Consumers Energy Company
Electric Rate Case No. U-22070
Index of Exhibits - A# Order

Exhibit # Complete (a)	Witness (b)	Description (c)
Historical Year Section		
A-1 (HLP-1), Sch A-1	Patton, Hannah L	Revenue Deficiency (Sufficiency) for the Historical Year Ended December 31, 2025
A-1 (HLP-2), Sch A-2	Patton, Hannah L	Historical Financial Metrics – Electric Results Only
A-2 (HLP-3), Sch B-1	Patton, Hannah L	Rate Base for the Historical Year Ended December 31, 2025
A-2 (HLP-4), Sch B-2	Patton, Hannah L	Total Utility Plant for the Historical Year Ended December 31, 2025
A-2 (HLP-5), Sch B-3	Patton, Hannah L	Depreciation Reserve and Other Deductions for the Historical Year Ended December 31, 2025
A-2 (HLP-6), Sch B-4	Patton, Hannah L	Working Capital for the Historical Year Ended December 31, 2025
A-2 (HLP-7), Sch B-5	Patton, Hannah L	13-Month Average Balance Sheet for the Historical Year Ended December 31, 2025
A-2 (HLP-8), Sch B-6	Patton, Hannah L	Point-In-Time Balance Sheet for the Historical Year Ended December 31, 2025
A-3 (HLP-9), Sch C-1	Patton, Hannah L	Adjusted Net Operating Income for the Historical Year Ended December 31, 2025
A-3 (HLP-10), Sch C-2	Patton, Hannah L	Calculation of the Revenue Conversion Factor for the Historical Year Ended December 31, 2025
A-3 (HLP-11), Sch C-3	Patton, Hannah L	Operating Revenue for the Historical Year Ended December 31, 2025
A-3 (HLP-12), Sch C-4	Patton, Hannah L	Cost of Fuel and Purchased Power for the Historical Year Ended December 31, 2025
A-3 (HLP-13), Sch C-5	Patton, Hannah L	Operation and Maintenance Expenses for the Historical Year Ended December 31, 2025
A-3 (HLP-15), Sch C-6	Patton, Hannah L	Depreciation and Amortization Expenses for the Historical Year Ended December 31, 2025
A-3 (HLP-16), Sch C-7	Patton, Hannah L	General Taxes for the Historical Year Ended December 31, 2025
A-3 (HLP-17), Sch C-8	Patton, Hannah L	Federal Income Taxes for the Historical Year Ended December 31, 2025
A-3 (HLP-18), Sch C-9	Patton, Hannah L	State Income Taxes for the Historical Year Ended December 31, 2025
A-3 (HLP-19), Sch C-10	Patton, Hannah L	Other (or Local) Taxes for the Historical Year Ended December 31, 2025
A-3 (HLP-20), Sch C-11	Patton, Hannah L	Allowance for Funds Used During Construction for the Historical Year Ended December 31, 2025
A-3 (HLP-21), Sch C-12	Patton, Hannah L	Income Tax Effect of Interest for the Historical Year Ended December 31, 2025
A-3 (HLP-22), Sch C-13	Patton, Hannah L	Interest Synchronization Adjustment for the Historical Year Ended December 31, 2025
A-4 (HLP-23), Sch D-1	Patton, Hannah L	Capital Structure and Rate of Return Summary for the Historical Year Ended December 31, 2025

A-4 (HLP-24), Sch D-2	Patton, Hannah L	Cost of Long-Term Debt (Excluding Securitization) for the Historical Year Ended December 31, 2025
A-4 (HLP-25), Sch D-3	Patton, Hannah L	Cost of Short-Term Debt for the Historical Year Ended December 31, 2025
A-4 (HLP-26), Sch D-4	Patton, Hannah L	Cost of Preferred Stock for the Historical Year Ended December 31, 2025
A-4 (HLP-27), Sch D-5	Patton, Hannah L	Cost of Common Shareholder's Equity for the Historical Year Ended December 31, 2025
A-5 (EMB-1), Sch E-1	Breuring, Eugene M	Annual Service Area Calendar Sales by Major Customer Classes and System Output – 5-Year Historical
A-6	-	Exhibit Number Intentionally Left Blank
A-7	-	Exhibit Number Intentionally Left Blank
A-8	-	Exhibit Number Intentionally Left Blank
A-9	-	Exhibit Number Intentionally Left Blank
A-10	-	Exhibit Number Intentionally Left Blank

Test Year Section

A-11 (HLP-28), Sch A-1	Patton, Hannah L.	Revenue Deficiency (Sufficiency) for the Projected 12-Month Period Ending April 30, 2028
A-11 (HLP-29), Sch A-2	Patton, Hannah L.	Financial Metrics – Ratemaking Basis – For the Projected 12-Month Period Ending April 30, 2028
A-11 (HLP-30), Sch A-3	Patton, Hannah L.	Comparison of the Historical and Projected Revenue Requirement for the Projected 12-Month Period Ending April 30, 2028
A-12 (HLP-31), Sch B-1	Patton, Hannah L	Rate Base for the Projected 12-Month Period Ending April 30, 2028
A-12 (HLP-32), Sch B-2	Patton, Hannah L	Total Utility Plant for the Projected 12-Month Period Ending April 30, 2028
A-12 (HLP-33), Sch B-3	Patton, Hannah L	Depreciation Reserve and Other Deductions for the Projected 12-Month Period Ending April 30, 2028
A-12 (HLP-34), Sch B-4	Patton, Hannah L	Working Capital Summary for the Projected 12-Month Period Ending April 30, 2028
A-12 (HLP-35), Sch B-5	Patton, Hannah L	Capital Expenditures Summary for the Projected 12-Month Period Ending April 30, 2028
A-12 (JJJ-1), Sch B-5.1	Judy, Joshua J	Summary of Actual & Projected Capital Expenditures Fleet Services
A-12 (MEW-3), Sch B-5.2	Wittbrodt, Mark E	Summary of Actual and Projected Electric Capital Expenditures for the Years 2025 through April 2028
A-12 (MJF-7), Sch B-5.3	Foster, Matthew J	Electric Corporate Services Capital Expenditures for the Years 2025 through the 12 Months Ending April 30, 2028
A-12 (QAG-1), Sch B-5.4	Guinn, Quentin A	Summary of Actual & Projected Capital Expenditures Facilities & Shared Services
A-12 (SHB-4), Sch B-5.5	Baker, Stacy H	Projected Capital Expenditures Information Technology Summary of Actual and Projected Electric and Common Capital Expenditures
A-12 (EMD-1), Sch B-5.6	Duke, Emily M	Electric Distribution Summary of Actual and Projected Capital Expenditures
A-12 (AMG-1), Sch B-5.7	Gast, Alex M.	Actual and Projected Capital Expenditures - Customer Experience & Growth
A-12 (AMG-3), Sch B-5.8	Gast, Alex M.	Actual and Projected Capital Expenditures – Demand Response

A-12 (AMG-10), Sch B-5.9	Gast, Alex M.	Transportation Electrification Plan Capital Expenditures
A-12 (DAS-1), Sch B-5.10	Schmoekel, Daniel A	Summary of Actual and Projected Electric Capital Expenditures for the Years 2021 through 2028
A-13 (HLP-36), Sch C-1	Patton, Hannah L	Adjusted Net Operating Income for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-38), Sch C-2	Patton, Hannah L	Calculation of the Revenue Conversion Factor for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-39), Sch C-3	Patton, Hannah L	Operating Revenues for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-40), Sch C-4	Patton, Hannah L	Cost of Fuel and Purchased Power for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-41), Sch C-5	Patton, Hannah L	Operating and Maintenance Expenses for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-43), Sch C-6	Patton, Hannah L	Depreciation and Amortization Expenses for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-44), Sch C-7	Patton, Hannah L	General Taxes for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-45), Sch C-8	Patton, Hannah L	Federal Income Taxes for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-46), Sch C-9	Patton, Hannah L	State Income Taxes for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-47), Sch C-10	Patton, Hannah L	Other (or Local) Taxes for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-48), Sch C-11	Patton, Hannah L	Allowance for Funds Used During Construction for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-49), Sch C-12	Patton, Hannah L	Income Tax Effect of Interest for the Projected 12-Month Period Ending April 30, 2028
A-13 (HLP-50), Sch C-13	Patton, Hannah L	Interest Synchronization Adjustment for the Projected 12-Month Period Ending April 30, 2028
A-14 (MRB-1), Sch D-1	Bleckman, Marc R	Overall Rate of Return Summary
A-14 (MRB-2), Sch D-1a	Bleckman, Marc R	Capital Structure Development
A-14 (MRB-3), Sch D-1b	Bleckman, Marc R	Comparison of Development of Capital Structure
A-14 (MRB-4), Sch D-2	Bleckman, Marc R	Cost of Long-Term Debt
A-14 (MRB-5), Sch D-3	Bleckman, Marc R	Cost of Short-Term Debt
A-14 (MRB-6), Sch D-4	Bleckman, Marc R	Cost of Preferred Stock
A-14 (AEB-1), Sch D-5	Bulkley, Ann E	Cost of Common Shareholder's Equity
A-14 (MRB-7), Sch D-6	Bleckman, Marc R	Short-Term Debt Utilization
A-15 (EMB-2), Sch E-1	Breuring, Eugene M	Annual Service Area Calendar Sales by Major Customer Classes and System Output – 5-Year Projected
A-15 (EMB-3), Sch E-2	Breuring, Eugene M	Test Year Total Company Electric Revenues & Deliveries
A-15 (EMB-4), Sch E-3	Breuring, Eugene M	Electric Deliveries & Customer Counts by Rate Category
A-15 (EMB-5), Sch E-4	Breuring, Eugene M	Calculation of Annual System Load Factor
A-16 (EAD-1), Sch F-1	Davis, Emily A	Electric COSS- Projected 12-Month Period Ending April 30, 2028

A-16 (MCG-2), Sch F-2	Grondin, Michael C	Summary of Present and Proposed Revenues by Rate Schedule
A-16 (MCG-2), Sch F-2.1	Grondin, Michael C	Calculation of Rate Design Targets
A-16 (MCG-3), Sch F-3.0	Grondin, Michael C	Present and Proposed Revenue Detail
A-16 (MCG-4), Sch F-4.0	Grondin, Michael C	Comparison of Present and Proposed Monthly Bills
A-16 (BAG-2), Sch F-5	Gray, Brittani A	Proposed Electric Tariff Sheets (M.P.S.C. No. 14 Redlined Version)
A-17 (SHB-1)	Baker, Stacy H	Summary of Actual and Projected Information Technology Operations O&M Expense for the Years 2025 and Test Year 12 Months ending April 30, 2028
A-18 (SHB-2)	Baker, Stacy H	Historical and Projected 13-Month Average of IT Cloud Computing Prepaid Balance for the historical years 2025 - 13-month balance ending December 31, 2025, and for the projected years 2027 – 13-month balance ending April 30, 2028
A-19 (SHB-3)	Baker, Stacy H	Summary of Actual and Projected Information Technology Investments O&M Expense for the Years 2025 and Test Year 12 Months ending April 30, 2028
A-20 (SHB-5)	Baker, Stacy H	Synopses Containing Descriptions, Scope, Benefits, Implementation Dates and Detailed Costs of Actual and Projected Electric & Common Capital Expenditures and O&M Expenses for the Years 2025, 2026, 2027, and 2028
A-21 (SHB-6) CONF	Baker, Stacy H	Synopses Containing Descriptions, Scope, Benefits, Implementation Dates and Detailed Costs of Projected Electric & Common Capital Expenditures and O&M Expenses for the Years 2026, 2027, and 2028 for the SAP S/4HANA Implementation Project
A-22 (SHB-7)	Baker, Stacy H	Business Case Executive Summaries for Historical, Bridge Period, and Test Year Projects
A-23 (SHB-8) CONF	Baker, Stacy H	Business Case Executive Summary for Bridge Period and Test Year for the SAP S/4HANA Implementation project
A-24 (SHB-9)	Baker, Stacy H	Asset Refresh Programs Projected Electric and Common Capital Expenditures, For the Projected Year 2027 and Test Year ending April, 30 2028, and For the Historical and Projected Years 2025 and
A-25 (SHB-10)	Baker, Stacy H	ARP-FDAM and ARP-WAM New Purchases Four-Year Historical Average
A-26 (SHB-11) CONF	Baker, Stacy H	Application Currency Programs Projected Electric and Common Capital and O&M Expenditures for the Years 2027, 2028, and Test Year 12 Months ending April 30, 2028
A-27 (SHB-12)	Baker, Stacy H	Enhancements Three-Year Historical Average
A-28 (SHB-13) CONF	Baker, Stacy H	Projected 13-Month Average of IT S/4HANA Regulatory Asset for the projected years 2027 – 13-month balance ending April 30, 2028
A-29 (SHB-14) CONF	Baker, Stacy H	Projected SAP S/4HANA Implementation Project Reconciliation for Case Nos. U-21870 and U-22070
A-30 (RRB-1)	Babale, Rachel R	Summary of Historical Year, Bridge Period, and Projected Test Year for Operations Resources – Electric LVD Workplan
A-31 (RRB-2)	Babale, Rachel R	Summary of Historical Year, Bridge Period, and Projected Test Year Operations Resources – Electric HVD Workplan
A-32 (MRB-8)	Bleckman, Marc R	Current and Historical Credit Ratings
A-33 (MRB-9)	Bleckman, Marc R	Recent Utility Corporate Bond Issuances
A-34 (MRB-10)	Bleckman, Marc R	Peer Company Commission Authorized Equity Ratios
A-35 (MRB-11)	Bleckman, Marc R	State Regulatory Evaluations
A-36 (MRB-12)	Bleckman, Marc R	Cumulative Annual Interest Savings
A-37 (MRB-13)	Bleckman, Marc R	Peer Company Revolver Capacity Analysis
A-38 (MRB-14)	Bleckman, Marc R	Moody's March 23, 2026 Credit Report
A-39 (MRB-15)	Bleckman, Marc R	S&P Global August 7, 2024 Report – RRA State Regulatory Evaluations – Energy
A-40 (MRB-16)	Bleckman, Marc R	UBS May 10, 2023 Report
A-41 (MRB-17)	Bleckman, Marc R	S&P September 15, 2025 Credit Report
A-42 (MRB-18)	Bleckman, Marc R	Fitch April 11, 2025 Credit Report
A-43 (MRB-19)	Bleckman, Marc R	S&P January 14, 2026 Report
A-44 (MRB-20)	Bleckman, Marc R	Fitch April 8, 2026 Credit Report

A-45 (EMB-6)	Breuring, Eugene M	Estimated Electric Rate Case PSCR Factor
A-46 (TPC-1)	Clark, Thomas P	Weadock BESS Project – Milestone Schedule
A-47 (TPC-2) CONF	Clark, Thomas P	Weadock BESS Project – Substation Transformer Agreement by and between Virginia Transformer Company and Consumers Energy Company, dated March 1, 2024
A-48 (TPC-3) CONF	Clark, Thomas P	Weadock BESS Project – Purchase Order by and between Virginia Transformer Company and Consumers Energy Company, dated March 7, 2024
A-49 (TPC-4) CONF	Clark, Thomas P	Weadock BESS Project – EPC Contract between Rauhorn Electric, Inc. and Consumers Energy Company, dated August 2, 2024
A-50 (TPC-5) CONF	Clark, Thomas P	Weadock BESS Project – Contract Change Order #1 to the EPC Contract between Rauhorn Electric, Inc. and Consumers Energy Company, dated July 28, 2025
A-51 (TPC-6) CONF	Clark, Thomas P	Weadock BESS Project – Major Procurement Contract between Our Next Energy, Inc. and Consumers Energy, dated August 2, 2024
A-52 (TPC-7) CONF	Clark, Thomas P	Weadock BESS Project – Contract Change Order #1 to the Major Procurement Contract by and between Our Next Energy, Energy Vault, Inc. and Consumers Energy Company, dated December 18,
A-53 (TPC-8) CONF	Clark, Thomas P	Weadock BESS Project – Contract Change Order #2 to the Major Procurement Contract by and between Our Next Energy, Energy Vault, Inc. and Consumers Energy Company, dated May 13, 2025
A-54 (TPC-9) CONF	Clark, Thomas P	Weadock BESS Project – Contract Change Order #3 to the Major Procurement Contract by and between Our Next Energy, Energy Vault, Inc. and Consumers Energy Company, dated September 15,
A-55 (TPC-10)	Clark, Thomas P	Iosco BESS Project – Milestone Schedule
A-56 (TPC-11) CONF	Clark, Thomas P	Iosco BESS Project – Substation Transformer Agreement by and between Virginia Transformer Company and Consumers Energy Company, dated March 1, 2024
A-57 (TPC-12) CONF	Clark, Thomas P	Iosco BESS Project – Purchase Order by and between Virginia Transformer Company and Consumers Energy Company, dated March 7, 2024
A-58 (TPC-13) CONF	Clark, Thomas P	Iosco BESS Project – EPC Contract between Rauhorn Electric, Inc. and Consumers Energy Company, dated August 2, 2024
A-59 (TPC-14) CONF	Clark, Thomas P	Iosco BESS Project – Contract Change Order #1 EPC Contract between Rauhorn Electric, Inc. and Consumers Energy Company, dated July 28, 2025
A-60 (TPC-15) CONF	Clark, Thomas P	Iosco BESS Project – Major Procurement Contract between Our Next Energy, Inc. and Consumers Energy Company dated August 2, 2024
A-61 (TPC-16) CONF	Clark, Thomas P	Iosco BESS Project – Contract Change Order #1 to the Major Procurement Contract between Our Next Energy, Energy Vault, Inc. and Consumers Energy Company, dated December 18, 2024
A-62 (TPC-17) CONF	Clark, Thomas P	Iosco BESS Project – Contract Change Order #2 to the Major Procurement Contract between Our Next Energy, Energy Vault, Inc. and Consumers Energy Company, dated May 13 , 2025
A-63 (TPC-18) CONF	Clark, Thomas P	Iosco BESS Project – Contract Change Order #3 to the Major Procurement Contract between Our Next Energy, Energy Vault, Inc. and Consumers Energy Company, dated September 15, 2025
A-64 (LMC-1)	Connolly, Laura M	Summary of Large Load Proposals
A-65 (LMC-2)	Connolly, Laura M	Large Load Rate Design – Proposal 1
A-66 (LMC-3)	Connolly, Laura M	Large Load Rate Design – Proposal 2
A-67 (LMC-4)	Connolly, Laura M	Large Load Rate Design – Proposal 3
A-68 (LMC-5)	Connolly, Laura M	Large Load Rate Design – Proposal 4
A-69 (LMC-6)	Connolly, Laura M	Large Load Rate Design – Proposal 5
A-70 (AMC-1)	Conrad, Amy M	EICP Performance Measures
A-71 (AMC-2)	Conrad, Amy M	Target Pay Level Market Analysis
A-72 (AMC-3)	Conrad, Amy M	Summary of Actual and Projected – Annual Incentive O&M Expenses
A-73 (AMC-4)	Conrad, Amy M	Summary of Officer Compensation - Proxy Data for Consumers and Peer Group
A-74 (AMC-5)	Conrad, Amy M	Most Recent CMS Summary Compensation Table from the Proxy statement
A-75 (AMC-6)	Conrad, Amy M	Allocation of Base Salary and Incentive Expense for the Historical Period
A-76 (EAD-2)	Davis, Emily A	Alternative Meter Allocation
A-77 (EAD-3)	Davis, Emily A	SRM Calculation
A-78 (EAD-4)	Davis, Emily A	SOC Calculation

A-79 (EAD-5)	Davis, Emily A	Allocation of Surcharges
A-80 (EAD-6)	Davis, Emily A	Large Load COSS- Proposal 1
A-81 (EAD-7)	Davis, Emily A	Large Load COSS- Proposal 2
A-82 (EAD-8)	Davis, Emily A	Large Load COSS- Proposal 3
A-83 (EAD-9)	Davis, Emily A	Large Load COSS- Proposal 4
A-84 (EAD-10)	Davis, Emily A	Large Load COSS- Proposal 5
A-85 (JDP-1)	Dickey, Jeffrey P	March/April Ice Storm Comprehensive Cost & Comparative Analysis Data
A-86 (EMD-2)	Duke, Emily M	Electric Distribution Actual and Projected Capital Expenditures – Cost Splits
A-87 (EMD-3)	Duke, Emily M	Electric Distribution Actual and Project Capital Expenditures – 5yr Historical
A-88 (EMD-4)	Duke, Emily M	Electric Distribution Actual and Projected Capital Expenditures – Over/Under $5 Million
A-89 (EMD-5)	Duke, Emily M	Electric Distribution Summary of Actual & Projected O&M
A-90 (EMD-6)	Duke, Emily M	Electric Distribution Detailed Summary of Actual & Projected O&M
A-91 (EMD-7)	Duke, Emily M	Electric Distribution Actual & Projected O&M Cost Splits
A-92 (EMD-8)	Duke, Emily M	Electric Distribution Actual and Projected O&M Using Inflation
A-93 (EMD-9)	Duke, Emily M	Electric Distribution Detailed Summary of Actual & Projected O&M

1	2025	2025 Union Contract Changes	Software(Intangible)	Corporate	The Human Resources - 2025 Union Changes project will implement SAP and other system changes required as a result of three collective bargaining agreements which will be renegotiated and ratified. Collective bargaining agreements expire every five years for Operating Maintenance and Construction (OM&C), Virtual Contact Center (VCC), and Zealand employee groups. For OM&C, the current agreement ends June 1, 2025. The VCC agreement ends August 1, 2025. The Zealand agreement ends October 1, 2025. Collective bargaining agreements expire every five years for OM&C (Operating Maintenance and Construction), CCC (Customer Contact Center) and Zealand employee groups. For OM&C, the current agreement ends June 1, 2025. CCC agreement ends in August 1, 2025. Zealand agreement ends October 1, 2025. Technology changes are required to reflect these new agreements. Otherwise, employees in these union groups may not be paid appropriately or get correct benefits. Completion of this project will provide value to the Company and its customers through: (1) waste elimination by making changes in the software for any pay and benefit changes as required by the new agreements; (2) defect reduction by adding process automation to otherwise manual processes for tracking and recording work, premium, and absence time; and (3) improved employee engagement among the OM&C, CCC, and Zealand union employees. The scope of this project encompasses making any system changes required to support the new working agreement for the OM&C, CCC and Zealand employees. Exact details will be finalized after the negotiation process is completed and contracts are approved. Three alternatives were considered for this project: (1) Make no system changes after the contracts are ratified. This option was not chosen because it exposes the Company to possible fines, disengaged employees, union grievances, significant manual processes leading to greater possibility of error, hiring additional staff to perform activities outlined in the agreements, and increased legal costs due to employee grievances. (2) Find other third-party software to support the changes required by the union agreements. This option was not chosen because it would require SAP integration along with additional software licensing and maintenance costs. (3) Make system changes to eliminate manual updating, comply with the working agreement language, support union employee engagement, and reduce grievances. Option (3) was chosen because it leverages current SAP technology, automates what would otherwise require manual processing, and is the least costly option.	2025-04-24	2026-02-02	-1.00	-	58,546		-	-	-	-	-	-	-	34,806	-	-	6,401	28,405	-	-
2	2025	Application Currency-Corporate-O&A	Software(Intangible)	Corporate	The Corporate Services initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Corporate Services adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Corporate Services are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2025-01-01	2025-12-31	-1.00	-	247,951		-	-	-	-	-	-	-	153,681	7,387	-	77,304	68,991	-	-
3	2025	Asset Accounting Upgrade 2025-202	Software(Intangible)	Corporate	The project will upgrade our current accounting asset management software to the latest version as required by the vendor and implement additional new features, ensuring continued support of a critical financial application, and providing new functionality. In 2027, standard vendor support ends for the current on-premise software. Losing vendor support creates security and stability risk that can result in performance issues. When the application is out of the normal support with the vendor, the Company no longer receives security patches, support for defect resolution or bug fixes, and cannot enhance the application. To ensure compliance with regulated and financial accounting in the fixed asset sub-ledger, it is necessary to perform an upgrade and maintain vendor support. In addition, the upgrade provides additional functionality to increase the frequency of financial reporting and improve visibility. This project creates value for the Company by ensuring compliance with regulated and financial accounting within the fixed asset sub-ledger. In addition, the project adds value by: (1) performing the allocation process on a more frequent basis providing better financial visibility; (2) automating manual tasks; and (3) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support. The project scope includes: (1) evaluating current vendor/product solution with market leaders; (2) upgrading the vendor software from the current version to the newer version. Alternatives considered include: (1) Evaluate SAP options for leasing, asset, and tax management capabilities. While this option would eliminate the need for an interface between SAP and FiveTech Plan, it would be more complex, cost more, and not provide all the required features. (2) Evaluate other software options. This option will introduce new ongoing support costs and integrations and may not provide regulatory reporting and other needed improvements. (3) Upgrade to the newest version of current solution. This is the preferred option as it will reduce hardware and server support costs, provide more frequent software upgrades, avoid database and server upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.	2025-06-18	2026-08-28	-1.00	-	566,275		-	-	-	-	-	-	-	174,802	-	-	20,295	154,508	-	-
4	2025	Product Family Enhancements-Corp	Software(Intangible)	Corporate	The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements.The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Corporate Services Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Corporate Services. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as People and Culture (Human Resources), Legal, Finance and Governmental, Regulatory and, Public Affairs. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	665,241	3,130		456,156	-	-	173,696	233,480	-	48,979	1,940	-	-	84	1,856	-	-
5	2025	Product Family Enhancements-Corp	Software(Intangible)	Corporate	The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Corporate Services Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Corporate Services. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as People and Culture (Human Resources), Legal, Finance and Governmental, Regulatory and, Public Affairs. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	-	357,471		-	-	-	-	-	-	-	221,562	-	-	43,678	177,885	-	-
6	2025	Talent Management Enablement	Software(Intangible)	Corporate	The project will deliver technology solutions to enable best-in-class Talent Management programs and processes that are critical to achieve the Company's overarching Talent Strategy Plan. The Talent Strategy Plan is a key enabler of the company's Integrated Resource Plan (IRP), Electric Distribution Infrastructure Investment Plan (EDIIP), and Natural Gas Delivery Plan (NGDP). Effective Talent Management programs and processes are critical to develop the skills, capabilities, productivity, and experience necessary to successfully execute these plans that deliver clean, reliable, affordable energy through an exceptional customer experience. Significant technology improvements are required to transform Human Resources (HR) to develop the skills and capabilities necessary to achieve the Company's strategic destination. Currently, many Talent Management processes are manually managed with little or no technology enablement. Specifically, the talent compensation processes are mostly manually done outside the system which introduces waste, and a potential for errors. In addition there is a limited visibility of competency gaps within the workforce. The Company cannot effectively place talent in accelerated development programs aligned to competency gaps, nor can it recognize and motivate employees for quickly increasing competency and performance. Furthermore, the Company operates in an increasingly competitive job market where candidates and employees expect best-in-class processes, technologies and experiences relative to their employment and career development. The lack of full technical enablement across Talent Management programs poses a risk to employee attraction, retention and limits the ability to develop the right skills at the right time to deliver on Company strategies. This project will add value to the Company through technology that will enable: (1) fully functional integrated compensation module; (2) accelerated and targeted talent development of critical skills necessary to deliver on the Company's commitment to clean energy and exceptional customer experience; (2) transparency into talent and skill gaps in order to identify retention and service delivery risks within critical areas, as well as inform succession and hiring strategies; (3) improved knowledge transfer, business continuity, and customer service during a time when retirement eligibility is high and risk of knowledge loss has the potential to negatively impact customer service and satisfaction; and (4) increased efficiency and quality of talent management through simplified and automated processes that reduce costs associated with recruiting, onboarding, and developing employees. Talent Management Enablement will deliver the best-practice technology to enable and enhance (1) Fully functional integrated talent compensation management; (2) Simplified and automated talent management process for employee lifecycle management from on-boarding through Off-boarding; (3) Succession Planning and Business Continuity; (4) Career Development and Employee Retention;. The scope will include: (1) implementation of each system/application; (2) integration with current systems, applications and processes as applicable; (3) retrofit current systems and applications to ensure a seamless end-to-end experience of HR processes; (4) delivery of mobile capabilities for in scope processes; (5) reporting and analytics dashboards and report insights for in scope processes. These alternatives were considered for these Talent Management programs and processes: (1) Develop custom, internally built solutions that could meet most requirements. This alternative was not selected because a custom solution would result in higher overall costs, higher maintenance costs, fewer upgrades, and would not leverage industry best practices to ensure best-in-class delivery; (2) Select an on-premise software tool. This alternative was not selected because it requires internal maintenance, increases infrastructure costs, and would have less frequent upgrades which would hinder the Company's ability to ensure processes are evolving alongside industry trends and best practices. (3) Evaluate and select cloud/SaaS solution(s) which would have lower infrastructure costs, less internal maintenance than an on-premise solution, and would be built and evolved with upgrades based on industry best practices. Based on research, internal experience with successful best practice implementations, and vendor demonstrations, option three was selected.	2023-09-07	2025-01-26	-1.00	377,372	486,075		65,532	-	-	4,439	58,790	-	2,303	63,347	-	-	14,218	49,129	-	-
7	2025	Total Information Management (TIM)	Software(Intangible)	Corporate	The project will replace the existing Total Information Management (TIM) on-premise solution with a cloud-based OpenText Software as a Service (SaaS) solution. It will provide the Company with the ability to reduce operational costs for performing upgrades and maintenance, take advantage of new enhancements offered by the vendor, and ensure continued support of the platform. The existing on-premise Total Information Management (TIM) solution hardware and software is at end of support. The state of the current infrastructure creates security, stability, and reliability risk for the platform. Without vendor support, the application no longer receives security patches, bug fixes, or functionality support from the vendor, which creates additional security, stability, and reliability risk. This project will provide value to the Company through: (1) reducing costs with cloud allocated hardware scalable to current usage needs; (2) reducing operating costs with vendor managed feature updates and maintenance provided without service disruption; (3) providing access to new and innovative capabilities; and (4) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support. The project scope includes: (1) migrating, upgrading, and transforming the dataset to the latest version of OpenText Extended Enterprise Content Management (xECM) Cloud Edition and deploying in the vendor hosted cloud; (2) migrating on-premise documents to the vendor hosted OpenText Core Archive cloud; and (3) enabling new functionality including a new user interface, new workflow capabilities, new workgroup management features, and new integrations with Microsoft 365 applications. Alternatives considered include: (1) Defer to a future date. This alternative was not selected due to requiring upgrades of existing on-premise hardware, impeding our ability to take advantage of new features offered by the cloud solution, and reducing cost savings opportunities presented by moving to the cloud. (2) Deploy OpenText on-premise solution to new on-premise hardware. This alternative was not selected due to cost associated with purchasing new hardware, cost associated to maintain, and it does not free up internal resources to focus on other value-added initiatives. (3) Select and migrate to a new vendor software. This alternative was not selected due to the cost, effort, and complexity of replacing the platform with a whole new technology. (4) Migrate to the OpenText cloud platform. This alternative was selected due to it building on the Company strategy of moving to cloud, reducing operating and maintenance costs, and it reduces risk by ensuring consistent, seamless vendor support.	2025-03-10	2026-01-27	-1.00	2,754,880	512,955		1,889,021	1,376,261	-	98,571	321,272	-	92,916	317,932	254,796	-	11,748	51,388	-	-

11	2025	Customer Order Service Tracker	Software(Intangible)	Customer	Short cycle orders including gas emergencies and meter services account for many of the incoming customer inquiries to the contact centers. This project will implement a service order status tracker to provide transparency to customers and oversight to internal teams supporting utility service orders across Company service areas. The tracker will provide timely and accurate service order updates, creating a more robust customer experience for tracking service order status and location-based updates. Customers have limited visibility to when Company assigned crews will be on premise and what work will be completed. This is due to features missing within the Company's digital channels for accurate updates from dispatch, scheduling, and field crews. The lack of awareness drives calls into the call center, resulting in approximately 346,000 annual contact center calls related to short cycle requests. Additionally, this lack of visibility increases truck rolls due to dispatchers being unaware of crew locations and routes which can cause crews to be assigned when a local crew could have completed the work. This leads to overall customer dissatisfaction because of a lack of visibility to scheduled and ongoing short cycle work. Enabling a digital channel for communication regarding utility service orders will improve customer experience and reduce the waste of repetitive crew dispatching. This project will add value to the Company and its customers by: (1) providing transparency for customers on the timing and location of the associated crew completing utility service orders, (2) reducing calls to contact centers by customers seeking clarification regarding arrival times through visibility to scheduling time-frames and providing notifications to customers when crews are enroute, (3) improving resource assignment by current location, which decreases wasted truck rolls through enabling location services for active crews, (4) increasing visibility into the service person(s) completing the order by enabling crews to connect with customers through digital channels, and (5) improving customer experience for short cycle service orders by implementing a channel of choice for Company interactions. The scope for the project includes: (1) modifying the customer self-service portal to include features that support utility service order tracking, including the location of crews enroute, (2) providing desktop and mobile capabilities, (3) enhancing the existing ServiceBench platform to allow real-time status updates that can be communicated to customers, (4) utilizing location-based services to update internal portal in real time, and (5) enabling text and email notifications to alert customers of service crews arrival times. Alternatives considered for this project include: (1) Deploy a mobile application to address utility service order tracking, (2) utilize a cloud hosted solution from a third-party, (3) modify the existing customer portal to enable customers and the Company to track utility service orders and crews. Options one and two were not selected as the cost associated with deployment would greatly outweigh the benefits with call reduction and improved customer experience. The third option was selected because it utilizes existing technologies, which reduces the implementation complexity and project cost and has faster value realization for the customer and the Company.	2025-01-01	2025-12-31	-1.00	3,382,089	881,140		388,818	-	-	9,502	375,601	-	3,716	127,534	-	-	1,540	125,994	-	-
12	2025	Energy Assistance Enhancements ar	Software(Intangible)	Customer	The Energy Assistance Enhancements and Maintenance Annual Updates project, formerly known as Consumers Affordable Resource for Energy (CARE) project, will implement software changes to offer energy assistance to low-income customers and streamline the process for the assistance agencies who use the assistance portal. This is accomplished through improved user interfaces and updates to SAP to process various requests. Upcoming modifications will be identified following an ongoing and annual review of requests, that includes criteria from the Department of Health and Human Services (DHHS) and Michigan Public Service Commission (MPSC) to prioritize the list of changes. Each grant year, DHHS and MPSC stipulate the criteria required for customers to enroll in the CARE program, how the Company and agencies will manage the enrollment process and track active CARE customers, and how they will administer the Michigan Energy Assistance Program (MEAP) benefits through bill credits and arrears forgiveness. The criteria changes significantly each year; therefore, the Energy Assistance Enhancement and Maintenance Annual Updates application requires modifications to meet the new requirements. If the regulatory requirements are not fulfilled, the Company is at risk of losing state Low Income Home Energy Assistance Program (LIHEAP) funds to assist low-income customers with paying their energy bills, thereby increasing the customers risk of shutoff for non-payment. In addition, our energy assistance programs function within all software platforms in the company which consistently need enhancements and updates. The project will provide the following value: (1) complete modifications to internal SAP application and Agency Portal to receive LIHEAP funding, which can be used to provide customers the bill credits and arrears forgiveness; (2) improve the data within the assistance agencies portal, thereby making it easier to assist customers in need of LIHEAP funding; and (3) complete modifications to customer facing platforms. The project scope includes: (1) updating the enrollment and status process; (2) allowing for flat monthly bills; (3) improving reporting; (4) updating the arrears forgiveness plan; (5) satisfying additional regulatory requirements for the annual grant rule changes required by the Department of Health and Human Services and Michigan Public Service Commission; (6) updating CARE dunning process; and (7) updating CE PASS functionality to enhance Agency Self-Service. Alternatives considered included: (1) continue with current process, which would lead to loss of grant funding, thus decreasing or eliminating energy assistance dollars for customers; (2) transfer administration of Energy Assistance Programs to a third party organization, which would remove ownership and visibility into the health of the program while increasing administrative costs; and (3) make annual updates to the application, which will allow agencies to easily enroll customers on assistance programs and allow placement of holds to stop or prolong credit activity until assistance decisions are granted. Option 3 was selected since it provides long-term proactive energy assistance to customers and prevents loss of grant funds. Changes are required to internal systems (SAP, Agency Portal, etc.) , therefore a cloud or third party alternative is not viable. Additionally, retiring the existing Agency Portal for a new application would increase costs beyond that of the routine upgrades.	2025-01-01	2025-12-31	0.00	-	293,972		-	-	-	-	-	-	-	182,205	-	-	108,246	73,959	-	-
13	2025	Enhancements - Customer Experien	Software(Intangible)	Customer	The CX&O initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the CX&O Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT technology investments for CX&O. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	354,329	68,530		242,963	-	-	102,084	110,577	-	30,302	42,475	-	-	5,050	37,425	-	-
14	2025	Enhancements-CX&O-O&M	Software(Intangible)	Customer	The CX&O initiative will utilize O&M funding to make enhancements to existing technology and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort technology changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing technology requires a short timeframe between inception and implementation. Failure to make these changes or to update aging technology can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of technology enhancements in the CX&O Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work technology efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT technology investments for CX&O. The scope of technology enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	-	205,253		-	-	-	-	-	-	-	127,217	-	-	36,209	91,008	-	-
15	2025	Genesys Cloud Migration	Software(Intangible)	Customer	The project will migrate the Company's existing on-premise customer contact solution and deploy it to the Genesys Platform As A Service (PAAS) cloud-based solution. It will provide the Company with the ability to reduce operational costs for performing upgrades and maintenance, take advantage of new enhancements offered by the vendor, and ensure continued support of a critical customer communication channel. In 2028, standard vendor support ends for the current on-premise contact center software and extended support is not available from the vendor. Without vendor support, the application no longer receives security patches, bug fixes, or functionality support from the vendor, which creates security, stability, and reliability risk. With the upcoming end of standard support, the vendor is no longer offering feature enhancements to the current on-premise solution limiting the Company's ability to invest in new ways to better serve its customers. This project will provide value to both the Company and its customers through: (1) reducing costs with cloud allocated hardware scalable to current usage needs; (2) reducing operating costs with vendor managed feature updates and maintenance provided without service disruption; (3) providing access to new and innovative capabilities to enhance customer service; and (4) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support. The project scope includes: (1) deploying the new PAAS cloud-based solution in the vendor cloud environment; (2) installing a new internet circuit to directly connect the Company's systems to the vendors cloud environment; (3) updating existing customer interactive voice response (IVR) system to accommodate the new cloud implementation; and (4) implement new features supporting analytics, quality, and reporting. Alternatives considered include: (1) Defer to later years. This alternative was not selected due to requiring upgrades of existing on-premise hardware, impeding our ability to take advantage of new features offered by the cloud solution, and reducing cost savings opportunities presented by moving to the cloud; (2) Deploy Genesys on-premise solution to new on-premise hardware. This alternative was not selected due cost associated with purchasing new hardware and does not address the security, stability, and reliability risk resulting from the vendor end of support for the on-premise software. (3) Select and migrate to a new vendor software. This alternative was not selected due to the complexity of our existing internal integrations between the Genesys platform and the Company's other internal systems. As a result, selecting a new system with a new vendor would make the switch cost prohibitive. (4) Migrate to the Genesys Cloud platform. This alternative was selected due to it building on the Company strategy of moving to cloud, reducing operating and maintenance costs, and reduces risk by ensuring consistent, seamless vendor support.	2024-06-25	2025-12-19	-0.80	-	181,298		-	-	-	-	-	-	-	19,132	-	-	9,487	9,644	-	-
16	2025	Product Family Enhancements-Cust	Software(Intangible)	Customer	The Customer initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	2,490,803	417,046		1,707,944	92,697	-	184,697	1,325,221	-	105,328	258,487	-	-	31,765	226,722	-	-
17	2025	Product Family Enhancements-Cust	Software(Intangible)	Customer	The Customer initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	-	17,892		-	-	-	-	-	-	-	11,090	-	-	991	10,099	-	-
18	2025	Rate Change Maintenance	Software(Intangible)	Customer	The Rates Change Maintenance project will modify SAP billing in accordance with pricing and rate change requirements. For the Company to continue to meet and comply with the Michigan Public Service Commission (MPSC) rate change requirements, there is a need to make periodic updates/modifications to the existing prices and rate structures. These updates help ensure accuracy of billing and provide optimal rates for customers. The project will add value for both the Company and its customers through: (1) improved customer satisfaction by providing accurate billing; (2) optimized rate configuration enabling rate changes to be made more efficiently; and (3) timely updates to Company applications that incorporate mandatory changes to the rate structure that includes new surcharges, price changes, and energy efficiency programs. The scope of this project encompasses (1) implementation of annual or monthly (or both) electric and gas customer price changes, and rate structure changes as approved by the MSPC, and (2) optimizing the rate configuration in the Company's back-end system for more efficient rate changes. Alternative considered include: (1) a fully dedicated offshore development model. The option ensured resources were readily available with a more cost-effective labor expense. This alternative was not chosen due to the risk of billing inaccuracies and customer complaints. These risks were deemed too high because of the complexities of the rate structure, new development, and the timing it would take for testing of this model; and (2) leverage onshore resources to plan, coordinate, and execute the rate changes. This option was selected as it supports the Company's operation model for rate changes.	2025-01-01	2025-12-31	-1.00	-	301,644		-	-	-	-	-	-	-	186,960	-	-	14,372	172,589	-	-
19	2025	SiteCore Primary Upgrade 2025	Software(Intangible)	Customer	The project will refresh all components of the website hosting, delivery, search, and analytics applications to add new features and improve search capabilities. Sitecore is the content management application for consumersenergy.com website, a channel many customers use for accessing account information and bill payment. Sitecore is currently operating on version 10.3, which is due to end mainstream support at the end of 2025. If this occurs, there will be an increase in support and maintenance fees of 10% above the annual subscription spend. The project will add value for the Company by: (1) avoiding costs for extended maintenance agreements required at the end of mainstream support; (2) ensuring that the website retains the most up-to-date security posture; and (3) supporting the Company's CXi goals by improving reliability and performance. The project scope includes: (1) upgrading the Sitecore content management software to include content hosting and delivery allowing the use of new features and functionality; (2) migrate the Sitecore platform to the most up-to-date hardware and software by refreshing the application and database servers to a newer version of Windows Server and SQL Server. Alternatives considered include: (1) Delay the upgrade. This alternative was not chosen due to the current version falling outside of the mainstream support window, requiring an additional 10% in maintenance fees. Along with rapidly changing feature sets that are continually being developed by the vendor, the Company would be in a worse position to handle constantly changing cyber threats; (2) Undergo a full website redesign. This solution was not chosen as a similar effort is already slated to begin in 2024; and (3) Upgrade Sitecore on a two-year cycle. This alternative was chosen as it provides up-to-date functionality, stability, and mitigates cyber security risks while minimizing cost and impact.	2025-05-30	2026-04-30	-1.00	-	117,201		-	-	-	-	-	-	-	44,372	-	-	36,376	7,995	-	-

