more directly representative of the risk for stranded infrastructure. Therefore, passthrough charges that are proportionate to customer consumption (e.g., energy) are excluded from this analysis.

("WACC") of 7.55 percent as the discount rate, and assuming a 14-year term with a four-year capacity ramp followed by equal monthly credits applied over the next ten years, the net present cost of this collateral obligation would be approximately $63 million under the standard provision and $19 million under the reduced provision.

By contrast, under a more proportional and risk-aligned framework, such as a requirement equal to two years of anticipated demand revenues, the same customer would provide $21 million in collateral. Using the same WACC and assuming the collateral is returned in equal monthly installments over a 10-year period following a four-year ramp, the net present cost would be approximately $9 million. If fully qualified customers received a 70 percent reduction and partially qualified customers received a 50 percent reduction, the obligations would decline further in proportion to the reduced risk, as shown in Table 2.

This example assumes the collateral is posted in cash and held by the utility without accruing interest. It demonstrates the significant financial burden that Dominion's proposed structure would place on customers. A more flexible approach would still protect the utility while promoting liquidity and investment.

While cash collateral imposes an immediate and direct strain on a customer's liquidity, alternative forms of collateral such as letters of credit or performance bonds can provide equivalent financial assurance with significantly less impact on working capital and financial flexibility.

As shown in Table 3, excessive collateral obligations may increase the cost of capital and create financial uncertainty, thereby discouraging investment. This risk is heightened if the utility does not meet interconnection timelines, as customers may be required to maintain

collateral for longer than anticipated, incurring substantial carrying costs. In some cases, this could result in project delays or abandonment.

Table 3: Collateral Cash Flow Illustrative Example

Year	Dominion Proposal	Dominion Proposal (70% Reduction)	Recommended	Recommended (50% Reduction)	Recommended (70% Reduction)

Counsel to Data Center Coalition

CC: Parties to Case No. U-21859

MPSC Case No.: U-21859
Requester: MNSC
Question No.: MNSC-DCC-2.1(SUPP)
Respondent: Justin Bieber and Shana Ramirez
Page: 1 of 1

QUESTION: For any rebuttal testimony and exhibits filed by Data Center Coalition (DCC) that responds to MNSC testimony and exhibits filed in this proceeding, please produce, on the day rebuttal is filed:

a. Electronic versions of all exhibits used in support of the rebuttal testimony in original format with all links and formulae intact;

b. The supporting workpapers of each witness used in support of preparing their rebuttal testimony and exhibits in original format with all links and formulae intact;

c. All documents cited, referenced, or relied on by each rebuttal witness to develop or support their rebuttal testimony or exhibits; and

d. All analyses, evaluations, projections, documents, and calculations – including any drafts – that were not sponsored as exhibits but were considered or relied upon by the witness in developing their rebuttal testimony or exhibits.

OBJECTION OF COUNSEL:
DCC objects to this request to the extent that it seeks materials that are publicly available.

DCC further objects to this request to the extent it seeks any privileged materials.

Subject to and without waiving these objections, DCC will comply.

SUPPLEMENTAL RESPONSE:

a. The only exhibit to DCC's rebuttal testimony in Exhibit DCC-4 (JB-4). An electronic version of that exhibit was served on all parties.

b. Please see attached workpaper of witness Ramirez, "Consumers Collateral Calculation Workpaper.xlsx" (MNSC-DCC-2.1b.(SUPP) Attach 1). DCC witness Bieber has no workpapers to his rebuttal testimony.

c. All documents referenced or relied upon by DCC witnesses are cited within their respective rebuttal testimonies and are publicly available.

DCC witnesses considered the direct testimonies filed by other parties to this proceeding in developing their respective rebuttal testimonies. Those testimonies are publicly available. There are no documents responsive to this request.

Counsel to Data Center Coalition

CC: Parties to Case No. U-21859

MPSC Case No.: U-21859
Requester: AG
Question No.: AG-DCC-1.1
Respondent: Justin Bieber
Date of Response: July 21, 2025
Page: 1 of 1

QUESTION:
Referring to DCC witness Bieber's Direct Testimony, and specifically the estimated $755,000,000 figure included as "estimated capital cost" in his Table JB-2 and referenced elsewhere in the testimony:

a. Confirm that this figure was calculated by splitting the difference between the range of "$730-$780 million" included in Consumers' discovery response U21859-DCC-CE-0006.

b. If not confirming in response to Sub-Question 1.a above, please explain your calculation, including by providing all calculations and analyses, along with all inputs and assumptions for those calculations and analyses and results therefrom, used in determining the $755,000,000 amount as included in Mr. Bieber's testimony.

