Hello,

I am writing to you because I want to urge the MPSC to reject DTE Electric Co.'s application for approval of contracts with the data center customer in Washtenaw County.

The data center is going to be built on 250 Acres of Farmland in Saline Township. It is going to require over 1.4GW capacity, supplied completely by DTE with 7 billion dollars in electric contracts. This power demand is 25% of DTE's current power demand. DTE is asking for expedited approval of their contracts to supply energy for this data center.

In its filing, DTE said the contracts could be approved by the public service commission without notice or hearing because they "will not increase the cost of services to the Company's customers." However, Michigan Attorney General Dana Nessel is asking the MPSC for a contested case hearing to gather more details and has called this, "a rush job."

I am urging the MPSC to reject DTE Electric Co.'s application for approval for several reasons. There is a claim that building a data center in Saline will cause electricity costs to go down or will not impact them, but the reality is that costs will go up. Illinois, with 244 Data centers, has seen a **15.8% increase** in year-over-year electricity costs. Virginia, with 666 data centers, has seen a **13% increase**. Ohio, with 193 data centers, has seen a **12% increase**. In the PJM energy market, **data centers were responsible for 63% of the price increase, and some customers' bills went up by up to \$1000.**

Data centers of this size also require diesel back-up generators, which will become major polluters in the area. In Memphis, the xAI data center is currently operating 35 methane turbines, which are emitting 1,000 to 2,000 tons of nitrogen oxides, formaldehyde, and fine particulate matter. **It's become the biggest polluter in the area.** Residents have complained that their whole neighborhood **smells like a gas leak.** In the year that it's been open, **the xAI data center has already caused several cases of asthma, chronic obstructive pulmonary disease, and bronchitis, and many community members have already passed away.**

As a Michigan resident, I want to urge the Michigan Public Service Commission to uphold its mission to serve the public by ensuring safe, reliable, and accessible energy and telecommunications services at reasonable rates. Please reject DTE Electric Co.'s application for approval of contracts with the data center customer in Washtenaw County.

Thank you,

Jordan K. Rice

The data center is going to be built on 250 Acres of Farmland in Saline Township. It is going to require over 1.4GW capacity, supplied completely by DTE with 7 billion dollars in electric contracts. This power demand is 25% of DTEs current power demand. DTE is asking for expedited approval of their contracts to supply energy for this data center.

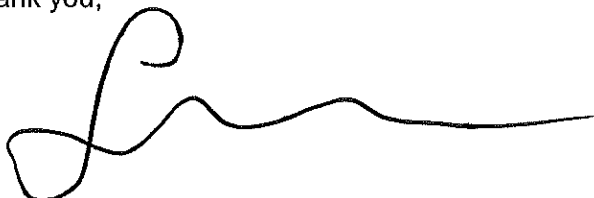

In its filing, DTE said the contracts could be approved by the public service commission without notice or hearing because they "will not increase the cost of services to the Company's customers." However, Michigan Attorney General Dana Nessel is asking the MPSC for a contested case hearing to gather more details and has called this, "a rush job."

I am urging the MPSC to reject DTE Electric Co's application for approval for several reasons. There is a claim that building a data center in Saline will cause electricity costs to go down or will not impact them, but the reality is that costs will go up. Illinois, with 244 Data centers, has seen a **15.8% increase** in year-over-year electricity costs. Virginia, with 666 data centers, has seen a **13% increase**. Ohio, with 193 data centers, has seen a **12% increase**. In the PJM energy market, **data centers were responsible for 63% of the price increase**, and **some customers' bills went up by up to \$1000**.

Data centers of this size also require diesel back-up generators, which will become major polluters in the area. In Memphis, the xAI data center is currently operating 35 methane turbines, which are emitting 1,000 to 2,000 tons of nitrogen oxides, formaldehyde, and fine particulate matter. **It's become the biggest polluter in the area.** Residents have complained that their whole neighborhood **smells like a gas leak**. In the year that it's been open, **the xAI data center has already caused several cases of asthma, chronic obstructive pulmonary disease, and bronchitis, and many community members have already passed away.**

As a Michigan resident, I want to urge the Michigan Public Service Commission to uphold its mission to serve the public by ensuring safe, reliable, and accessible energy and telecommunications services at reasonable rates. Please reject DTE Electric Co.'s application for approval of contracts with the data center customer in Washtenaw County.

Thank you,