20	SUBTOTAL	2025 Customer										2,332,814	82,697	-	290,568	1,811,299	-	138,150	1,802,038	-	-	346,602	755,436	-	-
21	2025	Ransomware Recovery-OT-Electric I	New Computers / Hardware	Electric	This project will implement a multi-layered security approach to our production OT data center backups to mitigate data loss risk from a ransomware attack for both IT and OT. As an American energy provider, the company is at an increased risk of ransomware attacks by nation-states and other advanced threat actors. A severe ransomware attack could leave the Company without access to critical data or processes and little to no ability to recover the associated systems and information. In a best-case scenario, a successful ransomware attack would likely result in primary systems outages, severely limiting our capability to provide services to our customers, for up to a week and could result in months of work to recover auxiliary systems. This project will add value to the Company, and its customers, by: (1) Implementing a 3-2-1-1-0 (3 copies, 2 media, 1 offline, 1 immutable/air) strategy to protect the production data center systems, data, and backups from ransomware and broader potential cyber-attacks; (2) Providing a diverse set of restoration options to reduce data loss and improve the recovery time of mission-critical systems; (3)Mitigating the risk of complete data loss by storing backups offline and in a format that cannot be modified by any threat (internal or external); (4)Defining an OT-specific ransomware recovery plan that the Company can use to respond to a wide array of cyber-attacks with a practiced process; and (5) Providing the ability for OT to sever all communications from the industrial control systems to the public internet and corporate IT networks. The scope of this project is to deliver one-day of hardware storage level recovery points, local immutable copies of production OT data, an offline third copy of production OT data, and deliver a ransomware recovery plan with a scenario-based approach to ransomware response including plans for monitoring, testing, containment, ransomware/malware removal, and full system recovery. The project team looked at a number of alternatives to assure ransomware recovery capabilities: 1.)Paying the associated ransom, a plan to pay the ransom introduces unnecessary risk by either trusting the attacker to provide the encryption keys while taking a financial loss or the regulatory ramifications such action would result in. 2) Restoring from tape is a possibility but significantly increases OT's restoration times in the event of a severe ransomware attack (over one week to restore mission-critical systems). 3) Restoration from the public cloud was considered but delivery would have been extremely complex and capabilities are limited in ransomware recovery situations due to public Internet connections being severed to the OT datacenter when a ransomware attack is identified (Island Protocol). 4) The alternative chosen was to host ransomware capabilities in the CE OT datacenter. This solution provides enhanced recovery times and uninhibited restoration of mission critical systems.	2024-01-10	2026-02-10	-1.00	5,184,139	70,010		618,140	15,123	154,688	274,006	103,478	-	70,845	3,476	-	-	3,467	9	-	-
22	2025	Application Currency-Electric-O&M	Software(Intangible)	Electric	The Electric/Generation/Renewables Engineering and Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric/Generation/Renewables Engineering and Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality, number of versions behind the current available version, security and operational risk, operational impacts of performing the upgrade, ability to defer, and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Electric/Generation/Renewables Engineering and Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company.	2025-01-01	2025-12-31	-1.00	-	352,808		-	-	-	-	-	-	-	352,808	-	-	116,632	236,176	-	-
23	2025	Cascade Modernization and Prioritiz	Software(Intangible)	Electric	The project will add additional features and enhancements to Cascade, the High Voltage Distribution (HVD) team's asset management database, which includes HVD line switches, all substation and mobile substation equipment and some Low Voltage Distribution (LVD) equipment. These new capabilities will improve the efficiency, add automation and visualization of these assets. The Cascade Asset Management Database is currently lacking in two areas. 1) It does not currently have reporting for visual management that will show Asset Health. This results in not being able to prioritize equipment inspections and maintenance which causes wasted effort by operators spending time on the wrong equipment; and 2) integration to the Company's SCADA (Supervisory Control and Data Acquisition) system. Substation Operators inspect substations on a monthly/bi-monthly basis. Inspections require manual data entry that is already being collected by SCADA. Consequently, operators spend more time and effort on inspections focusing on data entry tasks rather than on meaningful inspection of equipment. Completion of this project will provide value to the Company through: (1) providing visual management using standard and customizable reports which will allow the Company to make data driven decisions; (2) establishing a link between equipment and SCADA which will allow anomalies to be detected and alerts to be sent to the team. This will automate data collection for substations inspections; and (3) allow visual management to be updated daily to reflect Asset Health status and be able to prioritize maintenance. The project scope includes: (1) installing the Connect module to Cascade; (2) installing the Insight module to Cascade; (3) securing a connection to the PI Historian server; (4) installing on-premise web server; and (5) creating additional dashboards. Alternatives considered included: (1) Breaking the scope into separate projects to be completed individually. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work efforts resulting in higher costs. (2) Do nothing. This alternative was not selected because the Company is not able to evaluate the equipment to the best of its ability allowing the team to make the best decisions. (3) Combining the work efforts for both initiatives into a single project to realize the most potential. This alternative was selected because it provided the best balance between achieving the project objectives and controlling the cost. Installing both solutions will allow visual management to be updated daily to reflect Asset Health status and the ability to prioritize maintenance.	2024-07-12	2025-08-25	-1.00	518,898	41,408		231,592	219,360	-	61,257	(77,384)	-	28,359	35,380	-	-	4,318	31,062	-	-
24	2025	Catastrophic Crewing (CatCrew) Ver	Software(Intangible)	Electric	The Catastrophic Crewing (Cat Crew) Version 2.0, formerly known as Catastrophic Crewing Database Replacement, will significantly overhaul and enhance the Catastrophic Crewing application, which is the software used during storms to manage storm resources and logistics, as well as key pieces of equipment during storm restoration. The current features of the Catastrophic Crewing are not meeting the continually changing expectations for the speed of service restoration for the increasing number of impactful storms in Michigan. We are unable to see and track resources or storm data accurately. There is a significant amount of manual processes, which include hotel reservations tasks, external crews assignments, and ICS on-call schedules that need weekly identification and analysis. There is an opportunity for approximately 4,000 hours of automation annually identified from these processes. The current system is not easy to use or intuitive. The data and reporting history is not accurate or up to date. There is significant potential for human error in the current system, which in turn creates a large volume of waste and increases possible risk to the public and field crews. The project will add value by: (1) streamlining the procurement of internal and external resources during storm conditions; (2) providing accurate information regarding hazard conditions and resource deficiencies; (3) enabling real time updates and safety visibility of all resources in the field; (4) reducing human struggle with office and field resourcing tasks (Ex.: with securing accommodations/hotel reservations); (5) improving reporting accuracy and reducing troubleshooting and data validation; and (6) improving resource management. The project scope includes: (1) identifying requirements for Catastrophic Crewing Application Enhancements; (2) developing, configuring, and testing interfaces, hardware, and software for the solution; (3) implementing the solution and process for the following work groups: Electric High-Voltage Distribution (HVD), Electric Low-Voltage Distribution (LVD), Mutual Assistance, Forestry, Restoration Management, and Storm Teams; (4) change management; (5) building system controls for validating that all required data entry is entered; (6) enhanced logic to automate callout for storm responders; (7) enhancing database exporting and reporting functionality; (8) error-proofing entries for all resources through data validation in the application; (9) archiving all resource data; (10) implementing functionality to identify the status of Forestry, Damage Assessment, Wire Down, and all other field resources in each area; (11) training resources on new technology and processes; and (12) automation of lodging capabilities for crews. The considered alternatives were: (1) continue with the current system and processes, not chosen due to its inability to allow timely, data-driven resource management for improved customer service and field resource safety; (2) replace the current system with a new one capable of addressing issues, not chosen because, the off-the-shelf product didn't meet all requirements, the product's cost was excessively high compared to enhancing the existing Cat Crew Management Application, and high support/maintenance cost; (3) divide the scope into separate projects, not chosen due to interrelated efforts leading to potential duplication of work and potentially higher costs, and (4) a complete overhaul and enhancement of current system. This alternative was selected because it minimizes duplication of efforts, maximizes identified benefits in operating and cost savings; and with minimal increase in ongoing application operational cost.	2024-02-09	2026-06-26	5.02	3,332,475	221,671		1,758,467	-	-	486,277	1,072,880	-	199,311	5,454	-	-	5,408	45	-	-
25	2025	Electric Geographic Information Syst	Software(Intangible)	Electric	This project will replace the existing design software for Electric Low Voltage Distribution (LVD) with a new solution that will be fully integrated to the ESRI (Environmental Systems Research Institute) GIS (Geographic Information System) platform which is already in use by the Company. This new solution will leverage GIS asset data to generate engineering designs. This will allow the Electric teams to have a single source and format to view asset data, construction drawings and redlines in both the back office and field. This change will further enable improvements to the mobile platform in quality of data that is used by the closeout team. This will also reduce the back end posting effort by using the native GIS data format; improving data quality by reducing the re-keying of data. The current design software creates waste in three areas for many teams within Electric including Low Voltage Distribution (LVD) Engineering, Field Leaders, and Customer Energy Management (CEM) Service Designers. (1) The current software does not support the native GIS data format and will not support future enablers which manage network management needs. This causes waste and room for error by having to redraw designs in GIS that have already been created and prevents optimization of the work process. (2) It is not able to integrate to SAP to automatically order materials based on the design. (3) The current software lacks needed mobile functionality due to its lack of support for the native GIS format. The designs are not georeferenced to the exact location and can't fully utilize redlining capability which causes a significant impact to data quality and crew performance. This project will add value to the Company and its employees through: (1) eliminating the need to duplicate all design work so it is in both the design system and GIS, (2) enabling mobile editing and redlining on the design in GIS, (3) enabled integration to SAP, and (4) utilizing the capabilities of the next generation GIS platform that will be delivered through an in-progress business case. The project scope includes: (1) installing a new solution that will integrate to GIS; (2) utilizing GIS geospatial and asset information data and the GIS platform for generating Electric LVD engineering designs; (3)integrating to and from SAP to automate Compatible and Mass Unit material ordering capability; (4) installing new and upgrading existing geospatial platform infrastructure to support additional users (Electric LVD designers, Field Leaders, Planners, Schedulers, etc) of GIS; (5) integrating to ProjectWise (engineering content management system); (6) configuring mobile toolset; (7) re-engineering the existing GIS data model to handle asset life cycle; and (8) configuration for new ArcGIS services. Alternatives considered include: (1) enhance existing software to be able to connect to GIS and SAP. This option was not selected because it is not native functionality in the current software. This would be extremely expensive to develop and implement; (2) continue with current solution. This option was not selected as the current software and data format hinders all downstream work and asset management workflows. This adds additional effort, technology costs, and will keep the Company from reaching its corporate competitiveness goal; (3) implement a GIS based solution. This alternative was selected because a new solution will utilize existing geospatial platform on-premise and will move the Company to a single data format that will enable both field and back office employees.	2025-09-09	2029-02-22	-0.31	6,241,626	659,758		-	-	-	-	-	-	-	759	-	-	183	576	-	-
26	2025	Electric Infrastructure Attachments	Software(Intangible)	Electric	Prior period adjustment.							1,795	-	-	-	1,795	-	-	-	-	-	-	-	-	-
27	2025	Generation Operations Digital Work I	Software(Intangible)	Electric	The project provides durable mobile devices for Ludington Pumped Storage, and mobile software and digital forms for Electric Generation at Ludington Pumped Storage and Renewable Generation. The current work management process for Electric Generation at Renewable Generation sites, and Ludington Pumped Storage is cumbersome and largely paper based. Information is currently buried in SAP, may not be complete and is not easily searchable. This system leads to process waste, re-work, and human error. An electronic mobile software will better capture maintenance, condition of equipment, provide visibility to data and records including regulatory tracking while working on equipment, and create a digital punch list for future work. This project provides value to the Company through: (1) Productivity is improved and human struggle reduced by simplification of work tracking through the mobile software. Time sheet charging is incorporated to the work order when someone on the crew pushes the clock to start versus being separately entered through SAP Employee Self Service. If there is more than one person on a crew, information is entered for the full crew versus individually, including time tracking. Functionality is available to more easily create a digital punchlist in the field when a worker sees something instead of later writing it on a punchboard and entering it separately into SAP. (2) Employee Engagement improves as the more tech savvy candidate pool for these positions are looking for mobile software to help them do their jobs. (3) Quality is improved by creating a digital punchlist when the technicians find an issue versus manually documenting it later. Accuracy increases and rework decreases when updates are performed right at the time and place of the work instead of afterwards. Productivity can also be tracked and measured for further improvements. This level of tracking is not possible with the current process and information. (4) Safety is improved as employees have remote access to manuals to reference before moving forward with and during their work. The access to manuals increases productivity and better supports error reduction training by having the manuals available so a worker can move beyond "I think" and "I believe". The project will mitigate the risk of work and safety errors from using outdated procedures. (5) For Renewable Generation, the improved maintenance program will reduce equipment downtime resulting in an increase to Megawatt hours produced. (6) For Ludington Pumped Storage, the new mobile devices will allow working with electronic Systems Operations Management System (eSOMS) which will improve productivity and reduce non-premise time. The scope of the project includes: the initial roll out for Electric Generation at Ludington Pumped Storage, and Renewable Generation, which would include: (1) purchase of mobile field devices for Ludington Pumped Storage, (2) purchase of additional mobile work management software licenses, (3) development and configuration of forms and workflow for these groups, and (4) enhance wireless connection at Ludington Pumped Storage. Alternatives considered include: (1) Utilize an SAP work management mobile solution. An SAP work management solution is not preferred since it is a new solution and requires additional project and support cost. (2) Continue the manual paper-based process. Continuing the manual paper-based process was not chosen because of process waste, re-work, and human error. (3) Customize the existing electronic Shift Operations Management System (eSOMS) mobile application to add work management functions. A custom eSOMS mobile application was not chosen because it would require additional project cost and an ongoing support budget for a custom solution that the eSOMS product was not intended to support. (4) Utilize an out of the box solution to minimize cost and risk to the Company and its employees. The combined Service Suite and digital form solution is the preferred option because it is a proven solution and provides the mobility and digital benefits at a lower cost than other alternatives.	2024-07-24	2026-01-18	-1.00	381,810	25,656		308,330	-	-	144,560	132,383	-	31,387	21,161	-	-	7,806	13,355	-	-
28	2025	HVD Supervisory Control and Data A	Software(Intangible)	Electric	The Electric High Voltage Distribution Monitoring System Upgrade project upgrades the software and hardware components of the High Voltage Distribution (HVD) Supervisory Control and Data Acquisition (SCADA) system. This system is used to monitor and control generation, transmission, and high voltage distribution voltage circuits. The upgrade will provide new functionality and enable new capabilities. Running on an older version of the HVD Software could have potential impacts on the reliability and resiliency of the low voltage distribution (LVD) system as well as the HVD system, as distribution reliability metrics depend upon HVD system availability. Maintaining an older version of the software and hardware creates risks associated with vendor responsiveness in addressing problems, as they arise. It will also take more effort to support any upgrades in the future because of difficulties resulting from longer durations between upgrade efforts. If upgrades are delayed, additional full-time resources will be required for the year upgrades occur to address upgrade complexities. Upgrading the HVD SCADA software and hardware adds value to the Company by ensuring that problems are promptly addressed when they occur. Additionally, the upgrade includes enhancements and fixes to the core product that support the resiliency of electric delivery, ensuring that customers are receiving the energy they need when they need it. Also, the distribution system depends on availability of the HVD system, staying current with the solution provider upgrades is critical to the resiliency of both systems. The scope of this project is an upgrade to the HVD SCADA software and hardware, which encompasses the following: (1) upgrading the application software; (2) upgrading the underlying application hardware; (3) implementing new functionality for improved value to the Company; (4) making necessary configuration changes; and (5) updating documentation related to the integration changes. Alternative considered include: (1) Defer the biennial upgrade of the SCADA application and its hardware. The Company targets SCADA biennial application upgrades to stay within two versions of the current application state to maintain application stability and cyber security, given the critical nature of the SCADA system. This alternative was not chosen due to increased security risk and need for vendor support of the application. Additionally, the hardware is already past the end of its useful life and has been moved over to a 3rd party warranty provider. (2) Alternative Vendor solution. This option was not chosen because the move from our current vendor would be time consuming and costly. It could also introduce instability as any alternative solutions have not been proven operationally. (3) Do nothing. This option was not chosen due to the critical nature of these systems and the potential operational risks associated with operating on an unsupported solution. (4) The option chosen is to complete the upgrade project with associated hardware and software necessary to complete the project that will deliver new functionality for improved value.	2025-04-07	2026-12-31	-1.00	3,442,113	213,929		849,601	414,669	420,716	2,283	11,280	-	653	127,424	600	48,524	-	78,301	-	-

29	2025	Live Wiredown Detection and ADMS	Software(Intangible)	Electric	The Live Wiredown Detection and ADMS Upgrade project, formerly known as Live Wire Down, enables, configures, tests, and implements an add-on module to the ADMS/Electra outage management system that provides the Company with the information on whether a wiredown has a live conductor or not, enabling dispatchers to prioritize truck-rolls and wire-guards to the live wiredowns first. The module provides this information based on any smart meter events being reported from behind that conductor. An upgrade to the ADMS system to the next version 3.4 is required to enable the Live Wiredown Detection module. The ADMS 3.4 version also contains several other functional enhancements the benefit the overall Electric service restoration process. Currently, the Company does not have the ability to remotely determine if a reported wire down is live. Therefore, the Company has to send truck-rolls to secure every location. Sometimes, it is a waste of time and resources for the public safety teams (police & fire) guarding a downed wire that may already be de-energized. There is no way currently to determine the priority of which wiredown the restoration team should be tending to. There are major public safety concerns around wire down operations as well as the logistics of team safety during wiredown operations. The Live Wiredown Detection module from the vendor requires an upgrade to version 3.4 of the current ADMS software. Therefore, this project would warrant an upgrade of the existing version 3.2 to new version 3.4 of the ADMS software, which itself comes with new functionality and several enhancements. The project will add value by: (1) reducing the number of truck-rolls, (2) relieving public safety personnel from downed wires quicker, (3) reducing the size of the wire down operations teams, (4) decreasing wiredown secure times, (5) implementing the ability to prioritize wiredowns, (6) gaining efficiency in resourcing and lean time spent troubleshooting, (7) meeting MPSC-regulatory standards, and (8) creating the ability to reduce isolating and enable restore or repair safer, faster, and cheaper. The scope of the project includes: (1) upgrade of the existing version 3.2 to new version 3.4 of the ADMS software, (2) turning on the "Live wire conductor" and other new functionality in the ADMS system, (3) testing the new functionality in various possible scenarios, (4) enabling the wiredown tool and other enhancements for all Low-Voltage Distribution (LVD) locations across the Company, and (5) communicating and training users on the new functionality. The alternatives considered are: (1) Developing an in-house application that provides process improvements. This option was not selected as it requires the Company to design and build the algorithm that the Electric Power Research Institute (EPRI) has already devised, and then integrate with the OMS system; (2) Using the LVD line sensors (to be deployed in 5 years) to provide some of the functionality. This option was not selected as the benefits realization would be much delayed; (3) Maintaining the current truck-roll process. This option was not selected due to the specific MPSC-regulatory standard expectations and the safety implications of doing nothing; and (4) Enabling and implementing the live wiredown module for OMS. This option of enabling and implementing the live wiredown module for OMS integrates with the new OMS system and is based on the algorithms that EPRI has already designed. This option was chosen as it has the least technology and integration risk, which avoids the need for the Company to develop their own logic and algorithm for live wiredown detection.	2025-01-01	2025-12-31	-1.00	1,582,898	116,702		-	-	-	-	-	-	-	79,279	-	-	52,136	18,143	-	-
30	2025	Product Family Enhancements-Elect	Software(Intangible)	Electric	The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software & hardware and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	631,426	57,212		631,426	-	-	66,771	517,123	-	47,533	57,212	-	-	32,958	24,254	-	-
31	2025	Product Family Enhancements-Elect	Software(Intangible)	Electric	The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	-	105,585		-	-	-	-	-	-	-	105,585	-	-	23,969	81,616	-	-
32	2025	Streetlight Outage and Restoration C	Software(Intangible)	Electric	This project will optimize the Streetlight Outage and Restoration (SOAR) application to better meet our customers need. The SOAR application is used by the Company's customers to report streetlight outages. This project will add new functionality to meet our customers' needs. While 98% of our customers are using SOAR to submit issues, between 15-20% of those issues are more than a lightbulb change/luminaire replacement, leading to multiple truck rolls, and work requiring long cycle scheduling. It lacks the most current source data due to manual process of updating the data, automation, and SMS text messaging, which leads to work and customer dissatisfaction. By integrating these optimizations, Consumers Energy will streamline the work management system, reduce errors and provide a more comprehensive and efficient solution for our customers, our schedulers and our field workers. This project creates value for the Company by: (1) improving customer and municipality communications; (2) adding visualizations to improve accuracy and speed of repair; (3) adding field improvements such as getting the issue to the right department the first time and knowing what materials are needed so the light is fixed on the first visit; and (4) automating and updating the map which will allow for more accuracy. All of these will eliminate waste by using automation and properly routing of orders. The project scope includes: (1) identifying correctly outages versus other work; (2) improving GIS data to include proper stock material and Temporary Traffic Control (TTC) requirements and prioritizing scheduled work based on outage repair needs; (3) offering SMS text messaging; (4) improving email communications by including more accurate details to customers; (5) daily automation of map data updating; (6) adding functionality for user-generated reliability reports; and (7) adding a new process to advise municipality of extended repair outages. The alternatives considered include: (1) continue the manual process. This includes adding municipality-owned lighting layers to the Company's GIS solution, updating streetlight asset information and updating of the SOAR map. This option was not selected as it is heavy in human error and waste resulting in additional costs. (2) Purchase a new system. This option was not selected as it would be extremely expensive to purchase and wouldn't have all of the requirements needed. (3) Implement technology improvements. This alternative was selected because it will improve customer communications, improve accuracy and speed of repair.	2025-09-08	2026-10-29	-0.99	1,860,161	448,127		652,802	-	-	35,122	607,935	-	9,745	338,119	-	-	7,041	331,078	-	-
33	2025	Transmission Outage Application (TC	Software(Intangible)	Electric	This project will modernize and streamline the high voltage system outage process, substation asset management, construction management and maintenance processes, as well as the high voltage project management process by replacing obsolete systems with an industry standard alternative and providing future integration opportunities with corporate systems. The current software version is no longer supported by the vendor and does not allow for the enhancements that would increase the functionality of the software. Also, the solution is susceptible to human error and duplication of efforts due to the manual nature of the work. Lastly, the ongoing support of the software is also costly and time consuming due to the outdated version and the requirements for the process solution. The project will add value by: (1) simplifying the process of managing and rescheduling large HVD projects; (2) enhancing the ability to quickly identify conflicts created by schedule changes; (3) allowing the Company to internally support future integrations with existing applications; (4) improving resource management and visibility by planning Substation Construction, Substation Operations, and High Voltage Distribution (HVD) Lines reasources by project; (5) implementing ability to plan Control Center reasources based on planned work and control center capacity; (6) improving visibility and repeatable reporting for defects and problem solving; (7) simplifying communication with stakeholder groups including Low Voltage Distribution (LVD) Scheduling, Business Customer Solutions, Electric Field Lab, and Substation Operations for outage requests requiring resource coordination; and (8) including 24x7 application support and patching due to using a Cloud solution. The scope of the project includes: (1) upgrading to the newest version of software for a real-time electric operations application; (2) migration of applications and data to cloud servers, and (3) end-user testing. The alternatives considered for the project include: (1) continuing with the current system and processes. This alternative was not selected because the current version is out of support, is prone to human error and duplication, and is costly to maintain. (2) breaking the project into separate Company built applications. This alternative was not selected because the individual applications would have integration complications and support issues, as they would all be separate entities. (3) purchase an off-the-shelf cloud option. This alternative was selected as it would not have customization of the base product or integration issues and comes with 24x7 cloud support.	2025-09-08	2026-07-31	-0.93	861,864	276,556		349,051	115,000	-	-	230,400	-	3,651	12,880	-	-	12,313	568	-	-
34	**SUBTOTAL**	**2025 Electric**										**5,481,160**	**764,165**	**575,404**	**1,070,277**	**2,599,843**	**-**	**591,464**	**1,130,537**	**666**	**48,524**	**266,231**	**815,183**	**-**	**-**
35	2025	Application Currency-Electric & Gas	Software(Intangible)	Electric & Gas Shared	The Electric and Gas Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric and Gas Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Electric and Gas Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2025-01-01	2025-12-31	-1.00	-	106,648		-	-	-	-	-	-	-	66,101	-	-	16,400	49,701	-	-
36	2025	Application Currency-Operational Te	Software(Intangible)	Electric & Gas Shared	The Operational Technology initiative will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrades. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Operational Technology adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. 39	2025	Customer Consecutive Estimate Red	Software(Intangible)	Electric & Gas Shared	The project will resolve gas and electric accounts with consecutive estimates due to the service being disconnected and customer's usage being estimated. Consumers Energy experienced two show cause orders from MPSC for consecutive estimates and fines of $500,000 in 2016 and $1M in 2023 including $3M that is to be refunded to the customers from the money that is recovered from the vendor. If the funding is not recovered from the vendor, the total fine would result in $4M as the Company is responsible for the difference between the dollars recovered from the vendor and the $3M total established by MPSC. The project objective is to reduce disconnected consecutive estimate accounts from 8% to less than 1% reducing non-compliance regulatory risk with MPSC rules. The project scope includes enhancing account and work management digital solutions to properly reflect disconnected account status. Process improvements were put into place after the 2016 show cause; however, increased electric meter failures, supply chain shortages, and a project focused on replacing meter technology due to the sunset of 3G communication led to issues that resulted in a second show cause order. Do nothing does not improve the customer experience. Our current solution of SAP CRM used by Call Center, SAP Work Management, ADMS for Storm and Service Suite for Field Work are all core platforms able to accomodate the change. Adding additional software or alternatives will complicate the technical solution and/or require additional training for Call Center & field personnel.	2025-03-10	2026-01-27	-1.00	711,907	98,300		48,140	-	-	3,124	43,811	-	1,205	21,085	-	-	1,744	19,341	-	-
40	2025	Enhancements-Operations-Capital	Software(Intangible)	Electric & Gas Shared	The Operations initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Operations Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric, Gas and Generation Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	122,361	-		83,903	-	-	8,887	72,877	-	2,139	-	-	-	-	-	-	-
41	2025	Field Contractor Work Management	Software(Intangible)	Electric & Gas Shared	The project provides the ability to electronically manage contractor work and increases accuracy and timeliness of information processing for field work deliverables. This project additionally creates new opportunities to measure and optimize field work processes supporting customer on-time delivery goals. Contractor field employees use manual, paper-based processes and generic communication technologies (phone, radio, email, collaboration sites) to perform work for the Company. Due to the non-electronic format, inaccuracy, and delay of information processing there are negative impacts to the availability and accuracy of work status. This limits the opportunity to measure and optimize field work processes that support customer on-time delivery and other goals. The project will add value by: (1) improving on-time delivery of customer work by providing electronic work order information to contractors; (2) improving customer satisfaction through efficiency in scheduling work and reporting on the progress electronically; (3) increasing safety by tracking work and contractor status providing visibility into the last known location of the contractor; (4) improving material management; (5) making it easier to move emergent work to contractors to balance workloads and meet customer commitments; and (6) enabling real time updates to work order information, increasing data accuracy and reducing invoice reconciliation time. The project scope includes: (1) identifying requirements for a Bring Your Own Device (BYOD) field contractor work management technology solution and process; (2) developing, configuring, and testing interfaces, hardware, and software for the solution; (3) implementing the solution and process for the following work groups: Electric High-Voltage Distribution (HVD), Electric Low-Voltage Distribution (LVD), Mutual Assistance, Forestry, Gas Distribution, Gas Code Compliance, and Substation Operations Construction/Metric; (4) updating the following vendor contract types to support BYOD field contractor work management: zone, specific bid, ancillary, electric storm, and mutual assistance; and (5) training field contractors on the new technology and processes. The alternatives considered included: (1) Continue with the current paper-based process. This alternative was not selected because this approach does not allow for the timely, data-driven work management metrics required to improve service to customers. (2) Use the current Company mobile application. This alternative was not selected because the solution is not expected to receive long term investments by the vendor and the mobile application would require more upfront investment than the proposed option. (3) Use off-platform options such as ServiceBench. This alternative was not selected because contractors would not be able to leverage the benefits and integrations with the existing platform and it would require additional new integrations. (4) Provide Company-funded field devices to contractors. This alternative was not selected because the investment in hardware, management of on-boarding and off-boarding of devices to contractors, and training and change management is cost-prohibitive and introduces a risk of the loss of control of information security and corporate assets. Leveraging the existing field work management solution was chosen because it uses existing well-developed functionality while leveraging cloud-based, BYOD capabilities to move short-term and long-term contractors from paper processes to the established, standard work management system.	2021-05-24	2025-04-28	-0.85	1,730,358	742,196		31,196	-	(2,676)	28,178	-	-	5,694	1,116	-	-	922	5	-	189
42	2025	Field Mapping and Graphics	Software(Intangible)	Electric & Gas Shared	This project will implement a solution for the mobile field mapping and data collection that can search and view facility map data, view work order designs, and create work order as-built construction drawings in the field. This software technology increases process efficiency by consolidating field graphics functionality, reducing IT complexity and testing, and increasing adoption in the field through ease of use. In addition, it allows the Company to move to a supported application platform and retire the unsupported ArcPad solution. The current mapping and graphics application was implemented in 2002 and is no longer sold or supported in any capacity, and the customizations developed for the application cannot be changed. Due to the improved accuracy of the CE landbase (streets, political boundaries, etc.), the outdated electric maps that are referencing that data causes the map to be unreadable which causes a safety issue. Additionally, field employees have considerable challenges when attempting to use the software due to slowness, an aged interface, and dated processes. The project will add value by: (1) providing more accurate geospatial data, including facility map data, pre-construction designs, and as-built construction drawings; (2) consolidating daily tasks into a more simplified process; (3) eliminating the process waste from duplicating asset data in two systems; (4) enabling the adoption of the Geographic Information System (GIS) standard; and (5) making mapping and graphics data available on field devices. The project scope includes: (1) installing a new mobile field mapping and graphics application; (2) creating the ability to search and view the facility map data in GIS format along with the ability to search by address; (3) viewing pre-construction work order designs in a new GIS format; and (4) creating as-built construction drawings in GIS format for assigned work orders. Four alternatives were evaluated and three were determined non-viable for the project: (1) Continue maintaining the current ArcPad application. This option was not selected because the Company is no longer able to make changes to the ArcPad application to mitigate issues if the application has critical defects. A total failure of the application could revert field crews back to paper-based facility maps, risking safety using static, outdated data; or require the creation of as-built construction drawings on paper documents. (2) Use the Adobe or Snagit applications for creating as-built construction drawings. This option was not selected because field users would have to use one solution for viewing facility maps and use rudimentary drawing tools like Adobe or Snagit for creating as-built construction drawings. This option was also not selected because it introduces additional costs due to the complexity and customization needed to integrate the applications. (3) Build a custom Mapping and Graphics solution. This option was not selected as existing industry solutions are available at a much lower cost with much less risk. (4) Implementing the new field mapping and graphics software was selected as this option will consolidate field graphics functionality into an efficient process and provide a current, supported solution.	2021-01-05	2026-03-23	-0.72	3,991,705	135,200		101,698	-	-	20,407	37,069	-	44,222	35,864	-	-	23,190	12,607	-	67

Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Companys ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	-	1,361,912		-	-	-	-	-	-	-	844,120	-	-	92,572	751,543	-	5
46	2025	Spatial Asset Management	Software(Intangible)	Electric & Gas Shared	This initiative will implement SAP's Spatial Asset Management module. It will allow users to view assets, notifications, and orders geospatially using a map. The module will allow us to create and maintain asset maintenance plans for each segment of our gas and electric distribution networks (linear assets). We will create linear assets as technical objects (such as functional locations and equipment) and store linear data. We will enable creation of maintenance plans for these technical objects which result in notifications, maintenance orders, and measurement documents. We will enable monitoring the condition of our linear assets, identify where there is damage or a defect (using the start point and end point and offset), and manage all types of maintenance tasks (planned, unplanned, and preventative). Currently Consumer Energy lacks spatial visualization and spatial awareness of work and assets impacting requirements for first time quality and impacting the ability to plan, bundle and execute nearby work. The lack of a linear asset management capability affects the full work management value stream resulting in overproduction of asset maintenance activity such as assessments, surveys, and inspections. This project creates value for the company by 1) providing capability in SAP to view assets, notifications, and work orders on a map, 2) providing location awareness in SAP for assets and work, 3) establishing linear asset management capability in SAP for gas and electric delivery networks, 4) enabling end-to and map-based workflows. The scope of this project encompasses implementation in SAP of the Spatial Asset Management module. Alternatives considered include: 1) A Cloud-based individualized asset integration between GIS and SAP. This alternative was not selected as it proves ineffective in addressing needs of the end-to-end work management value stream while increasing the technical footprint of customization. There are also performance concerns with cloud to on-prem integrations. 2) Work group centric approaches to viewing work on a map. This alternative was not selected as it does not support standard operation thru the entire work management value stream. 3) Do nothing. This alternative was not selected as this would enable increasing costs and inefficiencies in gas and electric work management. 4) The alternative to implement the Spatial Asset Management module in SAP was chosen as it expands use of a core technology investment, supports current investment in our work management value stream, and is compatible with our GIS technology.	2024-05-10	2026-06-26	-1.00	2,861,655	97,619		226,180	-	-	7,266	112,356	-	106,558	15,862	-	-	2,455	13,408	-	-
47	2025	Work Management Scheduling Analy	Software(Intangible)	Electric & Gas Shared	The project will implement a solution to optimize the key components of the Distribution Planning and Scheduling functions including forecasting, work order intake, resource identification, work schedule creation, work execution preparation and associated work order analytics. The Distribution Planning, Scheduling and Administrative Support & Financial Services (Work Plan Strategy) teams are utilizing manually intensive work methods, systems and forecasting models. These inefficiencies impact the creation of work plans, lack predictive capacity planning, and reduce productivity of operational partners. The project will add value by providing: (1) streamlined processes tied to workload review and preparatory analysis, leading to increased focus on workload priority, execution of work and a reduction of human struggle; (2)increased accuracy in crew work schedules, leading to improved customer satisfaction and on-time delivery of customer requested work, system integrity work, and gas compliance requirements; (3) reduced manual scheduling steps, reporting and analysis of data associated with work management processes and systems; thereby minimizing the risk of human error hours spent developing and updating crew route sheets; and (4) improved forecasting accuracy, that results in greater transparency into the weekly schedule and associated work plan. The project scope includes: (1) implement a solution to facilitate the review of work orders from various engineering organizations, allowing for streamlined check-in of work orders; (2) implement a scheduling tool that utilizes predictive modelling and advanced analytics and streamlines daily schedule modifications; (3) enhance integration with the Aros application to bring in employee capacity and availability information; (4) integrate with SAP to retrieve work order data and manage record keeping requirements; (5) enhance integration with Field Service Suite (FSS) for quicker access to MISS DIG information and work order assignments; and (6) implement associated analytics and reporting. Three primary alternatives were considered for this project: (1) Automating manual data movement across excel and current systems through Robotic Process Automation. This option was not chosen because it will not meet base requirements and will not provide desired insights into whether the schedule supports operating priorities and metrics, financial scenarios, first time completion of work, and daily goals; (2) Integrating an off-the-shelf planning and scheduling system. This option is not preferred due to associated up-front and long-term costs; and (3) Implementing a hybrid of an off-the-shelf planning component with custom built scheduling functions. This is the preferred option to provide a more cost-effective and targeted fit for the organization.	2022-01-26	2025-12-29	-1.00	1,932,038	212,118		35,562	-	(177)	7,306	22,071	-	6,361	29,851	-	160	-	29,691	-	-
48	**SUBTOTAL**	**2025 Electric & Gas Shared**										**2,787,911**	**6,456**	**74,587**	**491,040**	**1,912,047**	**-**	**302,981**	**1,400,203**	**41,213**	**11,532**	**254,582**	**1,098,417**	**-**	**458**
49	2025	ARP-Infoblox Refresh	Network	IT/Digital Foundation	This project will replace the three legacy core components, Domain Name System (DNS), Dynamic Host Configuration Protocol (DHCP), and Internet Protocol Address Management (IPAM) also referred to as DDI (DNS, DHCP, IPAM) environment with a modern, vendor supported system. Infoblox is the DDI solution that the Company uses to enable seamless network communications across critical systems. When Infoblox Assets that are used to support customer interactions and ensure the stability of technology for business operations are obsolete or out-of-date, they are more expensive to support and can be more difficult to keep current with Security updates. Consumers Energy also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. The value of this program includes: (1) enabling the Company to efficiently manage and control their networks, and (2) providing Domain Name System (DNS), Dynamic Host Configuration Protocol (DHCP), and Internet Protocol Address Management (IPAM). The scope of this project includes the replacement of DNS, DHCP and IPAM assets on a 5-7 years refresh cycle. The alternative considered was to continue operating on existing Infoblox equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes. The alternative to replace the existing Infoblox equipment with the latest hardware and software provided by the vendor was selected to avoid these risks and continue a regular refresh cycle.	2025-01-01	2025-12-31	-1.00	393,288	7,271		203,605	-	200,738	2,020	243	-	604	4,507	-	-	4,495	12	-	-

50	2025	ARP-Local Area Network	Network	IT/Digital Foundation	This project will upgrade the Company's entire LAN and a significant portion of the Wireless Local Area Network (WLAN). At some Company locations, LAN equipment has been in service since 2011. If the LAN/WLAN hardware and software is not routinely refreshed, the Company will lose the manufacturer support needed for equipment bug fixes, security vulnerability patches, and enhancements. In addition, aging equipment cannot accommodate the increasing demand for wireless devices necessary to perform day-to-day operations that rely on wireless-enabled devices, such as rugged field devices, cell phones, barcode scanners, tablets, and other mobile devices. As equipment ages, it is at risk of higher failure rates, which increases the risk of unplanned outages. In the event of unplanned outages, business areas would not be able to access services on the corporate network including email, SAP, internet, and phones. The project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor supported, thereby ensuring support for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; (6) increasing user productivity through a higher performing wireless network, which increases the productivity and efficiency of office and field employees serving customers; and (7) improving support for wireless Internet Protocol (IP) phones, Internet of Things(IoT) and field devices. The project scope includes: (1) refreshing the LAN equipment and software across all Company sites; (2) identifying the required features for the new equipment; (3) implementing the new equipment according to industry best practices; (4) replacing wireless network with upgraded infrastructure and verifying wireless coverage is as expected; and (5) collecting wireless survey data for all Company locations in order to design improved wireless network coverage. The alternative considered was to continue operating on the existing platform past the vendors end-of-support date. The vendor support period ended in May of 2021, and paying for extended support is not an option offered by the vendor. The risk inherent in not refreshing the platform is a lack of vendor support resulting in an absence of software bug fixes, security updates, and break fixes. The Company chose to replace the existing equipment with the latest hardware and software available, following a five year refresh cycle.	2025-01-01	2025-12-31	-1.00	737,964	100,199		382,044	33,827	(67,218)	149,056	229,383	-	37,196	62,104	-	56,580	3,252	2,011	-	260
51	2025	ARP-Radio	Network	IT/Digital Foundation	This project will refresh hardware to include; 800Mhz Radios and infrastructure, cellular modems, plant radios and systems, cellular amplification devices and vehicle consoles in service trucks. This equipment supports mission critical voice and data communications for plant and field service personnel and dispatch personnel. 800MHz radios are upgraded on a 10-year lifecycle basis. Plant radio systems are upgraded on a scheduled 7-year lifecycle basis. Cellular modems are refreshed on a 5-year life cycle basis. Amplification systems are refreshed on a 10-year life cycle. Vehicle consoles are typically retired with the vehicle but are salvaged for reuse in new vehicles when possible. 800MHz, mobile, and portable radios, Plant radios systems, and Cellular modems support core business functions, life safety communications, and rapid response for restoration of customers service and critical infrastructure. Company radio systems must be refreshed on a scheduled basis or risk exceeding life expectancy and failing. The refresh of these subscriber units in a proactive manner is critical to providing service to customers. If these units are not refreshed, the increased risk of unit failure would result in interruptions to timely and concise communications to field personnel to resolve gas leaks, and downed electric lines, or service turn-on requests, which risks life safety. This project creates value for customers and the Company by: (1) upholding public safety; (2) ensuring timely responses and repairs to emergent gas leaks, wire downs, and electric outages; (3) ensuring real-time communications between Company dispatch locations and crews in the field; (4) ensuring the safety of personnel working in higher risk workspaces by replacing equipment with units that contain intrinsically safe batteries; (5) supporting continuous improvement and training by replacing equipment that is capable of capturing audio recordings; and (6) remaining in compliance with MPSC regulatory requirements by maintaining critical radio infrastructure. The project scope consists of: (1) scheduled replacement of radios and modems and consoles; and (2) installing additional radios modems and console assets to satisfy growth requirements; and (3) scheduled replacement of out of date cellular and radio boosters. The alternatives considered included: (1) Replace the existing units with new units from other radio and modem manufacturers; (2) purchase new radio subscriber units from existing manufacturers. Option 2 was not selected because the Company now uses a standards-based radio system allowing for multiple radio manufacturer options. Option 1 was selected to allow for a competitive bidding process that will provide the most cost-effective radio that will meet the needs of users.	2025-01-01	2025-12-31	-1.00	1,499,439	165,149		776,260	-	827,499	14,014	(57,380)	-	(7,873)	102,360	-	71,279	6,273	9,518	-	15,290
52	2025	Application Currency-IT/Digital Foun	New Computers / Hardware	IT/Digital Foundation	The Application Platforms initiative will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrades. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Application Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Application Platforms are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2025-01-01	2025-12-31	-1.00	-	21,188		-	-	-	-	-	-	-	13,132	-	-	12,753	379	-	-
53	2025	ARP-Collaboration	New Computers / Hardware	IT/Digital Foundation	This project will replace the Company's obsolete or out-of date audio, visual, telephony and other communication collaborative tools and equipment. When Collaboration Assets that are used to support customer interactions and business operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value by: (1) ensuring that the Company's audio, visual, telephony, and other communications systems are stable and reliable; and (2) retiring the legacy enterprise Avaya telephone systems that have reached end of mainstream manufacturer support. The project scope consists of: (1) annually replacing aging collaboration assets; and (2) installing new collaboration assets to account for evolving business requirements. The following alternatives were considered: (1) refresh visual assets and a portion of the audio assets; (2) refresh a portion of the audio assets only; and (3) refresh visual assets only. These alternatives were not chosen due to the risk inherent with a partial replacement of assets, which includes: (1) a reduced supply of equivalent replacement Avaya parts that are no longer being produced; and (2) an erosion of the knowledge technicians possess on discontinued systems.	2025-01-01	2025-12-31	-1.00	922,771	516,440		632,744	4,937	508,639	21,755	93,849	-	3,564	320,092	18,100	228,414	5,134	68,438	-	6
54	2025	ARP-Field Device Asset Management	New Computers / Hardware	IT/Digital Foundation	This project will replace field devices according to a four-year refresh cycle that is based on industry standards, hardware failures, security patches, and software compatibility. When Field Device Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with Security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular four-year refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing field devices prior to increasing hardware failures; and (2) allowing field workers to complete their job tasks. The project scope consists of replacing field device assets according to the four-year refresh cycle. The alternatives considered were to: (1) extend the replacement cycle from four years to five years for field devices; and (2) use outdated equipment. The Company did not select these options because: (1) there would be an increased risk of hardware failure and equipment outages that could impact the capacity of business partners to complete job tasks; (2) it could cause applications to run poorly or stop functioning; (3) it would increase the assets that need refreshing in future years based on the number of devices that were not replaced during the four year refresh cycle; and (4) it could cause an inability to apply security patches. Based on industry data, waiting longer than the four-year cycle would increase hardware failures, security patch issues, and software compatibility concerns, resulting in additional downtime that could affect customer safety and storm restoration. The Company selected a four-year refresh cycle to alleviate these concerns.	2025-01-01	2025-12-31	-1.00	2,400,742	(82)		1,646,189	-	1,623,447	3,836	17,761	-	1,144	(51)	-	(4)	-	(47)	-	-
55	2025	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Common project will replace dated and obsolete servers shared by Electric and Gas on a rotating five-year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure.	2025-01-01	2025-12-31	-1.00	1,769,128	170,400		1,213,091	626,767	549,295	16,924	15,682	-	4,423	105,615	-	48,203	554	56,857	-	-
56	2025	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Electric project will replace dated and obsolete servers on a rotating 5 year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five to seven-year refresh cycle or (2) refresh hardware based on a five to seven-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five to seven-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety for customers, as vendors do not provide extended support after seven years. The Company chose the alternative to refresh this hardware based on a five to seven-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure that supports systems such as Electric SCADA.	2025-01-01	2025-12-31	-1.00	213,441	59,643		213,441	118,402	39,223	55,345	(14,096)	-	14,566	59,643	200	9,717	33,170	16,556	-	-
57	2025	ARP-Printer Asset Management (PAI	New Computers / Hardware	IT/Digital Foundation	This project will replace and install select printers, plotters, and multi-function printing devices based on printer replacement assessments and a five-year refresh cycle. Printer service and usage history is evaluated and a determination is made if a printer can be repurposed instead of ordering a new one. When Printer Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with firmware and security updates. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving the dependability of these printer devices for employees; (2) averting increased costs due to hardware repairs; and (3) ensuring compatibility with enterprise print applications. The project scope consists of the annual replacement of printer assets according to a five-year refresh cycle. The alternatives considered for the project included looking at refresh cycles from three to seven years as well as running the assets to failure. The selection of a five-year cycle was deemed to be the best solution since anything less than five years would increase the likelihood of unexpected expense for replacement of assets that were still in good operating condition. Anything greater than five years is assessed monthly to ensure it is not run-to-failure, including running the asset to failure, resulting in additional expenses for maintenance of the equipment and downtime, negatively affecting employee productivity. The Company assesses the printer fleet based on years of active service, service history, printer usage data, and the number of users within a facility. Based on these factors, the Company either decommissions, repurposes, leaves in place, or refreshes the printers.	2025-01-01	2025-12-31	-1.00	1,560,027	3,322		1,069,711	-	1,001,931	52,555	19,489	-	(4,264)	2,059	-	-	1,787	208	-	64
58	2025	ARP-Server and Storage	New Computers / Hardware	IT/Digital Foundation	This project will replace or augment server and storage infrastructure for the Company. When Server and Storage Hardware Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and can be more challenging to keep current with Security updates. The Company also runs the risk of failure of these assets impacting customer interactions and business operations if it does not adhere to a regular five to seven-year refresh cycle. This project creates value for the Company through: (1) improved stability and availability of business-critical applications by proactively replacing server and storage hardware assets prior to the likelihood of increasing hardware failures; and (2) ensuring that adequate resources are available to support application demands after five to seven years of actual use. The scope of this program encompasses: (1) replacement of server and storage hardware assets; and (2) installation of additional new computers and storage capacity to account for evolving business requirements. The alternatives considered were to purchase extended maintenance, move some of these assets to the cloud with the Digital -Hybrid Cloud and Data Center Migration project, or to replace the assets on the current cycle. The option to purchase extended maintenance was not selected because full support would not be offered after seven years, and maintenance costs would increase. The preferred option is to move some of these assets to the cloud in the Digital Hybrid Cloud and Data Center Migration project while refreshing the remainder using the five- to seven-year cycle as it is the most cost-effective option.	2025-01-01	2025-12-31	-1.00	345,497	14,256		236,907	144,519	85,889	1,915	4,043	-	540	8,836	-	-	8,813	22	-	-
59	2025	ARP-Workstation Asset Management	New Computers / Hardware	IT/Digital Foundation	This project will replace and install new desktops, laptops, and tablets on a four-year refresh cycle based on industry standards, hardware failures, security patches, and software compatibility. Monitors will be replaced every eight years based on Company data related to historical failure rates. When Workstation Assets that are used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing workstations prior to increasing hardware failures; and (2) allowing business partners to complete their job tasks. The project scope consists of: (1) replacing workstation assets; and (2) installing new units for new resources. The alternatives considered were to: (1) extend the replacement cycle from four years to five years for all desktops and laptops; (2) extend the replacement cycle only on desktops from four years to five years; and (3) use outdated equipment. The Company did not select these options because: (1) there would be an increased risk of hardware failure and equipment outages that could impact the capacity of business partners to complete job tasks; (2) it could cause applications to run poorly or stop functioning; (3) it would increase the ARP in future years based on the number of devices that were not replaced during the four year refresh cycle ; and (4) it could cause an inability to apply security patches. Based on industry data, waiting longer than the four-year cycle would increase hardware failures, security patch issues, and software compatibility concerns, resulting in additional downtime that could affect customer safety and storm restoration. The Company selected a four-year refresh cycle for desktops, laptops, and tablets; and an eight-year cycle for monitors to alleviate these concerns.	2025-01-01	2025-12-31	-1.00	8,044,233	97,772		5,515,931	-	5,252,176	211,957	10,549	-	41,250	60,599	-	41,872	255	898	-	17,774