RESPONSE:
a. Confirmed.

b. N/A.

MPSC Case No.: U-21859
Requester: AG
Question No.: AG-DCC-1.2
Respondent: Justin Bieber
Date of Response: July 21, 2025
Page: 1 of 1

QUESTION:
Refer to DCC witness Bieber's Direct Testimony at pages 26-27:

a. Would all distribution interconnection costs for a 100 MW or larger data center customer be attributable to that customer?

b. If your answer to Question 2.a is no, please explain what portion would be attributable to that customer, including by providing all calculations and analyses, along with all inputs and assumptions for those calculations and analyses and results therefrom, used in determining your answer.

OBJECTION OF COUNSEL:
DCC objects to this request on the grounds that it is vague and calls for speculation. Individual customer circumstances are likely to vary dependent on siting location and relevant conditions of Consumers Energy's system. Without knowing what customer and what region of Consumers' system are in question, this question cannot be answered comprehensively. Further, DCC cannot answer conclusively with respect to cost attribution because DCC does not control and cannot predict whether all distribution interconnection costs for a hypothetical customer would be attributable to that customer. Subject to and without waiving this objection, DCC responds as follows.

RESPONSE:

a. My direct testimony does not specify what portion of distribution interconnection costs would be attributable to a data center customer. The testimony states that distribution costs to interconnect a large load customer can vary significantly based on the location of the load.

   Since the distribution investments and associated costs to interconnect a hypothetical 100 MW customer are currently unknown, it is also unknown what portion of those costs might be attributable to a hypothetical 100 MW customer.

   My testimony also explains that Consumers' tariff allows the Company to charge a monthly extraordinary facilities charge or to require non-refundable Contributions in Aid of Construction ("CIAC") when extraordinary facilities are required to interconnect a customer. Requiring non-refundable CIAC for extraordinary facilities would effectively be a direct assignment of those costs.

b. See response to question 1.2a.

MPSC Case No.: U-21859
Requester: AG
Question No.: AG-DCC-1.3
Respondent: Justin Bieber
Date of Response: July 21, 2025
Page: 1 of 2

QUESTION:
Refer to DCC witness Bieber's Rebuttal Testimony at page 17:

a. Would all transmission interconnection costs for a 100 MW or larger data center customer be attributable to that customer?

b. If your answer to Question 3.a is no, please explain what portion would be attributable to that customer, including by providing all calculations and analyses, along with all inputs and assumptions for those calculations and analyses and results therefrom, used in determining your answer.

c. If your answer to Question 3.a is no, please explain what portion would constitute costs for "radial transmission facilities" related to interconnection as described in your testimony, including by providing all calculations and analyses, along with all inputs and assumptions for those calculations and analyses and results therefrom, used in determining your answer.

OBJECTION OF COUNSEL:
DCC objects to this request on the grounds that it is vague and calls for speculation. Individual customer circumstances are likely to vary dependent on siting location and relevant conditions of Consumers Energy's system. Without knowing what customer and what region of Consumers' system are in question, this question cannot be answered comprehensively. Further, DCC cannot answer conclusively with respect to cost attribution because DCC does not control and cannot predict whether all transmission interconnection costs for a hypothetical customer would be attributable to that customer. Subject to and without waiving this objection, DCC responds as follows.

RESPONSE:
a. My rebuttal testimony does not specify what portion of transmission interconnection costs would be attributable to a data center customer. The testimony states that Consumers relies on the Midcontinent Independent System Operator ("MISO") to operate the transmission system and dispatch generation resources in an efficient manner to serve all system loads. It also states that system transmission investments are jointly utilized to serve all loads on the system.

   Since the transmission investments and associated costs to interconnect a hypothetical 100 MW customer are currently unknown, it is also unknown what portion of those costs might be attributable to a hypothetical 100 MW customer.

MPSC Case No.: U-21859
Requester: AG
Question No.: AG-DCC-1.3
Respondent: Justin Bieber
Date of Response: July 21, 2025
Page: 2 of 2

Further, Consumers does not own or operate transmission assets. As the Company explains in discovery, the Company expects all large data center customers to take service from the distribution system (see U21859-MNSC-CE-0079).

b. See response to question 1.3a.

c. See response to question 1.3a. Consumers expects to provide service to all customers from the distribution system. Therefore, any radial facilities, such as the ones referenced in my testimony that might interconnect a new load customer to a dedicated substation, would likely be classified as distribution voltage.

MPSC Case No.: U-21859
Requester: AG
Question No.: AG-DCC-1.4
Respondent: Justin Bieber
Date of Response: July 21, 2025
Page: 1 of 1

QUESTION:
To the extent not provided in response to Questions 2-3 above, what portion of interconnection costs for a 100MW or larger data center customer, such as the interconnection costs described in Consumers Energy's discovery response U21859-MNSC-CE-0035, are attributable to that data center customer? To the extent that your response to this Question is already encompassed in your responses to Questions 2-3 above, please explain and identify how the answers to those questions also provide an answer to this Question. Please provide all calculations and analyses used to determine your answer, along with the inputs and assumptions for those calculations and analyses and the results therefrom.

OBJECTION OF COUNSEL:
DCC objects to this request on the grounds that it is vague and calls for speculation. Individual customer circumstances are likely to vary dependent on siting location and relevant conditions of Consumers Energy's system. Without knowing what customer and what region of Consumers' system are in question, this question cannot be answered comprehensively. Further, DCC cannot answer conclusively with respect to cost attribution because DCC does not control and cannot predict whether all distribution or transmission interconnection costs for a hypothetical customer would be attributable to that customer. Subject to and without waiving this objection, DCC responds as follows.

RESPONSE:

See responses to 1.2a. and 1.3a. As explained in the referenced discovery, the range of total cost for interconnection facilities for a 100 MW load vary greatly on the location of load and the network upgrades required to adequately interconnect the load while maintaining system reliability. Since the interconnection costs to interconnect a hypothetical 100 MW data center customer are currently unknown, it is also unknown what portion of those costs might be attributable to a hypothetical 100 MW customer.

Dated: July 21, 2025

U21859-AG-MEIU-1a:

Refer to the direct testimony and exhibits of MEIU witness Albers filed in this proceeding on June 12, 2025 ("MEIU's Direct Testimony"), along with the direct testimony of Consumers Energy's witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

a. Identify and explain each recommendation in MEIU's Direct Testimony that would require data center customers to procure or fund, or be responsible for procuring or funding, any specific amount or specific minimum amount of renewable or clean energy as a requirement for taking service.

Response: My Direct Testimony does not contain a recommendation that would require data center customers to procure or fund, or be responsible for procuring or funding, any specific amount or specific minimum amount of renewable or clean energy as a requirement for taking service. My Direct Testimony recommends that the Commission approve tariff language allowing new customers with loads of 25 MW and above to choose from among described options how to satisfy the new load cost-effectively in compliance with the independently applicable statutory requirements identified on pages 6-7.

Response provided by: John D. Albers

U21859-AG-MEIU-1b

Refer to the direct testimony and exhibits of MEIU witness Albers filed in this proceeding on June 12, 2025 ("MEIU's Direct Testimony"), along with the direct testimony of Consumers Energy's witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

b. For each recommendation identified in response to Sub-Question 1.a above, produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) showing how and the specific extent to which each such recommendation would result in procurement of renewable or clean energy to meet PA 235's compliance standards (including as described in MCL 460.1028(1)) to accommodate each additional data center load.

Response: See response to U21859-AG-MEIU-1a.

Response provided by: John D. Albers

U21859-AG-MEIU-2a

Refer to MEIU's Direct Testimony, along with the direct testimony of Consumers Energy's witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

a. Identify and explain any recommendations in Staff's Direct Testimony that address the possibility of Consumers Energy requesting a surcharge (such as it might request under the premise of MCL 460.1045) to recover any portion of compliance costs under PA 235 driven by an increase in data center load.

Response: Assuming that Question U21859-AG-MEIU-2a intended to reference MEIU's Direct Testimony and not Staff's Direct Testimony, my Direct Testimony on behalf of MEIU does not contain any recommendations that address the possibility of Consumers Energy requesting a surcharge to recover any portion of compliance costs under PA 235 driven by an increase in data center load.

Response provided by: John D. Albers

U21859-AG-MEIU-2b

Refer to MEIU's Direct Testimony, along with the direct testimony of Consumers Energy's witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

b. For each recommendation identified in response to Sub-Question 2.a above, produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) as to how such recommendation addresses the possibility of a requested surcharge.

Response: See response to U21859-AG-MEIU-2a.

Response provided by: John D. Albers

U21859-AG-MEIU-3a

Refer to MEIU's Direct Testimony, along with the direct testimony of Consumers Energy's witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

a. Identify and explain any points in MEIU's Direct Testimony that address the added transmission costs from development of generation resources, including specifically the development of renewable generation resources for meeting PA 235 compliance, as referenced in Consumers Energy's discovery response U21859-AG-CE-0065.