60	2025	Digital-Hybrid Cloud and Data Cente	New Computers / Hardware	IT/Digital Foundation	This project will optimize data center assets and asset replacement project purchases by migrating or retiring applications out of existing Company and co-location data centers into cloud services, reducing operational costs for running IT services and leveraging increased cloud capabilities to improve the efficiency, quality, and speed-to-market of customer-facing and internal IT services. The technology currently deployed in the Company's data centers meets many customers' needs today. However, the pace of digital transformation is increasing rapidly, and requirements for applications are evolving faster than the technology in the Company's data centers can respond in a cost-effective manner. These data center constraints lead to longer implementation times, missing capabilities, or reduced functionality in the applications that the Company can deploy. This project will create value by ensuring the Company's technology requirements are met through a comprehensive and cost-effective combination of data centers and public cloud services. Specifically, by migrating applications to cloud services, the project will: (1) reduce capacity, hardware maintenance, and security device costs at the co-location data center; (2) reduce hardware maintenance and security device costs at the production data center; (3) enable the ability to scale infrastructure quickly up or down without costly up-front hardware purchases; (4) reduce application risk through cost-effective, scalable infrastructure redundancy and availability; (5) reduce ongoing server and storage asset replacement costs; (6) reduce ongoing networking equipment replacement costs; (7) reduce operational support costs; and (8) enable the use of a vast array of cloud services to support Company applications. The project scope includes: (1) promoting the robust main co-location data center to become the primary data center for on-premise IT services; (2) demoting the Company's production data center to the disaster recovery data center for on-premise IT services; (3) analyzing applications for migration to cloud or retirement; (4) migrating applications from on-premise to cloud; (5) transforming applications to use cost-effective cloud services; (6) altering network architecture and deploying base infrastructure to allow each location (on-premise or in cloud) to function independently; (7) deploying cloud and on-premise cost management tooling and processes; (8) simplifying and optimizing backup and disaster recovery resources and processes using cloud services; (9) implementing additional automation for application deployment and management; (10) changing the operations model for support of cloud-based applications; (11) educating and increasing the skills of IT and other employees in leveraging public cloud services; and (12) transforming IT to become the broker of cloud services for the Company. Alternatives considered included: (1) migrating to public cloud services faster. This alternative was not chosen because the Company's ability to absorb new technologies coupled with the investments the Company has already made in data center equipment would prevent a faster move from being efficient and effective, introducing additional financial risk; (2) migrating to public cloud services slower or not at all. This alternative was not selected because: delaying public cloud services and capabilities coupled with requiring an extension of the life of existing data center equipment creates increased financial and operational risk; and (3) contracting with an outside vendor to provide cloud services to run applications for the Company. This alternative was not selected because industry information shows the option as not yet cost effective or not providing a maturity level that the Company would be able to easily consume with limited in-house experience and expertise in public cloud. The alternative to migrate to a hybrid cloud and data center model was selected because of the expected cost benefits and technology capabilities it provides to the Company over a timeline that allows the Company to realize the value of existing investments.	2023-04-02	2026-12-31	0.18	10,913,822	2,440,581		2,726,992	-	(2,126)	885,434	1,611,001	-	232,683	529,504	13,895	-	69,548	446,061	-	-
61	2025	SAP HANA Database Migration	New Computers / Hardware	IT/Digital Foundation	In preparation for SAP's planned end of support for its Business Suite product in 2027, the Company will migrate its existing SAP databases from Oracle to SAP HANA in advance of the required move to S/4 HANA. The Company's SAP applications currently utilize Oracle's relational database management system as their underlying database storage technology. SAP has informed its customers that standard support for its legacy Business Suite (aka ECC) product will end in 2027, along with support for all non-SAP database platforms. SAP has also informed customers that the future direction for their enterprise solution is S/4HANA, a solution built explicitly for their HANA database platform. To prepare for these upcoming events, the company will migrate all of its SAP databases off of Oracle and onto SAP HANA. This project lays the groundwork for the company's eventual shift to SAP's HANA-based solutions by: (1) proactively migrating SAP databases to a database technology that is fully supported by SAP beyond 2027; and (2) mitigating the risk of a complete loss of support for the current Oracle database technology in 2027. Project scope includes: (1) procurement of HANA software licensing to cover all migrated SAP applications; (2) data migration for all SAP applications from the Oracle database to SAP HANA; and (3) implementation of new application support policies, procedures and tools required to manage the newly migrated SAP HANA applications. Given SAP's announcement regarding the end of support for its ECC product in 2027, all customers running SAP on database software other than HANA will also lose support for their associated database software in 2027. SAP is offering no other options for databases other than HANA beyond 2027. While there is no alternative to the HANA database for SAP going forward, the Company has considered multiple options: (1) Perform a direct migration from SAP Business Suite on Oracle to S/4HANA. A direct migration to S/4HANA brings greater operational risk to the Company as both the underlying database technology and the SAP application's functionality would change simultaneously, so this alternative was not selected. (2) Remain on the current SAP Business Suite product but competitively bid support services to a third-party provider instead of SAP. This alternative was not selected because moving to a third-party support model forces the Company to remain on outdated SAP software and eliminates any possibility of benefitting from new business functionality provided by S/4HANA. It will also require the Company to accept significant risk due to the fact that SAP security patches, application patches and upgrades will not be available upon termination of the SAP maintenance agreement. (3) Migrate to SAP's Software as a Service (SaaS) implementation of S/4HANA. This alternative was not selected because an S/4HANA SaaS migration is a much more disruptive option as the Company's business processes must be adjusted to accommodate functionality differences between ECC and S/4HANA. The risk of negative business impact is significantly greater than simply changing the underlying database technology. (4) Migrate the SAP databases to HANA prior to implementing S/4HANA. This alternative was selected as it gives the Company several years to solidify its HANA database infrastructure before introducing the substantial business process changes required with S/4HANA.	2023-07-27	2026-02-23	-0.83	8,663,011	1,430,090		2,352,303	-	18,977	234,474	1,985,352	-	113,499	253,491	26,733	-	38,690	187,782	-	285
62	2025	Security/OT Field Modernization	New Computers / Hardware	IT/Digital Foundation	This project will implement new infrastructure for accomplishing improved security in the field for OT assets. Gas and Electric technicians are using corporate laptops, to manage critical OT infrastructure which does not follow cyber security best practices for managing critical infrastructure. Vendors and contractors have access to the Company's critical infrastructure using non-Company laptops. Best practice is to use dedicated laptops to connect to critical infrastructure. The value of this project is deploying dedicated Company OT laptops and associated OT infrastructure that can move between OT locations only and providing a secure environment. This project will procure and configure approximately 130 devices that will be used to manage critical OT infrastructure. The Company reviewed several options to mitigate cyber security risks inherent with the use of standard corporate laptops managing critical infrastructure. The alternatives considered are: (1) Continue utilizing existing workflow of using Corporate domain laptops with software installed; (2) Bring in an outside vendor to design and implement a proposed infrastructure; (3) Complete disallowance of all local access to critical systems; (4) Extending the OT network to remote Company locations; (5) Deploy a dedicated Company OT laptop and OT communications circuits, which includes cellular connectivity. The dedicated OT laptop and communications circuits prevented the best way to secure the critical infrastructure by limiting internet and e-mail access. Vendors and contractors could also utilize these approved dedicated systems for managing infrastructure they help support at Company locations. Based on the analysis performed, the Company chose to deploy a dedicated OT laptop and communications circuits.	2025-02-20	2026-12-30	-1.00	2,117,586	310,431		805,662	21,992	531,851	133,951	82,389	-	35,479	39,305	-	-	36,728	1,527	-	1,050
63	2025	Application Currency-IT/Digital Foun	Software(Intangible)	IT/Digital Foundation	The Application Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Application Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Application Platforms area are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2025-01-01	2025-12-31	-1.00	-	117,102		-	-	-	-	-	-	-	72,580	17,273	-	4,035	51,273	-	-
64	2025	Application Currency-IT/Digital Foun	Software(Intangible)	IT/Digital Foundation	The Infrastructure Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Infrastructure Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Infrastructure Platforms are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2025-01-01	2025-12-31	-1.00	-	28,957		-	-	-	-	-	-	-	17,948	-	-	17,900	48	-	-
65	2025	AxWay Secure Transport 2024 Upgr	Software(Intangible)	IT/Digital Foundation	Axway SecureTransport is the Company's multi-protocol Managed File Transfer (MFT) gateway for securing, managing, and tracking data file flow for our business partners and external vendors. Files impacting billing, HR, Supply Chain, Finance, Alternate Energy Programs, Front Office, Back Office, Device Management, Outage Management and Business Reporting functions utilize these services. This project will update the platform to the current software version, enabling cost-saving operational enhancements while retaining data security and platform supportability.Ax Axway Secure Transport is the public-facing managed file transfer gateway, maintaining platform version integrity is critical to ensuring it remains secure and supportable in the event of a cyber attack, outage or other critical incident. A prolonged outage or incident, for any reason, compromises the ability of the Company to perform mission-critical business transactions in finance, operations and direct customer support. Upgrading this application also gives the Company the opportunity to properly scale SecureTransport and take advantage of the growing demand for additional, cost-savings features of the tool, such as managing internal Electronic Data Interchange (EDI) transactions. The value this project brings Consumers Energy and customers includes: (1) Addressing known problems and limitations of the current software and hardware platforms. (2) Ensuring continued secure, scalable, and critical data transmission services running through Axway continue functioning. (3) Creating the capacity to methodically merge/streamline internal and external data file transfer services to eliminate waste. (4) Merging/streamlining the company data file transfer services reducing cyber-attack vectors and creates a more easily maintained and monitored security model. The scope of this project includes (1) Upgrading the application and database to the current released and supported versions. (2) Refreshing the underlying application infrastructure by upgrading to the latest operating system and hardware platforms. (3) Enable and test expanded Electronic Data Interchange (EDI) functionality.Alternatives considered include: (1) deferring the upgrade. This alternative was not selected because the Axway SecureTransport platform handles critical Company financial, HR and operational transactions--the risk associated with problems stemming from an outdated and unsupported version is too high. Nor would the waste elimination benefits of using the upgraded Axway platform to start consolidating EDI for CE be realized. (2) Replacing the platform. The estimated project costs and timetable for replacing the business functions currently performed by the existing Axway SecureTransport platform would be extensive, and operationally, it is not well suited for a cloud or hybrid cloud solution. In addition to significant platform, application, implementation and functional testing costs, replacing it would require extensive coordination and testing with all of the internal and external account holders, taking upwards of one calendar year. (3) Upgrading the platform. This provides the Company the most cost-effective alternative, balancing costs, known risks, and even growing business capacity and productivity.	2024-02-27	2026-01-26	-1.00	-	119,834		-	-	-	-	-	-	-	27,258	-	-	5,053	22,205	-	-
66	2025	BizTalk Services Migration and Retir	Software(Intangible)	IT/Digital Foundation	The Microsoft BizTalk application transfers data from one location to another with internal and external software systems and assists with securely communicating sensitive financial data. The project will migrate the BizTalk application services to other existing applications resulting in the retirement of the Biztalk application. Microsoft announcing end of life for this application a replacement is needed to avoid business impact. The current version of Biztalk running at Consumers Energy is already out of mainstream support, if major issues occur within the application, it could disrupt critical business processes. This includes financial concerns such as payroll, account receivable, and other essential operations. Ensuring continuity is vital. This project creates and maintains value for the Company and its customers by migrating the Biztalk services to supported applications already present in the Consumers Energy environment that do have not end of life concerns and can provide the same functionality Biztalk was providing to meet business requirements. This project creates and maintains value for the Company and its customers by: (1) Migrating all current processes from the current application to replacement products. The secure file transport processes will be migrating to the existing Axway Secure Transport platform. The Electronic Data Interchange processes will be migrated to the existing SAP platform. (2) Ensuring current and future compliance with Information Security critical and sensitive data initiatives, such as patching, data encryption, and authentication requirements. (3) Guarantees 7x24x365 vendor support is available to the Company during significant outages by remaining on a version supported by the vendor. Alternatives considered included: (1) Using Azure native services to recreate all of the processes and services Biztalk provided. This was cost prohibitive due to time and effort this would take. (2) Purchasing a replacement product. Not seen as optimal as existing applications are already implemented within Consumers Energy that provide the same capability. (3) Leverage existing applications within the Consumers Energy application portfolio. This option was selected as lowest cost option and also to meet application rationalization goals to eliminate applications that are providing duplicate functionality.	2025-02-28	2026-10-31	0.00	876,410	930,309		-	-	-	-	-	-	-	335,186	-	-	122,437	212,749	-	-
67	2025	Data & Analytics Platform Rationaliz	Software(Intangible)	IT/Digital Foundation	This project will optimize the Data & Analytics system landscape by creating connections, migrating data into the Data Lake in the cloud, and building visualizations from the data in the Data Lake. The IT Data & Analytics legacy systems (SSDL, SAP BW, SAP BOBJ, Native HANA, the BW Portal, and BODS) are outdated, inefficient, and becoming duplicative in nature with the introduction of DL 2.0. If these legacy systems are not retired, they will continue to cost the Company money as major investments are needed to maintain and support them. This platform rationalization project creates value for the Company and its customers by reducing the total cost of ownership associated with maintaining and supporting legacy systems including licensing fees, maintenance costs, infrastructure, and support resources. The project scope includes: (1) the assessment of the existing Data & Analytics platforms including SSDL, SAP BW, SAP BOBJ, Native HANA, the BW Portal, and BODS; (2) inventory of data and reports still being used by stakeholders; (3) determination of migration strategy; (4) data migration to the Azure Data Lake; (5) report migration to Power BI; (6) organization change management; and (7) the retirement/decommissioning of the legacy platforms and applications. Alternatives considered: (1) upgrade legacy systems in place (on-premise). This alternative was not selected because this is costly and misaligned with the Company's cloud strategy. (2) Lift and shift these on-premise systems to the cloud through the Hybrid Cloud Transformation Program. This alternative was not selected because it would duplicate the work being done as part of the DL 2.0 project and would not provide the same efficiencies that DL 2.0 introduces. (3) Migrate all data sources to DL 2.0 and retire legacy systems. This alternative was selected because of the expected cost benefits and technology capabilities it provides to the Company over a timeline that allows the Company to realize the value of existing investments.	2025-04-07	2027-12-31	0.22	9,019,671	1,319,807		1,174,008	-	-	447,311	607,218	-	119,479	20,633	-	-	7,042	13,438	-	154

68	2025	Digital-Cloud Data and Analytics Plat	Software(Intangible)	IT/Digital Foundation	This project will provide Artificial Intelligence (AI) and analytics in the cloud across the business to uncover new paths to value, faster, allowing the organization to make better decisions and enable delivery outcomes for the NiSPP, Electric Grid Integration, customer programs, and other business needs. The project will additionally establish data governance roles and responsibilities, processes, and implement tools to support best practices across the enterprise. Consumers Energy faces several challenges in the ongoing data modernization journey, which include: (1) legacy data platform operations; (2) long lead times for data exploration and identification of data assets; (3) lack of data ownership and quality, (4) limited data governance best practices across data ownership, access control & security; and (5) heavy dependence on IT for Business Intelligence reporting and analytics. The project will add value by providing data to support business needs by: (1) optimizing data platform operations costs with workflow-based platform infrastructure deployment using pre-built modules and templates; (2) reducing data operations build complexity and data engineering costs through automation; (3) improving data quality and governance that leads to reduced costs of data provisioning, data duplication, and improved data accuracy; (4) streamlining data access requests, management, and governance to reduce risks and support efficiency; and (5) increasing the speed to deliver new data and data capabilities, improving productivity, and improving access to data. This project is an enabler for business areas to use these capabilities to build analytic models for asset and labor optimization that is anticipated to more than offset the project costs. The project scope includes: (1) developing and modernizing the analytics platform in the cloud to allow Consumers Energy to implement new use cases leveraging simplified infrastructure configurations and automated deployment processes; (2) build and deploy data management capabilities, controls, catalog, assets, and data flow; (3) developing data ordering workflows and data access management controls; (4) prioritization and new datasets; (5) simplifying infrastructure configuration; (6) automating deployment processes; (7) enabling data governance tools and processes. Alternatives considered include: (1) Address current pain points in existing on-premise and cloud analytics platforms. This alternative was not selected because the existing platforms requires new investment in licensing and infrastructure, delivery for new capabilities cannot keep pace with demand, still requires investment to address legacy system technical obsolescence, and business areas would not realize asset and labor optimizations. (2) Continue to utilize existing on-premise and cloud analytics platforms. This alternative was not selected because it would not address the current pain points in the existing on-premise and cloud analytics platforms, limiting the Company's ability to have required data and analytics capabilities to improve processes and realize asset and labor optimizations. (3) Implement a new data and analytics platform in the cloud. This alternative was selected because it provides improved analytics capabilities, faster access to data that is critical to improve business process, and reduces technical obsolescence.	2023-04-17	2025-12-29	-1.00	12,253,904	1,308,872		(78,598)	-	-	-	(79,599)	-	1	29,166	-	-	1,438	27,719	-	-
69	2025	Enhancements-IT-Capital	Software(Intangible)	IT/Digital Foundation	Prior period adjustment.							4,787	-	(20,103)	(861)	887	-	36,380	-	-	-	-	-	-	-
70	2025	Enterprise Print - Scan Suite	Software(Intangible)	IT/Digital Foundation	The projects intent is to upgrade the current Enterprise Print and Capture suite for improved data security and integration for the work from home business partner. The company currently maintains a print and capture suite that will have support ending in 2025. Only high-level security patches will be available after this date. The company maintains a fleet of servers that are scheduled to be upgraded. The current print and capture suite is not compatible with the targeted server operating systems. The lack of internal resources requires the company to continue to absorb increased costs to contract administrative personal. This project maintains cost savings achieved by eliminating wasteful print jobs and further enables a productive, and flexible workforce for business partners working remotely. This project also ensures that the latest data transmission security requirements of are met by the solution. The project scope includes: (1) upgrading the current suite to the latest version; (2) consolidating the amount of print servers in the environment; (3) training for company personal to administer the suite; (4) converting all workflows from the current system; (5) implementing remediation for security vulnerability risk; (6) integrating device management with Enterprise Configuration Management Database (CMDB) for asset tracking and monitoring. Alternatives considered: (1) migrating to cloud services. This alternative was not chosen at this time due to maturity levels found with subscription services. (2) other print-scan products. This alternative was not selected as it would required new print and scanning specific to another print-scan product. (3) Print-scan products that were less costs. This alternative was not selected, due to fewer capabilities offered than the current product, which would introduction inefficiencies in the current processes. (4) upgrade current product. This alternative was chosen due to lower overall cost of not requiring new hardware, maturity of current product, and providing same level of capabilities required to support current processes.	2024-03-27	2024-12-31	-1.00	658,588	84,906		21,788	-	-	-	1,770	-	20,019	-	-	-	-	-	-	-
71	2025	Enterprise Service Bus Application 2	Software(Intangible)	IT/Digital Foundation	This project will upgrade and migrate the Business Works developer application to the next version. Newer ESB software versions offer improved integration with Rest/API services and applications. It is critical that this vital data tool or pathway, be more scalable, secure, and capable of integrating to a service-based environment. In addition, the messaging and event modules within the ESB are currently outside of their standard support windows. While it is possible to continue to get extended support by paying an estimated premium of approximately $50,000 annually, this is just temporary coverage and serves only to delay the need for an upgrade. The value this project provides the Company includes: (1) cost avoidance to avoid extensive payments for extend support purposes; (2) avoid technical obsolescence; (3) operational resiliency; and (4) improved administrative and operational efficiencies. The project scope includes implementing current version of all applications that are part of the ESB application, database version, and required database drivers. Alternatives considered included: (1) Accept the annual $50,000 extended maintenance cost. Given the critical nature of this application, it is not recommended to lose maintenance support for any of the applications involved. Any sustained ESB product deficiency would impact many areas of the Company, such as billing, revenue collection, and remote meter management. The current implementation of the ESB platform was built with 5 years of growth in mind. This alternative was not chosen due to risk to Company operations , and the additional expense. (2) Replace the on-premise upgrade plan to implement a cloud-based solution. A cloud migration would also take longer to complete, which would put the Company at risk of falling outside of the current vendor support window for the products current version. (3) Upgrade the existing application. This option was selected because it best meets the Company needs for the near future by restoring vendor support for fixes and patches, and enables product scalability to the measure required of business capabilities.	2024-10-14	2025-12-26	-0.92	-	314,443		-	-	-	-	-	-	-	186,726	-	-	82,454	104,087	-	185
72	2025	HR Support Pack and Business Soft	Software(Intangible)	IT/Digital Foundation	Prior period adjustment.							-	-	-	-	-	-	-	1,034	-	-	64	970	-	-
73	2025	HR Support Pack and Business Soft	Software(Intangible)	IT/Digital Foundation	The HR Support Pack and BSI upgrade will update the SAP system with HR Support Packs that are released annually by SAP to comply with HR and tax changes. SAP releases annual HR support packs to ensure compliance. Without them, the Company would be unable to comply with HR and tax changes, resulting in the inability to calculate and distribute payroll. This project creates value for the Company by: (1) ensuring that its systems are in compliance with new financial rules and regulations; and (2) ensuring that it can calculate and distribute payroll. The scope of this project is to add SAP HR corrections to ensure proper reporting of financial information by the Company. As this is an upgrade of an existing system, the alternative considered was to delay the upgrade. This alternative was not chosen due to the risk of not complying with financial rules and regulations.	2025-02-05	2025-12-31	-1.00	-	239,276		-	-	-	-	-	-	-	148,305	-	-	18,515	129,789	-	-
74	2025	Kubra 4.0 Upgrade	Software(Intangible)	IT/Digital Foundation	Consumers Energy (CE) has the overarching ambition of serving 1 in 3 Low-to-Moderate Income (LMI) customers (currently 1 in 6), while supporting the achievement of clean energy goals and reduction in Uncollectible Expense (UCA). 37% of CE customers are low to moderate income (LMI). Low Income (LI) accounts for 11% and means they are currently in crisis and unable to pay their bill. Moderate Income (MI) accounts for 26% and means they are one financial crisis away from being unable to pay their bill. As part of the LMI effort, we are prioritizing Behavior Based Direct Messaging: Meet the customer where they are, communicate about assistance options based on behavioral indicators, and increase the likelihood of enrollment into meaningful assistance programs ahead of a crisis, and Kubra 4.0 will aid in the success of those LMI goals. To help a customer avoid a crisis before it happens, we need the ability to proactively communicate to them when their behaviors signal the possibility of an issue, some examples being: (1) A customer misses a payment after record of making payments for several months, (2) The auto-pay system receives an insufficient fund ticket alert from the customers' account, (3) Energy use is high, and a bill is projected to be 25-50% larger than usual, and (4) Localized / seasonal triggers such as heat waves, blizzards, and ice storms. Additionally, (5) it's imperative that we're able to test and modify message content that captures the customer's attention, so that we may drive awareness to programs that offer assistance ahead of a crisis. Kubra 4.0 platform is more flexible and configurable to help experimental design & marketing iterate on who/when/what to cut through digital noise. This project creates value for the Company through improving customer communications by providing Consumers Energy (CE) with access to (1) templates and wording changes that previously required expensive Statement of Work (SOW) engagement to deliver and (2) reduce lengthy wait times to implement these aforementioned Statements of Work (SOWs). Finally, (3) this engagement will also introduce 12 net new alert messages, (4) allow for new means of communication and messaging via the mobile app push notification feature, and (5) provide better outage notification reliability and control via Application Programming Interface (API) data transfer instead of Secure File Transfer Protocol (SFTP) data transfer. The project scope includes: (1) 12 net new alerts including 4 for the Shut-off Protection Plan (SPP), missed payment(s), summer event alerting, winter event alerting, and 5 additional alerts to be detailed out during the plan & design phase of the effort based on current low-to-moderate income (LMI) customer communication needs, (2) new template editor as part of the upgraded platform, (3) New Push Notification option available for mobile app which will enable a fast follow enhancement to push notifications through more than just email and text, (4) all other updates and improvements through Kubra 4.0 including use of APIs and other technical improvements, and (5) a new Application Programming Interface (API) built specifically for CE's outage messages for better reliability - instead of the existing file transfer outage information which is less reliable. The alternatives considered include: (1) continue the expensive Statements of Work (SOW) approach for updating each message template and for bringing on any new messages. This would total approximately ~50k per new alert, for a total of 600k for all 12 net new alerts for this effort if pursued individually. This total is not including costs to any existing message adjustments. This alternative was not considered due to the extra cost and overhead. (2) Purchase a new customer communications system. This option was not selected as it would be extremely expensive to purchase and wouldn't have all of the requirements needed and would be a tremendous amount of labor to reintegrate with our existing communication channels. (3) Utilizing Microsoft Dynamics or Riverstar. This option was not selected as it would be a tremendous amount of labor to reintegrate with our existing communication channels nor would either of the platforms fully support the bandwith or channels needed for the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-03-17	2026-03-27	-1.00	335,716	-		225,160	-	-	92,846	106,614	-	25,700	-	-	-	-	-	-	-
75	2025	Product Family Enhancements-Appli	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	293,465	59,854		201,229	10,286	-	58,379	108,013	-	24,551	37,098	-	-	9,251	27,847	-	-
76	2025	Product Family Enhancements-Appli	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	-	94,861		-	-	-	-	-	-	-	58,795	-	-	35,814	22,981	-	-
77	2025	Product Family Enhancements-Infras	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software & hardware and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	196,032	105,266		134,419	-	-	51,219	61,096	-	22,104	65,244	-	-	19,536	45,708	-	-

80	2025	Tibco API Exchange Gateway Repla	Software(Intangible)	IT/Digital Foundation	This project is looking to retire the API Exchange Gateway within the Tibco ESB and replace it with a new solution called Microsoft Self-Hosted Gateway. The API Exchange Gateway is used by the TECO ESB to integrate to external vendors, all new development will need to be done to integrate this solution.The Tibco API Exchange Gateway is anticipated to be sunset by the vendor, as they have already dropped all development of enhancements for the platform.This project creates value for the Company by: (1) Avoiding the risk of running a project no longer supported by the vendor (i.e. the Tibco Enterprise Service Bus API Exchange module), and (2) Enabling the Company the opportunity to move to a product that is more stable, secure, and usable.The project scope includes: (1) Conducting a RFP to procure a replacement product and work with architecture team to migrate the product. (2) Migrate all current work items to the new platform. (3) Conduct appropriate testing to ensure all Service Level Agreements are met.Alternatives considered include: (1) Evaluating the replacement of the current product with a new product that is not already in the Company environment. This alternative was not selected because it would not be cost effective. (2) Keeping the current application as-is. This alternative was not selected as the vendor for the current platform has stopped all development for this product. (3) Leveraging an existing solution already in the Company environment. This alternative was selected as it avoids multiple solutions with redundant capabilities and avoids costs for supporting and maintaining a second solution.	2023-01-03	2025-03-31	-1.00	177,467	117,000		10,277	-	-	1,613	6,015	-	2,649	4,570	-	-	-	4,570	-	-

82	2025	ARP-Cyber Security	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a 3-5 year hardware lifecycle; and (2) performing application upgrades. As part of the review process, the alternatives considered were to: (1) upgrade or replace only those assets identified in the plan; (2) upgrade or replace a portion of the assets identified in the plan. Option 1 was not chosen based on continued refresh cycle for cyber security assets to avoid security risks, system vulnerabilities, and out-of-warranty repair costs. Option 2 was not chosen due to the security risk inherent with not replacing assets as per standard refresh cycles increasing system vulnerabilities, and out-of-warranty repair costs.	2025-01-01	2025-12-31	-1.00	148,380	8,049		76,816	-	(1,852)	51,023	13,734	-	13,111	4,969	-	-	-	4,267	722	-	-
83	2025	ARP-Cyber-Common	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions shared by Electric and Gas. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades. The alternatives considered include: (1) upgrade or replace only the assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warranty repair costs. (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.	2025-01-01	2025-12-31	-1.00	498,985	179,405		258,324	66,832	155,787	7,812	25,935	-	1,958	111,196	26,188	-	1,010	83,998	-	-
84	2025	ARP-Cyber-Electric	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions for Electric. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades. The alternatives considered include: (1) upgrade or replace only the assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warranty repair costs. (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.	2025-01-01	2025-12-31	-1.00	50,016	-		50,016	-	49,820	155	-	-	41	-	-	-	-	-	-	-
85	2025	ARP-Network-Common	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks shared by Electric and Gas. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. The project scope includes: (1) refreshing network equipment and software assets on a five-year refresh cycle; (2) identifying the required features for the new equipment; and (3) implementing the new equipment according to industry best practices. The alternatives considered include: (1) continuing to operate on existing equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes; and (2) refresh network and software assets on a five-year refresh cycle. This alternative was selected to replace the existing equipment with the latest hardware and software to avoid hardware failure and losing vendor support, software bug fixes, security updates, and other software fixes.	2025-01-01	2025-12-31	-1.00	41,452	-		21,460	7,879	12,028	-	1,553	-	-	-	-	-	-	-	-	-
86	2025	ARP-Network-Electric	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks for Electric. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. The project scope includes: (1) refreshing network equipment and software assets on a five-year refresh cycle; (2) identifying the required features for the new equipment; and (3) implementing the new equipment according to industry best practices. The alternatives considered include: (1) continuing to operate on existing equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes; and (2) refresh network and software assets on a five-year refresh cycle. This alternative was selected to replace the existing equipment with the latest hardware and software to avoid hardware failure and losing vendor support, software bug fixes, security updates, and other software fixes.	2025-01-01	2025-12-31	-1.00	452,230	59,470		452,230	127,255	324,720	196	2	-	57	59,470	59,470	-	-	-	-	-
87	2025	ARP-Physical Security	New Computers / Hardware	Security	The ARP-Physical Security, formerly known as Physical Security Asset Refresh, will enhance or replace physical security assets to provide improved visibility and incident resolution related to security concerns. The Company has several thousand physical security asset devices currently in use including security cameras, motion detectors, intrusion detection systems, and card access systems. Current limitations include the lack of integrated solutions for centralized management, situational awareness, real time monitoring, compliance with regulations and guidelines, and faster responses to emergencies and incidents. This could result in the increase of potential security vulnerabilities, associated penalties, and reputational damage. The value provided by completing the project is to: (1) maintain compliance with State and Federal Regulations; (2) reduce redundancies with less of a need for multiple cameras and reducing gaps in functionality; and (3) optimize overall system performance. Included in the project is the enhancement or replacement of assets including: (1) advanced door systems at Company buildings; (2) security cameras for monitoring capabilities; and (3) gate and lock systems, which include security cameras, motion detectors, intrusion detection systems, and card access systems. Alternatives considered include: (1) not refreshing physical security assets, and (2) defer a portion of the refresh of physical security assets per an asset refresh cycle industry standard. Alternatives 1 and 2 were not selected due to the risk of security incidents and breach resolution, and the inability to meet FERC requirements. The alternative selected maintains compliance, reduces redundancies and gaps in functionality, and optimizes overall performance of physical security systems.	2025-01-01	2025-12-31	-1.00	2,310,334	545		1,584,196	-	1,213,765	31,369	387,146	-	(48,084)	338	-	-	337	-	-	-
88	2025	Application Control Enablement	Software(Intangible)	Security	This project implement a technology called Application Control. Application control, also known as application allow listing, is a security strategy that permits only approved applications to run on a system. This approach helps prevent unauthorized software and malware from executing, thereby enhancing the overall security of the network.The rapid multiplication of unauthorized and potentially malicious applications in the current threat landscape poses a substantial risk to corporate data, network infrastructure, and overall business operations. The Company currently does not have an application control solution to mitigate this threat. Without a robust application control product, unauthorized applications can introduce vulnerabilities into the Company's network, leading to data breaches, malware infections, and other cyber threats. Failure to control application usage on the Company's network can result in non-compliance with industry regulations and standards, potentially leading to legal and financial repercussions. Unmanaged applications can cause system conflicts, performance degradation, and downtime, disrupting business continuity and productivity. Inadequate control over applications in the Company's environment increases the risk of data leakage and loss, compromising sensitive information and intellectual property. Uncontrolled application usage can; (1) lead to inefficient use of IT resources; (2) increase licensing costs for software that should not be installed or leveraged by a particular user or department; and (3) reduce efficiency due to deploying computers with more resources than are required because users are installing unneeded software. This project creates value for the Company by (1) Protecting the Company's IT environment by preventing unauthorized and potentially harmful applications from being installed or executed, (2) Maintaining adherence to industry regulations and standards by controlling application usage. This helps avoid legal and financial penalties associated with non-compliance and ensures the Company meets its regulatory obligations. The project scope includes: (1) implementing a Software as a Service (SAAS) application control solution on all corporate computers and (2) implementing stringent restrictions using high enforcement mode on critical assets to prevent running any unauthorized software. Alternatives considered include; (1) removal of local administrator permissions for all users. This option was not chosen as there are legitimate business uses for users to have the ability to make modifications to their workstations., (2) leverage already existing in place antivirus or endpoint detection and response software. This alternative was not selected as this does not prevent unauthorized installation or running of unauthorized software, (3) implementing a privilege management tool. A privilege management tool is a security solution designed to control and monitor access to critical resources within an organization. It helps protect against cyber threats by ensuring that only authorized users have access to sensitive information and systems. This alternative was not chosen as it does not prevent a bad actor that has established privilege into the Company network to install malicious software., and (4) implement an application control solution. This option was chosen because it meets all of the required use cases which reduces risk to corporate data, network infrastructure, and overall business operations.	2025-03-17	2026-03-27	-1.00	697,320	82,165		478,152	391,240	-	52,730	1,919	-	32,263	50,939	49,584	-	1,352	3	-	-
89	2025	Application Currency-Security-O&M	Software(Intangible)	Security	This project will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrade The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade scope applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Security digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Security are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2025-01-01	2025-12-31	-1.00	-	205,818		-	-	-	-	-	-	-	127,567	1,128	-	84,378	42,061	-	-
90	2025	Enhancements-Security-Capital	Software(Intangible)	Security	This initiative will use Capital funding to make enhancements to existing technology and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements in accordance with accounting rules. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Security lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Security in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as cyber security related platforms, cyber security incident response, physical security, security awareness, risk management, privacy and compliance. Prior to implementing a Security enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for Security enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2025-01-01	2025-12-31	-1.00	404,105	20,152		277,095	92,014	46,408	62,670	37,599	-	38,404	12,490	-	-	11,617	841	-	32

94	2025	Public Key Infrastructure (PKI) Upgra	Software(Intangible)	Security	Replace on-premise PKI to stay supported by the manufacturer. The existing PKI that issues certificates to IT systems for secure communications needs to be upgraded to stay supported by the manufacturer. If the PKI is not maintained, in the event of a system failure the Company would not have support in recovering. All IT systems requiring secure communications via certificates would go offline within three days. Replace existing PKI with new PKI that is supported by the manufacturer. The project will build and configure the servers necessary to provide Public Key Infrastructure services, put in place physical token management for maintaining security, migrate certificate issuing and management to the new system and decommission the old system. The Company has a limited use service for PKI on the Internet only. (1) The Company looked into expanding the service to include usage on the Company network but found the solution to not be economically viable. (2) The Company also looked at full cloud solutions, but it did not meet the security standards currently being used around physical token use. (3) The Company looked at continuing extended support, however the continuing extended support is not available by the vendor. (4) The Company selected a hybrid solution of part cloud and part on-premise to meet all operational and security compliance requirements. The opportunity is to retain ownership of the keys on-premise prior to evaluating ownership through the cloud.	2024-07-01	2026-01-26	-1.00	1,588,066	409,866		137,120	(9,651)	(18,254)	476	148,177	-	16,372	85,215	40,305	210	-	42,809	-	1,892
95	2025	Saviynt Enterprise Identity Governan	Software(Intangible)	Security	The project will implement Saviynt EIGA module, consolidate Identity Access Management (IAM) functionality into Saviynt, and retire the Identity Manager application. By implementing the new solution, the Company will optimize IAM functionality, eliminate complexity, and reduce support costs. In addition, the project will integrate the OT network with an IAM solution that will allow for automated management of users and entitlements in the OT Active Directory domains and applications. The current version of AccessNow reached end-of-life in December 2022, with support discontinued in January 2023. The application has numerous custom workflows and integrations, requiring professional services for ongoing use and changes. It lacks proper data analytics and reporting, posing risks such as inability to fix critical defects, software incompatibility, compliance issues, increased costs, and degraded performance. The Company uses multiple IAM tools, each performing critical functions, leading to numerous required interfaces and customizations. While beneficial for end users, these integrations increase the risk of system failures, higher support costs, multiple subscriptions, infrastructure and maintenance costs, and more expensive upgrades. The current solution utilizes SAP HR batch file processes that introduces failure points, delays, and data integrity issues. Failures in these processes can prevent new or transferred employees from accessing necessary systems, leading to operational disruptions and potential compliance risks due to inappropriate access retention. This project provides value by: (1) Consolidating multiple IAM platforms through the implementation of the Saviynt Enterprise IGA Module, reducing complexity and support costs; (2) Decreasing complexity and enhancing efficiency by reducing interfaces between multiple identity tools; (3) Improving the end-user experience and reducing human struggle with access requests through a new, intuitive portal design; (4) Minimizing custom code and focusing on configurations only by utilizing out-of-the-box functionality; and (5) Streamlining employee data processing with the implementation of an HR interface. This project scope includes: (1) Implementing the Saviynt EIGA module to consolidate IAM platforms; (2) Standardizing processes by removing customized code and using out-of-the-box functionality; (3) Replacing and improving access system; (4) Addressing issues with aging applications, multiple IAM platforms, integration challenges, and antiquated HR processing. Alternatives considered include: (1) Implementing hot fixes to AccessNow version 8.1.5 to ensure support through mid-2023; (2) Upgrading only the application to current supported version, excluding the new web portal but will include new application functionality; (3) Remaining on current version that will be unsupported as of January 2023, requiring vendor professional services for any break / fix. Patches and enhancements may potentially introduce additional risk of version instability; (4) Implementing IAM functions in Saviynt platform to manage access requests, including Active Directory, SAP, SAP HR, disconnected systems, and existing API integrations. The alternative selected was implementing the new Saviynt system, eliminating AccessNow software.	2024-07-01	2027-10-29	-1.00	6,052,582	577,224		1,360,640	(5,360)	-	326,357	912,012	-	127,632	172,001	4,845	-	45,160	118,225	-	3,770
96	2025	Security Analytics	Software(Intangible)	Security	Prior period adjustment.							-	-	-	-	-	-	-	-	-	-	-	-	-	-
97	SUBTOTAL	2025 Security										4,635,095	2,369,374	31,457	524,888	1,527,843	-	181,533	810,886	202,396	2,059	251,509	349,230	-	5,694

99	2026	2025 Union Contract Changes	Software(Intangible)	Corporate	The Human Resources - 2025 Union Changes project will implement SAP and other system changes required as a result of three collective bargaining agreements which will be renegotiated and ratified. Collective bargaining agreements expire every five years for Operating Maintenance and Construction (OM&C), Virtual Contact (VCC), and Zeeland employee groups. For OM&C, the current agreement ends June 1, 2025. The VCC agreement ends August 1, 2025. The Zeeland agreement ends October 1, 2025. Collective bargaining agreements expire every five years for OM&C (Operating Maintenance and Construction), CCC (Customer Contact Center) and Zeeland employee groups. For OM&C, the current agreement ends June 1, 2025. CCC agreement ends in August 1, 2025. Zeeland agreement ends October 1, 2025. Technology changes are required to reflect these new agreements. Otherwise, employees in these union groups may not be paid appropriately or get correct benefits. Completion of this project will provide value to the Company and its customers through: (1) waste elimination by making changes in the software for any pay and benefit changes as required by the new agreements; (2) defect reduction by adding process automation to otherwise manual processes for tracking and recording work, premium, and absence time; and (3) improved employee engagement among the OM&C, CCC, and Zeeland union employees. The scope of this project encompasses making any system changes required to support the new working agreement for the OM&C, CCC, and Zeeland employees. Exact details will be finalized after the negotiation process is completed and contracts are approved. Three alternatives were considered for this project: (1) Make no system changes after the contracts are ratified. This option was not chosen because it exposes the Company to possible fines, disengaged employees, union grievances, significant manual processes leading to greater possibility of error, hiring additional staff to perform activities outlined in the agreements, and increased legal costs due to employee grievances. (2) Find other third-party software to support the changes required by the union agreements. This option was not chosen because it would require SAP integration along with additional software licensing and maintenance costs. (3) Make system changes to eliminate manual updating, comply with the working agreement language, support union employee engagement, and reduce grievances. Option (3) was chosen because it leverages current SAP technology, automates what would otherwise require manual processing, and is the least costly option.	2025-04-24	2026-02-02	0.00	-	59,546		-	-	-	-	-	-	-	2,135	-	-	72	2,064	-	-
100	2026	Application Currency-Corporate-O&A	Software(Intangible)	Corporate	The Corporate Services initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Corporate Services adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality, number of versions behind the current available version, security and operational risk, operational impacts of performing the upgrade, ability to defer, and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective databases, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Corporate Services are routinely evaluated to determine if and when upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	-	374,178		-	-	-	-	-	-	-	235,732	-	-	235,732	-	-	-
101	2026	Asset Accounting Upgrade 2025-202	Software(Intangible)	Corporate	The project will upgrade the Company's current accounting asset management software to the latest version as required by the vendor, ensuring continued support of a critical financial application. Standard vendor support will be ending for the current on-premise software. Losing vendor support creates security and stability risk that can result in performance issues. When the application is out of the normal support with the vendor, the Company no longer receives security patches, support for defect resolution or bug fixes, and cannot enhance the application. To ensure compliance with regulated and financial accounting in the fixed asset sub-ledger, it is necessary to perform an upgrade and maintain vendor support. There are also larger costs to upgrade if the upgrades are further apart due to complex testing activities and too many version increases at any one time. This project creates value for the Company by ensuring compliance with regulated and financial accounting within the fixed asset sub-ledger. In addition, the project adds value by: (1) performing the allocation process on a more frequent basis providing better financial visibility; (2) automating manual tasks; (3) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support; and (4) lowering costs with more frequent upgrades to reduce testing complexities and reduce the number of revisions to be adopted. The project scope includes: (1) evaluating current vendor/product solution with market leaders; (2) upgrading the vendor software from the current version to the newer version. Alternatives considered include: (1) Evaluated SAP options for leasing, asset, and tax management capabilities. While this option would eliminate the need for an interface between SAP and PowerPlan, it would be more complex, cost more, and not provide all the required features. (2) Evaluated other software options. This option would introduce new ongoing support costs and integrations and may not provide the regulatory reporting and other needed improvements. (3) Upgrade to the newest version of current solution. This is the preferred option as it will reduce hardware and server support costs, provide more frequent software upgrades, avoid database and server upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.	2025-06-18	2026-08-28	-1.00	-	566,275		-	-	-	-	-	-	-	179,076	-	-	28,660	150,415	-	-
102	2026	Product Family Enhancements-Corp	Software(Intangible)	Corporate	The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements.The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increases support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Corporate Services Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Corporate Services. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as People and Culture (Human Resources), Legal, Finance and Governmental, Regulatory and, Public Affairs. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	1,115,000	248,975		738,576	-	-	515,846	-	-	222,730	156,854	-	-	156,854	-	-	-
103	2026	Product Family Enhancements-Corp	Software(Intangible)	Corporate	The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increases support costs, and limit the Company's ability to consistently meet objectives. 105	2026	Application Currency-Customer-O&M	Software(Intangible)	Customer	The Customer initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Customer digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Customer are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	-	57,170		-	-	-	-	-	-	-	36,017	-	-	36,017	-	-	-	-
106	2026	Customer Order Service Tracker	Software(Intangible)	Customer	Short cycle orders including gas emergencies and meter services account for many of the incoming customer inquiries to the contact centers. This project will implement a service order status tracker to provide transparency to customers and oversight to internal teams supporting utility service orders across Consumers' service areas. The tracker will provide timely and accurate service order updates, creating a more robust customer experience for tracking service order status and location-based updates. Customers have limited visibility to when Company assigned crews will be on premise and what work will be completed. This is due to features missing within the Company's digital channels for accurate updates from dispatch, scheduling, and field crews. The lack of awareness drives calls into the call center, resulting in approximately 346,000 annual contact center calls related to short cycle requests. Additionally, this lack of visibility increases truck rolls due to dispatchers being unaware of crew locations and routes which can cause crews to be assigned when a local crew could have completed the work. This leads to overall customer dissatisfaction because of a lack of visibility to scheduled and ongoing short cycle work. Enabling a digital channel for communication regarding utility service orders will improve customer experience and reduce the waste of repetitive crew dispatching. This project will add value to the Company and its customers by: (1) providing transparency for customers on the timing and location of the associated crew completing utility short cycle service orders, (2) reducing calls to contact centers by customers seeking clarification regarding arrival times through visibility to scheduling time-frames and providing notifications to customers when crews are en-route, (3) improving resource assignment by current location, which decreases wasted truck rolls through enabling location services for active crews, (4) increasing visibility into the service person(s) completing the order by enabling crews to connect with customers through digital channels, and (5) improving customer experience for short cycle service orders by implementing a channel of choice for Company interactions. The scope for the project includes: (1) modifying the customer self-service portal to include features that support utility service order tracking, including the location of crews en-route, (2) providing desktop and mobile capabilities, (3) enhancing the existing ServiceMesh platform to allow real-time status updates that can be communicated to customers, (4) utilizing location-based services to update internal portal in real time, and (5) enabling text and email notifications to alert customers of service crews arrival times. Alternatives considered for this project include: (1) Deploy a mobile application to address utility service order tracking, (2) utilize a cloud hosted solution from a third-party, (3) modify the existing customer portal to enable customers and the Company to track utility service orders and crews. Options one and two were not selected as the cost associated with deployment would greatly outweigh the benefits with call reduction and improved customer experience. The third option was selected because it utilizes existing technologies, which reduces the implementation complexity and project cost and has faster value realization for the customer and the Company.	2025-09-08	2026-12-17	-1.00	3,382,089	861,140	ROM	1,864,689	-	-	606,841	695,520	-	562,328	412,686	-	-	192,386	220,500	-	-
107	2026	Energy Assistance Enhancements a	Software(Intangible)	Customer	The Energy Assistance Enhancements and Maintenance Annual Updates project, formerly known as Consumers Affordable Resource for Energy (CARE) project, will implement software changes to offer energy assistance to low-income customers and streamline the process for the assistance agencies who use the assistance portal. This is accomplished through improved user interfaces and updates to SAP to process various requests. Upcoming modifications will be identified following an ongoing and annual review of requests, that includes criteria from the Department of Health and Human Services (DHHS) and Michigan Public Service Commission (MPSC) to prioritize the list of changes. Each grant year, DHHS and MPSC stipulate the criteria required for customers to enroll in the CARE program, how the Company and agencies will manage the enrollment process and track active CARE customers, and how they will administer the Michigan Energy Assistance Program (MEAP) benefits through bill credits and arrears forgiveness. The criteria changes significantly each year; therefore, the Energy Assistance Enhancement and Maintenance Annual Updates application requires modifications to meet the new requirements. If the regulatory requirements are not fulfilled, the Company is at risk of losing state Low Income Energy Assistance Fund (LEAF) funds to assist low-income customers with paying their energy bills, thereby increasing the customers risk of shutoff for non-payment. In addition, our energy assistance programs function within all software platforms in the company which consistently need enhancements and updates. The project will provide the following value: (1) complete modifications to internal SAP application and Agency Portal to receive LEAF funding, which can be used to provide customers the bill credits and arrears forgiveness; (2) improve the data within the assistance agencies portal, thereby making it easier to assist customers in need of LEAF funding; and (3) complete modifications to customer facing platforms. The project scope includes: (1) updating the enrollment and status process; (2) allowing for flat monthly bills; (3) improving reporting; (4) updating the arrears forgiveness plan; (5) satisfying additional regulatory requirements for the annual grant rule changes required by the Department of Health and Human Services and Michigan Public Service Commission; (6) updating CARE dunning process; and (7) updating the assistance portal (CE PASS) functionality to enhance Agency Self-Service. Alternatives considered include: (1) continue with current process. This alternative was not chosen because it would lead to loss of grant funding, thus decreasing or eliminating energy assistance dollars for customers; (2) transfer administration of Energy Assistance Programs to a third party organization. This alternative was not selected because it would minimize ownership and visibility into the health of the program while increasing administrative costs; and (3) make annual updates to the application, which will allow agencies to easily enroll customers on assistance programs and allow placement of holds to stop or prolong credit activity until assistance decisions are granted. This option was selected since it provides long-term proactive energy assistance to customers and prevents loss of grant funds. Changes are required to internal systems such as SAP, a large internal system that supports broad areas of the business, and the Agency Portal, an internally developed web application, therefore a single cloud or third-party alternative is not viable. Additionally, retiring the existing Agency Portal for a new application would increase costs beyond that of the routine upgrades.	2026-01-01	2026-12-31	0.00	-	273,574		-	-	-	-	-	-	-	172,352	-	-	188,736	(16,384)	-	-
108	2026	Product Family Enhancements-Custo	Software(Intangible)	Customer	The Customer initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	2,776,896	196,020		1,839,416	-	5,952	233,160	1,534,278	-	66,026	123,493	-	-	81,660	41,833	-	-
109	2026	Product Family Enhancements-Custo	Software(Intangible)	Customer	The Customer initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	-	300,284		-	-	-	-	-	-	-	189,179	-	-	125,136	64,043	-	-
110	2026	Rate Change Maintenance	Software(Intangible)	Customer	The Rates Change Maintenance project will modify SAP billing in accordance with pricing and rate change requirements. For the Company to continue to meet and comply with certain MPSC requirements and to enable it to update its rates when rate changes are approved, there is a need to make periodic updates/modifications to existing prices and rate structures. These updates help ensure accuracy of billing and provide optimal rates for customers. The project will add value for both the Company and its customers through: (1) improved customer satisfaction by providing accurate billing; (2) optimized rate configuration enabling rate changes to be made more efficiently; and (3) timely updates to Company applications that incorporate mandatory changes to the rate structure that includes new surcharges, price changes, and energy efficiency programs. The scope of this project encompasses (1) implementation of annual or monthly (or both) electric and gas customer price changes, and rate structure changes as approved by the MSPC; and (2) optimizing the rate configuration in the Customer's back-end system for more efficient rate changes. Alternatives considered include: (1) a fully dedicated offshore development model. The option ensured resources were readily available with a more cost-effective labor expense. This alternative was not chosen due to the risk of billing inaccuracies and customer complaints. These risks were deemed too high because of the complexities of the rate structure, new development, and the time it would take for testing of this model; and (2) Instead, the Company chose to leverage onshore resources to plan, coordinate, and execute the rate changes. This option was selected as it supports the Company's operation model for rate changes.	2026-01-01	2026-12-31	0.00	-	246,373		-	-	-	-	-	-	-	155,215	-	-	155,215	-	-	-
111	2026	SiteCore Primary Upgrade 2025	Software(Intangible)	Customer	The project will refresh all components of the website hosting, delivery, search, and analytics applications to add new features and improve search capabilities. Sitecore is the content management application for the consumersenergy.com website, a channel many customers use for accessing account information and bill payment. Sitecore is currently operating on version 10.3, which is due to end mainstream support at the end of 2025. If this occurs, there will be an increase in support and maintenance fees of 10% above the annual subscription spend in order to purchase extended support, security updates and fixes will only be made available if the extended support is purchased, and product support for errors or required hotfixes that may impact platform stability will not be available even if extended support is purchased. The project will add value for the Company by: (1) avoiding costs for extended maintenance agreements required at the end of mainstream support; (2) ensuring that the website retains the most up-to-date security posture; and (3) supporting the Company's CXI goals by improving reliability and performance. The project scope includes: (1) upgrading the Sitecore content management software to include content hosting and delivery allowing the use of new features and functionality; (2) migrating the Sitecore platform to the most up-to-date "hardware" and software by refreshing the application and database servers to a newer version of Windows Server and SQL Server and placing them into Azure Cloud (PaaS & IaaS); (3) implementing autoscaling App Services within Azure to reduce or increase the amount of compute we are paying for based on the need of the customers (i.e. more compute during storm). Alternatives considered include: (1) Delay the upgrade. This alternative was not chosen due to the current version falling outside of the mainstream support window, requiring an additional 10% in maintenance fees. Along with rapidly changing feature sets that are continually being developed by the vendor, the Company would be in a worse position to handle constantly changing cyber threats; (2) Migrate to Sitecore's cloud SaaS solution. This alternative was not chosen due to the cost/benefit analysis of re-architecting our current Sitecore implementation to facilitate use of their SaaS/PaaS not being viable at this time; and (3) Upgrade Sitecore on a two-year cycle. This alternative was chosen as it provides up-to-date functionality, stability, and mitigates cyber security risks while minimizing cost and impact.	2025-05-30	2026-04-30	-1.00	-	117,201		-	-	-	-	-	-	-	28,734	-	-	17,951	10,783	-	-

114	2026	Ransomware Recovery-OT-Electric I	New Computers / Hardware	Electric	This project will implement a multi-layered security approach to our production OT data center backups to mitigate data loss risk from a ransomware attack for both IT and OT. As an American energy provider, the company is at an increased risk of ransomware attacks by nation-states and other advanced threat actors. A severe ransomware attack could leave the Company without access to critical data or processes and little to no ability to recover the associated systems and information. In a best-case scenario, a successful ransomware attack would likely result in primary systems outages, severely limiting our capability to provide services to our customers, for up to a week and could result in months of work to recover auxiliary systems. This project will add value to the Company, and its customers, by: (1) Implementing a 3-2-1-1-0 (3 copies, 2 media, 1 offline, 1 immutable) strategy to protect the production data center systems, data, and backups from ransomware and broader potential cyber-attacks; (2) Providing a diverse set of restoration options to reduce data loss and improve the recovery time of mission-critical systems. (3)Mitigating the risk of complete data loss by storing backups offline and in a format that cannot be modified by any threat (internal or external); (4)Defining an OT-specific ransomware recovery plan that the Company can use to respond to a wide array of cyber-attacks with a practiced process; and (5) Providing the ability for OT to sever all communications from the industrial control systems to the public internet and corporate IT networks. The scope of this project is to deliver one-day of hardware storage level recovery points, local immutable copies of production OT data, an offline third copy of production OT data, and deliver a ransomware recovery plan with a scenario-based approach to ransomware response including plans for monitoring, testing, containment, ransomware/malware removal, and full system recovery. The project team looked at a number of alternatives to assure ransomware recovery capabilities. 1) Paying the associated ransom, a plan to pay the ransom introduces unnecessary risk by either trusting the attacker to provide the encryption keys while taking a financial loss or the regulatory ramifications such action would result in. 2) Restoring from taps is a possibility but significantly increases OT's restoration times in the event of a severe ransomware attack (over one week to restore mission-critical systems). 3) Restoration from the public cloud was considered but delivery would have been extremely complex and capabilities are limited in ransomware recovery situations due to public Internet connections being severed to the OT datacenter when a ransomware attack is identified (Island Protocol). 4) The alternative chosen was to host ransomware capabilities in the CE OT datacenter. This solution provides enhanced recovery times and uninhibited restoration of mission critical systems.	2024-01-10	2026-02-10	-1.00	5,184,139	70,010		(130,510)	-	(112,512)	(34,260)	26,252	-	(9,990)	7,796	-	-	7,520	276	-	-

115	2026	Advanced Distribution Management I	Software(Intangible)	Electric	The Advanced Distribution Management System Upgrade (ADMS) project will enhance operator experience, simplify maintenance, and provide more powerful and flexible system functionalities. These include advancements in Fault Location, Isolation, and Service Restoration (FLISR), waste elimination within Maestro, the introduction of independent line sensors, a redesign of temporary conditions, and will incorporate operational views of schematics. The project will also be replacing the outdated hardware. The current ADMS lacks several critical features and improvements that are essential for enhancing operator experience, system maintenance, fault detection, and response capabilities. The existing system struggles with: (1) the current FLISR functionality does not adequately support complex protection requirements and manual switching steps, leading to inefficiencies and potential errors; (2) operators face challenges with passthrough edits and managing conflicts related to devices with tags or temporary conditions, resulting in frequent system reloads and inaccuracies in the as-operated system; (3) the temporary conditions subsystem is cumbersome to use, hindering efficient operations and the ability to support mobile substation and; (4) the current schematic tools do not provide operational views or the ability to save and share views, limiting situational awareness and usability for operators. These gaps result in operational inefficiencies, increased maintenance efforts, and reduced effectiveness in fault management and system operations. Addressing these issues is crucial for improving the overall functionality, usability, and maintenance of the Distribution Management System. (5) The Company runs the risk of increased failure if it does not regularly refresh the infrastructure. The project will add value by: (1) improving the user interface and overall experience of the operators, (2) increasing the flexibility and configurability of FLISR, allowing for better support of complex protection requirements and improving solutions for manual switching steps, (3) enhancing the usability of schematics, providing operational views and the ability to save and share views for better situational awareness, (4) developing advanced switch order functionality to support more robust and efficient operations, (5) allowing ADMS to pull real time network model from GIS Utility Network and (6) improving stability and availability of business-critical applications by proactively replacing hardware before it fails. The scope of the project includes: (1) replacing ADMS hardware, (2) upgrading the existing ADMS platform to the latest packaged version, (3) adding in the feature improvements for Temporary Condition Redesign, Maestro Conflict Resolutions, Independent Line Sensors, FLISR and Schematics, (4) implementing new extraction tool, (5) testing the new functionality in various possible scenarios, and (6) communicating and training users on the new functionality. Alternatives considered include: (1) using outdated equipment and current version of ADMS. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact the Company's ability to respond effectively in storm situations. (2) Moving to a cloud version of ADMS. This option was not selected as the current public cloud platforms do not offer the high security environment required for the ADMS application. Consequently, the vendor platform was not built for cloud environments. (3) Replacing the hardware and upgrading ADMS. This option was selected to alleviate the above concerns.	2026-03-02	2027-11-11	-1.00	11,035,811	892,993	ROM	2,833,468	15,593	1,091,480	922,829	282,945	-	520,621	388,307	-	-	260,216	128,091	-	-
116	2026	Application Currency-Electric-O&M	Software(Intangible)	Electric	The Electric/Generation/Renewables Engineering and Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric/Generation/Renewables Engineering and Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (5) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Electric/Generation/Renewables Engineering and Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	-	321,362		-	-	-	-	-	-	-	321,362	80,145	-	214,502	26,715	-	-
117	2026	Catastrophic Crewing (CatCrew) Ver	Software(Intangible)	Electric	The Catastrophic Crewing (Cat Crew) Version 2.0, formerly known as Catastrophic Crewing Database Replacement, will significantly overhaul and enhance the Catastrophic Crewing application, which is the software used during storms to manage storm resources and logistics, as well as key pieces of equipment during storm restoration. The current features of the Catastrophic Crewing are not meeting the continually changing expectations for the speed of service restoration for the increasing number of impactful storms in Michigan. We are unable to see and track resources or storm data accurately. There is a significant amount of manual processes: which include hotel reservations tasks, external crews assignments, and ICS on-call schedules that need weekly identification and analysis. There is an opportunity for approximately 4,000 hours of automation annually identified from these processes. The current system is not easy to use or intuitive. The data and reporting history is not accurate or up to date. There is significant potential for human error in the current system, which in turn creates a large volume of waste and increases possible risk to the public and field crews. The project will add value by: (1) streamlining the procurement of internal and external resources during storm conditions; (2) providing accurate information regarding hazard conditions and resource deficiencies; (3) enabling real time updates and safety visibility of all resources in the field; (4) reducing human struggle with office and field resourcing tasks (Ex.: with securing accomodations/hotel reservations); (5) improving reporting accuracy and reducing troubleshooting and data validation; and (6) improving resource management. The project scope includes: (1) identifying requirements for Catastrophic Crewing Application Enhancements; (2) developing, configuring, and testing interfaces, hardware, and software for the solution; (3) implementing the solution and process for the following work groups: Electric High-Voltage Distribution (HVD), Electric Low-Voltage Distribution (LVD), Mutual Assistance, Forestry, Restoration Management, and Storm Teams; (4) change management; (5) building system controls for validating that all required data entry is entered; (6) enhanced logic to automate callout for storm responders; (7) enhancing database exporting and reporting functionality; (8) error-proofing entries for all resources through data validation in the application; (9) archiving all resource data; (10) implementing functionality to identify the status of Forestry, Damage Assessment, Wire Down, and all other field resources in each area; (11) training resources on new technology and processes; and (12) automation of lodging capabilities for crews. The considered alternatives were: (1) continue with the current system and processes, not chosen due to its inability to allow timely, data-driven resource management for improved customer service and field resource safety; (2) replace the current system with a new one capable of addressing issues, not chosen because the off-the-shelf product didn't meet all requirements, the product's cost was excessively high compared to enhancing the existing Cat Crew Management Application, and high support/maintenance cost; (3) divide the scope into separate projects, not chosen due to interrelated efforts leading to potential duplication of work and potentially higher costs; and (4) a complete overhaul and enhancement of current system. This alternative was selected because it minimizes duplication of efforts; maximizes identified benefits in operating and cost savings; and with minimal increase in ongoing application operational cost.	2024-02-09	2026-06-26	5.02	3,332,475	221,671		878,838	-	-	230,187	542,093	-	106,559	185,619	-	-	132,317	53,301	-	-
118	2026	Electric Geographic Information Syst	Software(Intangible)	Electric	This project will replace the existing design software for Electric Low Voltage Distribution (LVD) with a new solution that will be fully integrated to the ESRI (Environmental Systems Research Institute) GIS (Geographic Information System) platform which is already in use by the Company. This new solution will leverage GIS asset data to generate engineering designs. This will allow the Electric teams to have a single source and format to view asset data, construction drawings and redlines in both the back office and field. This change will further enable improvements to the mobile platform in quality of data that is used by the closeout team. This will also reduce the back-end posting effort by using the native GIS data format; improving data quality by reducing the re-keying of data. The current design software creates waste in three areas for many teams within Electric including Low Voltage Distribution (LVD) Engineering, Field Leaders, and Customer Energy Management (CEM) Service Designers. (1) The current software does not support the native GIS data format and will not support future enabling work management needs. This causes waste and room for error by having to redraw designs in GIS that have already been created and prevents optimization of the work process. (2) It is not able to integrate to SAP to automatically order materials based on the design. (3) The current software lacks needed mobile functionality due to its lack of support for the native GIS format. The designs are not georeferenced to the exact location and can't fully utilize redlining capability which causes a significant impact to data quality and crew performance. This project will add value to the Company and its employees through: (1) eliminating the need to duplicate all design work so it is in both the design system and GIS; (2) enabling mobile editing and redlining on the design in GIS; (3) enabled integration to SAP; and (4) utilizing the capabilities of the next generation GIS platform that will be delivered through an in-progress business case. The project scope includes: (1) installing a new solution that will integrate to GIS; (2) utilizing GIS geospatial and asset information data and the GIS platform for generating Electric LVD engineering designs; (3) integrating to and from SAP to automate Compatible and Mass Unit material ordering capability; (4) installing new and upgrading existing geospatial platform infrastructure to support additional users (Electric LVD designers, Field Leaders, Planners, Schedulers, etc) of GIS; (5) integrating to ProjectWise (engineering content management system); (6) configuring mobile toolset; (7) re-engineering the existing GIS data model to handle asset life cycle; and (8) configuration for new ArcGIS services. Alternatives considered include: (1) enhance existing software to be able to connect to GIS and SAP. This option was not selected because it is not native functionality in the current software. This would be extremely expensive to develop and implement; (2) continue with current solution. This option was not selected as the current software and data format hinders all downstream work and asset management workflows. This adds additional effort, technologies, costs and will keep the Company from reaching its corporate competitiveness goal; (3) implement a GIS based solution. This alternative was selected because a new solution will utilize existing geospatial platform on-premise and will move the Company to a single data format that will enable both field and back office employees.	2025-09-09	2029-02-22	-0.31	6,241,626	659,758		2,278,224	-	200,000	1,038,422	425,000	-	614,802	351,211	-	70,000	199,707	75,000	-	6,504
119	2026	HVD Supervisory Control and Data A	Software(Intangible)	Electric	The Electric High Voltage Distribution Monitoring System Upgrade project upgrades the software and hardware components of the High Voltage Distribution (HVD) Supervisory Control and Data Acquisition (SCADA) system. This system is used to monitor and control generation, transmission, and high voltage distribution voltage circuits. The upgrade will provide new functionality and enable new capabilities. Running on an older version of the HVD Software could have potential impacts on the reliability and resiliency of the low voltage distribution (LVD) system as well as the HVD system, as distribution reliability metrics depend upon HVD system availability. Maintaining an older version of the software and hardware creates risks associated with vendor responsiveness in addressing problems, as they arise. It will also take more effort to support any upgrades in the future because of difficulties resulting from longer durations between upgrade efforts. If upgrades are delayed, additional full-time resources will be required for the year upgrades occur to address upgrade complexities. Upgrading the HVD SCADA software and hardware adds value to the Company by ensuring that problems are promptly addressed when they occur. Additionally, the upgrade includes enhancements and fixes to the core product that support the resiliency of electric delivery, ensuring that customers are receiving the energy they need when they need it. Also, the distribution system depends on availability of the HVD system, staying current with the solution provider upgrades is critical to the resiliency of both systems. The scope of this project is an upgrade to the HVD SCADA software and hardware, which encompasses the following: (1) upgrading the application software; (2) upgrading the underlying application hardware; (3) implementing new functionality for improved value to the Company; (4) making necessary configuration changes; and (5) updating documentation related to the integration changes. Alternative considered include: (1) Defer the biennial upgrade of the SCADA application and its hardware. The Company targets SCADA biennial application upgrades to stay within two versions of the current application state to maintain application stability and cyber security, given the critical nature of the SCADA system. This alternative was not chosen due to increased security risk and need for vendor support of the application. Additionally, the hardware is already past the end of its useful life and has been moved over to a 3rd party warranty provider. (2) Alternative Vendor solution. This option was not chosen because the move from our current vendor would be time consuming and costly. It could also introduce instability as any alternative solutions have not been proven operationally. (3) Do nothing. This option was not chosen due to the critical nature of these systems and the potential operational risks associated with operating on an unsupported solution. (4) The option chosen is to complete the upgrade project with associated hardware and software necessary to complete the project that will deliver new functionality for improved value.	2025-10-01	2026-12-04	-1.00	3,442,113	213,929		2,592,512	522,810	756,409	320,123	751,750	-	241,420	86,505	-	-	76,505	-	-	10,000
120	2026	Product Family Enhancements-Elect	Software(Intangible)	Electric	The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software & hardware and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	920,161	183,276		920,161	-	837	478,931	214,339	-	226,054	183,276	-	-	53,032	130,244	-	-
121	2026	Product Family Enhancements-Elect	Software(Intangible)	Electric	The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. 122	2026	Service Restoration Artificial Intelligence	Software(Intangible)	Electric	Artificial Intelligence (AI) Machine Learning (ML) can enhance decision-making during restoration events by quickly evaluating multiple datasets, reduce non value-added time, and continuously improve through learning. This project will show the value of AI ML in Storm Declarations, Resource Planning, Resource Utilization/Crew Movements, and Asset Identification. The Company faces challenges in efficiently managing storm response and restoration efforts. Historically, storm declarations, resource planning, and crew movements have relied on manual processes and estimations, leading to delays and inefficiencies. The need for a more effective and timely response during restoration events has become increasingly critical, especially given the complexity and scale of modern storm events. This project creates value for the Company by (1) enhancing the storm response capabilities. This will enable faster and more consistent decision-making during restoration events, optimizing resource planning and crew movement and improving asset identification. (2) Delivering business value. The utilization of AI ML in service restoration processes is expected to reduce non-value-added time, improve public safety and create savings for customers. (3) Providing customer value. The AI ML applications will benefit customers by optimizing storm declarations, resource planning, crew movement and asset identification. These enhancements will lead to more efficient outcomes, faster restoration times and improved public safety. Furthermore, AI ML's learning abilities enable the decision-making to continuously improve, and those learnings have the durability to live beyond the human experience and mitigate learning curves as people transition from role to role. The project scope includes: (1) developing AI ML models for storm declarations, resource planning, resource utilization/crew movements, and asset identification. (2) Integrating with existing systems like Advanced Distribution Management System (ADMS), Customer Resource Manager (CRM) and Catastrophic Crewing in house built application. (3) Training and deploying. (4) Performance monitoring and (5) customer communication. Alternatives considered include: (1) continuing with the manual process. This option was not chosen because it results in underutilized crews, non-value-added time, and increased human error and difficulty. (2) Purchasing a storm work management solution. This option was not chosen due to its high cost, vendor dependency during the Company's most critical times, and complexity. (3) Creating an AI ML solution. This option was selected as it meets the criteria and will be scalable across service restoration and electric distribution.	2026-03-01	2027-05-30	-1.00	1,380,332	170,130	ROM	883,817	-	-	617,287	-	-	266,530	110,185	-	-	110,185	-	-	-	-
123	2026	Streetlight Outage and Restoration C	Software(Intangible)	Electric	This project will optimize the Streetlight Outage and Restoration (SOAR) application to better meet our customers need. The SOAR application is used by the Company's customers to report streetlight outages. This project will add new functionality to meet our customers' needs. While 68% of our customers are using SOAR to submit issues, between 15-20% of those issues are more than a lightbulb change/luminaire replacement, leading to multiple truck rolls, and work requiring long cycle scheduling. It lacks the most current source data due to manual process of updating the data, automation, and SMS text messaging, which leads to waste and customer dissatisfaction. By integrating these optimizations, Consumers Energy will streamline the work management system, reduce errors and provide a more comprehensive and efficient solution for our customers, our schedulers and our field workers. This project creates value for the Company by: (1) improving customer and municipality communications; (2) adding visualizations to improve accuracy and speed of repair; (3) adding field improvements such as getting the issue to the right department the first time and knowing what materials are needed so the light is fixed on the first visit; and (4) automating and updating the map which will allow for more accuracy. All of these will eliminate waste by using automation and properly mating of data. The project scope includes: (1) identifying correctly outages versus other work; (2) improving GIS data to include proper stock material and Temporary Traffic Control (TTC) requirements and prioritizing scheduled work based on outage repair needs; (3) offering SMS text messaging; (4) improving email communications by including more accurate details to customers; (5) daily automation of map data updating; (6) adding functionality for user-generated reliability reports; and (7) adding a new process to advise municipality of extended repair outages. The alternatives considered include: (1) continue the manual process. This includes adding municipality-named lighting layers to the Company's GIS solution, updating streetlight asset information and updating of the SOAR map. This option was not selected as it is heavy in human error and waste resulting in additional costs. (2) Purchase a new system. This option was not selected as it would be extremely expensive to purchase and wouldn't have all of the requirements needed. (3) Implement technology improvements. This alternative was selected because it will improve customer communications, improve accuracy and speed of repair.	2025-09-08	2026-10-29	-0.99	1,860,161	448,127		1,207,359	3,000	-	573,089	467,054	-	164,216	110,008	-	-	110,008	-	-	-	-
124	2026	Transmission Outage Application (Tr	Software(Intangible)	Electric	This project will modernize and streamline the high voltage system outage process, substation asset management, construction management and maintenance processes, as well as the high voltage project management process by replacing obsolete systems with an industry standard alternative and providing future integration opportunities with corporate systems. The current software version is no longer supported by the vendor and does not allow for the enhancements that would increase the functionality of the software. Also, the solution is susceptible to human error and duplication of efforts due to the manual nature of the work. Lastly, the ongoing support of the software is also costly and time consuming due to the outdated version and the requirements for the existing solution. The project will add value by: (1) simplifying the process of managing and rescheduling large HVD projects; (2) enhancing the ability to quickly identify conflicts created by schedule changes; (3) allowing the Company to internally support future integrations with existing applications; (4) improving resource management and visibility by planning Substation Construction, Substation Operations, and High Voltage Distribution (HVD) Lines resources by project; (5) implementing ability to plan Control Center resources based on planned work and control center capacity; (6) improving stability and repeatable reporting for defects and problem solving; (7) simplifying communication with stakeholder groups including Low Voltage Distribution (LVD) Scheduling, Business Customer Solutions, Electric Field Lab, and Substation Operations for outage requests requiring resource coordination; and (8) including 24x7 application support and patching due to using a Cloud solution. The scope of the project includes: (1) upgrading to the newest version of software for a real-time electric operations application; (2) migration of applications and data to cloud servers; and (3) end-user testing. The alternatives considered for the project include: (1) continuing with the current system and processes. This alternative was not selected because the current version is out of support, is prone to human error and duplication, and is costly to maintain. (2) breaking the project into separate Company built applications. This alternative was not selected because these individual applications would have integration complications and support issues, as they would all be separate entities. (3) purchase an off-the-shelf cloud option. This alternative was selected as it would not have customization of the base product or integration issues and comes with 24x7 cloud support.	2025-09-08	2026-07-31	-0.93	861,864	276,556		512,813	-	-	51,580	444,000	-	17,233	263,676	-	-	242,735	20,941	-	-

127	2026	Application Currency-Electric & Gas	Software(Intangible)	Electric & Gas Shared	The Electric and Gas operations initiative will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrades. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric and Gas operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Electric and Gas operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	65,210	309,420		43,195	-	-	30,123	-	-	13,072	194,935	15,978	-	4,725	173,901	-	331	
128	2026	Application Currency-Electric & Gas	Software(Intangible)	Electric & Gas Shared	The Electric and Gas Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric and Gas Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Electric and Gas Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	-	663,259		-	-	-	-	-	-	-	417,853	-	-	377,460	40,393	-	-	
129	2026	Application Currency-Operational Te	Software(Intangible)	Electric & Gas Shared	The Operational Technology initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Operational Technology adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Operational Technology are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	-	253,895		-	-	-	-	-	-	-	159,954	-	-	159,954	-	-	-	
130	2026	Customer Consecutive Estimate Red	Software(Intangible)	Electric & Gas Shared	The project will resolve gas and electric accounts with consecutive estimates due to the service being disconnected and customer's usage being estimated. Consumers Energy experienced two show cause orders from MPSC for consecutive estimates and fines of $500,000 in 2016 and $1M in 2023 including $3M that is to be refunded to the customers from the money that is recovered from the vendor. If the funding is not recovered from the vendor, the total fine would result in $4M as the Company is responsible for the difference between the dollars recovered from the vendor and the $3M total established by MPSC. The project objective is to reduce disconnected consecutive estimate accounts from 8% to less than 1% reducing non-compliance regulatory risk with MPSC rules. The project scope includes enhancing account and work management digital solutions to properly reflect disconnected account status. Process improvements were put into place after the 2016 show cause; however, increased electric meter failures, supply chain shortages, and a project focused on replacing meter technology due to the sunset of 3G communication led to issues that resulted in a second show cause order. Do nothing does not improve the customer experience. Our current solution of SAP CRM used by Call Center, SAP Work Management, ADMS for Storm and Service Suite for Field Work are all core platforms able to accomodate the change. Adding additional software or alternatives will complicate the technical solution and/or require additional training for Call Center & field personnel.	2025-04-01	2026-03-31	0.00	711,907	96,300		425,063	-	-	159,332	226,353	-	39,378	39,237	-	-	39,237	-	-	-	
131	2026	Product Family Enhancements-Elect	Software(Intangible)	Electric & Gas Shared	The Electric and Gas operations initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Electric and Gas operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric and Gas Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric, Gas and Generation Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	1,036,665	155,294		686,687	-	6,824	131,640	476,047	-	72,376	97,835	-	2,946	16,775	78,114	-	-	
132	2026	Product Family Enhancements-Elect	Software(Intangible)	Electric & Gas Shared	The Electric and Gas operations initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. 133	2026	Spatial Asset Management	Software(Intangible)	Electric & Gas Shared	This initiative will implement SAPs Spatial Asset Management module. It will allow users to view assets, notifications, and orders geospatially using a map. The module will allow the Company to create and maintain asset maintenance plans for each segment of our gas and electric distribution networks (linear assets). The Company will create linear assets as technical objects (such as functional locations and equipment) and store linear data. The Company will enable creation of maintenance plans for these technical objects which result in notifications, maintenance orders, and measurement documents. We will enable monitoring the condition of our linear assets, identify where there is damage or a defect (using the start point and end point and offset), and manage all types of maintenance tasks (planned, unplanned, and preventative). Currently, the Company lacks spatial visualization and spatial awareness of work and assets impacting requirements for first time quality and impacting the ability to plan, bundle and execute nearby work. The lack of a linear asset management capability affects the full work management value stream resulting in overproduction of asset maintenance activity such as assessments, surveys, and inspections. This project creates value for the Company by (1) providing capability in SAP to view assets, notifications, and work orders on a map; (2) providing location awareness in SAP for assets and work; (3) establishing linear asset management capability in SAP for gas and electric delivery networks; and (4) enabling end-to-end map-based workflows. The scope of this project encompasses implementation in SAP of the Spatial Asset Management module. Alternatives considered include: (1) Implement a cloud-based individualized asset integration between GIS and SAP. This alternative was not selected as it proves ineffective in addressing needs of the end-to-end work management value stream while increasing the technical footprint of customization. There are also performance concerns with cloud to on-prem integrations; (2) Implement work group centric approaches to viewing work on a map. This alternative was not selected as it does not support standard operation through the entire work management value stream; (3) Do nothing. This alternative was not selected as this would result in increasing costs and inefficiencies in gas and electric work management; and (4) The alternative to implement the Spatial Asset Management module in SAP was chosen as it expands use of a core technology investment, supports current investment in our work management value stream, and is compatible with our GIS technology.	2024-05-10	2026-09-26	-1.00	2,981,655	97,619	ROM	236,450	-	-	79,223	119,232	-	37,995	33,705	-	-	14,605	18,900	-	-
134	2026	20% ROM Adjustment - Electric & Gs	Software(Intangible)	Electric & Gas Shared	This is for the 20% ROM Adjustment for IT projects.							(47,290)	-		(15,844)	(23,846)	-								
135	SUBTOTAL	2026 Electric & Gas Shared										1,391,395	-	6,624	459,217	521,832	-	162,521	1,879,517	15,978	4,357	716,535	348,016	-	331
136	2026	ARP-Radio	Network	IT/Digital Foundation	This project will refresh hardware to include: 800Mhz Radios and infrastructure, cellular modems, plant radios and systems, cellular amplification devices, vehicle consoles in service trucks, other communications equipment, and associated test equipment. This equipment supports mission critical voice and data communications for plant and field service personnel and dispatch personnel. 800MHz radios are upgraded on a 10-year lifecycle basis. Plant radio systems are upgraded on a scheduled 10-year lifecycle basis. Cellular modems are refreshed on a five-year life cycle basis. Amplification systems are refreshed on a 10-year life cycle. 800Mhz, mobile, and portable radios, Plant radios systems, and Cellular modems support core business functions, life safety communications, and rapid response for restoration of customers service and critical infrastructure. Company radio and cellular systems must be refreshed on a scheduled basis or risk exceeding life expectancy and failing or becoming obsolete. The refresh of this equipment in a proactive manner is critical to providing service to customers. If these units are not refreshed, the increased risk of unit failure would result in interruptions to timely and concise communications to field personnel to resolve gas leaks, and downed electric lines, or service turn-on requests, which risks life safety. This project creates value for customers and the Company by: (1) upholding public safety; (2) ensuring timely responses and repairs to emergent gas leaks, wire downs, and electric outages; (3) ensuring real-time communications between Company dispatch locations and crews in the field; (4) ensuring the safety of personnel working in higher risk workspaces by replacing equipment with units that contain intrinsically safe batteries; (5) supporting continuous improvement and training by replacing equipment that is capable of capturing audio recordings; and (6) remaining in compliance with MPSC regulatory requirements by maintaining critical radio infrastructure. The project scope consists of: (1) scheduled replacement of radios, modems, consoles; and (2) installing additional radios, modems, and console assets to satisfy growth requirements; and (3) scheduled replacement of out of date cellular and radio boosters and systems. The alternatives considered include: (1) Replacing the existing units with new units from other radio and modem manufacturers; (2) Purchasing new radio subscriber units from existing manufacturers. Option 2 was not selected because the Company now uses a standards-based radio system allowing for multiple radio manufacturer options. Option 1 was selected to allow for a competitive bidding process that will provide the most cost-effective radio that will meet the needs of users.	2026-01-01	2026-12-31	-1.00	1,457,038	96,993		763,197	-	712,056	20,271	19,946	-	10,923	61,105	-	55,976	3,534	1,260	-	336
137	2026	ARP-Collaboration	New Computers / Hardware	IT/Digital Foundation	This project will replace the Company's obsolete or out-of date audio, visual, telephony and other communication collaborative tools and equipment. When collaboration assets used to support customer interactions and business operations are obsolete or out-of-date, they are more difficult to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project creates value by: (1) ensuring the stability and reliability of the Company's audio, visual, telephony, and other communications systems; and (2) migrating to new collaboration assets. The project scope consists of: (1) replacing aging collaboration assets; and (2) installing new collaboration assets to meet evolving business requirements. The alternatives considered include: (1) continuing to operate collaboration assets beyond a five-year refresh cycle, or (2) refreshing collaboration assets based on a five-year refresh cycle while evaluating the health of the asset and evolving business requirements. The alternative to operate the collaboration assets beyond a five-year refresh cycle was not selected due to the risk of asset failures would cause stability and reliability issues for employees supporting our customers, as vendors do not provide extended support after five years. The Company chose to refresh the collaboration assets based on a five-year refresh cycle and evaluate the health of the asset and evolving business requirements to reduce the risk of impacting the productivity of employees supporting our customers.	2026-01-01	2026-12-31	-1.00	1,162,872	180,585		770,287	-	694,358	22,925	45,627	-	7,377	113,756	-	21,704	25,902	66,150	-	-
138	2026	ARP-Field Device Asset Managemen	New Computers / Hardware	IT/Digital Foundation	This project will replace field devices according to a four-year refresh cycle that is based on industry standards, hardware failures, security patches, and software compatibility. When Field Device Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with Security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular four-year refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing field devices before they fail; and (2) allowing field workers to complete their job tasks. The project scope consists of replacing field device assets according to the four-year refresh cycle. toAlternatives considered include: (1) using outdated equipment. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact meter readers' ability to complete job tasks. It would also complicate the Company's efforts to meet the MPSC's meter reading factor and consecutive estimated targets, and it could cause applications to run poorly or stop functioning; (2) The second alternative considered was to replace the hardware. The Company selected this option to alleviate the above concerns.	2026-01-01	2026-12-31	-1.00	7,579,082	5,000		5,020,370	-	4,690,086	94,833	-	-	35,452	3,150	-	3,150	-	-	-	-
139	2026	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Common project will replace dated and obsolete servers shared by Electric and Gas on a rotating five-year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure.	2026-01-01	2026-12-31	-1.00	1,655,506	152,731		1,096,607	-	993,600	28,918	-	-	74,089	96,221	-	90,720	5,501	-	-	-
140	2026	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Electric project will replace dated and obsolete servers on a rotating 5 year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five to seven-year refresh cycle or (2) refresh hardware based on a five to seven-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five to seven-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety for customers, as vendors do not provide extended support after seven years. The Company chose the alternative to refresh this hardware based on a five to seven-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure that supports systems such as Electric SCADA.	2026-01-01	2026-12-31	-1.00	190,856	17,183		190,856	-	165,000	10,914	-	-	14,942	17,183	-	15,000	2,183	-	-	-
141	2026	ARP-Printer Asset Management (PAI	New Computers / Hardware	IT/Digital Foundation	This project will replace and install select printers, plotters, and multi-function printing devices based on printer replacement assessments and a five-year refresh cycle. Printer service and usage history is evaluated and a determination is made if a printer can be repurposed instead of ordering a new one. When Printer Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with firmware and security updates. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving the dependability of these printer devices for employees; (2) averting increased costs due to hardware repairs; and (3) ensuring compatibility with enterprise print applications. The project scope consists of the annual replacement of printer assets according to a five-year refresh cycle. This does not mean that all printers are replaced after five years merely that printers are assessed on a five-year cycle for possible replacement. The alternatives considered for the project included looking at refresh cycles from three to seven years as well as running the assets to failure. The selection of a five-year cycle was deemed to be the best solution since anything less than five years would increase the likelihood of unneeded expense for replacement of assets that were still in good operating condition. Anything greater than five years would require the printers to be assessed monthly to ensure they are not run to failure, resulting in additional expenses for maintenance of the equipment and downtime, negatively affecting employee productivity. The Company assesses the printer fleet based on years of active service, service history, printer usage data, and the number of users within a facility. Based on these factors, the Company either decommissions, repurposes, leaves in place, or refreshes the printers.	2026-01-01	2026-12-31	-1.00	184,794	5,000		122,408	-	119,194	2,339	-	-	874	3,150	-	3,150	-	-	-	-
142	2026	ARP-Workstation Asset Management	New Computers / Hardware	IT/Digital Foundation	This project will replace and install new desktops, laptops, and tablets on a four-year refresh cycle based on industry standards, hardware failures, security patches, and software compatibility. Monitors will be replaced every eight years based on Company data related to historical failure rates. When Workstation Assets that are used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing workstations prior to increasing hardware failures; and (2) allowing business partners to complete their job tasks. The project scope consists of: (1) replacing workstation assets; and (2) installing new units for new resources. The alternatives considered were to: (1) extend the replacement cycle from four years to five years for all desktops and laptops; (2) extend the replacement cycle only on desktops from four years to five years; and (3) use outdated equipment. The Company did not select these options because: (1) there would be an increased risk of hardware failure and equipment outages that could impact the capacity of business partners to complete job tasks; (2) it could cause applications to run poorly or stop functioning; (3) it would increase the ARP in future years based on the number of devices that were not replaced during the four-year refresh cycle ; and (4) it could cause an inability to apply security patches. Based on industry data, waiting longer than the four-year cycle would increase hardware failures, security patch issues, and software compatibility concerns, resulting in additional downtime that could affect customer safety and storm restoration. The Company selected a four-year refresh cycle for desktops, laptops, and tablets; and an eight-year cycle for monitors to alleviate these concerns.	2026-01-01	2026-12-31	-1.00	5,542,158	51,618		3,671,126	-	3,486,135	83,027	72,831	-	29,132	32,519	-	30,575	1,945	-	-	-
143	2026	Digital-Hybrid Cloud and Data Cente	New Computers / Hardware	IT/Digital Foundation	This project will optimize data center assets and asset replacement project purchases by migrating or retiring applications out of existing Company and co-location data centers into cloud services, reducing operational costs for running IT services and leveraging increased cloud capabilities to improve the efficiency, quality, and speed-to-market of customer-facing and internal IT services. The technology currently deployed in the Company's data centers meets many customers' needs today. However, the pace of digital transformation is increasing rapidly, and requirements for applications are evolving faster than the technology in the Company's data centers can respond in a cost-effective manner. These data center constraints lead to longer implementation times, missing capabilities, or reduced functionality in the applications that the Company can deploy. This project will create value by ensuring the Company's technology requirements are met through a comprehensive and cost-effective combination of data centers and public cloud services. Specifically, by migrating applications to cloud services, the project will: (1) reduce capacity, hardware maintenance, and security device costs at the co-location data center; (2) reduce hardware maintenance and security device costs at the production data center; (3) enable the ability to scale infrastructure quickly up or down without costly up-front hardware purchases; (4) reduce application risk through cost-effective, scalable infrastructure redundancy and availability; (5) reduce ongoing server and storage asset replacement costs; (6) reduce ongoing networking equipment replacement costs; (7) reduce operational support costs; and (8) enable the use of a vast array of cloud services to support Company applications. The project scope includes: (1) promoting the robust main co-location data center to become the primary data center for on-premise IT services; (2) demoting the Company's production data center to the disaster recovery data center for on-premise IT services; (3) analyzing applications for migration to cloud or retirement; (4) migrating applications from on-premise to cloud; (5) transforming applications to use cost-effective cloud services; (6) altering network architecture and deploying base infrastructure to allow each location (on-premise or in cloud) to function independently; (7) deploying cloud and on-premise cost management tooling and processes; (8) simplifying and optimizing backup and disaster recovery resources and processes using cloud services; (9) implementing additional automation for application deployment and management; (10) changing the operations model for support of cloud-based applications; (11) educating and increasing the skills of IT and other employees in leveraging public cloud services; and (12) transforming IT to become the broker of cloud services for the Company. Alternatives considered include: (1) migrating to public cloud services faster. This alternative was not chosen because the Company's ability to absorb new technologies coupled with the investments the Company has already made in data center equipment would prevent a faster move from being efficient and effective, introducing additional financial risk; (2) migrating to public cloud services slower or not at all. This alternative was not selected because delaying public cloud services and capabilities coupled with requiring an extension of the life of existing data center equipment creates increased financial and operational risk; and (3) contracting with an outside vendor to provide cloud services to run applications for the Company. This alternative was not selected because industry information shows the option as not yet cost-effective or not providing a maturity level that the Company would be able to easily consume with limited in-house experience and expertise in public cloud. The alternative to migrate to a hybrid cloud and data center model was selected because of the expected cost benefits and technology capabilities it provides to the Company over a timeline that allows the Company to realize the value of existing investments.	2023-04-02	2026-12-31	0.17	10,913,922	2,440,581		1,148,137	-	-	242,564	852,940	-	52,633	173,047	-	-	20,794	152,253	-	-
144	2026	Operational Technology (OT) Datace	New Computers / Hardware	IT/Digital Foundation	The OT environment consists of systems supporting the control and monitoring of electric grid, electric generation, gas compression, and natural gas pipeline. These systems are critical for safe and reliable natural gas and electric delivery. The OT Datacenter Migration project enhances the Company's capabilities by co-locating to an enhanced datacenter at a vendor facility. The Company's current datacenter for the OT environment needs modernization and relocation from the Parnall Data Center. The current location is not the preferred location to house servers and systems critical to the control of the Electric Grid or Gas Pipeline due to the close proximity to a railway system. The climate conditioners in the current OT datacenter are aging and have had faults resulting in unplanned shutdowns . The location of the datacenter in the basement of the Parnall building is nearby to the main water piping for the building. There have been instances of water infiltration in the past. This project creates value for the Company by significantly strengthening capabilities through: (1) mitigating legacy physical and location risks at the current Parnall site; (2) migrating the OT infrastructure to a modern, highly secured environment with redundancy in climate conditions; and (3) better datacenter facilities support with a guaranties of redundant power. The scope of the project includes: (1) migration of the OT environment from the Parnall Data Center to a co-located vendor data center; (2) re-validation of the OT Production and Disaster Recovery procedures once migration is completed; (3) migration of IT systems required for supporting the OT environment; and (4) decommission the existing OT environment from the Parnall location. The Company performed an analysis of alternatives to expand capabilities as well as address constraints and risks: (1) Remain at the current Parnall Data Center; (2) migrate OT environments to the Cloud; and (3) relocate to a third-party co-location facility. Current industry best practices do not recommend migration of OT environments to the cloud. The co-location vendor provides the building, cooling, power, and physical security the Company lacks for its servers, storage, and other computing and networking equipment at the current Parnall location. Based on the analysis, the Company decided to implement the third alternative.	2026-06-30	2027-12-11	-1.00	7,749,620	1,856,450	ROM	2,908,884	211,487	2,119,098	150,579	211,487	-	216,233	569,615	-	-	226,265	343,350	-	-