Response: With the exception of a reference to grid enhancing technology on page 13, my Direct Testimony on behalf of MEIU does not address added transmission costs from development of generation resources.

Response provided by: John D. Albers

U21859-AG-MEIU-3b

Refer to MEIU's Direct Testimony, along with the direct testimony of Consumers Energy's witness Connolly at 4:7-8 that "[t]he Company has data center inquiries that total over 15 gigawatts of electric load in the economic development pipeline":

b. For each recommendation identified in response to Sub-Question 3.a above, produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) as to how such recommendation addresses transmission costs as described in discovery response U21859-AG-CE-0065.

Response: No calculations or analyses have been conducted. Generally, grid enhancing technology is intended to reduce transmission costs by making better and more efficient use of existing transmission infrastructure.

Response provided by: John D. Albers

U21859-AG-MEIU-4

Identify and explain any other recommendations in MEIU's Direct Testimony not identified in response to Questions No. 1-3 above that address the risks of cost-of-compliance shifting onto other customers for compliance with PA 235 in accommodating new data center loads. For each such recommendation, further produce all calculations and analyses (along with assumptions, inputs, and results of such calculations and analyses) as to how each such recommendation addresses the risks of cost-of-compliance shifting.

Response: My Direct Testimony on behalf of MEIU contains no recommendations addressing the risks of cost-of-compliance shifting onto other customers for compliance with PA 235 in accommodating new data center loads.

Response provided by: John D. Albers

U21859-AG-MEIU-5

Are any of MEIU's members entities that are "data centers" or owners or operators of "data centers" as "data center" is defined in the Direct Testimony of Consumers Energy's witness Connoly at 4:1-4? For example, are any members of Advanced Energy United, Inc., data centers or owners or operators of data centers?

Response:

Objection of Counsel: MEIU object to the request because it is not reasonably calculated to lead to the discovery of admissible evidence. The membership of any constituent entity of MEIU is not relevant to the issues under consideration in this proceeding. Subject to this objection, and without waiving it, MEIU answer as follows:

Advanced Energy United's membership includes data centers or owners or operators of data centers among its broad membership. I have no direct personal knowledge as to the membership of the Michigan Energy Innovation Business Council; however, its membership is publicly available here: https://www.mieibc.org/our-member-companies/.

Response provided by: As to the Objection, Counsel; As to the Substantive Response, John D. Albers

U21859-AG-MEIU-6

Are any of MEIU's members affiliates of entities that are "data centers" or owners or operators of "data centers" as "data center" is defined in the Direct Testimony of Consumers Energy's witness Connoly at 4:1-4?

Response:

Objection of Counsel: MEIU object to the request because it is not reasonably calculated to lead to the discovery of admissible evidence. The membership and affiliates of the membership of any constituent entity of MEIU is not relevant to the issues under consideration in this proceeding. Subject to this objection, and without waiving it, MEIU answer as follows:

Advanced Energy United's membership includes affiliates of entities that are data centers or owners or operators of data centers among its broad membership. I have no direct personal knowledge as to the membership or the affiliates of members of the Michigan Energy Innovation Business Council; however, its membership is publicly available here: https://www.mieibc.org/our-member-companies/.

Response provided by: As to the Objection, Counsel; As to the Substantive Response, John D. Albers

U21859-AG-MEIU-7a

Refer to the inquiries identified by Consumers Energy in discovery responses to question U21859-AG-CE-0015 as well as Exhibit AG-1.6 including a list of such inquires produced by Consumers in response to Sub-Question U21859-AG-CE-0015.a:

a. Were any of these inquiries made by entities that are members of MEIU?

Response:

Objection of Counsel: MEIU object to this interrogatory because it seeks information from third parties and information not within their possession, custody, control, or personal knowledge. Subject to this objection and without waiving it, MEIU would answer as follows:

MEIU are not in possession of any information concerning the business plans of their members.

Response provided by: Counsel

U21859-AG-MEIU-7b

Refer to the inquiries identified by Consumers Energy in discovery responses to question U21859-AG-CE-0015 as well as Exhibit AG-1.6 including a list of such inquires produced by Consumers in response to Sub-Question U21859-AG-CE-0015.a:

b. Were any of these inquires made by entities that are affiliates of members of MEIU?

Response:

Objection of Counsel: MEIU object to this interrogatory because it seeks information from third parties and information not within their possession, custody, control, or personal knowledge. Subject to this objection and without waiving it, MEIU would answer as follows:

MEIU are not in possession of any information concerning the business plans of affiliates of their members.