145	2026	Security/OT Field Modernization	New Computers / Hardware	IT/Digital Foundation	This project will implement new infrastructure for accomplishing improved security in the field for OT assets. Gas and Electric technicians are using corporate laptops, to manage critical OT infrastructure which does not follow cyber security best practices for managing critical infrastructure. Vendors and contractors have access to the Company's critical infrastructure using non-Company laptops. Best practice is to use dedicated laptops to connect to critical infrastructure. The value of this project is deploying dedicated Company OT laptops and associated OT infrastructure that can move between OT locations only and providing a secure environment. This project will procure and configure approximately 130 devices that will be used to manage critical OT infrastructure. The Company reviewed several options to mitigate cyber security risks inherent with the use of standard corporate laptops managing critical infrastructure. The alternatives considered are: (1) Continue utilizing existing workflow of using Corporate domain laptops with software installed; (2) Bring in an outside vendor to design and implement a proposed infrastructure; (3) Complete disallowance of all local access to critical systems; (4) Extending the OT network to remote Company locations; (5) Deploy a dedicated Company OT laptop and OT communications circuits, which includes cellular connectivity. The dedicated OT laptop and communications circuits presented the best way to secure the critical infrastructure by limiting internet and e-mail access. Vendors and contractors could also utilize these approved dedicated systems for managing infrastructure they help support at Company locations. Based on the analysis performed, the Company chooses to deploy a dedicated OT laptop and communications circuits which is not a cloud related solution, since it is hardware and not software.	2025-02-20	2026-12-30	-1.00	2,117,568	310,431		624,390	80,596	-	252,587	232,203	-	59,005	155,620	98,611	-	20,020	33,541	-	1,447
146	2026	20% ROM Adjustment - IT/Digital Fo	New Computers / Hardware	IT/Digital Foundation	This is for the 20% ROM Adjustment for IT projects.							(581,777)	(42,298)	(423,619)	(30,116)	(42,298)	-	(43,247)	-	-	-	-	-	-	-
147	2026	Application Currency-IT/Digital Foun	Software(Intangible)	IT/Digital Foundation	The Application Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Application Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Application Platforms area are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	-	472,347		-	-	-	-	-	-	-	297,579	-	-	297,579	-	-	-
148	2026	Application Currency-IT/Digital Foun	Software(Intangible)	IT/Digital Foundation	The Infrastructure Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. 149	2026	BizTalk Services Migration and Retir	Software(Intangible)	IT/Digital Foundation	The Microsoft BizTalk application transfers data from one location to another with internal and external software systems and assists with securely communicating sensitive financial data. The project will migrate the BizTalk application services to other existing applications resulting in the retirement of the Biztalk application. Microsoft announcing end of life for this application a replacement is needed to avoid business impact. The current version of Biztalk running at Consumers Energy is already out of mainstream support. If major issues occur within the application, it could disrupt critical business processes. This includes financial concerns such as payroll, account receivable, and other essential operations. Ensuring continuity is vital. This project creates and maintains value for the Company and its customers by migrating the Biztalk services to supported applications already present in the Consumers Energy environment that do have not end of life concerns and can provide the same functionality Biztalk was providing to meet business requirements. This project creates and maintains value for the Company and its customers by: (1) Migrating all current processes from the current application to replacement products. The secure file transport processes will be migrating to the existing Axway Secure Transport platform. The Electronic Data Interchange processes will be migrated to the existing SAP platform. (2) Ensuring current and future compliance with Information Security critical and sensitive data initiatives, such as patching, data encryption, and authentication requirements. (3) Guarantees 7x24x365 vendor support is available to the Company during significant outages by remaining on a version supported by the vendor. Alternatives considered included: (1) Using Azure native services to recreate all of the processes and services Biztalk provided. This was cost prohibitive due to time and effort this would take. (2) Purchasing a replacement product. Not new or optimal as existing applications are already implemented within Consumers Energy that provide the same capability. (3) Leverage existing applications within the Consumers Energy application portfolio. This option was selected as lowest cost option and also to meet application rationalization goals to eliminate applications that are providing duplicate functionality.	2025-02-28	2026-10-31	-1.00	876,410	930,309		580,534	-	8	177,055	358,935	-	44,536	245,395	-	-	104,307	141,088	-	-
150	2026	Business Capability Mapping SaaS T	Software(Intangible)	IT/Digital Foundation	The Business Capability Mapping (BCM) SaaS Tool is a cloud based software solution which will visualize the Company's capabilities related to our metrics, data maturity, supporting technologies, financial allocations, and other view points. The tool will automate analysis and report generation to quickly provide information while supporting other efforts directly supporting technology investment planning and management. The current lack of a centralized tool for tracking enterprise-wide data, which is manually managed via Excel, poses significant challenges. This manual process limits data sharing and the distribution of business capability roadmaps, complicating investment planning and alignment. The absence of a centralized tool also hinders effective communication regarding prioritization and application stack updates, preventing a comprehensive view of impacted areas. Consequently, the enterprise architecture practice struggles to accurately plan and forecast investment opportunities, leading to misallocation of funds, labor, and potential delays in enabling strategic opportunities. The solution will include implementing a centralized tool to streamline data sharing, enhance communication, and support accurate planning and forecasting. The company will see value through: (1) Implementing processes and supporting technical components to enable automated scoring of capabilities, including scores, measures, metrics, KPIs, and OKRs for consistent and accurate analysis; (2) Developing a consolidated view of critical capabilities, applications, and infrastructure, ranked based on their efficiency and effectiveness in meeting company objectives; (3) Integrating key technology features supporting Application Rationalization, Enterprise Resource Planning (ERP) system and major platform upgrades, Business Capability Modeling, Application Stack Ownership, Enterprise Architecture Artifact Tool Repository, centralized repository and role based access; (4) Generate a consistent framework to support the prioritization of investments based on their impact on key capabilities across the enterprise, (5) Implement a shared platform to integrate architecture activities versus siloed practices; and (6) Consolidate empirical data used for investments and technical health to ensure accuracy and consistency in evaluations. The project scope includes: (1) Implement a role-based access SaaS product and Integrate with ServiceNow and other internal systems; (2) Configure the SaaS product with identified tools for data gathering on capabilities and their performance; (3) Develop processes and automation to gather data on capabilities, including applications, technical infrastructure, and metrics; (4) Establish a framework for prioritizing investments; (5) Create role-based dashboards and reports to visualize the output of data analysis; (6) Develop automated communications for key business decisions, investment plans, data collection, and reports; (7) Enable self-reporting on data within the tool; (8) Connect supporting documentation to the capabilities; and (9) Provide training on how to use the tool including end-user training. Alternatives considered for this include: (1) Continue with current practices for initiative planning and Enterprise Architecture practices. This was not selected as it does not address gaps in enterprise-wide practices and consolidated roadmap capabilities addressing key company objectives. (2) Develop in-house applications using multiple platforms including Excel, PowerBI, and custom development. This was not selected due to complexity of the solution and cost of delivery. Additionally, the dependency on the automated processes would create additional hurdles for efficient delivery. (3) Acquire external tools to support BCM, Enterprise Architecture, and investment planning. This solution was selected as it provides quick and efficient access to automated tools within acceptable cost ranges.	2026-03-25	2026-06-25	-0.52	548,250	171,200	ROM	363,161	-	-	248,400	-	-	114,761	107,856	-	-	85,806	22,050	-	-
151	2026	Data & Analytics Platform Rationaliza	Software(Intangible)	IT/Digital Foundation	This project will optimize the Data & Analytics system landscape by creating connections, migrating data into the Data Lake in the cloud, and building visualizations from the data in the Data Lake. The IT Data & Analytics legacy systems (SSDL, SAP BW, SAP BOBJ, Native HANA, the BW Portal, and BCDS) are outdated, inefficient, and becoming duplicative in nature with the introduction of DL 2.0. If these legacy systems are not retired, they will continue to cost the Company money as major investments are needed to maintain and support them. This platform rationalization project creates value for the Company and its customers by reducing the total cost of ownership associated with maintaining and supporting legacy systems including licensing fees, maintenance costs, infrastructure, and support resources. The project scope includes: (1) the assessment of the existing Data & Analytics platforms including SSDL, SAP BW, SAP BOBJ, Native HANA, the BW Portal, and BCDS; (2) inventory of data and reports still being used by stakeholders; (3) determination of migration strategy; (4) data migration to the Azure Data Lake; (5) report migration to Power BI; (6) organization change management; and (7) the retirement/decommissioning of the legacy platforms and applications. Alternatives considered: (1) upgrade legacy systems in place (on-premise). This alternative was not selected because this is costly and misaligned with the Company's cloud strategy. (2) Lift and shift these on-premise systems to the cloud through the Hybrid Cloud Transformation Program. This alternative was not selected because it would duplicate the work being done as part of the DL 2.0 project and would not provide the same efficiencies that DL 2.0 introduces. (3) Migrate all data sources to DL 2.0 and retire legacy systems. This alternative was selected because of the expected cost benefits and technology capabilities it provides to the Company over a timeline that allows the Company to realize the value of existing investments.	2025-04-07	2027-12-31	0.24	9,019,671	1,319,807		2,652,770	280,195	-	879,438	1,263,049	-	230,087	439,789	406,339	-	22,274	11,176	-	-
152	2026	Enterprise Service Bus 2026-2027 U	Software(Intangible)	IT/Digital Foundation	This project will upgrade the current Enterprise Service Bus software versions in use at the company. This will also implement a container management system and migrate various services to containers. Newer ESB software versions offer improved integration with RestAPI services and applications. It is critical that this vital data tool or pathway, be more scalable, secure, and capable of integrating to a service-based environment. The lack of a container management solution prohibits the adoption of a more cloud native approach leading to retaining legacy solutions. The value this project provides the Company includes: (1) implement a container management solution; (2) avoid technical obsolescence; (3) operational resiliency; and (4) improved administrative and operational efficiencies. The project scope includes (1) implementing the current version of all applications that are part of the ESB application, database version, and required database drivers and (2) implementing a Kubernetes solution for container management and migrate targeted services that are identified as microservices to containers. Alternatives considered included: (1) Accept the current version levels and continue to pay for extended support costs and accept technical obsolescence risk. (2) Only upgrade the existing applications. (3) Upgrade all of the applications as well as evolve the cloud-based instance to a more cloud native architecture by converting containers and implementing a Kubernetes solution to manage the containers. This option was selected because it best meets the Company needs for the near future by maintaining vendor support for fixes and patches, and enables product scalability to the measure required of business capabilities.	2026-09-01	2027-11-22	-1.00	1,331,120	1,042,944	ROM	-	-	-	-	-	-	-	19,809	-	-	19,809	-	-	-
153	2026	HR Support Pack and Business Soft	Software(Intangible)	IT/Digital Foundation	The Human Resources (HR) Support Pack and Business Software Inc (BSI) upgrade will update the SAP system with HR Support Packs that are released annually by SAP to comply with HR and tax changes. SAP releases annual HR support packs to ensure compliance. Without them, the Company would be unable to comply with HR and tax changes, resulting in the inability to calculate and distribute payroll. This project creates value for the Company by: (1) ensuring that its systems are in compliance with new financial rules and regulations; and (2) ensuring that it can calculate and distribute payroll. The scope of this project is to add SAP HR corrections to ensure proper reporting of financial information by the Company. oAlternatives considered include: (1) not upgrading to the current support packs, which results in noncompliance with financial rules and regulations and inaccurate payroll. (2) there is no economical cloud solution, so this option was not entertained. (3) the Company decided the best alternative is to apply the appropriate support pack upgrades. This option is preferred because it enables the Company to comply with HR and tax changes, resulting in the ability to correctly calculate and distribute payroll.	2026-01-23	2027-02-15	0.00	-	665,132		-	-	-	-	-	-	-	419,033	-	-	63,727	355,306	-	-
154	2026	ISIS Papyrus 2026 Upgrade	Software(Intangible)	IT/Digital Foundation	This project will upgrade the Papyrus Objects suite of applications to the most recent version available per vendor recommendation. The ISIS Papyrus application is critical to creating electronic and paper correspondence for customers, including bills and dunnings. The application will be at least one major upgrade revision behind by 2026. It's imperative that customers retain unfettered access to their paper bills, dunning notices and other communications produced by ISIS. ISIS also makes customer bills available for online viewing through the website and mobile apps. Without the upgrade, vendors make no guarantee that any substantial patches or hot fixes impacting application reliability, capacity and security will be forthcoming. The upgrade will address these problems and challenges, as well as ensuring all other platform components comply with the Company's operational and security standards. The value of this project includes: (1) providing a more stable operational model by upgrading to the most recent version available; (2) maintaining the necessary vendor support; and (3) resolving tuning and stability issues with the vendors. The scope of the project is to upgrade the various licensed products that comprise the Papyrus Objects suite of applications. Alternatives considered include: (1) delaying the upgrade and continuing to operate with the current version. This alternative was not chosen due to the risk of application stability and the inability to maintain cyber security patching. (2) The Company instead decided to upgrade to the current version. This alternative was chosen as it eliminates the risk of application instability and the inability to maintain cyber security patching.	2026-02-01	2026-10-01	-1.00	-	217,246	ROM	-	-	-	-	-	-	-	136,865	-	-	136,865	-	-	-

155	2026	Kubra 4.0 Upgrade	Software(Intangible)	IT/Digital Foundation	Consumers Energy (CE) has the overarching ambition of serving 1 in 3 Low-to-Moderate Income (LMI) customers (currently 1 in 6), while supporting the achievement of clean energy goals and reduction in Uncollectible Expense (UCX). 37% of CE customers are low to moderate income (LMI). Low Income (LI) accounts for 11% and means they are currently in crisis and unable to pay their bill. Moderate Income (MI) accounts for 26% and means they are one financial crisis away from being unable to pay their bill. As part of the LMI effort, we are prioritizing Behavior Based Direct Messaging: Meet the customer where they are, communicate about assistance options based on behavioral indicators, and increase the likelihood of enrollment into meaningful assistance programs ahead of a crisis, and Kubra 4.0 will aid in the success of those LMI goals. To help a customer avoid a crisis before it happens, we need the ability to proactively communicate to them when their behaviors signal the possibility of an issue, some examples being: (1) A customer misses a payment after record of making payments for several months, (2) The auto-pay system receives an insufficient funds alert from the customers' account, (3) Energy use is high, and a bill is projected to be 25-50% larger than usual, and (4) Localized / seasonal triggers such as heat waves, blizzards, and ice storms. Additionally, (5) it's imperative that we're able to text and modify message content that captures the customer's attention, so that we may drive awareness to programs that offer assistance ahead of a crisis. Kubra 4.0 platform is more flexible and configurable to help experimental design & marketing iterate on who/where/what to cut through digital noise. This project creates value for the Company through improving customer communications by providing Consumers Energy (CE) with access to (1) templates and wording changes that previously required expensive Statement of Work (SOW) engagement to deliver and (2) reduce lengthy wait times to implement these aforementioned Statements of Work (SOWs). Finally, (3) this engagement will also introduce 12 net new alert messages, (4) allow for new means of communication and messaging via the mobile app push notification feature, and (5) provide better outage notification reliability and control via Application Programming Interface (API) data transfer instead of Secure File Transfer Protocol (SFTP) data transfer. The project scope includes: (1) 12 net new alerts including 4 for the Shut-off Protection Plan (SPP), missed payment(s), summer event alerting, winter event alerting, and 5 additional alerts to be detailed out during the plan & design phase of the effort based on current low-to-moderate income (LMI) customer communication needs, (2) new template editor as part of the upgraded platform, (3) New Push Notification option available for mobile app which will enable a fast follow enhancement to push notifications through more than just email and text, (4) all other updates and improvements through Kubra 4.0 including use of APIs and other technical improvements, and (5) a new Application Programming Interface (API) built specifically for CE's outage messages for better reliability - instead of the existing file transfer outage information which is less reliable. The alternatives considered include: (1) continue the expensive Statements of Work (SOW) approach for updating each message template and for bringing on any new messages. This would total approximately ~50k per new alert, for a total of 600k for all 12 net new alerts for this effort if pursued individually. This total is not including costs to any existing message adjustments. This alternative was not considered due to the extra cost and overhead. (2) Purchase a new customer communications system. This option was not selected as it would be extremely expensive to purchase and wouldn't have all of the requirements needed and would be a tremendous amount of labor to reintegrate with our existing communication channels. (3) Utilizing Microsoft Dynamics or Riverstar. This option was not selected as it would be a tremendous amount of labor to reintegrate with our existing communication channels nor would either of the platforms fully support the bandwidth or channels needed to properly communicate out what we send via Kubra today. (4) Implement the upgrade to include the new alerts. This alternative was selected because it will improve customer communications, improve accuracy and speed of message updates, and offer more message options to achieve the Low-to-Moderate income (LMI) 1-in-3 goal as we're able to keep expanding our communication options with the upgrade's features.																								
156	2026	MS Self-hosted Gateway Solution ar	Software(Intangible)	IT/Digital Foundation	This project is looking to retire the API Exchange Gateway used primarily by the Enterprise Service Bus and replace it with a new solution called Microsoft Self-Hosted Gateway in security Zone B. The API Exchange Gateway is used by the TIBCO ESB to integrate corporate applications. New development will need to be done to integrate this solution. The Tibco API Exchange Gateway is anticipated to be sunset by the vendor, as they have already dropped all development of enhancements for the platform. The end of life date is 6/30/25 This project creates value for the Company by: (1) Avoiding the risk of running a project no longer supported by the vendor (i.e. the Tibco API Exchange Gateway Exchange module), and (2) Enabling the Company the opportunity to move to a product that is more stable, secure, and usable. The project scope includes: (1) Implement the Self Hosted Gateway into Zone B as a replacement solution. (2) Migrate all current work items to the new platform or existing equivalent based on use case. (3) Conduct appropriate testing to ensure all Service Level Agreements are met. Alternatives considered include: (1) Evaluating the replacement of the current product with a new product that is not already in the Company environment. This alternative was not selected because it would not be cost effective. (2) Keeping the current application as-is. This alternative was not selected as the vendor for the current platform has stopped all development for this product and the EOL has been set (3) Leveraging an existing solution already in the Company environment. This alternative was not selected as an existing product in the corporate Zone B layer does not exist. (4) Implement the Microsoft Self-Hosted Gateway and migrate current data into new platform. This alternative was selected as the most cost-effective solution that has ongoing support from the publisher.	2026-01-23	2026-10-30	-1.00	-	289,131	ROM	-	-	-	-	-	-	-	182,152	-	-	139,399	42,754	-	-
157	2026	Product Family Enhancements-Appli	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	940,471	188,000		622,968	-	-	435,101	-	-	187,867	118,440	-	-	118,440	-	-	-
158	2026	Product Family Enhancements-Appli	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. 161	2026	SAP Support Pack Upgrade 2026	Software(Intangible)	IT/Digital Foundation	The SAP Support Pack Upgrade project is to maintain the currency levels of all SAP applications. This will ensure the applications are at version levels that are supported by SAP, have the latest patches and bug fixes, and provide cross-application compatibility for business partners. To continue to maintain SAP application version currency, across all applications, the support packs released by SAP must be routinely applied. Without maintaining application currency, the core business applications running on the SAP platform are at risk of losing vendor support, resulting in the inability to apply bug fixes and patches, including security patches, and maintain application interoperability and stability. The project will add value by: (1) maintaining supportability of SAP applications; (2) mitigating system security, stability and reliability risks by ensuring the applications are up-to-date with the most current patches and bug fixes released by SAP; and (3) ensuring ongoing cross-application compatibility. The scope of this project includes routine support pack upgrades to all SAP applications, which include: Enterprise Core Component (ECC), Customer Relationship Manager (CRM), Enterprise Portal, Process Orchestration (PO), Business Warehouse (BW), Business Objects (BOBJ), Data Services (DS), Solution Manager, Data Quality Manager (DQM), Graphical User Interface (GUI), Single Sign On (SSO), System Landscape Directory (SLD) and other related SAP applications. Alternatives considered include: (1) dividing the scope into individual projects by SAP application. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work, especially testing efforts, and therefore potentially higher costs. (2) migrating to SAP S/4HANA. This option was not selected because SAP S/4HANA is a multi-year project that is not expected to be completed by year-end 2026. So an alternative approach is needed to perform the application upgrades and maintain currency in the meantime. (3) Ultimately, the Company chose to balance the project scope through regular support pack upgrades. This alternative was selected because it provides the best balance of minimizing cost and maintaining support by combining multiple application upgrades through a single support pack upgrade effort.	2026-02-02	2026-10-31	-1.00	-	454,370		-	-	-	-	-	-	-	286,253	-	-	58,856	227,398	-	-

164	2026	ARP-Cyber-Common	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions shared by Electric and Gas. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades. The alternatives considered include: (1) upgrade or replace only the assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warranty repair costs. (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.	2026-01-01	2026-12-31	-1.00	1,719,036	18,809		900,431	-	835,985	42,167	2,300	-	19,980	11,850	-	3,150	8,131	-	-	569

166	2026	ARP-Network-Common	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks shared by Electric and Gas. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. The project scope includes: (1) refreshing network equipment and software assets on a five-year refresh cycle; (2) identifying the required features for the new equipment; and (3) implementing the new equipment according to industry best practices. The alternatives considered include: (1) continuing to operate on existing equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes; and (2) refresh network and software assets on a five-year refresh cycle. This alternative was selected to replace the existing equipment with the latest hardware and software to avoid hardware failure and losing vendor support, software bug fixes, security updates, and other software fixes.	2026-01-01	2026-12-31	-1.00	833,668	14,560		436,676	4,190	400,808	15,714	8,016	-	7,947	9,173	-	3,760	5,040	-	-	353
167	2026	ARP-Network-Electric	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks for Electric. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. The project scope includes: (1) refreshing network equipment and software assets on a five-year refresh cycle; (2) identifying the required features for the new equipment; and (3) implementing the new equipment according to industry best practices. The alternatives considered include: (1) continuing to operate on existing equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes; and (2) refresh network and software assets on a five-year refresh cycle. This alternative was selected to replace the existing equipment with the latest hardware and software to avoid hardware failure and losing vendor support, software bug fixes, security updates, and other software fixes.	2026-01-01	2026-12-31	-1.00	66,368	1,056		66,368	200	58,305	4,500	1,166	-	2,197	1,056	-	200	800	-	-	56
168	2026	Critical Substation Upgrade	Network	Security	This project will implement enhanced security measures at the Company's critical substations in order to prevent unauthorized access, deter criminal activity, and respond to threats in real-time. With the enhanced security posture, Consumers Energy will be better positioned to mitigate malicious activity through real-time detection and increase the reliability of electric delivery to our customers. Today, Consumers Energy currently deems 16 substations as business critical to its electric system while an additional 34 substations fall under NERC-CIP compliance. Recent attacks to critical infrastructure have increased the likelihood of an adversary exploiting vulnerabilities at critical substation increasing the risk for large scale outages and customer impact. The Company's current security measures do not allow us to detect, deter, or monitor potential threats on site. Without the ability to monitor these assets in real-time, the Company is vulnerable to an adversary causing destruction without knowledge of when or how the event took place. A phased implementation would allow the Company to systematically mitigate risk to assets deemed most vulnerable. The objective of this project is to implement enhanced security measures to better detect, deter, and respond to threats to the Company's electric substations in real-time. This enhanced security posture will align with other utilities that own and operate substations and mitigate disruption to electric service while improving reliability. Enhanced Security measures that will need to be implemented include but are not limited to: (1) access controls; (2) access readers; (3) cameras; (4) video and audio programming; (5) fence intrusion (which will be accomplished through camera systems); (6) subcontractor work of trenching poles, installing equipment etc., (7) additional facility lighting; and (8) security equipment maintenance. Alternatives considered include: (1) maintaining the current security perimeter fencing and conducting routine inspections of the site. This alternative was not selected, as it does not provide the ability to prevent, detect, or respond to threats in real-time; (2) hiring contract security guards to patrol the sites. This alternative was not selected as ongoing O&M costs would be expensive; (3) outfitting sites with thermal cameras with built in analytics that would alarm to intrusions and subjects on the properties along with access control measures. This alternative was selected because it had lower ongoing O&M costs and enhanced detection abilities.	2026-01-01	2026-12-31	-1.00	11,771,395	1,016,500	ROM	2,600,895	-	312,500	609,375	1,562,500	-	116,520	267,500	-	-	267,500	-	-	-
169	2026	20% ROM Adjustment - Security	Network	Security	This is for the 20% ROM Adjustment for IT projects.							(272,470)	-	(32,738)	(63,838)	(163,688)	-	(12,207)	-	-	-	-	-	-	-
170	2026	ARP-Physical Security	New Computers / Hardware	Security	The ARP-Physical Security, formerly known as Physical Security Asset Refresh, will enhance or replace physical security assets to provide improved visibility and incident resolution related to security concerns. The Company has several thousand physical security asset devices currently in use including security cameras, motion detectors, intrusion detection systems, and card access systems. Current limitations include the lack of integrated solutions for centralized management, situational awareness, real time monitoring alerts, compliance with regulations and guidelines, and faster responses to emergencies and incidents. This could result in an increase of potential security vulnerabilities, associated penalties, and reputational damage. The value provided by completing the project is to: (1) maintain compliance with State and Federal Regulations; (2) reduce redundancies with less of a need for multiple cameras and reduce gaps in functionality; and (3) optimize overall system performance. Included in the project is the enhancement or replacement of assets including: (1) advanced door systems at Company buildings; (2) advanced analytics on security cameras for monitoring and real time alerting capabilities; and (3) gate and lock systems, which include security cameras, motion detectors, intrusion detection systems, and card access systems. Alternatives considered include: (1) not refreshing physical security assets, and (2) defer a portion of the refresh of physical security assets not meeting the industry standard of 3-to 7 years for indoor cameras and 3 to 5 years for outdoor cameras. Alternatives 1 and 2 were not selected due to the risk of security concerns, utilizing equipment that is at end of life and no longer supported, and the risk of a lack of inability to meet regulatory requirements (FERC, NERC, TSA and NRC). The alternative selected maintains compliance, reduces redundancies and gaps in functionality, provides up to date support for the assets and current technological capabilities and optimizes overall performance of physical security systems.	2026-01-01	2026-12-31	-1.00	2,112,820	12,626		1,399,532	-	660,126	110,568	387,504	-	41,334	7,954	-	-	5,434	2,520	-	-
171	2026	Application Currency-Security-O&M	Software(Intangible)	Security	This project will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrade. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Security digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Security are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2026-12-31	-1.00	-	403,127		-	-	-	-	-	-	253,970	3,366	-	250,604	-	-	-
172	2026	Enhancements-Security-Capital	Software(Intangible)	Security	This initiative will use Capital funding to make enhancements to existing technology and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements in accordance with accounting rules. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Security lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Security in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as cyber security related platforms, cyber security incident response, physical security, security awareness, risk management, privacy and compliance. Prior to implementing a Security enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for Security enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	816,175	152,674		540,634	258,914	17,440	107,150	90,845	-	66,285	96,185	2,914	-	70,887	22,384	-	-
173	2026	Enhancements-Security-O&M	Software(Intangible)	Security	This initiative will use O&M funding to make enhancements to existing technology and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Security lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Security in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as cyber security related platforms, cyber security incident response, physical security, security awareness, risk management, privacy and compliance. Prior to implementing a Security enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for Security enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2026-12-31	-1.00	-	494,044		-	-	-	-	-	-	311,248	36,489	12,100	252,285	10,374	-	-
174	2026	Saviynt Enterprise Identity Governan	Software(Intangible)	Security	The project will implement Saviynt EIGA module, consolidate Identity Access Management (IAM) functionality into Saviynt, and retire the Identity Manager application. By implementing the new solution, the Company will optimize IAM functionality, eliminate complexity, and reduce support costs. In addition, the project will integrate the OT network with an IAM solution that will allow for automated management of users and entitlements in the OT Active Directory domains and applications. The current version of AccessNow reached end of life in December 2022, with support discontinued in January 2023. The application has numerous custom workflows and integrations, requiring professional services for ongoing use and changes. It lacks proper data analytics and reporting, posing risks such as inability to fix critical defects, software incompatibility, compliance issues, increased costs, and degraded performance. The Company uses multiple IAM tools, each performing critical functions, leading to numerous required interfaces and customizations. While beneficial for end users, these integrations increase the risk of system failures, higher support costs, multiple subscriptions, infrastructure and maintenance costs, and more expensive upgrades. The current solution utilizes SAP HR batch file processes that introduces failure points, delays, and data integrity issues. Failures in these processes can prevent new or transferred employees from accessing necessary systems, leading to operational disruptions and potential compliance risks due to inappropriate access retention. This project provides value by: (1) Consolidating multiple IAM platforms through the implementation of the Saviynt EIGA Module, reducing complexity and support costs; (2) Decreasing complexity and enhancing efficiency by reducing interfaces between multiple identity tools; (3) Improving the end-user experience and reducing human struggle with access requests through a new, intuitive portal design; (4) Minimizing custom code and focusing on configurations only by utilizing out of the box functionality; and (5) Streamlining employee data processing with the implementation of an HR interface. This project scope includes: (1) Implementing the Saviynt EIGA module to consolidate IAM platforms; (2) Streamlining processes by removing customized code and using out-of-the-box functionality; (3) Replacing and improving access system; (4) Addressing issues with aging applications, multiple IAM platforms, integration challenges, and antiquated HR processing. Alternatives considered include: (1) Implementing trial fixes to AccessNow version 8.1.5 to ensure support through mid-2023; (2) Upgrading only the application to current-supported version, excluding the new web portal but will include new application functionality; (3) Remaining on current version that will be unsupported as of January 2023, requiring vendor professional services for any breakfix. Patches and enhancements may potentially introduce additional risk of version instability; (4) Implementing IAM functions in Saviynt platform to manage access requests, including Active Directory, SAP, SAP HR, disconnected systems, and existing API integrations. The alternative selected was implementing the new Saviynt system, eliminating AccessNow software.	2024-07-01	2027-10-29	-1.00	6,052,582	577,224		843,707	-	33,120	158,877	397,440	-	254,270	38,019	-	-	38,019	-	-	-

178	2027	Asset Accounting Tax Upgrade	Software(Intangible)	Corporate	The project will upgrade the Company's current on-premise accounting asset management tax software to the SaaS version as required by the vendor ensuring continued support of a critical financial application and providing new functionality. In 2025, standard vendor support ends for the current on-premise PowerTax software. Losing vendor support creates security and stability risk that can result in performance issues. When the application is out of the normal support with the vendor, the Company no longer receives security patches, support for defect resolution or bug fixes, and cannot enhance the application. To ensure compliance with regulated and financial accounting in the tax fixed asset sub-ledger, it is necessary to perform an upgrade and maintain vendor support. In addition, the upgrade provides additional functionality to increase the frequency of financial reporting and improve visibility. This project creates value for the Company by ensuring compliance with regulated and financial accounting within the tax fixed asset sub-ledger. In addition, the project adds value by: (1) moving to a SaaS solution in order stay supported; and (2) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support. The project scope includes: (1) evaluating current vendor/product solutions with market leaders; and (2) upgrading the vendor software from the current version to the newer SaaS version; or replacing it. Alternatives considered include: (1) evaluating SAP options for leasing, asset, and tax management capabilities. While this option would eliminate the need for an interface between SAP and PowerPlan, it would be more complex, cost more, and not provide all the required features such as centralized tax error processing. (2) evaluating other software options. This option may not provide appropriate regulatory reporting and other needed improvements and introduces several complexities and costs: Integration Challenges as PowerPlan modules are designed to work seamlessly together and data synch, mapping, and real-time updates may not be as robust as with native modules; Loss of Automation and Efficiency as there may be manual data transfers, duplicate entries and reduced automation increasing labor costs and risk of mistakes; Higher IT and Support Costs as maintaining two asset accounting systems means higher IT overhead with upgrades, troubleshooting, and user training; Reduced Data Integrity and Security as splitting tax data between systems can create gaps in data integrity, audit trails, and security controls; and Limited Vendor Accountability as when issues arise, vendors may point to integration boundaries making troubleshooting and issue resolution slower and more complicated. (3) moving entire PowerPlan suite, which includes PowerTax, to their cloud option. This option would be expensive from a licensing and integration build perspective, has an unclear timeline, and would remove the opportunity for direct database control. (4) waiting until a future upgrade cycle. This option introduces technical risk and potential financial processing risk. (5) upgrading to a newer version of the current solution. This is the preferred option as it will provide more frequent software upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.	2027-02-01	2028-02-28	-1.00	-	400,191	ROM	-	-	-	-	-	-	-	216,103	-	-	81,459	134,644	-	-
179	2027	Asset Accounting Upgrade 2027-202	Software(Intangible)	Corporate	The project will upgrade the Company's current accounting asset management software to the latest version as required by the vendor, ensuring continued support of a critical financial application. Standard vendor support will be ending for the current on-premise software. Losing vendor support creates security and stability risk that can result in performance issues. When the application is out of the normal support with the vendor, the Company no longer receives security patches, support for defect resolution or bug fixes, and cannot enhance the application. To ensure compliance with regulated and financial accounting in the fixed asset sub-ledger, it is necessary to perform an upgrade and maintain vendor support. There are also larger costs to upgrade if the upgrades are further apart due to complex testing activities and too many version increases at any one time. This project creates value for the Company by ensuring compliance with regulated and financial accounting within the fixed asset sub-ledger. In addition, the project adds value by: (1) performing the allocation process on a more frequent basis providing better financial visibility; (2) automating manual tasks; (3) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support; and (4) lowering costs with more frequent upgrades to reduce testing complexities and reduce the number of versions to be adopted. The project scope includes: (1) evaluating current vendor/product solution with market leaders; and (2) upgrading the vendor software from the current version to a newer version. Alternatives considered include: (1) Evaluated SAP options for leasing, asset, and tax treatment capabilities. While this option would eliminate the need for an interface between SAP and PowerPlan, it would be more complex, cost more, and not provide all the required features. (2) Evaluated other software options. This option would introduce new ongoing support costs and integrations and may not provide regulatory reporting and other needed improvements. (3) Address cloud possibilities. This option is expensive and has an unclear timeline roadmap; (4) wait until a future upgrade cycle. This option introduces technical risk; (5) Upgrading to a newer version of current solution. This is the preferred option as it will provide more frequent software upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.	2027-02-01	2028-02-28	-1.00	-	671,749	ROM	-	-	-	-	-	-	-	378,180	-	-	125,723	252,457	-	-
180	2027	Enterprise Risk Management	Software(Intangible)	Corporate	The project will implement software to streamline Enterprise Risk Management (ERM) processes, improve efficiency, provide risk identification and repository tools, and deliver real-time risk data. The Enterprise Risk Team (ERT) collaborates with Risk Owners (ROs) annually to identify new risks, update existing ones, quantify impacts and likelihoods, document mitigation plans, identify trends, and formulate risk tolerance metrics. This process involves iterative exchanges between ERT and ROs to align on content. This effort culminates in multiple risk reps presented annually to senior management and the Board of Directors (BoD). The manual Enterprise Risk Management (ERM) process is intensive and time-consuming, creating risks of human error that can inaccurately quantify risks, introduce data anomalies, and create version tracking issues. The current process results in inefficient use of time by risk analysts and risk owners, limits the breadth of analysis, and affects the Company's ability to promptly identify, analyze, and communicate risks to senior leaders, potentially causing delays in responding to emerging risks. Due to its lengthy nature, the manual process is conducted only once a year but needs to be performed more frequently for proactive enterprise risk management. Utility industry peers use software to more effectively manage enterprise risk management programs. This project creates value for the Company by: (1) providing real-time risk information to stakeholders including the risk team, risk owners, senior management, and the Board of Directors (BoD); (2) supporting proactive risk management; (3) establishing a centralized repository for risk identification, management, and mitigation plans; (4) reducing waste through simplified processes; and (5) enhancing efficiency for risk owners and analysts. The project scope includes: (1) creating risk analysis templates and tools for automated reporting; (2) establishing automated workflows to perform risk updates; (3) configuring dynamic templates that prompt the risk owners based on prior selections; (4) organizing risk assessments through an active and searchable data repository; (5) creating new reports and executive dashboards; (6) migrating data; and (7) setting record retention rules. Alternatives considered include: (1) Continuing to use the current manual processes. This alternative was not chosen due to inefficiencies, poor quality results, and limited frequency of risk reviews. (2) Building a custom internal enterprise risk solution. This alternative was not selected because it does not incorporate best practices available in risk management software provided by industry leaders. (3) Implementing a software solution from a leading enterprise risk solution vendor. Although this introduces new license and ongoing support costs, it is preferred since it incorporates industry best practices, ensures application reliability, security, stability through vendor support, and provides innovation and insights via risk information reporting through management dashboards. Additionally, it aligns the Company with utility industry peer practices for more effective enterprise risk management.	2027-07-01	2028-07-03	-1.00	184,200	80,666	ROM	-	-	-	-	-	-	-	7,253	-	-	2,528	4,725	-	-
181	2027	Product Family Enhancements-Corp	Software(Intangible)	Corporate	The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements.The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Corporate Services Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Corporate Services. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as People and Culture (Human Resources), Legal, Finance and Governmental, Regulatory and, Public Affairs. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	1,031,882	74,206		683,519	82,215	1,957	163,025	381,391	-	54,931	46,750	15,825	39	7,431	23,455	-	-
182	2027	Product Family Enhancements-Corp	Software(Intangible)	Corporate	The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Corporate Services Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Corporate Services. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as People and Culture (Human Resources), Legal, Finance and Governmental, Regulatory and, Public Affairs. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	-	353,192		-	-	-	-	-	-	-	222,511	186	-	67,010	155,315	-	-

184	2027	Energy Assistance Enhancements a	Software(Intangible)	Customer	The Energy Assistance Enhancements and Maintenance Annual Updates project, formerly known as Consumers Affordable Resource for Energy (CARE) project, will implement software changes to offer energy assistance to low-income customers and streamline the process for the assistance agencies who use the assistance portal. This is accomplished through improved user interfaces and updates to SAP to process various requests. Upcoming modifications will be identified following ongoing and annual review of requests, that includes criteria from the Department of Health and Human Services (DHHS) and Michigan Public Service Commission (MPSC) to prioritize the list of changes. Each grant year, DHHS and MPSC stipulate the criteria required for customers to enroll in the CARE program, how the Company and agencies will manage the enrollment process and track active CARE customers, and how they will administer the Michigan Energy Assistance Program (MEAP) benefits through bill credits and arrears forgiveness. The criteria changes significantly each year; therefore, the Energy Assistance Enhancement and Maintenance Annual Updates application requires modifications to meet the new requirements. If the regulatory requirements are not fulfilled, the Company is at risk of losing state Low Income Energy Assistance Fund (LEAF) funds to assist low-income customers with paying their energy bills, thereby increasing the customers risk of shutoff for non-payment. In addition, our energy assistance programs function within all software platforms in the company which consistently need enhancements and updates. The project will provide the following value: (1) complete modifications to internal SAP application and Agency Portal to receive LEAF funding, which can be used to provide customers the bill credits and arrears forgiveness; (2) improve the data within the assistance agencies portal, thereby making it easier to assist customers in need of LEAF funding; and (3) complete modifications to customer facing platforms. The project scope includes: (1) updating the enrollment and status process; (2) allowing for flat monthly bills; (3) improving reporting; (4) updating the arrears forgiveness plan; (5) satisfying additional regulatory requirements for the annual grant rule changes required by the Department of Health and Human Services and Michigan Public Service Commission; (6) updating CARE dunning process; and (7) updating the assistance portal (CE PASS) functionality to enhance Agency Self-Service. Alternatives considered include: (1) continue with current process. This alternative was not chosen because it would lead to loss of grant funding, thus decreasing or eliminating energy assistance dollars for customers; (2) transfer administration of Energy Assistance Programs to a third party organization. This alternative was not selected because it would remove ownership and visibility into the health of the program while increasing administrative costs; and (3) make annual updates to the application, which will allow agencies to easily enroll customers on assistance programs and allow placement of holds to stop or prolong credit activity until assistance decisions are granted. This option was selected since it provides long-term proactive energy assistance to customers and prevents loss of grant funds. Changes are required to internal systems such as SAP, a large internal system that supports broad areas of the business, and the Agency Portal, an internally developed web application, therefore a single cloud or third-party alternative is not viable. Additionally, retiring the existing Agency Portal for a new application would increase costs beyond that of the routine upgrades.	2027-01-01	2027-12-31	0.00	-	292,962		-	-	-	-	-	-	-	184,566	-	-	105,826	78,740	-	-
185	2027	Product Family Enhancements-Cust	Software(Intangible)	Customer	The Customer initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	2,563,822	600,183		1,698,275	30,191	5,952	458,763	1,025,508	-	177,861	378,115	3,113	-	74,552	299,941	-	508
186	2027	Product Family Enhancements-Cust	Software(Intangible)	Customer	The Customer initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. 187	2027	Rate Change Maintenance	Software(Intangible)	Customer	The Rates Change Maintenance project will modify SAP billing in accordance with pricing and rate change requirements. For the Company to continue to meet and comply with certain MPSC requirements and to enable it to update its rates when rate changes are approved, there is a need to make periodic updates/modifications to existing prices and rate structures. These updates help ensure accuracy of billing and provide optimal rates for customers. The project will add value for both the Company and its customers through: (1) improved customer satisfaction by providing accurate billing; (2) optimized rate configuration enabling rate changes to be made more efficiently; and (3) timely updates to Company applications that incorporate mandatory changes to the rate structure that includes new surcharges, price changes, and energy efficiency programs. The scope of this project encompasses (1) implementation of annual or monthly (or both) electric and gas customer price changes, and rate structure changes as approved by the MSPC; and (2) optimizing the rate configuration in the Company's back-end system for more efficient rate changes. Alternative considered include: (1) a fully dedicated offshore development model. The option ensured resources were readily available with a more cost-effective labor expense. This alternative was not chosen due to the risk of billing inaccuracies and customer complaints. These risks were deemed too high because of the complexities of the rate structure, new development, and the time it would take for testing of this model; and (2) Instead, the Company chose to leverage onshore resources to plan, coordinate, and execute the rate changes. This option was selected as it supports the Company's operation model for rate changes.	2027-01-01	2027-12-31	0.00	-	298,844		-	-	-	-	-	-	-	188,272	-	-	13,783	174,489	-	-
188	2027	SiteCore Secondary Upgrade 2027	Software(Intangible)	Customer	The project will refresh all components of the website hosting, delivery, search, and analytics applications to add new features and improve search capabilities. Sitecore is the content management application for the consumersenergy.com website, a channel many customers use for accessing account information and bill payment. Sitecore requires regular upgrades to adhere to the vendors support lifecycle to ensure system reliability, take advantage of new application features, maintain current security updates, and improve the customer's website experience. The project will add value for the Company by: (1) avoiding costs for extended maintenance agreements required at the end of mainstream support; (2) ensuring that the website retains the most up-to date security posture; and (3) supporting the Company's Customer Experience Index (CXi) goals by improving reliability and performance. The project scope includes: (1) upgrading the Sitecore content management software to the latest available version. Alternatives considered include: (1) Delay the upgrade. This alternative was not chosen due to the need to prevent the application from falling outside of the mainstream support window, requiring an additional 10% in maintenance fees. Along with rapidly changing feature sets that are continually being developed by the vendor, the Company would be in a worse position to handle constantly changing cyber threats; (2) Migrating to a cloud solution was also considered. This alternative was not chosen due to the cost/benefit analysis of re-architecting the Company's current Sitecore implementation to facilitate cloud migration that is not viable at this time; and (3) Rejecting these alternatives, the Company chose to upgrade Sitecore on a two-year cycle because it provides up to-date functionality, stability, and mitigates cyber security risks while minimizing cost and impact.	2027-01-18	2027-10-15	-1.00	-	105,765	ROM	-	-	-	-	-	-	-	66,632	-	-	66,632	-	-	-
189	**SUBTOTAL**	**2027 Customer**										**1,698,275**	**39,191**	**5,952**	**458,763**	**1,025,588**	**-**	**177,861**	**965,425**	**3,113**	**-**	**206,174**	**655,630**	**-**	**500**
190	2027	Advanced Distribution Management S	Software(Intangible)	Electric	The Advanced Distribution Management System Upgrade (ADMS) project will enhance operator experience, simplify maintenance, and provide more powerful and flexible system functionalities. These include advancements in Fault Location, Isolation, and Service Restoration (FLISR), waste elimination within Maestro, the introduction of independent line sensors, a redesign of temporary conditions, and will incorporate operational views of schematics. The project will also be replacing the outdated hardware. The current ADMS lacks several critical features and improvements that are essential for enhancing operator experience, system maintenance, fault detection, and response capabilities. The existing system struggles with: (1) the current FLISR functionality does not adequately support complex protection requirements and manual switching steps, leading to inefficiencies and potential errors; (2) operators face challenges with passthrough edits and managing conflicts related to devices with tags or temporary conditions, resulting in frequent system reloads and inaccuracies in the as-operated system; (3) the temporary conditions subsystem is cumbersome to use, hindering efficient operations and the ability to support mobile substation and; (4) the current schematic tools do not provide operational views or the ability to save and share views, limiting situational awareness and usability for operators. These gaps result in operational inefficiencies, increased maintenance efforts, and reduced effectiveness in fault management and system operations. Addressing these issues is crucial for improving the overall functionality, usability, and maintenance of the Distribution Management System. (5) The Company runs the risk of increased failure if it does not regularly refresh the infrastructure. The project will add value by: (1) improving the user interface and overall experience of the operators, (2) increasing the flexibility and configurability of FLISR, allowing for better support of complex protection requirements and improving solutions for manual switching steps, (3) enhancing the usability of schematics, providing operational views and the ability to save and share views for better situational awareness, (4) developing advanced switch order functionality to support more robust and efficient operations, (5) allowing ADMS to pull real time network model from GIS Utility Network and (6) improving stability and availability of business-critical applications by proactively replacing hardware before it fails. The scope of the project includes: (1) replacing ADMS hardware, (2) upgrading the existing ADMS platform to the latest packaged version, (3) adding in the feature improvements for Temporary Condition Redesign, Maestro Conflict Resolutions, Independent Line Sensors, FLISR and Schematics, (4) implementing new extraction tool, (5) testing the new functionality in various possible scenarios, and (6) communicating and training users on the new functionality. Alternatives considered include: (1) using outdated equipment and current version of ADMS. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact the Company's ability to respond effectively in storm situations. (2) Moving to a cloud version of ADMS. This option was not selected as the current public cloud platforms do not offer the high security environment required for the ADMS application. Consequently, the vendor platform was not built for cloud environments. (3) Replacing the hardware and upgrading ADMS. This option was selected to alleviate the above concerns.	2026-03-02	2027-11-11	-1.00	11,035,811	892,993	ROM	8,202,343	24,407	1,708,520	2,911,744	1,531,672	-	2,026,000	384,686	40,000	-	192,550	192,136	-	-
191	2027	Application Currency-Electric-O&M	Software(Intangible)	Electric	The Electric/Generation/Renewables Engineering and Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increases cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric/Generation/Renewables Engineering and Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Electric/Generation/Renewables Engineering and Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2027-01-01	2027-12-31	-1.00	-	217,850		-	-	-	-	-	-	-	217,850	-	-	193,807	24,044	-	-
192	2027	Electric Geographic Information Syst	Software(Intangible)	Electric	This project will replace the existing design software for Electric Low Voltage Distribution (LVD) with a new solution that will be fully integrated to the ESRI (Environmental Systems Research Institute) GIS (Geographic Information System) platform which is already in use by the Company. This new solution will leverage GIS asset data to generate engineering designs. This will allow the Electric teams to have a single source and format to view asset data, construction drawings and redlines in both the back office and field. This change will further enable improvements to the mobile platform in quality of data that is used by the closeout team. This will also reduce the back end posting effort by using the native GIS data format; improving data quality by reducing the re-keying of data. The current design software creates waste in three areas for many teams within Electric including Low Voltage Distribution (LVD) Engineering, Field Leaders, and Customer Energy Management (CEM) Service Designers. (1) The current software does not support the native GIS data format and will not support future enabling work management needs. This causes waste and room for error by having to redraw designs in GIS that have already been created and prevents optimization of the work process. (2) It is not able to integrate to SAP to automatically order materials based on the design. (3) The current software lacks needed mobile functionality due to its lack of support for the native GIS format. The designs are not georeferenced to the exact location and can't fully utilize redlining capability which causes a significant impact to data quality and crew performance. This project will add value to the Company and its employees through: (1) eliminating the need to duplicate all design work as it is in both the design system and GIS; (2) enabling mobile editing and redlining on the design in GIS; (3) enabled integration to SAP; and (4) utilizing the capabilities of the next generation GIS platform that will be delivered through an in-progress business case. The project scope includes: (1) installing a new solution that will integrate to GIS; (2) utilizing GIS geospatial and asset information data and the GIS platform for generating Electric LVD engineering designs; (3) integrating to and from SAP to automate Compatible and Mass Unit material ordering capability; (4) installing new and upgrading existing geospatial platform infrastructure to support additional users (Electric LVD designers, Field Leaders, Planners, Schedulers, etc) of GIS; (5) integrating to ProjectWise (engineering content management system); (6) configuring mobile toolset; (7) re-engineering the existing GIS data model to handle asset life cycle; and (8) configuration for new ArcGIS services.	2025-09-09	2029-02-22	-0.47	6,241,626	659,758		2,576,069	1,100,000	-	1,056,849	-	-	419,220	136,794	-	-	136,794	-	-	-
193	2027	Electric GIS Utility Network Transfor	Software(Intangible)	Electric	This project will transform the Company's current Geographic Information System (GIS) platform to the Environmental Systems Research Institute (ESRI) Utility Network Model and establish a unified GIS for large scale distribution (HVD), low voltage distribution (LVD), and substations data model. This transformation aims to optimize core engineering and operational processes, technologies, and data. The Company's GIS for electric records is expanding as an authoritative source for asset connectivity, location and health information. However, growing business requirements for advanced analytics and regulatory mandates necessitate more granular geospatial insights. Existing functionality does not meet business partner needs, and GIS data is refreshed in batch mode once a day, leading to inefficiencies with real-time systems. Managing HVD and LVD data in different models remains challenging. The Company's past implementation of ESRI's GIS for Electric, version 10.8.1, will be unsupported after March 1, 2028. Critical third-party solutions supporting key editing and business functionality are also ending support without upgrade options, posing risks for security updates. ESRI's development focus is shifting to the ArcGIS Utility Network Management extension, ArcGIS Enterprise, and ArcGIS Pro. The vendor's development team has reached the limits of ArcMap and the geometric network's capabilities and will no longer build additional functionality. Future development and enhancements are focused on the next-generation technologies of the Utility Network and ArcGIS Pro. ESRI utility solution partners are also moving their product lines away from the geometric network, soon supporting only the Utility Network. The project creates value for the Company by: (1) mitigating risks associated with product support and of life; (2) enabling detailed asset management and location based analytics to bring clearer understandings around the assets that support energy delivery; (3) increasing productivity through use of shortcuts, templates, and streamlined workflows within the software; (4) providing extensive, out-of-the-box tracing tools; (5) providing 3D visualization functionality; (6) enabling users with editing tools, giving them guidance at every step of the process for developing workflows and enforcing stronger data integrity; (7) viewing the up to date network in a map or schematic diagram and be able to quickly toggle back and forth between them; and (8) enabling archiving and historical versioning to view the state of the electric network over time. All of these capabilities will result in greater insight and efficiency that improves the safety and delivery to customers of Michigan. The Utility Network enables implementation of third-party tools that will allow us to keep the operational model more up to date as circuits with temp conditions and/or control tags can be imported as needed. The project scope includes: (1) upgrading all database, web, and application servers to supported Windows version; (2) upgrading end user application from ArcGIS Desktop to ArcGIS Pro; (3) migrating and converting LVD and HVD GIS data from geometric network data schema to the Utility Network, iteratively publishing data to new model for consumption; (4) reconfiguring electric applications that are integrated with GIS or that consume GIS data; and (5) creating substation asset model. Alternatives considered include: (1) Continue to use geometric network. This alternative was not selected because the architecture is at the end of its life. Additionally, dependent third-party solutions are moving away from the geometric network, making it unsustainable for continued use. (2) Moving to Utility Network and migrating to a supported platform. This alternative was chosen to enable the Company to leverage a cloud-based solution and provide options for utilizing third-party solutions.	2027-07-01	2029-12-04	-1.00	20,408,033	5,007,911	ROM	4,108,314	1,800,000	-	370,745	1,702,591	-	234,978	1,559,856	360,000	-	360,205	758,458	-	61,193
194	2027	Integrated Energy Management Platf	Software(Intangible)	Electric	This project will reduce data center assets running PCI Energy Solutions by migrating into vendor cloud hosting solution. This will optimize vendor support, reduce operational costs (upgrades, server maintenance) and allow the Company to leverage new cloud capabilities. PCI Energy Solutions (PCI) provides software that Company uses to fulfill the Federal Energy Regulatory Commission (FERC) requirement of communicating unit availability to the Regional Transmission Operator and become more efficient at buying and selling electricity in the wholesale market. Due to the solution being Company hosted, the Company is not able to leverage benefits of the full functionality in the vendor's cloud hosting solution (Software as a Service (SaaS)). The complex nature of the solution requires various IT and business support teams to monitor, maintain and upgrade the system. Due to the critical nature of the application, the Company is looking to the SaaS hosting to benefit from the uptime SLA of 99.95% and the streamlined operational support for faster issue resolution. This project creates value for the Company by: (1) utilizing the vendor's SaaS environment which provides efficiencies for timely operational support. Currently, as an example, IT sends PCI a database copy so they can replicate the Company's environment in the vendor's system. This leads to waste of resources, time and increased support costs. (2) Freeing up resources for more value add work. As the Company optimized the organization, it is very important to reduce waste and work on the most valuable items; (3) reducing Oracle footprint; (4) reducing IT labor support costs; (5) reducing ongoing networking equipment replacement and upgrade costs. The project scope includes: (1) planning and executing the data migration; (2) designing and configuring new and existing vendor SaaS components; (3) implementing integrations to CO15 (Commercial Off-The-Shelf) and custom systems; (4) testing; (5) educating and increasing the skills of the employees to leverage the new vendor SaaS services; (6) decommissioning old infrastructure. Alternatives considered include: (1) continue to use the Company hosted installation of PCI. This alternative was not chosen due to the significant waste involved in maintaining the system, the inability to leverage Cloud functionality, and the failure to decrease the reliance on Oracle servers. (2) Move to a different energy market platform. This alternative was not selected because the different platform would have lesser options and would not be able to utilize PCIs bid to build process. (3) Move to the vendor SaaS. This alternative was selected as the Company will utilize the latest technology and optimize operational support.	2027-05-02	2028-03-16	-1.00	4,329,636	1,662,202	ROM	4,194,207	3,357,911	-	406,262	45,000	-	385,034	1,611,270	-	-	308,270	1,303,000	-	-
195	2027	Product Family Enhancements-Elect	Software(Intangible)	Electric	The Electric/Generation/Renewables Engineering and Operations initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Electric/Generation/Renewables Engineering and Operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric/Generation/Renewables Engineering and Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric/Generation/Renewables Engineering and Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	719,345	188,564		719,345	20,000	-	185,588	453,062	-	60,695	188,564	-	-	34,331	154,233	-	-

In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	-	120,493		-	-	-	-	-	-	-	120,493	2,280	-	52,124	66,090	-	-
197	2027	Service Restoration Artificial Intellige	Software(Intangible)	Electric	Artificial Intelligence (AI) Machine Learning (ML) can enhance decision-making during restoration events by quickly evaluating multiple datasets, reduce non value-added time, and continuously improve through learning. This project will show the value of AI ML in Storm Declarations, Resource Planning, Resource Utilization/Crew Movements, and Asset Identification. The Company faces challenges in efficiently managing storm response and restoration efforts. Historically, storm declarations, resource planning, and crew movements have relied on manual processes and estimations, leading to delays and inefficiencies. The need for a more effective and timely response during restoration events has become increasingly critical, especially given the complexity and scale of modern storm events. This project creates value for the Company by (1) enhancing the storm response capabilities. This will enable faster and more consistent decision-making during restoration events, optimizing resource planning and crew movement and improving asset identification. (2) Delivering business value. The utilization of AI ML in service restoration processes is expected to reduce non-value-added time, improve public safety and create savings for customers. (3) Providing customer value. The AI ML applications will benefit customers by optimizing storm declarations, resource planning, crew movement and asset identification. These enhancements will lead to more efficient outcomes, faster restoration times and improved public safety. Furthermore, AI ML's learning abilities enable the decision-making to continuously improve, and those learnings have the durability to live beyond the human experience and mitigate learning curves as people transition from role to role. The project scope includes: (1) developing AI ML models for storm declarations, resource planning, resource utilization/crew movements, and asset identification, (2) Integrating with existing systems like Advanced Distribution Management System (ADMS), Customer Resource Manager (CRM) and Catastrophic Crewing in house built application. (3) Training and deploying. (4) Performance monitoring and (5) customer communication. Alternatives considered include: (1) continuing with the manual process. This option was not chosen because it results in underutilized crews, non-value-added time, and increased human error and difficulty. (2) Purchasing a storm work management solution. This option was not chosen due to its high cost, vendor dependency during the Company's most critical times, and complexity. (3) Creating an AI ML solution. This option was selected as it meets the criteria and will be scalable across service restoration and electric distribution.	2026-03-01	2027-05-30	-1.00	1,380,332	170,130	ROM	496,515	-	-	346,783	-	-	149,732	59,945	-	-	59,945	-	-	-

200	2027	Application Currency-Electric & Gas	Software(Intangible)	Electric & Gas Shared	The Electric and Gas Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric and Gas Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality, number of versions behind the current available version, security and operational risk, operational impacts of performing the upgrade, ability to defer, and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Electric and Gas Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2027-01-01	2027-12-31	-1.00	-	541,866		-	-	-	-	-	-	-	341,375	-	-	305,695	35,681	-	-
201	2027	Application Currency-Operational Te	Software(Intangible)	Electric & Gas Shared	The Operational Technology initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Operational Technology adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality, number of versions behind the current available version, security and operational risk, operational impacts of performing the upgrade, ability to defer, and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Operational Technology are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2027-01-01	2027-12-31	-1.00	-	194,042		-	-	-	-	-	-	-	122,247	-	-	122,247	-	-	-
202	2027	Iron Enterprise Edition 2027 Upgrad	Software(Intangible)	Electric & Gas Shared	This project will upgrade Iron Enterprise Edition (IEE), which collects the reads from meters to ensure non-estimated bill accuracy. Iron Enterprise Edition (IEE) is the Company's keystone application of the Advanced Metering Infrastructure (AMI), that provides billing data that includes time of use data. If this application does not stay current, the Company increases the risk business operations could be interrupted or compromised. Iron Enterprise Edition (IEE) is a key component in keeping the Company current, with billing capacity, stability, and accuracy obligations. This project creates value for the Company by: (1) ensuring the features and functionality needed to meet and exceed customer satisfaction and billing accuracy are available to business partners and IT; (2) meeting Information Security's requirement to keep applications patched and protected from cyber attack. The scope of this project includes: (1) upgrading the Iron Enterprise Edition (IEE) applications to the next appropriate versions; (2) migrating the database to the next version required by the application; and (3) replacing hardware required by the next version to maintain operating system currency. Alternatives considered include: (1) deferring the upgrade. This alternative was not selected because it would decouple Iron IEE (Consumers Energy's Meter Data Management) from the Iron security infrastructure introducing application instability, security and dependency risks to the utility, possibly negatively impacting critical customer electric and gas billing operations. It would also likely affect other business critical Iron applications, creating more expense to support and no ability to leverage updated tool capability. (2) replacing the platform. Replacing IEE/MDM would require the application business owners to undertake a new initiative mirroring the expense and effort that went into the initial multi-million dollar project.(3) performing the upgrade is the best alternative. This option is superior for both customers and the Company because it maintains vendor support for hot fixes and patches, and aligns with all upgrade projects related to other Iron products.	2027-01-14	2027-11-14	-1.00	-	265,814	ROM	-	-	-	-	-	-	-	167,463	-	-	167,463	-	-	-
203	2027	Product Family Enhancements-Elect	Software(Intangible)	Electric & Gas Shared	The Electric and Gas operations initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Electric and Gas operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric and Gas Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric, Gas and Generation Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	1,826,301	307,743		1,209,742	-	29,699	217,220	887,934	-	74,889	193,878	-	-	46,883	146,929	-	67
204	2027	Product Family Enhancements-Elect	Software(Intangible)	Electric & Gas Shared	The Electric and Gas operations initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Electric and Gas Operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric and Gas Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. *Additionally,*enhancement requests are fulfilled to provide functionality for areas such as Electric, Gas and Generation Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	-	566,033		-	-	-	-	-	-	-	356,601	15	-	47,634	308,910	-	41

206	2027	ARP-Radio	Network	IT/Digital Foundation	This project will refresh hardware to include: 800Mhz Radios and infrastructure, cellular modems, plant radios and systems, cellular amplification devices, vehicle consoles in service trucks, other communications equipment, and associated test equipment. This equipment supports mission critical voice and data communications for plant and field service personnel and dispatch personnel. 800MHz radios are upgraded on a 10-year lifecycle basis. Plant radio systems are upgraded on a scheduled 10-year lifecycle basis. Cellular modems are refreshed on a five-year life cycle basis. Amplification systems are refreshed on a 15-year life cycle. 800MHz, mobile, and portable radios, Plant radios systems, and Cellular modems support core business functions, life safety communications, and rapid response for restoration of customers service and critical infrastructure. Company radio and cellular systems must be refreshed on a scheduled basis or risk exceeding life expectancy and failing or becoming obsolete. The refresh of this equipment in a proactive manner is critical to providing service to customers. If these units are not refreshed, the increased risk of unit failure would result in interruptions to timely and concise communications to field personnel to resolve gas leaks, and downed electric lines, or service turn-on requests, which risks life safety. This project creates value for customers and the Company by (1) upholding public safety; (2) ensuring timely responses and repairs to emergent gas leaks, wire downs, and electric outages; (3) ensuring real-time communications between Company dispatch locations and crews in the field; (4) ensuring the safety of personnel working in higher risk workspaces by replacing equipment with units that contain intrinsically safe batteries; (5) supporting continuous improvement and training by replacing equipment that is capable of capturing audio recordings; and (6) remaining in compliance with MPSC regulatory requirements by maintaining critical radio infrastructure. The project scope consists of: (1) scheduled replacement of radios, modems, consoles; and (2) installing additional radios, modems, and console assets to satisfy growth requirements; and (3) scheduled replacement of out of date cellular and radio boosters and systems. The alternatives considered include: (1) Replacing the existing units with new units from other radio and modem manufacturers; (2) Purchasing new radio subscriber units from existing manufacturers. Option 2 was not selected because the Company now uses a standards-based radio system allowing for multiple radio manufacturer options. Option 1 was selected to allow for a competitive bidding process that will provide the most cost-effective radio that will meet the needs of users.	2027-01-01	2027-12-31	-1.00	1,738,734	93,246		910,749	-	858,059	23,501	20,952	-	8,237	58,745	-	56,102	1,383	1,260	-	-
207	2027	ARP-Collaboration	New Computers / Hardware	IT/Digital Foundation	This project will replace the Company's obsolete or out-of date audio, visual, telephony and other communication collaborative tools and equipment. When collaboration assets used to support customer interactions and business operations are obsolete or out-of-date, they are more difficult to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project creates value by: (1) ensuring the stability and reliability of the Company's audio, visual, telephony, and other communications systems; and (2) migrating to new collaboration assets. The project scope consists of: (1) replacing aging collaboration assets; and (2) installing new collaboration assets to meet evolving business requirements. The alternatives considered include: (1) continuing to operate collaboration assets beyond a five-year refresh cycle, or (2) refreshing collaboration assets based on a five-year refresh cycle while evaluating the health of the asset and evolving business requirements. The alternative to operate the collaboration assets beyond a five-year refresh cycle was not selected due to the risk of asset failures would cause stability and reliability issues for employees supporting our customers, as vendors do not provide extended support after five years. The Company chose to refresh the collaboration assets based on a five-year refresh cycle and evaluate the health of the asset and evolving business requirements to reduce the risk of impacting the productivity of employees supporting our customers.	2027-01-01	2027-12-31	-1.00	730,273	167,315		483,733	-	283,259	48,908	136,864	-	14,702	105,408	-	13,356	25,902	66,150	-	-

208	2027	ARP-Field Device Asset Management	New Computers / Hardware	IT/Digital Foundation	This project will replace field devices according to a four-year refresh cycle that is based on industry standards, hardware failures, security patches, and software compatibility. When Field Device Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with Security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular four-year refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing field devices before they fail; and (2) allowing field workers to complete their job tasks. The project scope consists of replacing field device assets according to the four-year refresh cycle. Alternatives considered include: (1) using outdated equipment. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact meter readers' ability to complete job tasks. It would also complicate the Company's efforts to meet the MPSC's meter reading factor and consecutive estimated targets, and it could cause applications to run poorly or stop functioning; (2) The second alternative considered was to replace the hardware. The Company selected this option to alleviate the above concerns.	2027-01-01	2027-12-31	-1.00	5,534,405	3,556		3,865,990	-	3,571,344	68,892	-	-	25,754	2,240	-	1,822	144	174	-	-
209	2027	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Common project will replace dated and obsolete servers shared by Electric and Gas on a rotating five-year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure.	2027-01-01	2027-12-31	-1.00	1,471,974	147,459		975,036	-	931,997	31,328	-	-	11,711	92,899	-	86,940	5,959	-	-	-
210	2027	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Electric project will replace dated and obsolete servers on a rotating five-year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure that supports systems such as Electric SCADA.	2027-01-01	2027-12-31	-1.00	1,833,952	275,742		1,833,952	-	1,714,000	87,312	-	-	32,640	275,742	-	261,000	14,742	-	-	-
211	2027	ARP-Printer Asset Management (PAI	New Computers / Hardware	IT/Digital Foundation	This project will replace and install select printers, plotters, and multi-function printing devices based on printer replacement assessments and a five-year refresh cycle. Printer service and usage history is evaluated and a determination is made if a printer can be repurposed instead of ordering a new one. When Printer Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with firmware and security updates. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving the dependability of these printer devices for employees; (2) averting increased costs due to hardware repairs; and (3) ensuring compatibility with enterprise print applications. The project scope consists of the annual replacement of printer assets according to a five-year refresh cycle. This does not mean that all printers are replaced after five years merely that printers are assessed on a five-year cycle for possible replacement. The alternatives considered for the project included looking at refresh cycles from three to seven years as well as running the assets to failure. The selection of a five-year cycle was deemed to be the best solution since anything less than five years would increase the likelihood of unneeded expense for replacement of assets that were still in good operating condition. Anything greater than five years would require the printers to be assessed monthly to ensure they are not run to failure, resulting in additional expenses for maintenance of the equipment and downtime, negatively affecting employee productivity. The Company assesses the printer fleet based on years of active service, service history, printer usage data, and the number of users within a facility. Based on these factors, the Company either decommissions, repurposes, leaves in place, or refreshes the printers.	2027-01-01	2027-12-31	-1.00	675,450	8,454		447,418	-	436,804	7,726	-	-	2,888	5,326	-	83	5,064	162	-	16
212	2027	ARP-Workstation Asset Management	New Computers / Hardware	IT/Digital Foundation	This project will replace and install new desktops, laptops, and tablets on a four-year refresh cycle based on industry standards, hardware failures, security patches, and software compatibility. Monitors will be replaced every eight years based on Company data related to historical failure rates. When Workstation Assets that are used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing workstations prior to increasing hardware failures; and (2) allowing business partners to complete their job tasks. The project scope consists of: (1) replacing workstation assets; and (2) installing new units for new resources. The alternatives considered were to purchase extended maintenance, move some of these assets to the cloud with the Digital -Hybrid Cloud and Data Center Migration project, or to replace the assets on the current cycle. The option to purchase extended maintenance was not selected because full support would not be offered after seven years, and maintenance costs would increase. The preferred option is to move some of these assets to the cloud in the Digital Hybrid Cloud and Data Center Migration project while refreshing the remaining the five- to seven-year cycle as it is the most cost-effective option.	2027-01-01	2027-12-31	-1.00	6,997,985	101,362		4,635,452	-	4,453,827	81,517	71,506	-	28,602	63,858	-	14,413	14,060	1,518	-	33,867
213	2027	Operational Technology (OT) Datace	New Computers / Hardware	IT/Digital Foundation	The OT environment consists of systems supporting the control and monitoring of electric grid, electric generation, gas compression, and natural gas pipeline. These systems are critical for safe and reliable natural gas and electric delivery. The OT Datacenter Migration project enhances the Company's capabilities by co-locating to an enhanced datacenter at a vendor facility. The Company's current datacenter for the OT environment needs modernization and relocation from the Parnall Data Center. The current location is not the preferred location to house servers and systems critical to the control of the Electric Grid or Gas Pipeline due to the close proximity to a railway system. The climate conditioners in the current OT datacenter are aging and have had faults resulting in unplanned shutdowns . The location of the datacenter in the basement of the Parnall building is nearby to the main water piping for the building. There have been instances of water infiltration in the past. This project creates value for the Company by significantly strengthening capabilities through: (1) mitigating legacy physical and location risks at the current Parnall site; (2) migrating the OT infrastructure to a modern, highly secured environment with redundancy in climate conditions; and (3) better datacenter facilities support with a guarantee of redundant power. The scope of the project includes: (1) migration of the OT environment from the Parnall Data Center to a co-located vendor data center; (2) re-validation of the OT Production and Disaster Recovery procedures once migration is completed; (3) migration of IT systems required for supporting the OT environment; and (4) decommission the existing OT environment from the Parnall location. The Company performed an analysis of alternatives to expand capabilities as well as address constraints and risks: (1) Remain at the current Parnall Data Center; (2) migrate OT environments to the Cloud; and (3) relocate to a third-party co-location facility. Current industry best practices do not recommend migration of OT environments to the cloud. The co-location vendor provides the building, cooling, power, and physical security the Company lacks for its servers, storage, and other computing and networking equipment at the current Parnall location. Based on the analysis, the Company decided to implement the third alternative.	2026-06-30	2027-12-11	-1.00	7,749,620	1,856,450	ROM	2,224,464	119,713	1,199,526	250,175	450,913	-	204,140	599,949	-	-	259,749	340,200	-	-
214	2027	20% BVM Adjustment - IT/Digital Fo	New Computers / Hardware	IT/Digital Foundation	This is for the 20% BVM Adjustment for IT projects							(444,807)	(20,943)	(290,994)	(80,074)	(50,183)	-	(46,836)	-	-	-	-	-	-	-
215	2027	Application Currency-IT/Digital Foun	Software(Intangible)	IT/Digital Foundation	The Application Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Application Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Application Platforms area are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2027-01-01	2027-12-31	-1.00	-	262,429		-	-	-	-	-	-	-	165,330	-	-	165,330	-	-	-
216	2027	Application Currency-IT/Digital Foun	Software(Intangible)	IT/Digital Foundation	The Infrastructure Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Infrastructure Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. 217	2027	AxWay Secure Transport 2027 Upgr	Software(Intangible)	IT/Digital Foundation	Axway SecureTransport is the official Consumers Energy multi-protocol Managed File Transfer (MFT) gateway for securing, managing, and tracking data file flow for business partners and external vendors. Files impacting billing, HR, Supply Chain, Finance, Alternate Energy Programs, Front Office, Back Office, Device Management, Outage Management and Business Reporting functions utilize these services. This project will update the platform to the current software version, enabling cost saving operational enhancements while retaining data security and platform supportability. As Axway Secure Transport is the public-facing MTF gateway, maintaining platform version integrity is critical to ensuring it remains secure and supportable in the event of a cyber attack, outage or other critical incident. A prolonged outage or incident, for any reason, compromises the ability of the Company to perform mission-critical business transactions in finance, operations and direct customer support. Upgrading this application also gives the Company the opportunity to properly scale SecureTransport and take advantage of the growing demand for additional, cost-savings features of the tool, such as managing internal Electronic Data Interchange transactions. The value this project brings the Company, its customers and business partners by: (1) addressing known problems and limitations of the current software platforms. (2) ensuring continued secure, scalable, and critical data transmission services running through Axway. (3) creating the capacity to methodically merge/streamline internal and external data file transfer services to eliminate waste. (4) merging/streamlining the company data file transfer services reduces cyber attack vectors and creates a better, more easily maintained and monitored security model. The scope of this project includes (1) upgrading the application and database to the current released and supported versions. and (2) enabling and testing in scope file transfer processes. Alternatives considered include: (1) deferring the upgrade. This alternative was not selected because the Axway SecureTransport platform handles critical Company financial, HR, and operational transactions--the risk associated with problems stemming from an outdated and unsupported version is too high. (2) replacing the platform. The estimated project costs and timetable for replacing the business functions currently performed by the existing Axway SecureTransport platform would be extensive, and operationally, it is not well suited for a SaaS or hybrid cloud solution. In addition to significant platform, implementation, and functional testing costs, replacing it would require extensive coordination and testing with all of the internal and external account holders, taking upwards of one calendar year. (3) upgrading the platform. This project provides the Company the best, most cost-effective alternative, balancing risk, known risks, and ever-growing business capacity and productivity.	2027-01-01	2027-09-01	-1.00	-	400,191	ROM	-	-	-	-	-	-	-	252,120	-	-	252,120	-	-	-
218	2027	Data & Analytics Platform Rationaliz	Software(Intangible)	IT/Digital Foundation	This project will optimize the Data & Analytics system landscape by creating connections, migrating data into the Data Lake in the cloud, and building visualizations from the data in the Data Lake. The IT Data & Analytics legacy systems (SingleStore Database (SSDL), SAP Business Warehouse (SAP BW), SAP Business Objects (SAP BOBJ), Native HANA, the SAP BW Portal, and BusinessObjects Data Services BODS) are outdated, inefficient, and becoming duplicative in nature with the introduction of DL 2.0. If these legacy systems are not retired, they will continue to cost the Company money as major investments are needed to maintain and support them. This platform rationalization project creates value for the Company and its customers by reducing the total cost of ownership associated with maintaining and supporting legacy systems including licensing fees, maintenance costs, infrastructure, and support resources. The project scope includes: (1) the assessment of the existing Data & Analytics platforms including SSDL, SAP BW, SAP BOBJ, Native HANA, the BW Portal, and BODS; (2) inventory of data and reports still being used by stakeholders; (3) determination of migration strategy; (4) data migration to the Azure Data Lake; (5) report migration to Power BI; (6) organization change management; and (7) the retirement/decommissioning of the legacy platforms and applications. Alternatives considered: (1) upgrade legacy systems in place (on-premise). This alternative was not selected because this is costly and misaligned with the Company's cloud strategy. (2) Lift and shift these on-premise systems to the cloud through the Hybrid Cloud Transformation Program. This alternative was not selected because it would duplicate the work being done as part of the DL 2.0 project and would not provide the same efficiencies that DL 2.0 introduces. (3) Migrate all data sources to DL 2.0 and retire legacy systems. This alternative was selected because of the expected cost benefits and technology capabilities it provides to the Company over a timeline that allows the Company to realize the value of existing investments.	2025-04-07	2027-12-31	0.43	9,019,671	1,319,807		2,187,744	241,077	-	702,716	897,084	-	346,868	370,717	-	-	60,862	309,855	-	-

219	2027	Enterprise Service Bus 2026-2027 U	Software(Intangible)	IT/Digital Foundation	This project will upgrade the current ESB software versions in use at the company. This will also implement a container management system, which deploys, manages, and scales microservices or applications that send or receive data via the service bus, and migrate various services to containers. Newer ESB software versions offer improved integration with Rest/API services and applications. It is critical that this vital data tool or pathway, be more scalable, secure, and capable of integrating to a service-based environment. The lack of a container management solution prohibits the adoption of a more cloud native approach leading to retaining legacy solutions. The value this project provides the Company includes: (1) implement a container management solution; (2) avoid technical obsolescence; (3) operational resiliency; and (4) improved administrative and operational efficiencies. The project scope includes (1) implementing the current version of all applications that are part of the ESB application, database version, and required database drivers and (2) implementing a Kubernetes solution for container management and migrate targeted services that are identified as microservices to containers. Alternatives considered included: (1) Accept the current version levels and continue to pay for extended support costs and accept technical obsolescence risk. (2) Only upgrade the existing applications. (3) Upgrade all of the applications as well as evolve the cloud-based instance to a more cloud native architecture by converting containers and implementing a Kubernetes solution to manage the containers. This option was selected because it best meets the Company needs for the near future by maintaining vendor support for fixes and patches, and enables product scalability to the measure required of business capabilities.	2026-09-01	2027-11-22	-1.00	1,331,120	1,042,944	ROM	881,734	364,704	-	389,822	-	-	187,207	637,245	131,670	-	505,575	-	-	-
220	2027	HR Support Pack and Business Soft	Software(Intangible)	IT/Digital Foundation	The Human Resources (HR) Support Pack and Business Software Inc (BSI) upgrade will update the SAP system with HR Support Packs that are released annually by SAP to comply with HR and tax changes. SAP releases annual HR support packs to ensure compliance. Without them, the Company would be unable to comply with HR and tax changes, resulting in the inability to calculate and distribute payroll. This project creates value for the Company by: (1) ensuring that its systems are in compliance with new financial rules and regulations; and (2) ensuring that it can calculate and distribute payroll. The scope of this project is to add SAP HR corrections to ensure proper reporting of financial information by the Company. oAlternatives considered include: (1) not upgrading to the current support packs, which results in noncompliance with financial rules and regulations and inaccurate payroll. (2) there is no economical cloud solution, so this option was not entertained. (3) the Company decided the best alternative is to apply the appropriate support pack upgrades. This option is preferred because it enables the Company to comply with HR and tax changes, resulting in the ability to correctly calculate and distribute payroll.	2027-02-06	2027-12-29	0.00	-	665,132		-	-	-	-	-	-	-	419,033	-	-	36,314	355,306	-	27,413
221	2027	Product Family Enhancements-Appli	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	311,154	30,590		206,109	13,264	5,288	79,634	69,868	-	38,054	19,272	292	99	7,416	11,466	-	-
222	2027	Product Family Enhancements-Appli	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	402,938	130,035		266,906	2,124	29,401	116,147	67,114	-	52,120	81,922	2,069	59	21,138	58,657	-	-
224	2027	Product Family Enhancements-Infras	Software(Intangible)	IT/Digital Foundation	The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	-	73,484		-	-	-	-	-	-	-	46,295	279	10,410	6,733	28,873	-	-

227	2027	ARP-Cyber-Common	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades. The alternatives considered include: (1) upgrade or replace only those assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warrant repair costs; (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.	2027-01-01	2027-12-31	-1.00	1,453,118	16,664		761,143	-	706,711	38,244	1,942	-	14,246	10,498	-	3,150	7,348	-	-	-
228	2027	ARP-Cyber-Electric	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions for Electric. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades. The alternatives considered include: (1) upgrade or replace only those assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warrant repair costs; (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.	2027-01-01	2027-12-31	-1.00	470,780	19,377		470,780	200	421,200	32,282	1,800	-	15,298	19,377	-	5,000	14,377	-	-	-
229	2027	ARP-Network-Common	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. The project scope includes: (1) refreshing network equipment and software assets on a five-year refresh cycle; (2) identifying the required features for the new equipment; and (3) implementing the new equipment according to industry best practices. The alternatives considered include: (1) continue to operate on existing equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes; and (2) refresh network and software assets on a five-year refresh cycle. This alternative was selected to replace the existing equipment with the latest hardware and software to avoid hardware failure and losing vendor support, software bug fixes, security updates, and other software fixes.	2027-01-01	2027-12-31	-1.00	1,515,192	24,980		793,658	8,905	740,418	21,774	14,808	-	7,752	15,737	-	6,300	9,437	-	-	-
230	2027	ARP-Network-Electric	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks for Electric. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. 231	2027	Critical Substation Upgrade	Network	Security	This project will implement enhanced security measures at the Company's critical substations in order to prevent unauthorized access, deter criminal activity, and respond to threats in real-time. With the enhanced security posture, Consumers Energy will be better positioned to mitigate malicious activity through real-time detection and increase the reliability of electric delivery to our customers. Today, Consumers Energy currently deems 16 substations as business critical to its electric system while an additional 34 substations fall under NERC-CIP compliance. Recent attacks to critical infrastructure have increased the likelihood of an adversary exploiting vulnerabilities at critical substation increasing the risk for large scale outages and customer impact. The Company's current security measures do not allow us to detect, deter, or monitor potential threats on site. Without the ability to monitor these assets in real-time, the Company is vulnerable to an adversary causing destruction without knowledge of when or how the event took place. A phased implementation would allow the Company to systematically mitigate risk to assets deemed most vulnerable. The objective of this project is to implement enhanced security measures to better detect, deter, and respond to threats to the Company's electric substations in real-time. This enhanced security posture will align with other utilities that own and operate substations and mitigate disruption to electric service while improving reliability. Enhanced Security measures that will need to be implemented include but are not limited to: (1) access controls; (2) access readers; (3) cameras; (4) video and audio programming; (5) fence intrusion (which will be accomplished through camera systems); (6) subcontractor work of trenching poles, installing equipment etc.; (7) additional facility lighting; and (8) security equipment maintenance. Alternatives considered include: (1) maintaining the current security perimeter fencing and conducting routine inspections of the site. This alternative was not selected, as it does not provide the ability to prevent, detect, or respond to threats in real-time; (2) hiring contract security guards to patrol the sites. This alternative was not selected as ongoing O&M costs would be expensive; (3) outfitting sites with thermal cameras with built in analytics that would alarm to intrusions and subjects on the properties along with access control measures. This alternative was selected because of lower ongoing O&M costs and enhanced detection abilities.	2026-01-01	2026-12-15	-1.00	11,771,395	1,016,500	ROM	4,585,250	-	2,312,500	1,070,000	562,500	-	640,250	374,500	-	-	374,500	-	-	-	-
232	2027	20% ROM Adjustment - Security	Network	Security	This is for the 20% ROM Adjustment for Security projects.							(480,351)	-	(242,258)	(112,093)	(58,928)	-	(67,073)	-	-	-	-	-	-	-
233	2027	ARP-Physical Security	New Computers / Hardware	Security	The ARP-Physical Security, formerly known as Physical Security Asset Refresh, will enhance or replace physical security assets to provide improved visibility and incident resolution related to security concerns. The Company has several thousand physical security asset devices currently in use including security cameras, motion detectors, intrusion detection systems, and card access systems. Current limitations include the lack of integrated solutions for centralized management, situational awareness, real time monitoring alerts, compliance with regulations and guidelines, and faster responses to emergencies and incidents. This could result in an increase of potential security vulnerabilities, associated penalties, and reputational damage. The value provided by completing the project is to: (1) maintain compliance with State and Federal Regulations; (2) reduce redundancies with less of a need for multiple cameras and reduce gaps in functionality; and (3) optimize overall system performance. Included in the project is the enhancement or replacement of assets including: (1) advanced door systems at Company buildings; (2) advanced analytics on security cameras for monitoring and real time alerting capabilities; and (3) gate and lock systems, which include security cameras, motion detectors, intrusion detection systems, and card access systems. Alternatives considered include: (1) not refreshing physical security assets, and (2) defer a portion of the refresh of physical security assets not meeting the industry standard of 5 to 7 years for indoor cameras and 3 to 5 years for outdoor cameras. Alternatives 1 and 2 were not selected due to the risk of security concerns, utilizing equipment that is at end of life and no longer supported, and the risk of a lack of inability to meet regulatory requirements (FERC, NERC, TSA and NRC). The alternative selected maintains compliance, reduces redundancies and gaps in functionality, provides up to date support for the assets and current technological capabilities and optimizes overall performance of physical security systems.	2027-01-01	2027-12-31	-1.00	2,114,320	12,626		1,400,526	-	861,120	110,568	387,504	-	41,334	7,954	-	-	5,434	2,520	-	-
234	2027	Application Currency-Security-Capita	Software(Intangible)	Security	This project will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrades. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Security digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Security are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2027-01-01	2027-12-31	-1.00	153,200	10,700		101,480	-	-	70,877	-	-	30,603	6,741	-	-	6,741	-	-	-
235	2027	Application Currency-Security-O&M	Software(Intangible)	Security	This project will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrade. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Security digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Security are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2027-01-01	2027-12-31	-1.00	-	403,127		-	-	-	-	-	-	-	253,970	3,366	-	250,604	-	-	-
236	2027	Enhancements-Security-Capital	Software(Intangible)	Security	This initiative will use Capital funding to make enhancements to existing technology and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements in accordance with accounting rules. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications require a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Security lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Security in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as cyber security related platforms, cyber security incident response, physical security, security awareness, risk management, privacy and compliance. Prior to implementing a Security enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for Security enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	868,042	82,802		574,991	272,812	35,988	112,241	106,522	-	47,426	52,165	2,570	-	45,057	4,528	-	11
237	2027	Enhancements-Security-O&M	Software(Intangible)	Security	This initiative will use O&M funding to make enhancements to existing technology and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications require a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Security lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Security in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for Security enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2027-01-01	2027-12-31	-1.00	-	505,846		-	-	-	-	-	-	-	318,683	24,364	12,774	219,193	62,391	-	(38)
238	2027	Forward Web Proxy Services	Software(Intangible)	Security	This project will replace the Company's existing web proxy service platform with a new, modern, and more resilient platform designed to support both secure internet access and advanced data loss prevention capabilities. A web proxy service acts as a secure intermediary between users and the internet, evaluating, filtering, and forwarding traffic while enforcing company security policies. It acts as an intermediary that evaluates, modifies, and forwards the client's requests to the destination web server. This service offers many benefits for the Company such as advanced filtering. Advanced filtering in a forward web proxy service can filter out unwanted or harmful content from the internet, such as malware and phishing. This can protect the client's device and network from cyberattacks and improve their browsing experience. Without advanced filtering, the Company's cyber assets are at risk of attacks such as ransomware. The current web proxy platform, implemented in 2021, has caused ongoing operational issues related to web filtering, inconsistent policy enforcement, and intermittent connectivity. These challenges have occasionally limited employee and contractor access to critical internet and cloud-based resources, impacting productivity and increasing security risk. As the Company accelerates its transition to cloud and Software-as-a-Service (SaaS) platforms, maintaining consistent, secure, and reliable internet access is critical. The new platform will provide high availability, improved performance, and enhanced visibility into outbound traffic to ensure that business operations continue seamlessly, even during peak or failover conditions. The platform will also be designed to support flexible deployment models for remote, hybrid, and field-based workers—ensuring that security policies apply consistently regardless of location. In addition to improving reliability, this project introduces data loss prevention (DLP) capabilities as a core function of the web proxy service. These DLP capabilities will help the Company prevent unauthorized transmission of sensitive or regulated information—such as customer data, intellectual property, or operational system details—to unapproved external destinations. Through content inspection, contextual analysis, and integrated policy enforcement, the new solution will identify and block risky behaviors before data leaves the organization. DLP policies will also align with existing information governance frameworks and compliance obligations to provide both proactive protection and auditable oversight of data handling practices. This project creates value for the Company by: (1) increasing service reliability for employees and contractors to internet and cloud-based resources; (2) utilize technology to enable the Company to handle all types of different workloads from varying geographic locations and is highly available; (3) using a mature and scalable web proxy service provider; (4) providing Zero Trust by continuously verifying every connection request; and (5) implementing data loss prevention capabilities on our core web proxy services. The project scope includes: (1) replacing the current web proxy services solution and implementing a new system; (2) replacing physical web proxy hardware; (3) potentially changing SASE cloud vendors; (4) and implementing data loss prevention for web proxy services. The Security team did extensive research on alternative web proxy services solutions. Alternatives considered include: (1) continue to use and maintain the current web proxy services platform as it currently is implemented. This alternative was not chosen due to the previous operational issues with the platform that make it unreliable. The result of an unreliable system means that employees and contractors are unable to access business critical services such as email, Teams, ServiceNow, SharePoint Online,; (2) Route all internet traffic through the Company's corporate data center. This alternative wasn't chosen because the capabilities of firewalls aren't as effective in stopping sophisticated cyber-attacks as using a web proxy service; (3) Perform an evaluation between existing product with expanded feature sets, such as data loss prevention and alternative vendors that could replace current system with modern vendor platform for web proxy services. This option was chosen because it offers additional analysis with the potential to enhance existing, in place, products with features such as enhanced data loss prevention mechanisms, browser isolation (the ability to contain web pages so that the web page can't affect the client workstation) and sandboxing (a way to safely execute malicious applications without impacting the Company's network). As part of the evaluation the Company reassessed based on outside advisors and industry trend analysis, focusing on the ability to execute and the vendor's company strategy.	2027-01-15	2028-01-30	-1.00	4,478,032	492,770	ROM	2,966,248	2,641,499	-	33,120	105,984	-	185,646	304,715	277,414	-	7,141	20,160	-	-
239	2027	Privileged Access Management Clou	Software(Intangible)	Security	This project will perform the implementation of a Privileged Access Management (PAM) solution to enhance security by securely storing, rotating, and isolating privileged credentials for both human and non-human users. It provides robust monitoring and control of privileged access across on-premises, cloud, and hybrid environments. Additionally, it automates password management, reducing administrative tasks and minimizing the risk of credential exposure. The Company faces significant security risks related to the management of privileged access, including potential data breaches, unauthorized access, and compliance issues. The Company's current methods of managing privileged accounts are often manual, error-prone, and insufficient to address the complexities of modern IT environments. There is a critical need for a robust solution that can automate and secure the management of privileged credentials, provide comprehensive monitoring and control, and ensure compliance with security policies across on-premises, cloud, and hybrid environments. This project creates value for the Company through: (1) securely storing and managing privileged credentials; (2) automating credential rotation; (3) isolating access to prevent unauthorized use; (4) improving compliance with regulatory requirements through comprehensive audit trails, and reporting; (5) increasing efficiency by automating password management; and (6) reducing manual tasks that can be prone to human error. The project scope includes migrating the Company's current system Privileged Access Management (PAM) system to a cloud vendor, implementing new features not available in the current on-prem solution. Alternatives considered included: (1) manual password rotation. This alternative was not chosen because it requires significant time and effort to manage and update passwords manually. It also increases the risk of human error including mistakes, such as forgetting to update passwords or using predictable patterns; (2) Access Control Lists (ACLs). This alternative was not chosen because of scalability issues. ACLs are difficult to manage as the number of users and resources grows. This option also requires regular updates and reviews to ensure accuracy and security; (3) manual audit logs. This alternative was not chosen because it is very labor intensive. It requires significant effort to maintain and review logs manually. The use of manual audit logs increases the risk of inaccuracy by having a higher chance of errors and incomplete records; (4) periodic security reviews. This alternative was not chosen because it is very resource intensive and requires time and expertise to conduct through reviews. Periodic security reviews may also miss issues that arise between review periods; and (5) implementation of a cloud based Privileged Access Management (PAM) solution was the chosen option. It provides robust monitoring and control of privileged access across on-premises, cloud, and hybrid environments. Additionally, it automates password management, reducing administrative tasks and minimizing the risk of credential exposure.	2027-01-16	2027-11-30	-1.00	2,409,688	350,750	ROM	1,596,177	1,395,014	-	80,091	-	-	121,072	220,973	204,120	-	16,853	-	-	-

240	2027	Vulnerability and Exposure Managem	Software(Intangible)	Security	This project will enhance the Company's Vulnerability Management program by implementing a cohesive suite of technologies focused on Vulnerability Management. These technologies will include minimally the following capabilities: vulnerability management, web application static and dynamic analysis, and attack surface management. Vulnerability Management is a critical process for identifying, assessing, and mitigating security weaknesses within an organization's IT infrastructure. This proactive approach involves continuous monitoring and evaluation of systems to detect vulnerabilities that could be exploited by cyber threats. By prioritizing vulnerabilities based on risk, cost, and potential impact, organizations can effectively allocate resources to address the most critical issues first. Implementing a robust Vulnerability Management program not only enhances the security posture of the organization but also ensures compliance with industry regulations and standards, thereby reducing the risk of data breaches, malware infections, ransomware, and other cyber threats. This Vulnerability Management program supports business continuity and protects sensitive information and systems, making it an essential component of any comprehensive cybersecurity strategy. The Company's current Vulnerability Management program relies on multiple disparate tools to perform core activities such as scanning, analysis, and remediation tracking. This multi-tool approach can create inefficiencies, increase the likelihood of data gaps, and require additional effort from users to correlate and interpret information across platforms. The use of several systems to manage vulnerabilities can lead to inconsistent workflows, duplicated efforts, and reduced coordination between teams. Streamlining the tool set or improving integration between existing solutions would enhance operational efficiency and support a more cohesive vulnerability management process. This project creates value for the Company by (1) enhancing the efficiency and effectiveness of the Vulnerability Management program through improved integration and reduced reliance on multiple standalone tools; and (2) supporting risk-based decision-making by enabling more consistent identification, prioritization, and remediation of vulnerabilities. These improvements will reduce operational overhead, minimize security exposure, and help ensure continued alignment with industry regulations and cybersecurity frameworks. The project scope includes evaluating and implementing a new vulnerability solution. The scope also includes enablement of active scanning with the new solution, consolidating data sources, and improving cross-platform visibility. Alternatives considered include: (1) continuing with the current multi-tool Vulnerability Management program. This option was not selected as it perpetuates inefficiencies, inconsistent workflows, and limited visibility across platforms; (2) increasing manual efforts to correlate and manage data between existing tools. This alternative was not chosen due to the high resource demands and increased risk of human error, which may further delay remediation timelines; (3) procurement of a new, cloud-based consolidated vulnerability management platform. This option was chosen as it allows the Company to enhance vulnerability data, threat intelligence, and process efficiencies within the current environment to deliver immediate value with high confidence in the vulnerability data that is being provided.	2027-01-15	2027-11-30	-1.00	1,418,998	290,800	ROM	939,945	764,803	-	72,500	23,184	-	79,458	183,204	156,240	-	26,964	-	-	-
241	2027	Workstation Temporary Administrativ	Software(Intangible)	Security	This project will implement controls that will allow local least administrative access to workstations on a time limited basis. Non-IT and Security resources will be able to request this access. Temporary administrative access to workstations is required to support some application installations, local system configuration, or to troubleshoot workstation issues. Currently, administrative access is only allowed on employee workstations for authorized users that is granted by a manual process. The current process allows the authorized user to have access to everything on the employee workstation which allows for human error. The process is resource intensive and requires manual removal of access. Cyber Security and Information Technology (IT) teams do not have controls in place to restrict the usage of local administrative accounts or monitoring capabilities to detect misuse without human intervention. The current state creates an environment for misuse where broad admin access could be leveraged for data breaches and ransomware. A successful attack would impact the Company's ability to serve our customers. This project creates value for the Company by: (1) reducing risk by eliminating over 1,000 local administrative accounts; (2) adding the ability to implement security controls and restrictions on local administrative functions; (3) increasing productivity by reducing the time and resources needed to provision, manage, and audit local accounts for security compliance; (4) adding the ability to provide administrative access for a specific and limited duration of time, thereby reducing cyber security risk of workstation compromise. This project will implement a platform that can enforce security controls and audit the security compliance of local administrative accounts for Company workstations. The features of this platform include: (1) the ability to give administrator access for a specific duration of time; (2) enable applications to automatically run in a privileged state; (3) the ability to remotely change the administrator password; and (4) generate a single-use administrator password. Alternatives considered include: (1) accepting the risk of using local administrators that are not managed centrally for end point administration. This alternative was not chosen because the usage of these accounts doesn't follow company standards for software provisioning and introduces unsupported software versions and vulnerabilities into the environment; (2) continuing the existing practice of manual oversight to grant local administrative access which does not eliminate the risk of misuse of administrator access. This alternative was not selected because it doesn't follow company standards for software provisioning and introduces unsupported software versions and vulnerabilities into the environment; (3) developing a platform for administrative account access internally. This alternative was not chosen due to the time frame it would take internal resources to develop and maintain the solution at the same level of quality and feature parity as a commercial product; and (4) implement a cloud platform specifically developed for managing local administrative accounts. This option was chosen because of the features designed for managing local administrative accounts will reduce the risk of misuse of administrative credentials within the Company.	2027-02-01	2027-07-31	-1.00	995,035	21,400	ROM	659,111	534,083	-	44,298	-	-	80,730	13,462	-	-	13,462	-	-	-

245	2028	Application Currency-Corporate-O&A	Software(Intangible)	Corporate	The Corporate Services initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that will require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Corporate Services adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software, and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Corporate Services are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2028-01-01	2028-12-31	-1.00	-	43,163		-	-	-	-	-	-	-	27,193	-	-	27,193	-	-	-
246	2028	Asset Accounting Tax Upgrade	Software(Intangible)	Corporate	The project will upgrade the Company's current on-premise accounting asset management tax software to the SaaS version as required by the vendor ensuring continued support of a critical financial application and providing new functionality. In 2025, standard vendor support ends for the current on-premise PowerTax software. Losing vendor support creates security and stability risk that can result in performance issues. When the application is out of the normal support with the vendor, the Company no longer receives security patches, support for defect resolution or bug fixes, and cannot enhance the application. To ensure compliance with regulated and financial accounting in the tax fixed asset sub-ledger, it is necessary to perform an upgrade and maintain vendor support. In addition, the upgrade provides additional functionality to increase the frequency of financial reporting and improve visibility. This project creates value for the Company by ensuring compliance with regulated and financial accounting within the tax fixed asset sub-ledger. In addition, the project adds value by: (1) moving to a SaaS solution in order stay supported; and (2) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support. The project scope includes: (1) evaluating current vendor/product solutions with market leaders; and (2) upgrading the vendor software from the current version to the newer SaaS version; or replacing it. Alternatives considered include: (1) evaluating SAP options for leasing, asset, and tax management capabilities. While this option would eliminate the need for an interface between SAP and PowerPlan, it would be more complex, cost more, and not provide all the required features such as centralized tax error processing. (2) evaluating other software options. This option may not provide appropriate regulatory reporting and other needed improvements and introduces several complexities and costs: Integration Challenges as PowerPlan modules are designed to work seamlessly together and data synch, mapping, and real-time updates may not be as robust as with native modules; Loss of Automation and Efficiency as there may be manual data transfers, duplicate entries and reduced automation increasing labor costs and risk of mistakes; Higher IT and Support Costs as maintaining two asset accounting systems means higher IT overhead with upgrades, troubleshooting, and user training; Reduced Data Integrity and Security as splitting tax data between systems can create gaps in data integrity, audit trails, and security controls; and Limited Vendor Accountability as when issues arise, vendors may point to integration boundaries making troubleshooting and issue resolution slower and more complicated. (3) moving entire PowerPlan suite, which includes PowerTax, to their cloud option. This option would be expensive from a licensing and integration build perspective, has an unclear timeline, and would remove the opportunity for direct database control. (4) waiting until a future upgrade cycle. This option introduces technical risk and potential financial processing risk. (5) upgrading to a newer version of the current solution. This is the preferred option as it will provide more frequent software upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.	2027-02-01	2028-02-28	-1.00	-	400,191	ROM	-	-	-	-	-	-	-	36,017	-	-	19,187	16,830	-	-
247	2028	Asset Accounting Upgrade 2027-202	Software(Intangible)	Corporate	The project will upgrade the Company's current accounting asset management software to the latest version as required by the vendor, ensuring continued support of a critical financial application. Standard vendor support will be ending for the current on-premise software. Losing vendor support creates security and stability risk that can result in performance issues. When the application is out of the normal support with the vendor, the Company no longer receives security patches, support for defect resolution or bug fixes, and cannot enhance the application. To ensure compliance with regulated and financial accounting in the fixed asset sub-ledger, it is necessary to perform an upgrade and maintain vendor support. There are also larger costs to upgrade if the upgrades are further apart due to complex testing activities and too many version increases at any one time. This project creates value for the Company by ensuring compliance with regulated and financial accounting within the fixed asset sub-ledger. In addition, the project adds value by: (1) performing the allocation process on a more frequent basis providing better financial visibility; (2) automating manual tasks; (3) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support; and (4) lowering costs with more frequent upgrades to reduce testing complexities and reduce the number of versions to be adopted. The project scope includes: (1) evaluating current vendor/product solution with market leaders; and (2) upgrading the vendor software from the current version to a newer version. Alternatives considered include: (1) Evaluated SAP options for leasing, asset, and tax management capabilities. While this option would eliminate the need for an interface between SAP and PowerPlan, it would be more complex, cost more, and not provide all the required features. (2) Evaluated other software options. This option would introduce new ongoing support costs and integrations and may not provide regulatory reporting and other needed improvements; (3) Address cloud possibilities. This option is expensive and has an unclear timeline roadmap; (4) wait until a future upgrade cycle. This option introduces technical risk; (5) Upgrading to a newer version of current solution. This is the preferred option as it will provide more frequent software upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.	2027-02-01	2028-02-28	-1.00	-	671,749	ROM	-	-	-	-	-	-	-	45,021	-	-	11,361	33,661	-	-
248	2028	Enterprise Risk Management	Software(Intangible)	Corporate	The project will implement software to streamline Enterprise Risk Management (ERM) processes, improve efficiency, provide risk identification and repository tools, and deliver real-time risk data. The Enterprise Risk Team (ERT) collaborates with Risk Owners (ROs) annually to identify new risks, update existing ones, quantify impacts and likelihoods, document mitigation plans, identify trends, and formulate risk tolerance metrics. This process involves iterative exchanges between ERT and ROs to align on content. This effort culminates in multiple risk maps presented annually to senior management and the Board of Directors (BoD). The manual Enterprise Risk Management (ERM) process is intensive and time-consuming, creating risks of human error that can inaccurately quantify risks, introduce data anomalies, and create version tracking issues. The current process results in inefficient use of time by risk analysts and risk owners, limits the breadth of analysis, and affects the Company's ability to promptly identify, analyze, and communicate risks to senior leaders, potentially causing delays in responding to emerging risks. Due to its lengthy nature, the manual process is conducted only once a year but needs to be performed more frequently for proactive enterprise risk management. Utility industry peers use software to more effectively manage enterprise risk management programs. This project creates value for the Company by: (1) providing real-time risk information to stakeholders including the risk team, risk owners, senior management, and the Board of Directors (BoD); (2) supporting proactive risk management; (3) establishing a centralized repository for risk identification, management, and mitigation plans; (4) reducing waste through simplified processes; and (5) enhancing efficiency for risk owners and analysts. The project scope includes: (1) creating risk analysis templates and tools for automated reporting; (2) establishing automated workflows to perform risk updates; (3) configuring dynamic templates that prompt the risk owners based on prior selections; (4) organizing risk assessments through an online and searchable data repository; (5) creating new reports and executive dashboards; (6) migrating data; and (7) setting record retention rules. Alternatives considered include: (1) Continuing to use the current manual processes. This alternative was not chosen due to inefficiencies, poor quality results, and limited frequency of risk reviews. (2) Building a custom internal enterprise risk solution. This alternative was not selected because it does not incorporate best practices available in risk management software provided by industry leaders. (3) Implementing a software solution from a leading enterprise risk solution vendor. Although this introduces new license and ongoing support costs, it is preferred since it incorporates industry best practices, ensures application reliability, security, stability through vendor support, and provides innovation and insights via risk information reporting through management dashboards. Additionally, it aligns the Company with utility industry peer practices for more effective enterprise risk management.	2027-07-01	2028-07-03	-1.00	184,200	80,666	ROM	122,014	-	-	42,526	79,488	-	-	26,121	-	-	11,946	14,175	-	-
249	2028	HR Support Pack and Business Soft	Software(Intangible)	Corporate	The Human Resources (HR) Support Pack and Business Software Inc (BSI) upgrade will update the SAP system with HR Support Packs that are released annually by SAP to comply with HR and tax changes. SAP releases annual HR support packs to ensure compliance. Without them, the Company would be unable to comply with HR and tax changes, resulting in the inability to calculate and distribute payroll. This project creates value for the Company by: (1) ensuring that its systems are in compliance with new financial rules and regulations; and (2) ensuring that it can calculate and distribute payroll. The scope of this project is to add SAP HR corrections to ensure proper reporting of financial information by the Company. xAlternatives considered include: (1) not upgrading to the current support packs, which results in noncompliance with financial rules and regulations and inaccurate payroll. (2) there is no economical cloud solution, so this option was not entertained. (3) the Company decided the best alternative is to apply the appropriate support pack upgrades. This option is preferred because it enables the Company to comply with HR and tax changes, resulting in the ability to correctly calculate and distribute payroll.	2028-02-06	2028-12-29	0.00	-	665,132		-	-	-	-	-	-	-	419,033	-	-	63,727	355,306	-	-
250	2028	Product Family Enhancements-Corp	Software(Intangible)	Corporate	The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. The Corporate Services initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Corporate Services Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Corporate Services. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as People and Culture (Human Resources), Legal, Finance and Governmental, Regulatory and, Public Affairs. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2028-01-01	2028-12-31	-1.00	1,031,882	74,206		683,519	82,215	1,957	163,025	381,391	-	54,931	46,750	15,825	39	7,431	23,455	-	-

254	2028	Application Currency-Customer-O&M	Software(Intangible)	Customer	The Customer initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Customer digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Customer are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2028-12-31	-1.00	-	57,170		-	-	-	-	-	-	-	36,017	-	-	36,017	-	-	-
255	2028	Energy Assistance Enhancements ar	Software(Intangible)	Customer	The Energy Assistance Enhancements and Maintenance Annual Updates project, formerly known as Consumers Affordable Resource for Energy (CARE) project, will implement software changes to offer energy assistance to low-income customers and streamline the process for the assistance agencies who use the assistance portal. This is accomplished through improved user interfaces and updates to SAP to process various requests. Upcoming modifications will be identified following an ongoing and annual review of requests, that includes criteria from the Department of Health and Human Services (DHHS) and Michigan Public Service Commission (MPSC) to prioritize the list of changes. Each grant year, DHHS and MPSC stipulate the criteria required for customers to enroll in the CARE program, how the Company and agencies will manage the enrollment process and track active CARE customers, and how they will administer the Michigan Energy Assistance Program (MEAP) benefits through bill credits and arrears forgiveness. The criteria changes significantly each year; therefore, the Energy Assistance Enhancement and Maintenance Annual Updates application requires modifications to meet the new requirements. If the regulatory requests are not fulfilled, the Company is at risk of losing state Low Income Energy Assistance Fund (LEAF) funds to assist low-income customers with paying their energy bills, thereby increasing the customers risk of shutoff for non-payment. In addition, our energy assistance programs function within all software platforms in the company which consistently need enhancements and updates. The project will provide the following value: (1) complete modifications to internal SAP application and Agency Portal to receive LEAF funding, which can be used to provide customers the bill credits and arrears forgiveness; (2) improve the data within the assistance agencies portal, thereby making it easier to assist customers in need of LEAF funding; and (3) complete modifications to customer facing platforms. The project scope includes: (1) updating the enrollment and status process; (2) allowing for flat monthly bills; (3) improving reporting; (4) updating the arrears forgiveness plan; (5) satisfying additional regulatory requirements for the annual grant rule changes required by the Department of Health and Human Services and Michigan Public Service Commission; (6) updating CARE dunning process; and (7) updating the assistance portal (CE PASS) functionality to enhance Agency Self-Service. Alternatives considered include: (1) continue with current process. This alternative was not chosen because it would lead to loss of grant funding, thus decreasing or eliminating energy assistance dollars for customers; (2) transfer administration of Energy Assistance Programs to a third-party organization. This alternative was not selected because it would remove ownership and viability into the health of the program while increasing administrative costs; and (3) make annual updates to the application, which will allow agencies to easily enroll customers on assistance programs and allow placement of holds to stop or prolong credit activity until assistance decisions are granted. This option was selected since it provides long-term proactive energy assistance to customers and prevents loss of grant funds. Changes are required to internal systems such as SAP, a large internal system that supports broad areas of the business, and the Agency Portal, an internally developed web application, therefore a single cloud or third-party alternative is not viable. Additionally, retiring the existing Agency Portal for a new application would increase costs beyond that of the routine upgrades.	2026-01-01	2028-12-31	0.00	-	292,962		-	-	-	-	-	-	-	184,566	-	-	105,826	78,740	-	-
256	2028	Product Family Enhancements-Cust	Software(Intangible)	Customer	The Customer initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2028-12-31	-1.00	2,283,817	544,183		1,512,800	30,191	5,952	331,928	998,429	-	146,300	342,835	3,113	-	47,387	291,827	-	508
257	2028	Product Family Enhancements-Cust	Software(Intangible)	Customer	The Customer initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2028-12-31	-1.00	-	234,667		-	-	-	-	-	-	-	147,840	-	-	45,380	102,460	-	-
258	2028	Rate Change Maintenance	Software(Intangible)	Customer	The Rates Change Maintenance project will modify SAP billing in accordance with pricing and rate change requirements. For the Company to continue to meet and comply with certain MPSC requirements and to enable it to update its rates when rate changes are approved, there is a need to make periodic updates/modifications to existing prices and rate structures. These updates help ensure accuracy of billing and provide optimal rates for customers. The project will add value for both the Company and its customers through: (1) improved customer satisfaction by providing accurate billing; (2) optimized rate configuration enabling rate changes to be made more efficiently; and (3) timely updates to Company applications that incorporate mandatory changes to the rate structure that includes new surcharges, price changes, and energy efficiency programs. The scope of this project encompasses (1) implementation of annual or monthly (or both) electric and gas customer price changes, and rate structure changes as approved by the MSPC; and (2) optimizing the rate configuration in the Company's back-end system for more efficient rate changes. Alternative considered include: (1) a fully dedicated offshore development model. The option ensured resources were readily available with a more cost-effective labor expense. This alternative was not chosen due to the risk of billing inaccuracies and customer complaints. These risks were deemed too high because of the complexities of the rate structure, new development, and the time it would take for testing of this model; and (2) Instead, the Company chose to leverage onshore resources to plan, coordinate, and execute the rate changes. This option was selected as it supports the Company's operation model for rate changes.	2026-01-01	2028-12-31	0.00	-	298,844		-	-	-	-	-	-	-	188,272	-	-	13,783	174,489	-	-

260	2028	Advanced Distribution Management I	Software(Intangible)	Electric	The Advanced Distribution Management System Upgrade (ADMS) project will enhance operator experience, simplify maintenance, and provide more powerful and flexible system functionalities. These include advancements in Fault Location, Isolation, and Service Restoration (FLISR), waste elimination within Maestro, the introduction of independent line sensors, a redesign of temporary conditions, and will incorporate operational views of schematics. The project will also be replacing the outdated hardware. The current ADMS lacks several critical features and improvements that are essential for enhancing operator experience, system maintenance, fault detection, and response capabilities. The existing system struggles with: (1) the current FLISR functionality does not adequately support complex protection requirements and manual switching steps, leading to inefficiencies and potential errors; (2) operators face challenges with passthrough edits and managing conflicts related to devices with tags or temporary conditions, resulting in frequent system reloads and inaccuracies in the as-operated system; (3) the temporary conditions subsystem is cumbersome to use, hindering efficient operations and the ability to support schedule automation and; (4) the current schematic tools do not provide operational views or the ability to save and share views, limiting situational awareness and usability for operators. These gaps result in operational inefficiencies, increased maintenance efforts, and reduced effectiveness in fault management and system operations. Addressing these issues is crucial for improving the overall functionality, usability, and maintenance of the Distribution Management System. (5) The Company runs the risk of increased failure if it does not regularly refresh the infrastructure. The project will add value by: (1) improving the user interface and overall experience of the operations, (2) increasing the flexibility and configurability of FLISR, allowing for better support of complex protection requirements and improving solutions for manual switching steps, (3) enhancing the usability of schematics, providing operational views and the ability to save and share views for better situational awareness, (4) developing advanced switch order functionality to support more robust and efficient operations, (5) allowing ADMS to pull real time network model from GIS Utility Network and (6) improving stability and availability of business-critical applications by proactively replacing hardware before it fails. The scope of the project includes: (1) replacing ADMS hardware, (2) upgrading the existing ADMS platform to the latest packaged version, (3) adding in the feature improvements for Temporary Condition Redesign, Maestro Conflict Resolutions, Independent Line Sensors, FLISR and Schematics, (4) implementing new extraction tool, (5) testing the new functionality in various possible scenarios, and (6) communicating and training users on the new functionality. Alternatives considered include: (1) using outdated equipment and current version of ADMS. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact the Company's ability to respond effectively in storm situations. (2) Moving to a cloud version of ADMS. This option was not selected as the current public cloud platforms do not offer the high security environment required for the ADMS application. Consequently, the vendor platform was not built for cloud environments. (3) Replacing the hardware and upgrading ADMS. This option was selected to alleviate the above concerns.	2026-03-02	2027-11-11	-1.00	11,035,811	892,993	ROM	-	-	-	-	-	-	-	40,000	40,000	-	-	-	-	-
261	2028	Application Currency-Electric-O&M	Software(Intangible)	Electric	The Electric/Generation/Renewables Engineering and Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric/Generation/Renewables Engineering and Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Electric/Generation/Renewables Engineering and Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2028-12-31	-1.00	-	177,913		-	-	-	-	-	-	-	177,913	-	-	177,913	-	-	-

262	2028	Electric Geographic Information Syst	Software(Intangible)	Electric	This project will replace the existing design software for Electric Low Voltage Distribution (LVD) with a new solution that will be fully integrated to the ESRI (Environmental Systems Research Institute) GIS (Geographic Information System) platform which is already in use by the Company. This new solution will leverage GIS asset data to generate engineering designs. This will allow the Electric teams to have a single source and format to view asset data, construction drawings and redlines in both the back office and field. This change will further enable improvements to the mobile platform in quality of data that is used by the closeout team. This will also reduce the back and posting effort by using the native GIS data format; improving data quality by reducing the re-keying of data. The current design software creates waste in three areas for many teams within Electric including Low Voltage Distribution (LVD) Engineering, Field Leaders, and Customer Energy Management (CEM) Service Designers. (1) The current software does not support the native GIS data format and will not support future enabling work management needs. This causes waste and room for error by having to redraw designs in GIS that have already been created and prevents optimization of the work process. (2) It is not able to integrate to SAP to automatically order materials based on the design. (3) The current software lacks needed mobile functionality due to its lack of support for the native GIS format. The designs are not georeferenced to the exact location and can't fully utilize redlining capability which causes a significant impact to data quality and crew performance. This project will add value to the Company and its employees through: (1) eliminating the need to duplicate all design work so it is in both the design system and GIS; (2) enabling mobile editing and redlining on the design in GIS; (3) enabled integration to SAP; and (4) utilizing the capabilities of the next generation GIS platform that will be delivered through an in-progress business case. The project scope includes: (1) installing a new solution that will integrate to GIS; (2) utilizing GIS geospatial and asset information data and the GIS platform for generating Electric LVD engineering designs; (3) integrating to and from SAP to automate Compatible and Mass Unit material ordering capability; (4) installing new and upgrading existing geospatial platform infrastructure to support additional users (Electric LVD designers, Field Leaders, Planners, Schedulers, etc) of GIS; (5) integrating to ProjectWise (engineering content management system); (6) configuring mobile toolset; (7) re-engineering the existing GIS data model to handle asset life cycle; and (8) configuration for new ArcGIS services.	2025-09-09	2029-02-22	-0.47	6,241,626	659,758		1,109,865	-	-	775,167	-	-	334,698	136,794	-	-	136,794	-	-	-
263	2028	Electric GIS Utility Network Transfor	Software(Intangible)	Electric	This project will transform the Company's current Geographic Information System (GIS) platform to the Environmental Systems Research Institute (ESRI) Utility Network Model and establish a unified high voltage distribution (HVD), low voltage distribution (LVD), and substations data model. This transformation aims to optimize core engineering and operational processes, technologies, and data. The Company's GIS for electric records is expanding as an authoritative source for asset connectivity, location and health information. However, growing business requirements for advanced analytics and regulatory mandates necessitate more granular geospatial insights. Existing functionality does not meet business partner needs, and GIS data is refreshed in batch mode once a day, leading to mismatches with real-time systems. Managing HVD and LVD data in different models remains challenging. The Company's past implementation of ESRI's GIS for Electric, version 10.8.1, will be unsupported after March 1, 2028. Critical third-party solutions supporting key editing and business functionality are also ending support without upgrade options, posing risks for security updates. ESRI's development focus is shifting to the ArcGIS Utility Network Management extension, ArcGIS Enterprise, and ArcGIS Pro. The vendor's development team has reached the limits of ArcMap and the geometric network's capabilities and will no longer build additional functionality. Future development and enhancements are focused on the next-generation technologies of the Utility Network and ArcGIS Pro. ESRI utility solution partners are also moving their product lines away from the geometric network, soon supporting only the Utility Network. The project creates value for the Company by: (1) mitigating risks associated with product support end of life; (2) enabling detailed asset management and location based analytics to bring clearer understandings around the assets that support energy delivery; (3) increasing productivity through use of shortcuts, templates, and streamlined workflows within the software; (4) providing extensive, out-of-the-box tracing tools; (5) providing 3D visualization functionality; (6) enabling users with editing tools, giving them guidance at every step of the process for developing workflows and enforcing stronger data integrity; (7) viewing the up to date network in a map or schematic diagram and be able to quickly toggle back and forth between them; and (8) enabling archiving and historical versioning to view the state of the electric network over time. All of these capabilities will result in greater insight and efficiency that improves the safety and delivery to customers of Michigan. The Utility Network enables implementation of third-party tools that will allow us to keep the operational model more up to date as circuits with temp conditions and/or control tags can be imported as needed. The project scope includes: (1) upgrading all database, web, and application servers to supported Windows version; (2) upgrading end user application from ArcGIS Desktop to ArcGIS Pro; (3) migrating and converting LVD and HVD GIS data from geometric network data schema to the Utility Network, iteratively publishing data to new model for consumption; (4) reconfiguring electric applications that are integrated with GIS or that consume GIS data; and (5) creating substation asset model. Alternatives considered include: (1) Continue to use geometric network. This alternative was not selected because the architecture is at the end of its life. Additionally, dependent third-party solutions are moving away from the geometric network, making it unsustainable for continued use. (2) Moving to Utility Network and migrating to a supported platform. This alternative was chosen to enable the Company to leverage a cloud-based solution and provide options for utilizing third-party solutions.	2027-07-01	2029-12-04	-1.00	20,408,033	5,007,911	ROM	9,980,290	45,000	-	1,867,227	6,507,208	-	1,560,855	1,496,636	50,000	-	369,135	910,112	-	167,389
264	2028	HVD Supervisory Control and Data A	Software(Intangible)	Electric	The Electric HVD Monitoring System Upgrade project upgrades the software (every 2 years) and hardware components (every 4 years) of HVD SCADA system. This will include the upgrade of the underlying operating systems and database platforms that the software resides on as needed to maintain vendor support. This system is used to monitor and control generation and high voltage distribution voltage circuits. This project will add additional features and enhancements to HVD Monarch, the Company's HVD SCADA platform that improves efficiency and reliability. Running on an older version of the HVD hold have potential impacts on the reliability and resiliency of the low voltage distribution (LVD) system as well as the HVD system, as distribution reliability metrics depend upon HVD system availability. Maintaining an older version of the software and hardware creates risks associated with vendor responsiveness in addressing problems, as they arise. It will also take more effort to support any upgrades in the future because of difficulties resulting from longer durations between upgrade efforts. If upgrades are delayed, additional full-time resources will be required for the year upgrades occur to address upgrade complexities. Upgrading the HVD SCADA software and hardware adds value to the Company by ensuring that problems are promptly addressed when they occur. Additionally, the upgrade includes enhancements and fixes to the core product that support the resiliency of electric delivery, ensuring that customers are receiving the energy they need when they need it. Also, the distribution system depends on availability of the HVD system, staying current with the solution provider upgrades is critical to the resiliency of both systems. The scope of this project is an upgrade to the HVD SCADA software and hardware, which encompasses the following: (1) upgrading the application software; (2) upgrading the underlying operating systems and database platforms; (3) upgrading the underlying application hardware; (4) implementing new functionality for improved value to the Company; (5) making necessary configuration changes; and (5) updating documentation related to the integration changes. Alternative considered include: (1) Defer the biennial upgrade of the SCADA application and its hardware. The Company targets SCADA biennial application upgrades to stay within two versions of the current application due to maintain application stability and cyber security, given the critical nature of the SCADA system. This alternative was not chosen due to increased security risk and need for vendor support of the application. Additionally, the hardware is already past the end of its useful life and has been moved over to a 3rd party warranty provider. (2) Alternative Vendor solution. This option was not chosen because the move from our current vendor would be time consuming and costly. It could also introduce instability as any alternative solutions have not been proven operationally. (3) Do nothing. This option was not chosen due to the critical nature of these systems and the potential operational risks associated with operating on an unsupported solution. (4) Move to cloud. This option was not chosen as CE's internal security requirement is to host control systems on premise. (5) The option chosen is to complete the upgrade project with associated hardware and software necessary to complete the project that will deliver new functionality for improved value.	2026-01-01	2029-12-04	-1.00	3,400,290	257,005	ROM	1,780,870	525,000	760,000	74,500	300,000	-	121,370	170,500	-	-	160,500	-	-	10,000
265	2028	Integrated Energy Management Platf	Software(Intangible)	Electric	This project will reduce data center assets running PCI Energy Solutions by migrating into vendor cloud hosting solution. This will optimize vendor support, reduce operational costs (upgrades, server maintenance) and allow the Company to leverage new cloud capabilities. PCI Energy Solutions (PCI) provides software the Company uses to fulfill the Federal Energy Regulatory Commission (FERC) requirement of communicating unit availability to the Regional Transmission Operator and become more efficient at buying and selling electricity in the wholesale market. Due to the solution being Company hosted, the Company is not able to leverage benefits of the functionality in the vendor's cloud hosting solution (Software as a Service (SaaS)). The complex nature of the solution requires serious IT and business support teams to monitor, maintain and upgrade the system. Due to the critical nature of the application, the Company is looking to the SaaS hosting to benefit from the uptime SLA of 99.95% and the streamlined operational support for faster issue resolution. This project creates value for the Company by: (1) utilizing the vendor's SaaS environment which provides efficiencies for timely operational support. Currently, as an example, IT sends PCI a database copy so they can replicate the Company's environment in the vendor's system. This leads to waste of resources, time and increased support costs. (2) Freeing up resources for more value add work. As the Company optimized the organization, it is very important to reduce waste and work on the most valuable items; (3) reducing Oracle footprint; (4) reducing IT labor support costs; (5) reducing ongoing networking equipment refreshment and upgrade costs. The project scope includes: (1) planning and executing the data migration; (2) designing and configuring new and existing vendor SaaS components; (3) implementing integrations to COTS (Commercial Off-The-Shelf) and custom systems; (4) testing; (5) educating and increasing the skills of the employees to leverage the new vendor SaaS services; (6) decommissioning old infrastructure. Alternatives considered include: (1) continue to use the Company hosted installation of PCI. This alternative was not chosen due to the significant waste involved in maintaining the system, the inability to leverage Cloud functionality, and the failure to decrease the reliance on Oracle servers. (2) Move to a different energy market platform. This alternative was not selected because the different platform would have lesser options and would not be able to utilize PCI's bid to build process. (3) Move to the vendor SaaS. This alternative was selected as the Company will utilize the latest technology and optimize operational support.	2027-05-02	2028-03-16	-1.00	4,329,636	1,662,202	ROM	135,429	-	-	94,588	-	-	40,841	50,932	-	-	50,932	-	-	-
266	2028	Product Family Enhancements-Elect	Software(Intangible)	Electric	The Electric/Generation/Renewables Engineering and Operations initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Electric/Generation/Renewables Engineering and Operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric/Generation/Renewables Engineering and Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric/Generation/Renewables Engineering and Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2028-12-31	-1.00	719,345	188,564		719,345	20,000	-	185,588	453,062	-	60,695	188,564	-	-	34,331	154,233	-	-
267	2028	Product Family Enhancements-Elect	Software(Intangible)	Electric	The Electric/Generation/Renewables Engineering and Operations initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Electric/Generation/Renewables Engineering and Operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric/Generation/Renewables Engineering and Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric/Generation/Renewables Engineering and Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2028-12-31	-1.00	-	120,493		-	-	-	-	-	-	-	120,493	2,280	-	52,124	66,090	-	-
268	2028	20% ROM Adjustment - Electric	Software(Intangible)	Electric	This is for the 20% ROM Adjustment for IT projects.							(2,379,318)	(114,000)	(152,000)	(407,263)	(1,361,442)	-	(344,613)	-	-	-	-	-	-	-

270	2028	Application Currency-Electric & Gas	Software(Intangible)	Electric & Gas Shared	The Electric and Gas Operations initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor support/renewal, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Electric and Gas Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Electric and Gas Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2028-12-31	-1.00	-	731,863		-	-	-	-	-	-	-	461,074	-	-	420,680	40,393	-	-

271	2028	Application Currency-Operational Te	Software(Intangible)	Electric & Gas Shared	The Operational Technology initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Operational Technology adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Operational Technology are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2028-12-31	-1.00	-	208,646		-	-	-	-	-	-	-	130,187	-	-	130,187	-	-	-
272	2028	Product Family Enhancements-Elect	Software(Intangible)	Electric & Gas Shared	The Electric and Gas operations initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Electric and Gas operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric and Gas Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric, Gas and Generation Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2028-12-31	-1.00	-	566,033		-	-	-	-	-	-	-	356,601	15	-	47,634	308,910	-	41
274	**SUBTOTAL**	**2028 Electric & Gas Shared**										**1,209,742**	**-**	**29,699**	**217,220**	**887,934**	**-**	**74,889**	**1,141,740**	**15**	**-**	**645,304**	**496,232**	**-**	**108**
275	2028	ARP-Radio	Network	IT/Digital Foundation	This project will refresh hardware to include: 800Mhz Radios and infrastructure, cellular modems, plant radios and systems, cellular amplification devices, vehicle consoles in service trucks, other communications equipment, and associated test equipment. This equipment supports mission critical voice and data communications for plant and field service personnel and dispatch personnel. 800MHz radios are upgraded on a 10-year lifecycle basis. Plant radio systems are upgraded on a scheduled 10-year lifecycle basis. Cellular modems are refreshed on a five-year life cycle basis. Amplification systems are refreshed on a 10-year life cycle. 800MHz, mobile, and portable radios, Plant radios systems, and Cellular modems support core business functions, life safety communications, and rapid response for restoration of customers service and critical infrastructure. Company radio and cellular systems must be refreshed on a scheduled basis or risk exceeding life expectancy and failing or becoming obsolete. The refresh of this equipment in a proactive manner is critical to providing service to customers. If these units are not refreshed, the increased risk of unit failure would result in interruptions to timely and concise communications to field personnel to resolve gas leaks, and downed electric lines, or service turn-on requests, which risks life safety. This project creates value for customers and the Company by: (1) upholding public safety; (2) ensuring timely responses and repairs to emergent gas leaks, wire downs, and electric outages; (3) ensuring real-time communications between Company dispatch locations and crews in the field; (4) ensuring the safety of personnel working in higher risk workspaces by replacing equipment with units that contain intrinsically safe batteries; (5) supporting continuous improvement and training by replacing equipment that is capable of capturing audio recordings; and (6) remaining in compliance with MPSC regulatory requirements by maintaining critical radio infrastructure. The project scope consists of: (1) scheduled replacement of radios, modems, consoles; and (2) installing additional radios, modems, and console assets to satisfy growth requirements; and (3) scheduled replacement of out of date cellular and radio boosters and systems. The alternatives considered include: (1) Replacing the existing units with new units from other radio and modem manufacturers; (2) Purchasing new radio subscriber units from existing manufacturers. Option 2 was not selected because the Company now uses a standards-based radio system allowing for multiple radio manufacturer options. Option 1 was selected to allow for a competitive bidding process that will provide the most cost-effective radio that will meet the needs of users.	2026-01-01	2028-12-31	-1.00	1,735,113	84,246		908,852	-	660,918	20,114	-	7,432	53,075	-	-	50,432	1,383	1,260	-	-
276	2028	ARP-Collaboration	New Computers / Hardware	IT/Digital Foundation	This project will replace the Company's obsolete or out-of date audio, visual, telephony and other communication collaborative tools and equipment. When collaboration assets used to support customer interactions and business operations are obsolete or out-of-date, they are more difficult to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project creates value by: (1) ensuring the stability and reliability of the Company's audio, visual, telephony, and other communications systems; and (2) migrating to new collaboration assets. The project scope consists of: (1) replacing aging collaboration assets; and (2) installing new collaboration assets to meet evolving business requirements. The alternatives considered include: (1) continuing to operate collaboration assets beyond a five-year refresh cycle, or (2) refreshing collaboration assets based on a five-year refresh cycle while evaluating the health of the asset and evolving business requirements. The alternative to operate the collaboration assets beyond a five-year refresh cycle was not selected due to the risk of asset failures would cause stability and reliability issues for employees supporting our customers, as vendors do not provide extended support after five years. The Company chose to refresh the collaboration assets based on a five-year refresh cycle and evaluate the health of the asset and evolving business requirements to reduce the risk of impacting the productivity of employees supporting our customers.	2026-01-01	2028-12-31	-1.00	2,639,319	207,361		1,748,285	-	1,595,255	34,854	107,971	-	10,204	130,637	-	-	42,437	88,200	-	-
277	2028	ARP-Field Device Asset Management	New Computers / Hardware	IT/Digital Foundation	This project will replace field devices according to a four-year refresh cycle that is based on industry standards, hardware failures, security patches, and software compatibility. When Field Device Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with Security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular four-year refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing field devices before they fail; and (2) allowing field workers to complete their job tasks. The project scope consists of replacing field device assets according to the four-year refresh cycle. Alternatives considered include: (1) using outdated equipment. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact meter readers' ability to complete job tasks. It would also complicate the Company's efforts to meet the MPSC's meter reading factor and consecutive estimated targets, and it could cause applications to run poorly or stop functioning; (2) The second alternative considered was to replace the hardware. The Company selected this option to alleviate the above concerns.	2026-01-01	2028-12-31	-1.00	4,765,207	3,556		3,156,473	-	3,075,848	58,686	-	-	21,939	2,240	-	1,922	144	174	-	-
278	2028	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Common project will replace dated and obsolete servers shared by Electric and Gas on a rotating five-year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure.	2026-01-01	2028-12-31	-1.00	2,599,980	254,552		1,722,214	-	1,656,000	48,196	-	-	18,017	160,368	-	151,200	9,168	-	-	-
279	2028	ARP-Operational Technology Suppo	New Computers / Hardware	IT/Digital Foundation	The Asset Refresh Program (ARP)-Operational Technology (OT) Support Electric project will replace dated and obsolete servers on a rotating five-year refresh schedule. When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle. This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure. The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements. The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure that supports systems such as Electric SCADA.	2026-01-01	2028-12-31	-1.00	293,972	52,186		293,972	-	224,000	50,932	-	-	19,040	52,186	-	42,000	10,186	-	-	-
280	2028	ARP-Printer Asset Management (PAI	New Computers / Hardware	IT/Digital Foundation	This project will replace and install select printers, plotters, and multi-function printing devices based on printer replacement assessments and a five-year refresh cycle. Printer service and usage history is evaluated and a determination is made if a printer can be repurposed instead of ordering a new one. When Printer Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with firmware and security updates. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving the dependability of these printer devices for employees; (2) averting increased costs due to hardware repairs; and (3) ensuring compatibility with enterprise print applications. The project scope consists of the annual replacement of printer assets according to a five-year refresh cycle. This does not mean that all printers are replaced after five years merely that printers are assessed on a five-year cycle for possible replacement. The alternatives considered for the project included looking at refresh cycles from three to seven years as well as running the assets to failure. The selection of a five-year cycle was deemed to be the best solution since anything less than five years would increase the likelihood of unneeded expense for replacement of assets that were still in good operating condition. Anything greater than five years would require the printers to be assessed monthly to ensure they are not run to failure, resulting in additional expenses for maintenance of the equipment and downtime, negatively affecting employee productivity. The Company assesses the printer fleet based on years of active service, service history, printer usage data, and the number of users within a facility. Based on these factors, the Company either decommissions, repurposes, leaves in place, or refreshes the printers.	2026-01-01	2028-12-31	-1.00	233,292	8,454		154,533	-	150,930	2,622	-	-	980	5,326	-	83	5,064	162	-	16
281	2028	ARP-Server and Storage	New Computers / Hardware	IT/Digital Foundation	This project will replace or augment server and storage infrastructure for the Company. When Server and Storage Hardware Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and can be more challenging to keep current with Security updates. The Company also runs the risk of failure of these assets impacting customer interactions and business operations if it does not adhere to a regular five to seven-year refresh cycle. This project creates value for the Company through: (1) improved stability and availability of business-critical applications by proactively replacing server and storage hardware assets prior to the likelihood of increasing hardware failures; and (2) ensuring that adequate resources are available to support application demands after five to seven years of actual use. The scope of this program encompasses: (1) replacement of server and storage hardware assets; and (2) installation of additional new computers and storage capacity to account for evolving business requirements. The alternatives considered were to: (1) purchase extended maintenance; (2) move some of these assets to the cloud with the Digital -Hybrid Cloud and Data Center Migration project or; (3) replace the assets on the current cycle. The option to purchase extended maintenance was not selected because full support would not be offered after seven years, and maintenance costs would increase. The preferred option is to move some of these assets to the cloud in the Digital Hybrid Cloud and Data Center Migration project while refreshing the remainder using the five- to seven-year cycle as it is the most cost-effective option.	2026-01-01	2028-12-31	-1.00	1,174,955	14,000		778,290	-	635,748	95,684	-	-	46,858	8,820	-	-	8,820	-	-	-
282	2028	ARP-Workstation Asset Management	New Computers / Hardware	IT/Digital Foundation	This project will replace and install new desktops, laptops, and tablets on a four-year refresh cycle based on industry standards, hardware failures, security patches, and software compatibility. Monitors will be replaced every eight years based on Company data related to historical failure rates. When Workstation Assets that are used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle. This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing workstations prior to increasing hardware failures; and (2) allowing business partners to complete their job tasks. The project scope consists of: (1) replacing workstation assets; and (2) installing new units for new resources. The alternatives considered were to purchase extended maintenance, move some of these assets to the cloud with the Digital -Hybrid Cloud and Data Center Migration project, or to replace the assets on the current cycle. The option to purchase extended maintenance was not selected because full support would not be offered after seven years, and maintenance costs would increase. The preferred option is to move some of these assets to the cloud in the Digital Hybrid Cloud and Data Center Migration project while refreshing the remainder using the five- to seven year cycle as it is the most cost-effective option.	2026-01-01	2028-12-31	-1.00	11,084,879	101,362		7,342,624	-	7,077,210	119,123	104,494	-	41,797	63,858	-	14,413	14,060	1,518	-	33,867

283	2028	Application Currency-IT-Digital Foun	Software(Intangible)	IT-Digital Foundation	The Application Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Application Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Application Platforms area are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2028-12-31	-1.00	-	387,430		-	-	-	-	-	-	-	231,481	-	-	231,481	-	-	-
284	2028	Application Currency-IT-Digital Foun	Software(Intangible)	IT-Digital Foundation	The Infrastructure Platforms initiative will utilize O&M funding to keep applications current for security and reliability. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades in the Infrastructure Platforms adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within the Infrastructure Platforms are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. 285	2028	Enterprise Print & Scan Suite Upgrad	Software(Intangible)	IT-Digital Foundation	The projects intent is to upgrade the current Enterprise Print and Capture suite for improved data security and integration for the work from home business partner. The company currently maintains a print and capture suite that will have support ending in 2028. Only high-level security patches will be available after this date. The company maintains a fleet of servers that are scheduled to be upgraded. The lack of internal resources requires the company to continue to absorb increased costs to contract administrative personal. This project maintains cost savings achieved by eliminating wasteful print jobs and further enables productive, and flexible workforce for business partners working remotely. This project also ensures that the latest data transmission security requirements of are met by the solution. The project scope includes: (1) upgrading the current suite to the latest version; (3) training for company personal to administer the suite; (4) maintaining all workflows from the current system; (5) continue with remediation for security vulnerability risk. Alternatives considered: (1) migrating to cloud services. This alternative was not chosen at this time due to maturity levels found with subscription services. (2) other print-scan products. This alternative was not selected as it would required new print and scanning specific to another print-scan product. (3) Print-scan products that were less costs. This alternative was not selected, due to fewer capabilities offered than the current product, which would introduction inefficiencies in the current processes. (4) upgrade current product. This alternative was chosen due to lower overall cost of not requiring new hardware, maturity of current product, and providing same level of capabilities required to support current processes.	2026-03-01	2028-12-29	-1.00	287,654	63,102	ROM	190,542	-	-	32,088	141,091	-	17,363	39,754	-	-	12,338	27,416	-	-
286	2028	Enterprise Service Bus 2028-2029 U	Software(Intangible)	IT-Digital Foundation	This project will upgrade the current Enterprise Service Bus software versions in use at the Company. Newer ESB software versions offer improved integration with RestAPI services and applications. It is critical that this vital data tool or pathway, be more scalable, secure, and capable of integrating to a service-based environment. In addition, the messaging and event modules within the ESB are currently outside of their standard support windows. While it is possible to continue to get extended support by paying an estimated premium of approximately $80,000 annually, this is just temporary coverage and serves only to delay the need for an upgrade. The value this project provides the Company includes: (1) cost avoidance to avoid extensive payments for extend support purposes; (2) avoid technical obsolescence; (3) operational resiliency; and (4) improved administrative and operational efficiencies. The project scope includes implementing current version of all applications that are part of the ESB application, database version, and required database drivers. Alternatives considered included: (1) Accept the annual $80,000 extended maintenance cost. Given the critical nature of this application, it is not recommended to lose mainstream support for any of the applications involved. Any sustained ESB product deficiency would impact many areas of the Company, such as billing, revenue collection, and remote meter management. The current implementation of the ESB platform was built with 5 years of growth in mind. This alternative was not chosen due to risk to Company operations, and the additional expense. (2) Replace the on-premise upgrade plan to implement a cloud-based solution. A cloud migration would also take longer to complete, which would put the Company at risk of falling outside of the current vendor support window for the products current version. (3) Upgrade the existing application. This option was selected because it best meets the Company needs for the near future by restoring vendor support for fixes and patches, and enables product scalability to the measure required of business capabilities.	2026-09-02	2029-09-21	-1.00	-	520,248	ROM	-	-	-	-	-	-	-	21,610	-	-	21,610	-	-	-
287	2028	ISIS Papyrus 2028 Upgrade	Software(Intangible)	IT-Digital Foundation	This project will upgrade the Papyrus Objects suite of applications to the most recent version available per vendor recommendation. The ISIS Papyrus application is critical to creating electronic and paper correspondence for customers, including bills and dunnings. It's imperative that customers retain unfettered access to their paper bills, dunning notices and other communications produced by ISIS. ISIS also makes customer bills available for online viewing through the website and mobile apps. Without the upgrade, vendors make no guarantee that any substantial patches or hot fixes impacting application reliability, capacity and security will be forthcoming. The upgrade will address these problems and challenges, as well as ensuring all other platform components comply with the Company's operational and security standards. The value of this project includes: (1) providing a more stable operational model by upgrading to the most recent version available; (2) maintaining the necessary vendor support; and (3) resolving tuning and stability issues with the vendors. The scope of the project is to upgrade the various licensed products that comprise the Papyrus Objects suite of applications. Alternatives considered include: (1) delaying the upgrade and continuing to operate with the current version. This alternative was not chosen due to the risk of application stability and the inability to maintain cyber security patching. (2) The Company instead decided to upgrade to the current version. This alternative was chosen as it eliminates the risk of application instability and the inability to maintain cyber security patching.	2028-02-01	2028-10-01	-1.00	-	217,246	ROM	-	-	-	-	-	-	-	136,865	-	-	136,865	-	-	-
288	2028	Product Family Enhancements-Appli	Software(Intangible)	IT-Digital Foundation	The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management. Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2028-12-31	-1.00	311,154	30,590		206,109	13,264	5,288	79,634	69,868	-	38,054	19,272	292	99	7,416	11,466	-	-
289	2028	Product Family Enhancements-Appli	Software(Intangible)	IT-Digital Foundation	The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. 292	2028	SAP Support Pack Upgrade 2028	Software(Intangible)	IT/Digital Foundation	The SAP Support Pack Upgrade project is to maintain the currency levels of all SAP applications. This will ensure the applications are at version levels that are supported by SAP, have the latest patches and bug fixes, and provide cross-application compatibility for business partners. To continue to maintain SAP application version currency, across all applications, the support packs released by SAP must be routinely applied. Without maintaining application currency, the core business applications running on the SAP platform are at risk of losing vendor support, resulting in the inability to apply bug fixes and patches, including security patches, and maintain application interoperability and stability. The project will add value by: (1) maintaining supportability of SAP applications; (2) mitigating system security, stability and reliability risks by ensuring the applications are up-to-date with the most current patches and bug fixes released by SAP; and (3) ensuring ongoing cross-application compatibility. The scope of this project includes routine support pack upgrades to all SAP applications, which include: Customer Relationship Manager (CRM), Enterprise Portal, Process Orchestration (PO), Business Warehouse (BW), Business Objects (BOBJ), Data Services (DS), Governance, Solution Manager, Data Quality Manager (DQM), System Landscape Directory (SLD) and other related SAP applications. Alternatives considered include: (1) dividing the scope into individual projects by SAP application. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work, especially testing efforts, and therefore potentially higher costs. (2) migrating to SAP S/4HANA. This option was not selected because SAP S/4HANA is a multi-year project that is not expected to be completed by year-end 2026. So an alternative approach is needed to perform the application upgrades and maintain currency in the meantime. (3) Ultimately, the Company chose to balance the project scope through regular support pack upgrades. This alternative was selected because it provides the best balance of minimizing cost and maintaining support by combining multiple application upgrades through a single support pack upgrade effort.	2026-02-01	2026-10-31	-1.00	-	454,370		-	-	-	-	-	-	-	286,253	-	-	286,253	-	-	-

295	2028	ARP-Cyber-Common	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades. The alternatives considered include: (1) upgrade or replace only those assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warrant repair costs; (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.	2026-01-01	2028-12-31	-1.00	749,224	12,130		392,443	-	364,355	19,735	1,002	-	7,351	7,642	-	1,575	6,067	-	-	-
296	2028	ARP-Cyber-Electric	Network	Security	This project will replace cyber security infrastructure to support increasing system and application demands and to prevent system failures and service interruptions for Electric. When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates. This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations. The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades. The alternatives considered include: (1) upgrade or replace only those assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warrant repair costs; (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.	2026-01-01	2028-12-31	-1.00	372,493	15,284		372,493	200	332,500	25,796	1,750	-	12,247	15,284	-	3,800	11,484	-	-	-
297	2028	ARP-Network-Common	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. The project scope includes: (1) refreshing network equipment and software assets on a five-year refresh cycle; (2) identifying the required features for the new equipment; and (3) implementing the new equipment according to industry best practices. The alternatives considered include: (1) continue to operate on existing equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes; and (2) refresh network and software assets on a five-year refresh cycle. This alternative was selected to replace the existing equipment with the latest hardware and software to avoid hardware failure and losing vendor support, software bug fixes, security updates, and other software fixes.	2026-01-01	2028-12-31	-1.00	797,493	13,525		417,727	3,929	390,805	11,196	7,816	-	3,981	8,521	-	3,465	5,056	-	-	-
298	2028	ARP-Network-Electric	Network	Security	This project will refresh data center network equipment, local area network (LAN), wireless local area network (WLAN), and equipment to efficiently manage and control the Company's networks for Electric. When network assets supporting customer interactions and ensuring the stability of mission-critical business operations are obsolete or out-of-date, they become more expensive to support and harder to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle. This project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor-supported for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; and (6) enabling the Company to efficiently manage and control its networks. The project scope includes: (1) refreshing network equipment and software assets on a five-year refresh cycle; (2) identifying the required features for the new equipment; and (3) implementing the new equipment according to industry best practices. The alternatives considered include: (1) continue to operate on existing equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes; and (2) refresh network and software assets on a five-year refresh cycle. This alternative was selected to replace the existing equipment with the latest hardware and software to avoid hardware failure and losing vendor support, software bug fixes, security updates, and other software fixes.	2026-01-01	2028-12-31	-1.00	106,117	1,784		106,117	400	99,184	3,349	1,984	-	1,200	1,784	-	500	1,284	-	-	-
299	2028	Critical Substation Upgrade	Network	Security	This project will implement enhanced security measures at the Company's critical substations in order to prevent unauthorized access, deter criminal activity, and respond to threats in real-time. With the enhanced security posture, Consumers Energy will be better positioned to mitigate malicious activity through real-time detection and increase the reliability of electric delivery to our customers. Today, Consumers Energy currently deems 16 substations as business critical to its electric system while an additional 34 substations fall under NERC-CIP compliance. Recent attacks to critical infrastructure have increased the likelihood of an adversary exploiting vulnerabilities at critical substation increasing the risk for large scale outages and customer impact. The Company's current security monitor tools are not allow us to detect, deter, or monitor potential threats on site. Without the ability to monitor these assets in real-time, the Company is vulnerable to an adversary causing destruction without knowledge of when or how the event took place. A phased implementation would allow the Company to systematically mitigate risk to assets deemed most vulnerable. The objective of this project is to implement enhanced security measures to better detect, deter, and respond to threats to the Company's electric substations in real-time. This enhanced security posture will align with other utilities that detect and operate substations and mitigate disruption to electric service while improving reliability. Enhanced Security measures that will need to be implemented include but are not limited to: (1) access controls; (2) access readers; (3) cameras; (4) video and audio programming; (5) fence intrusion (which will be accomplished through camera systems); (6) subcontractor work of trenching poles, installing equipment etc.; (7) additional facility lighting; and (8) security equipment maintenance. Alternatives considered include: (1) maintaining the current security perimeter fencing and conducting routine inspections of the site. This alternative was not selected, as it does not provide the ability to prevent, detect, or respond to threats in real-time. (2) hiring contract security guards to patrol the sites. This alternative was not selected as ongoing O&M costs would be expensive; (3) outfitting sites with thermal cameras with built in analytics that would alarm for intrusions and subjects on the properties along with access control measures. This alternative was selected because of lower ongoing O&M costs and enhanced detection abilities.	2026-01-01	2026-12-31	-1.00	11,771,395	1,016,500	ROM	4,585,250	-	2,312,500	1,070,000	562,500	-	640,250	374,500	-	-	374,500	-	-	-
300	2028	20% ROM Adjustment - Security	Network	Security	This is for the 20% ROM Adjustment for Security projects.							(480,351)	-	(242,258)	(112,060)	(59,926)	-	(67,073)	-	-	-	-	-	-	-
301	2028	ARP-Physical Security	New Computers / Hardware	Security	The ARP-Physical Security, formerly known as Physical Security Asset Refresh, will enhance or replace physical security assets to provide improved visibility and incident resolution related to security concerns. The Company has several thousand physical security asset devices currently in use including security cameras, motion detectors, intrusion detection systems, and card access systems. Current limitations include the lack of integrated solutions for centralized management, situational awareness, real time monitoring alerts, compliance with regulations and guidelines, and faster responses to emergencies and incidents. This could result in an increase of potential security vulnerabilities, associated penalties, and reputational damage. The value provided by completing the project is to: (1) maintain compliance with State and Federal Regulations; (2) reduce redundancies with less of a need for multiple cameras and reduce gaps in functionality, and (3) optimize overall system performance. Included in the project is the enhancement or replacement of assets including: (1) advanced door systems at Company buildings; (2) advanced analytics on security cameras for monitoring and real time alerting capabilities; and (3) gate and lock systems, which include security cameras, motion detectors, intrusion detection systems, and card access systems. Alternatives considered include: (1) not refreshing physical security assets, and (2) defer a portion of the refresh of physical security assets not meeting the industry standard of 5 to 7 years for indoor cameras and 3 to 5 years for outdoor cameras. Alternatives 1 and 2 were not selected due to the risk of security concerns, utilizing equipment that is at end of life and no longer supported, and the risk of a lack of inability to meet regulatory requirements (FERC, NERC, TSA and NRC). The alternative selected maintains compliance, reduces redundancies and gaps in functionality, provides up to date support for the assets and current technological capabilities and optimizes overall performance of physical security systems.	2026-01-01	2028-12-31	-1.00	2,114,320	12,626		1,400,526	-	861,120	110,568	397,504	-	41,334	7,954	-	-	5,434	2,520	-	-
302	2028	Application Currency-Security-O&M	Software(Intangible)	Security	This project will utilize both Capital and O&M funding to keep applications current for security and reliability. O&M is included in this project to complete expense activities associated with Capital upgrade. The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities. Maintaining the appropriate versions of applications through application currency upgrades to the Security digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes. Applications within Security are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.	2026-01-01	2028-12-31	-1.00	-	403,127		-	-	-	-	-	-	-	253,970	3,366	-	250,604	-	-	-
303	2028	Enhancements-Security-Capital	Software(Intangible)	Security	This initiative will use Capital funding to make enhancements to existing technology and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements in accordance with accounting rules. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Security lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. Included in the implementation are small changes and functionality improvements to existing IT software application investments for Security in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as cyber security related platforms, cyber security incident response, physical security, security awareness, risk management, privacy and compliance. Prior to implementing a Security enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for Security enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.	2026-01-01	2028-12-31	-1.00	868,042	82,802		574,991	272,812	35,988	112,241	106,522	-	47,428	52,165	2,570	-	45,057	4,528	-	11
304	2028	Enhancements-Security-O&M	Software(Intangible)	Security	This initiative will use O&M funding to make enhancements to existing technology and to address requests generated by changing business requirements. As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas. Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives. The value of software enhancements in Security lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment. 305	2028	Forward Web Proxy Services	Software(Intangible)	Security	This project will replace the Company's existing web proxy service platform with a new, modern, and more resilient platform designed to support both secure internet access and advanced data loss prevention capabilities. A web proxy service acts as a secure intermediary between users and the internet, evaluating, filtering, and forwarding traffic while enforcing company security policies. It acts as an intermediary that evaluates, modifies, and forwards the client's requests to the destination web server. This service offers many benefits for the Company such as advanced filtering. Advanced filtering in a forward web proxy service can filter out unwanted or harmful content from the internet, such as malware and phishing. This can protect the client's device and network from cyberattacks and improve their browsing experience. Without advanced filtering, the Company's cyber assets are at risk of attacks such as ransomware. The current web proxy platform, implemented in 2021, has caused ongoing operational issues related to web filtering, inconsistent policy enforcement, and intermittent connectivity. These challenges have occasionally limited employee and contractor access to critical internet and cloud-based resources, impacting productivity and increasing security risk. As the Company accelerates its transition to cloud and Software-as-a-Service (SaaS) platforms, maintaining consistent, secure, and reliable internet access is critical. The new platform will provide high availability, improved performance, and enhanced visibility into outbound traffic to ensure that business operations continue seamlessly, even during peak or failover conditions. The platform will also be designed to support flexible deployment models for remote, hybrid, and field-based workers–ensuring that security policies apply consistently regardless of location. In addition to improving reliability, this project introduces data loss prevention (DLP) capabilities as a core function of the web proxy service. These DLP capabilities will help the Company prevent unauthorized transmission of sensitive or regulated information–such as customer data, intellectual property, or operational system details–to unapproved external destinations. Through content inspection, contextual analysis, and integrated policy enforcement, the new solution will identify and block risky behaviors before data leaves the organization. DLP policies will also align with existing information governance frameworks and compliance obligations to provide both proactive protection and auditable oversight of data handling practices. This project creates value for the Company by (1) increasing service reliability for employees and contractors to internet and cloud-based resources; (2) utilize technology to enable the Company to handle all types of different workloads from varying geographic locations and is highly available; (3) using a mature and scalable web proxy service provider; (4) providing Zero Trust by continuously verifying every connection request; and (5) implementing data loss prevention capabilities on our core web proxy services. The project scope includes: (1) replacing the current web proxy services solution and implementing a new system; (2) replacing physical web proxy hardware; (3) potentially changing SAAS cloud vendors; (4) and implementing data loss prevention for web proxy services. The Security team did extensive research on alternative web proxy services solutions. Alternatives considered include: (1) continue to use and maintain the current web proxy services platform as it currently is implemented. This alternative was not chosen due to the previous operational issues with the platform that make it unreliable. The result of an unreliable system means that employees and contractors are unable to access business critical services such as email, Teams, ServiceNow, SharePoint Online,; (2) Route all internet traffic through the Company's corporate data center. This alternative wasn't chosen because the capabilities of firewalls aren't as effective in stopping sophisticated cyber-attacks as using a web proxy service; (3) Perform an evaluation between existing product with expanded feature sets, such as data loss prevention and alternative vendors that could replace current system with modern vendor platform for web proxy services. This option was chosen because it offers additional analysis with the potential to enhance existing, in place, products with features such as enhanced data loss prevention mechanisms, browser isolation (the ability to contain web pages so that the web page can't affect the client workstation) and sandboxing (a way to safely execute malicious applications without impacting the Company's network). As part of the evaluation the Company reassessed based on outside advisors and industry trend analysis, focusing on the ability to execute and the vendor's company strategy.	2027-01-15	2028-01-30	-1.00	4,478,032	492,770	ROM	-	-	-	-	-	-	-	5,730	-	-	5,730	-	-	-

2025 Union Contract Changes

Report Pulled: 4/15/2026 **Item ID: 13951**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - One Time **Work Type** Project

Alias HR - 2020 Union Changes, Human Resources - 2020 Union Changes, Human Resources -2025 Union Contract Changes, People & Culture - 2025 Union Contract Changes, 2025 Union Contract Changes

Description The Human Resources - 2025 Union Changes project will implement SAP and other system changes required as a result of three collective bargaining agreements which will be renegotiated and ratified.

Portfolio IT Services > Applications > Corporate Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement Collective bargaining agreements expire every five years for Operating Maintenance and Construction ("OM&C"), Virtual Contact Center ("VCC"), and Zeeland employee groups. For OM&C, the current agreement ends June 1, 2025. The VCC agreement ends August 1, 2025. The Zeeland agreement ends October 1, 2025. Collective bargaining agreements expire every five years for OM&C (Operating Maintenance and Construction), CCC (Customer Contact Center) and Zeeland employee groups. For OM&C, the current agreement ends June 1, 2025 . CCC agreement ends in August 1, 2025. Zeeland agreement ends October 1, 2025. Technology changes are required to reflect these new agreements. Otherwise, employees in these union groups may not be paid appropriately or get correct benefits.

Objectives Completion of this project will provide value to the Company and its customers through: (1) waste elimination by making changes in the software for any pay and benefit changes as required by the new agreements; (2) defect reduction by adding process automation to otherwise manual processes for tracking and recording work, premium, and absence time; and (3) improved employee engagement among the OM&C, CCC, and Zeeland union employees.

Scope The scope of this project encompasses making any system changes required to support the new working agreement for the OM&C, CCC, and Zeeland employees. Exact details will be finalized after the negotiation process is completed and contracts are approved.

Alternatives Three alternatives were considered for this project: (1) Make no system changes after the contracts are ratified. This option was not chosen because it exposes the Company to possible fines, disengaged employees, union grievances, significant manual processes leading to greater possibility of error, hiring additional staff to perform activities outlined in the agreements, and increased legal costs due to employee grievances. (2) Find other third-party software to support the changes required by the union agreements. This option was not chosen because it would require SAP integration along with additional software licensing and maintenance costs. (3) Make system changes to eliminate manual updating, comply with the working agreement language, support union employee engagement, and reduce grievances. Option (3) was chosen because it leverages current SAP technology, automates what would otherwise require manual processing, and is the least costly option.

DATES (phase end)

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Intangibles	Employee Engagement for the three union groups increases as measured annually in the areas of work/life balance and employee satisfaction.
Avoided Costs	If system changes are not made to automate the changes in the union agreements, additional employees/contractors will need to be hired to manually make the changes. The actual number of employees/contractors is not known at this time since union negotiations have not been finalized.
Intangibles	Union employees are engaged because they are being paid correctly per the union contract.
Avoided Costs	When union employees are paid correctly, the chance of grievances and issues with the NLRB (National Labor Relations Board) decreases. Grievances cost the company time and money, including legal costs.

Advanced Distribution Management System (ADMS) Softwar Report Pulled: 4/13/2026 Item ID: 14016

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Advanced Distribution Management System (ADMS) Enhancements, Advanced Distribution Management System (ADMS) Upgrade, Advanced Distribution Management System (ADMS) Software and Hardware Upgrade

Description The Advanced Distribution Management System Upgrade (ADMS) project will enhance operator experience, simplify maintenance, and provide more powerful and flexible system functionalities. These include advancements in Fault Location, Isolation, and Service Restoration (FLISR), waste elimination within Maestro, the introduction of independent line sensors, a redesign of temporary conditions, and will incorporate operational views of schematics. The project will also be replacing the outdated hardware.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The current ADMS lacks several critical features and improvements that are essential for enhancing operator experience, system maintenance, fault detection, and response capabilities. The existing system struggles with: (1) the current FLISR functionality does not adequately support complex protection requirements and manual switching steps, leading to inefficiencies and potential errors; (2) operators face challenges with passthrough edits and managing conflicts related to devices with tags or temporary conditions, resulting in frequent system reloads and inaccuracies in the as-operated system; (3) the temporary conditions subsystem is cumbersome to use, hindering efficient operations and the ability to support mobile substation and; (4) the current schematic tools do not provide operational views or the ability to save and share views, limiting situational awareness and usability for operators. These gaps result in operational inefficiencies, increased maintenance efforts, and reduced effectiveness in fault management and system operations. Addressing these issues is crucial for improving the overall functionality, usability, and maintenance of the Distribution Management System. (5) The Company runs the risk of increased failure if it does not regularly refresh the infrastructure.

Objectives The project will add value by: (1) improving the user interface and overall experience of the operators, (2) increasing the flexibility and configurability of FLISR, allowing for better support of complex protection requirements and improving solutions for manual switching steps, (3) enhancing the usability of schematics, providing operational views and the ability to save and share views for better situational awareness, (4) developing advanced switch order functionality to support more robust and efficient operations, (5) allowing ADMS to pull real time network model from GIS Utility Network and (6) improving stability and availability of business-critical applications by proactively replacing hardware before it fails.

Scope The scope of the project includes: (1) replacing ADMS hardware, (2) upgrading the existing ADMS platform to the latest packaged version, (3) adding in the feature improvements for Temporary Condition Redesign, Maestro Conflict Resolutions, Independent Line Sensors, FLISR and Schematics, (4) implementing new extraction tool, (5) testing the new functionality in various possible scenarios, and (6) communicating and training users on the new functionality.

Alternatives Alternatives considered include: (1) using outdated equipment and current version of ADMS. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact the Company's ability to respond effectively in storm situations. (2) Moving to a cloud version of ADMS. This option was not selected as the current public cloud platforms do not offer the high security environment required for the ADMS application. Consequently, the vendor platform was not built for cloud environments. (3) Replacing the hardware and upgrading ADMS. This option was selected to alleviate the above concerns.

DATES (phase end)

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	FINANCIAL REDUCTION - LND - Reduction in costs for training wire evaluators - TERRA KIRK
Intangibles	Improving the user interface and overall operator experience may lead to higher employee satisfaction and engagement. The project may enhance the company's reputation for reliability and efficiency, which can positively impact customer satisfaction and trust. IS THIS TRUE?
Risk Mitigation	The Company's research demonstrates that industry standards on refreshing hardware are generally three to five years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures, (2) avert customer frustration and employee downtime, (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities, (4) continue operating system support as older versions are retired by the manufacturer, and (5) ensure employees have the required software to perform their work.
Avoided Costs	The new system's improved fault detection and response capabilities could minimize downtime and associated costs. (less crews during storm with FLISR automation) DAWN WEEKS AC send email. Stephen Wilkerson
Intangibles	The project aims to enhance operator experience and system maintenance by improving the user interface and overall system functionality. This will lead to more efficient operations and quicker fault detection and response. The new features, such as advanced switch order functionality and improved schematics, will streamline operations. KRISTI BROWN will see if there is any financial gain here
Avoided Costs	The project will help avoid costs associated with system failures and prolonged outages. By proactively replacing hardware before it fails, the company will prevent costly emergency repairs. KRISHNA
Risk Mitigation	The project will mitigate several risks associated with the current system. By replacing outdated hardware and upgrading the software, the company will reduce the risk of hardware failure and equipment outages. The improved fault detection and response capabilities may also minimize the risk of prolonged outages.
Avoided Costs	The project will reduce the need for manual switching steps, thereby decreasing labor costs (moving employees to more value add work) and reducing human error. JEREMY to help
Intangibles	The upgrade to version 11 of the DMS software will address existing performance issues, such as database performance during storms, ensuring the system performs as expected under high usage.
Avoided Costs	wildfire mitigation STEPHANIE
Avoided Costs	Wire down prediction remote de-energization resulting in wiredown operations needed in critical storm situations. MATH SARAH W. and ALLISON TURNER - AC send e-mail for math

Application Control Enablement

Report Pulled: 4/13/2026 **Item ID: 14019**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Security - Application Control, Application Control Enablement

Description This project will implement a technology called Application Control. Application control, also known as application allow listing, is a security strategy that permits only approved applications to run on a system. This approach helps prevent unauthorized software and malware from executing, thereby enhancing the overall security of the network.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STANI

WORK OBJECTIVES

Problem Statement The rapid multiplication of unauthorized and potentially malicious applications in the current threat landscape poses a substantial risk to corporate data, network infrastructure, and overall business operations. The Company currently does not have an application control solution to mitigate this threat. Without a robust application control product, unauthorized applications can introduce vulnerabilities into the Company's network, leading to data breaches, malware infections, and other cyber threats. Failure to control application usage on the Company's network can result in non-compliance with industry regulations and standards, potentially leading to legal and financial repercussions. Unmanaged applications can cause system conflicts, performance degradation, and downtime, disrupting business continuity and productivity. Inadequate control over applications in the Company's environment increases the risk of data leakage and loss, compromising sensitive information and intellectual property. Uncontrolled application usage can; (1) lead to inefficient use of IT resources; (2) increase licensing costs for software that should not be installed or leveraged by a particular user or department; and (3) reduce efficiency due to deploying computers with more resources than are required because users are installing unneeded software.

Objectives This project creates value for the Company by (1) Protecting the Company's IT environment by preventing unauthorized and potentially harmful applications from being installed or executed; (2) Maintaining adherence to industry regulations and standards by controlling application usage. This helps avoid legal and financial penalties associated with non-compliance and ensures the Company meets its regulatory obligations.

Scope The project scope includes: (1) implementing a Software as a Service (SAAS) application control solution on all corporate computers and (2) implementing stringent restrictions using high enforcement mode on critical assets to prevent running any unauthorized software.

Alternatives Alternatives considered include; (1) removal of local administrator permissions for all users. This option was not chosen as there are legitimate business uses for users to have the ability to make modifications to their workstations.; (2) leverage already existing in place antivirus or endpoint detection and response software. This alternative was not selected as this does not prevent unauthorized installation or running of unauthorized software.; (3) implementing a privilege management tool. A privilege management tool is a security solution designed to control and monitor access to critical resources within an organization. It helps protect against cyber threats by ensuring that only authorized users have access to sensitive information and systems. This alternative was not chosen as it does not prevent a bad actor that has established privilege into the Company network to install malicious software.; and (4) implement an application control solution. This option was chosen because it meets all of the required use cases which reduces risk to corporate data, network infrastructure, and overall business operations.

Application Currency-Corporate-O&M

Report Pulled: 4/21/2026 **Item ID: 13357**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Application Currency-Corporate-O&M

Description The Corporate Services initiative will utilize O&M funding to keep applications current for security and reliability.

Portfolio IT Services > Applications > Corporate Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities.

Objectives Maintaining the appropriate versions of applications through application currency upgrades in the Corporate Services adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers.

Scope The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes.

Alternatives Applications within the Corporate Services are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.

Description The Electric and Gas Operations initiative will utilize O&M funding to keep applications current for security and reliability.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities.

Objectives Maintaining the appropriate versions of applications through application currency upgrades to the Electric and Gas Operations digital assets adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers.

Scope The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes.

Alternatives Applications within the Electric and Gas Operations are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Companys ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.

WORK OBJECTIVES

Problem Statement The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities.

Objectives Maintaining the appropriate versions of applications through application currency upgrades in the Operational Technology adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers. The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost.

Scope The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes.

Alternatives Applications within the Operational Technology are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.

WORK OBJECTIVES

Problem Statement

The Company manages a large number of applications in the technology landscape that require regular version upgrades to maintain vendor-supported software versions. Without vendor supported versions, the Company loses the ability to receive version updates and upgrades to address defects, patch security vulnerabilities, protect against cyberthreats, protect data, and add new features. Failure to upgrade these applications can have a direct negative impact on key customer and business processes, increase support costs, increase unplanned outages, and increase cyber security vulnerabilities.

Objectives

Maintaining the appropriate versions of applications through application currency upgrades in the Operational Technology adds value by: (1) enabling the Company to maintain vendor support; (2) remediating vendor security vulnerabilities and enhancing security protections; (3) addressing vendor defects that impair stability and functionality, leading to fewer incidents due to outdated software; and (4) addressing version interdependencies and compatibility between systems. This is essential to delivering safe, reliable, and affordable service to the Company's customers.

Scope

The application upgrades in scope are regularly prioritized based on considerations that include application criticality; number of versions behind the current available version; security and operational risk; operational impacts of performing the upgrade; ability to defer; and cost. The scope of upgrading these applications encompasses: (1) upgrading the application software and respective database, (2) assessing any new functionality for value to the Company, (3) making necessary configuration changes, (4) testing the upgraded software, and (5) updating documentation related to the integration changes.

Alternatives

Applications within the Operational Technology are routinely evaluated to determine if and what upgrade efforts are necessary to maintain an appropriate level of currency, as well as the priority of those efforts. During that review, the alternative of delaying the timing of the individual upgrades is considered based on: (1) maintaining an optimal balance between keeping the application current and risking failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) preventing employees from performing their daily tasks. This project makes ongoing upgrades and support for these applications possible and fortifies the Company's ability to keep the large number of applications in the technology landscape secure and operational through upgrades. Without these upgrades, the Company will fall further behind in maintaining vendor-supported software versions, increasing the cost and complexity of the upgrade in the future.

ARP-Collaboration

Report Pulled: 4/13/2026 **Item ID: 8213**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP - Collaboration Asset Refresh,ARP — Collaboration, ARP-Collaboration

Description This project will replace the Company's obsolete or out-of date audio, visual, telephony and other communication collaborative tools and equipment.

Portfolio IT Services > Infrastructure > Network Services > Communication Network > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & SE

WORK OBJECTIVES

Problem Statement When collaboration assets used to support customer interactions and business operations are obsolete or out-of-date, they are more difficult to keep current with security updates. The Company also risks asset failure if it does not adhere to a regular refresh cycle.

Objectives This project creates value by: (1) ensuring the stability and reliability of the Company's audio, visual, telephony, and other communications systems; and (2) migrating to new collaboration assets.

Scope The project scope consists of: (1) replacing aging collaboration assets; and (2) installing new collaboration assets to meet evolving business requirements.

Alternatives The alternatives considered include: (1) continuing to operate collaboration assets beyond a five-year refresh cycle, or (2) refreshing collaboration assets based on a five-year refresh cycle while evaluating the health of the asset and evolving business requirements. The alternative to operate the collaboration assets beyond a five-year refresh cycle was not selected due to the risk of asset failures would cause stability and reliability issues for employees supporting our customers, as vendors do not provide extended support after five years. The Company chose to refresh the collaboration assets based on a five-year refresh cycle and evaluate the health of the asset and evolving business requirements to reduce the risk of impacting the productivity of employees supporting our customers.

WORK OBJECTIVES

Problem Statement When enterprise software or cyber security infrastructure used to support and enhance customer interactions is obsolete, these assets are more expensive to support and can be more difficult to keep current with security updates.

Objectives This project will create value by maintaining the currency of the cyber security infrastructure for core enterprise software. These are used to ensure the stability of technology for business operations.

Scope The scope of this project consists of: (1) annually replacing a subset of cyber security firewalls and servers in keeping with a three-to-five-year refresh cycle; and (2) performing application upgrades.

Alternatives The alternatives considered include: (1) upgrade or replace only those assets identified in the plan. This alternative was not chosen because maintaining a continued refresh cycle for cyber security assets is necessary to avoid security risks, system vulnerabilities, and out-of-warrant repair costs; (2) upgrade or replace a portion of the assets identified in the plan. This alternative was not chosen due to the inherent security risk of not replacing assets according to standard refresh cycles, which increases system vulnerabilities and out-of-warranty repair costs; and (3) upgrade or replace assets based on a three-to-five-year refresh cycle. This alternative was chosen as it avoids security risk, system vulnerabilities, and out-of-warranty repair costs.

ARP-Field Device Asset Management (FDAM)

Report Pulled: 4/13/2026 **Item ID:** 8241

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP – Field Device Asset Management (FDAM),ARP — Field Device Asset Management (FDAM), ARP-Field Device Asset Management (FDAM)

Description This project will replace field devices according to a four-year refresh cycle that is based on industry standards, hardware failures, security patches, and software compatibility.

Portfolio IT Services > Infrastructure > End User Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & S

WORK OBJECTIVES

Problem Statement When Field Device Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with Security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular four-year refresh cycle.

Objectives This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing field devices before they fail; and (2) allowing field workers to complete their job tasks.

Scope The project scope consists of replacing field device assets according to the four-year refresh cycle.

Alternatives Alternatives considered include: (1) using outdated equipment. This alternative was not selected because there would be an increased risk of hardware failure and equipment outages that could impact meter readers' ability to complete job tasks. It would also complicate the Company's efforts to meet the MPSC's meter reading factor and consecutive estimated targets, and it could cause applications to run poorly or stop functioning; (2) The second alternative considered was to replace the hardware. The Company selected this option to alleviate the above concerns.

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP - Infoblox Refresh,ARP — Infoblox Refresh, ARP-Infoblox Refresh

Description This project will replace the three legacy core components, Domain Name System ("DNS"), Dynamic Host Configuration Protocol ("DHCP"), and Internet Protocol Address Management ("IPAM") also referred to as DDI ("DNS, DHCP, IPAM") environment with a modern, vendor supported system. Infoblox is the DDI solution that the Company uses to enable seamless network communications across critical systems.

Portfolio IT Services > Infrastructure > End User Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS &

WORK OBJECTIVES

Problem Statement When Infoblox Assets that are used to support customer interactions and ensure the stability of technology for business operations are obsolete or out-of-date, they are more expensive to support and can be more difficult to keep current with Security updates. Consumers Energy also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle.

Objectives The value of this program includes: (1) enabling the Company to efficiently manage and control their networks; and (2) providing Domain Name System ("DNS"), Dynamic Host Configuration Protocol ("DHCP"), and Internet Protocol Address Management ("IPAM").

Scope The scope of this project includes the replacement of DNS, DHCP and IPAM assets on a 5-7 years refresh cycle.

Alternatives The alternative considered was to continue operating on existing Infoblox equipment past the vendor's end-of-support date. This alternative was not selected because it carries risks with not having vendor support, software bug fixes, security updates, and other software fixes. The alternative to replace the existing Infoblox equipment with the latest hardware and software provided by the vendor was selected to avoid these risks and continue a regular refresh cycle.

OTHER VALUE

Type	Description
Intangibles	Every business-critical application is positively impacted by this refresh. Everything that runs on the network relies on this system.
Risk Mitigation	The company' research demonstrates that industry standards on refreshing hardware are generally three to five years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures, (2) avert customer frustration and employee downtime, (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities, (4) continue operating system support as older versions are retired by the manufacturer, and (5) ensure employees have the required software to perform their work.

ARP-Local Area Network

Report Pulled: 4/14/2026 **Item ID: 6789**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias LAN Refresh,Local Area Network Refresh, ARP - Local Area Network, ARP-Local Area Network

Description This project will upgrade the Company's entire LAN and a significant portion of the Wireless Local Area Network (WLAN).

Portfolio IT Services > Infrastructure > Network Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & S

WORK OBJECTIVES

Problem Statement

At some Company locations, LAN equipment has been in service since 2011. If the LAN/WLAN hardware and software is not routinely refreshed, the Company will lose the manufacturer support needed for equipment bug fixes, security vulnerability patches, and enhancements. In addition, aging equipment cannot accommodate the increasing demand for wireless devices necessary to perform day-to-day operations that rely on wireless-enabled devices, such as rugged field devices, cell phones, barcode scanners, tablets, and other mobile devices. As equipment ages, it is at risk of higher failure rates, which increases the risk of unplanned outages. In the event of unplanned outages, business areas would not be able to access services on the corporate network including email, SAP, internet, and phones.

Objectives

The project will create value for the Company and its customers by: (1) increasing network reliability; (2) adding new functionality; (3) improving network performance; (4) ensuring equipment is vendor supported, thereby ensuring support for bug fixes, security vulnerability patching, and enhanced features; (5) providing consistent wireless coverage across Company locations; (6) increasing user productivity through a higher performing wireless network, which increases the productivity and efficiency of office and field employees serving customers; and (7) improving support for wireless Internet Protocol (IP) phones, Internet of Things(IoT) and field devices.

Scope

The project scope includes: (1) refreshing the LAN equipment and software across all Company sites; (2) identifying the required features for the new equipment; (3) implementing the new equipment according to industry best practices; (4) replacing wireless network with upgraded infrastructure and verifying wireless coverage is as expected; and (5) collecting wireless survey data for all Company locations in order to design improved wireless network coverage.

Alternatives

The alternative considered was to continue operating on the existing platform past the vendors end-of-support date. The vendor support period ended in May of 2021, and paying for extended support is not an option offered by the vendor. The risk inherent in not refreshing the platform is a lack of vendor support resulting in an absence of software bug fixes, security updates, and break fixes. The Company chose to replace the existing equipment with the latest hardware and software available, following a five year refresh cycle.

ARP-Operational Technology Support Common

Report Pulled: 4/13/2026 **Item ID:** 14032

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP - Critical Infrastructure Support, 2014 CIS Asset Refresh,ARP — Operational Technology Support, ARP — Operational Technology Support Electric, ARP-Operational Technology Support Electric, ARP-Operational Technology Support Common

Description The Asset Refresh Program (ARP)-Operational Technology (OT) Support Common project will replace dated and obsolete servers shared by Electric and Gas on a rotating five-year refresh schedule.

Portfolio IT Services > Infrastructure > Data Center - Enterprise Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle.

Objectives This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure.

Scope The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements.

Alternatives The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure.

B/C Ratio (Overall) -1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
Technology Obsolescence	High	High	The risks associated with not completing the program are both disruptive and adverse performance impacts on business operations that Operational Technology supports, which includes the Merchant Operations Center, and System Control. The probability of these risks occurring increases as the age of the asset increases. Specifically: (1) There will be no security updates without the replacement, which increases our vulnerability. (2) Monitors to maintain the equipment will not be available. (3) Cyber security vulnerabilities will increase with aged systems, which make the systems more prone to attack and compromise. (4) This ensures compliance with the North American Electric Reliability Corporation Critical Infrastructure Protection Plan (NERC/CIP). NERC can fine Consumers Energy $1.2 million per incident per day for violating NERC.

OTHER VALUE

Type	Description
Risk Mitigation	The Company's research demonstrates that industry standards on refreshing hardware are generally three to five years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures, (2) avert customer frustration and employee downtime, (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities, (4) continue operating system support as older versions are retired by the manufacturer, and (5) ensure employees have the required software to perform their work.
Intangibles	This reduces the risk of potential cyber security incidents because upgraded systems have been built and calibrated for newer types of cyber-attacks. If the Operational Technology systems are not upgraded, it will affect the ability for Consumers Energy to meet the regulatory and compliance requirements needed for successful customer-facing operations.

ARP-Operational Technology Support Electric

Report Pulled: 4/14/2026 **Item ID:** 11617

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP - Critical Infrastructure Support, 2014 CIS Asset Refresh,ARP — Operational Technology Support, ARP — Operational Technology Support Electric, ARP-Operational Technology Support Electric

Description The Asset Refresh Program (ARP)-Operational Technology (OT) Support Electric project will replace dated and obsolete servers on a rotating five-year refresh schedule.

Portfolio IT Services > Infrastructure > Data Center - Enterprise Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVIC

WORK OBJECTIVES

Problem Statement When Operational Technology Assets that are used to ensure the safety and reliability of technology that supports critical electric operations are obsolete or out-of-date, they can be more difficult to keep current with Security updates and run the risk of failure if the Company does not adhere to a regular refresh cycle.

Objectives This project creates value by maintaining the currency of the Company's IT infrastructure and the core enterprise software that are utilized to support the operation of the Company's critical electric infrastructure.

Scope The program scope consists of: (1) replacement of computer hardware under the program; and (2) installing additional new compute capacity to account for expanding business requirements.

Alternatives The alternatives considered include: (1) continue to operate hardware beyond a five-year refresh cycle or (2) refresh hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs. The alternative to operate hardware beyond a five-year refresh cycle was not selected due to the risk that these hardware component failures would cause system reliability and safety issues for customers, as vendors do not provide extended support after five years. The Company chose the alternative to refresh this hardware based on a five-year refresh cycle along with evaluating the health of the asset and evolving business needs to reduce the risk of impacting critical infrastructure that supports systems such as Electric SCADA.

ARP-Physical Security

Report Pulled: 4/14/2026 **Item ID: 8176**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias Physical Security,Physical Security Asset Refresh, ARP-Physical Security

Description The ARP-Physical Security, formerly known as Physical Security Asset Refresh, will enhance or replace physical security assets to provide improved visibility and incident resolution related to security concerns.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-SECURITY PROGRAM MGM

WORK OBJECTIVES

Problem Statement The Company has several thousand physical security asset devices currently in use including security cameras, motion detectors, intrusion detection systems, and card access systems. Current limitations include the lack of integrated solutions for centralized management, situational awareness, real time monitoring alerts, compliance with regulations and guidelines, and faster responses to emergencies and incidents. This could result in an increase of potential security vulnerabilities, associated penalties, and reputational damage.

Objectives The value provided by completing the project is to: (1) maintain compliance with State and Federal Regulations; (2) reduce redundancies with less of a need for multiple cameras and reduce gaps in functionality; and (3) optimize overall system performance.

Scope Included in the project is the enhancement or replacement of assets including: (1) advanced door systems at Company buildings; (2) advanced analytics on security cameras for monitoring and real time alerting capabilities; and (3) gate and lock systems, which include security cameras, motion detectors, intrusion detection systems, and card access systems.

Alternatives Alternatives considered include: (1) not refreshing physical security assets, and (2) defer a portion of the refresh of physical security assets not meeting the industry standard of 5 to 7 years for indoor cameras and 3 to 5 years for outdoor cameras. Alternatives 1 and 2 were not selected due to the risk of security concerns, utilizing equipment that is at end of life and no longer supported, and the risk of a lack of inability to meet regulatory requirements (FERC, NERC, TSA and NRC). The alternative selected maintains compliance, reduces redundancies and gaps in functionality, provides up to date support for the assets and current technological capabilities and optimizes overall performance of physical security systems.

B/C Ratio (Overall) -1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
Theft/Accidental Disclosure	Low	Medium	Having cameras and other physical security assets can help uncover activities leading to potential thefts and or accidents.

OTHER VALUE

Type	Description
Risk Mitigation	Lack of life cycle replacement wouldn't allow for integrated solutions for centralized management, situational awareness, real time monitoring, compliance with regulations and guidelines, and faster, more effective/consistent response to emergencies and incidents which could result in the increase of potential security vulnerabilities, associated penalties and reputation damage.
Intangibles	Security Visibility - Having updated camera/Door systems helps the security command center have been visibility into often un-monitored areas.

ARP-Printer Asset Management (PAM)

Report Pulled: 4/13/2026 **Item ID: 6671**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias Printer Asset Management,ARP — Printer Asset Management (PAM), ARP-Printer Asset Management (PAM)

Description This project will replace and install select printers, plotters, and multi-function printing devices based on printer replacement assessments and a five-year refresh cycle. Printer service and usage history is evaluated and a determination is made if a printer can be repurposed instead of ordering a new one.

Portfolio IT Services > Infrastructure > End User Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & S

WORK OBJECTIVES

Problem Statement When Printer Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with firmware and security updates. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle.

Objectives This project creates value for the Company by: (1) improving the dependability of these printer devices for employees; (2) averting increased costs due to hardware repairs; and (3) ensuring compatibility with enterprise print applications.

Scope The project scope consists of the annual replacement of printer assets according to a five-year refresh cycle. This does not mean that all printers are replaced after five years – merely that printers are assessed on a five-year cycle for possible replacement.

Alternatives The alternatives considered for the project included looking at refresh cycles from three to seven years as well as running the assets to failure. The selection of a five-year cycle was deemed to be the best solution since anything less than five years would increase the likelihood of unneeded expense for replacement of assets that were still in good operating condition. Anything greater than five years would require the printers to be assessed monthly to ensure they are not run to failure, resulting in additional expenses for maintenance of the equipment and downtime, negatively affecting employee productivity. The Company assesses the printer fleet based on years of active service, service history, printer usage data, and the number of users within a facility. Based on these factors, the Company either decommissions, repurposes, leaves in place, or refreshes the printers.

Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures, (2) avert customer frustration and employee downtime, (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities, (4) continue operating system support as older versions are retired by the manufacturer, and (5) ensure employees have the required software to perform their work.

ARP-Radio

Report Pulled: 4/13/2026 **Item ID: 8234**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP - Wireless Network,ARP — Wireless Network, ARP — Radio, ARP-Radio

Description This project will refresh hardware to include: 800Mhz Radios and infrastructure, cellular modems, plant radios and systems, cellular amplification devices, vehicle consoles in service trucks, other communications equipment, and associated test equipment. This equipment supports mission critical voice and data communications for plant and field service personnel and dispatch personnel. 800MHz radios are upgraded on a 10-year lifecycle basis. Plant radio systems are upgraded on a scheduled 10-year lifecycle basis. Cellular modems are refreshed on a five-year life cycle basis. Amplification systems are refreshed on a 10-year life cycle.

Portfolio IT Services > Infrastructure > Network Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & S

WORK OBJECTIVES

Problem Statement 800MHz, mobile, and portable radios, Plant radios systems, and Cellular modems support core business functions, life safety communications, and rapid response for restoration of customers service and critical infrastructure. Company radio and cellular systems must be refreshed on a scheduled basis or risk exceeding life expectancy and failing or becoming obsolete. The refresh of this equipment in a proactive manner is critical to providing service to customers. If these units are not refreshed, the increased risk of unit failure would result in interruptions to timely and concise communications to field personnel to resolve gas leaks, and downed electric lines, or service turn-on requests, which risks life safety.

Objectives This project creates value for customers and the Company by: (1) upholding public safety; (2) ensuring timely responses and repairs to emergent gas leaks, wire downs, and electric outages; (3) ensuring real-time communications between Company dispatch locations and crews in the field; (4) ensuring the safety of personnel working in higher risk workspaces by replacing equipment with units that contain intrinsically safe batteries; (5) supporting continuous improvement and training by replacing equipment that is capable of capturing audio recordings; and (6) remaining in compliance with MPSC regulatory requirements by maintaining critical radio infrastructure.

Scope The project scope consists of: (1) scheduled replacement of radios, modems, consoles; and (2) installing additional radios, modems, and console assets to satisfy growth requirements; and (3) scheduled replacement of out of date cellular and radio boosters and systems.

Alternatives The alternatives considered include: (1) Replacing the existing units with new units from other radio and modem manufacturers; (2) Purchasing new radio subscriber units from existing manufacturers. Option 2 was not selected because the Company now uses a standards-based radio system allowing for multiple radio manufacturer options. Option 1 was selected to allow for a competitive bidding process that will provide the most cost-effective radio that will meet the needs of users.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Cost avoidance of future Modem purchases. Transitioning cellular services from modems to devices avoids future yearly modem refresh costs of approximately $420,000.
Risk Mitigation	The company' research demonstrates that industry standards on refreshing radio hardware is generally seven to ten years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures; (2) mitigate customer frustration and employee downtime; (3) maintain high standards for customer and employee safety; and (4) maintain technology currency for employees to perform their work.
Intangibles	The radio system funded through the ARP — Radio project supports core business functions such as storm restoration, emergency gas leak repair, and day-to-day customer support. By reinvesting in the system Consumers Energy extends the effectiveness of the system.
Risk Mitigation	The risk inherent in not replacing these items is the extended support cost, which amounts to $225,000 annually. Moreover, additional service hour, parts replacement, material, and setup costs would be incurred for outfitting of vehicles.

ARP-Server and Storage

Report Pulled: 4/13/2026 **Item ID: 8755**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP - Server and Storage,ARP — Server and Storage, ARP-Server and Storage

Description This project will replace or augment server and storage infrastructure for the Company.

Portfolio IT Services > Infrastructure > Data Center - Storage > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & SE

WORK OBJECTIVES

Problem Statement

When Server and Storage Hardware Assets used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and can be more challenging to keep current with Security updates. The Company also runs the risk of failure of these assets impacting customer interactions and business operations if it does not adhere to a regular five to seven-year refresh cycle.

Objectives

This project creates value for the Company through: (1) improved stability and availability of business-critical applications by proactively replacing server and storage hardware assets prior to the likelihood of increasing hardware failures; and (2) ensuring that adequate resources are available to support application demands after five to seven years of actual use.

Scope

The scope of this program encompasses: (1) replacement of server and storage hardware assets; and (2) installation of additional new computers and storage capacity to account for evolving business requirements.

Alternatives

The alternatives considered were to (1) purchase extended maintenance; (2) move some of these assets to the cloud with the Digital -Hybrid Cloud and Data Center Migration project or: (3) replace the assets on the current cycle. The option to purchase extended maintenance was not selected because full support would not be offered after seven years, and maintenance costs would increase. The preferred option is to move some of these assets to the cloud in the Digital Hybrid Cloud and Data Center Migration project while refreshing the remainder using the five- to seven-year cycle as it is the most cost-effective option.

B/C Ratio (Overall)	-1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
Technology Obsolescence	High	High	Consumers Energy's vendor, Nutanix only offers full support for seven years after purchase of a solution. After the end of support no more security patches are available and if an issue is encountered the manufacturer will not assist in resolving.

OTHER VALUE

Type	Description
Avoided Costs	If all the existing hardware environment went beyond seven years, O&M would increase would by $202,000. Each 1/7th of the environment not upgraded would equate to an increase in O&M by $30,000.
Avoided Costs	Maintenance costs would increase by about 15% after seven years over current amounts in the ITPM.
Intangibles	Research firm IDC Economics reports that without proactive replacement server performance drops by 39%, annual support costs increase 148%, application management costs increase 40%, and unplanned downtime hours increase by 62%.
Risk Mitigation	The Company's research demonstrates that industry standards on refreshing hardware are generally five to seven years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures; (2) avert customer frustration and employee downtime; (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities; (4) continue operating system support as older versions are retired by the manufacturer; and (5) ensure employees have the required software to perform their work.

ARP-Workstation Asset Management (WAM)

Report Pulled: 4/13/2026 **Item ID: 8242**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ARP - Workstation Asset Management (WAM),ARP — Workstation Asset Management (WAM), ARP-Workstation Asset Management (WAM)

Description This project will replace and install new desktops, laptops, and tablets on a four-year refresh cycle based on industry standards, hardware failures, security patches, and software compatibility. Monitors will be replaced every eight years based on Company data related to historical failure rates.

Portfolio IT Services > Infrastructure > End User Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & S

WORK OBJECTIVES

Problem Statement When Workstation Assets that are used to support customer interactions and business operations are obsolete or out-of-date, they are more expensive to support and keep current with security updates as equipment becomes obsolete. The Company also runs the risk of failure of these assets if it does not adhere to a regular refresh cycle.

Objectives This project creates value for the Company by: (1) improving stability and availability of business-critical applications by proactively replacing workstations prior to increasing hardware failures; and (2) allowing business partners to complete their job tasks.

Scope The project scope consists of: (1) replacing workstation assets; and (2) installing new units for new resources.

Alternatives The alternatives considered were to purchase extended maintenance, move some of these assets to the cloud with the Digital -Hybrid Cloud and Data Center Migration project, or to replace the assets on the current cycle. The option to purchase extended maintenance was not selected because full support would not be offered after seven years, and maintenance costs would increase. The preferred option is to move some of these assets to the cloud in the Digital Hybrid Cloud and Data Center Migration project while refreshing the remainder using the five- to seven year cycle as it is the most cost-effective option.

Technology Obsolescence	High	High	There is a high risk of hardware failure, the inability to keep current with security updates, and software compatibility issues without the four-year refresh.

OTHER VALUE

Type	Description
Avoided Costs	Future year costs would increase if equipment is not refreshed in planned year.
Risk Mitigation	The company' research demonstrates that industry standards on refreshing hardware are generally eight years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures, (2) avert customer frustration and employee downtime, (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities, (4) continue operating system support as older versions are retired by the manufacturer, and (5) ensure employees have the required software to perform their work.
Technology Capability	The WAM program enables and supports all administrative, engineering, operational, and corporate process and activities.

Asset Accounting Tax Upgrade

Report Pulled: 4/15/2026 **Item ID:** 13966

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Asset Accounting Upgrade, Asset Accounting Upgrade 2026, Asset Accounting Upgrade 2025-2026, Asset Accounting Upgrade 2026, Asset Accounting Upgrade 2025-2027, Asset Accounting Tax Upgrade

Description The project will upgrade the Company's current on-premise accounting asset management tax software to the SaaS version as required by the vendor ensuring continued support of a critical financial application and providing new functionality.

Portfolio IT Services > Applications > Corporate Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement In 2025, standard vendor support ends for the current on-premise PowerTax software. Losing vendor support creates security and stability risk that can result in performance issues. When the application is out of the normal support with the vendor, the Company no longer receives security patches, support for defect resolution or bug fixes, and cannot enhance the application. To ensure compliance with regulated and financial accounting in the tax fixed asset sub-ledger, it is necessary to perform an upgrade and maintain vendor support. In addition, the upgrade provides additional functionality to increase the frequency of financial reporting and improve visibility.

Objectives This project creates value for the Company by ensuring compliance with regulated and financial accounting within the tax fixed asset sub-ledger. In addition, the project adds value by: (1) moving to a SaaS solution in order stay supported; and (2) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support.

Scope The project scope includes: (1) evaluating current vendor/product solutions with market leaders; and (2) upgrading the vendor software from the current version to the newer SaaS version; or replacing it.

Alternatives Alternatives considered include: (1) evaluating SAP options for leasing, asset, and tax management capabilities. While this option would eliminate the need for an interface between SAP and PowerPlan, it would be more complex, cost more, and not provide all the required features such as centralized tax error processing. (2) evaluating other software options. This option may not provide appropriate regulatory reporting and other needed improvements and introduces several complexities and costs: Integration Challenges as PowerPlan modules are designed to work seamlessly together and data synch, mapping, and real-time updates may not be as robust as with native modules; Loss of Automation and Efficiency as there may be manual data transfers, duplicate entries and reduced automation increasing labor costs and risk of mistakes; Higher IT and Support Costs as maintaining two asset accounting systems means higher IT overhead with upgrades, troubleshooting, and user training; Reduced Data Integrity and Security as splitting tax data between systems can create gaps in data integrity, audit trails, and security controls; and Limited Vendor Accountability as when issues arise, vendors may point to integration boundaries making troubleshooting and issue resolution slower and more complicated. (3) moving entire PowerPlan suite, which includes PowerTax, to their cloud option. This option would be expensive from a licensing and integration build perspective, has an unclear timeline, and would remove the opportunity for direct database control. (4) waiting until a future upgrade cycle. This option introduces technical risk and potential financial processing risk. (5) upgrading to a newer version of the current solution. This is the preferred option as it will provide more frequent software upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.

Scope The project scope includes: (1) evaluating current vendor/product solution with market leaders; and (2) upgrading the vendor software from the current version to a newer version.

Alternatives Alternatives considered include: (1) Evaluated SAP options for leasing, asset, and tax management capabilities. While this option would eliminate the need for an interface between SAP and PowerPlan, it would be more complex, cost more, and not provide all the required features. (2) Evaluated other software options. This option would introduce new ongoing support costs and integrations and may not provide regulatory reporting and other needed improvements; (3) Address cloud possibilities. This option is expensive and has an unclear timeline roadmap; (4) wait until a future upgrade cycle. This option introduces technical risk; (5) Upgrading to a newer version of current solution. This is the preferred option as it will provide more frequent software upgrades, provide weekly allocation functionality, and provide new features in job scheduling, regulatory reporting for Cost of Service, reporting, and centralized error processing.

Risk Mitigation	Performing this upgrade ensures continued vendor support of a critical application.
Intangibles	The Company improves its financial visibility and ability to react to changing information as a result of running the allocation process on a more frequent basis.
Risk Mitigation	Upgrading the software ensures continued compliance with regulated and financial accounting within the fixed asset sub-ledger.

AxWay Secure Transport 2024 Upgrade

Report Pulled: 4/20/2026 **Item ID: 11748**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , AxWay Secure Transport Upgrade, AxWay Secure Transport 2024 Upgrade, AxWay Secure Transport 2025 Upgrade, AxWay Secure Transport 2024 Upgrade

Description Axway SecureTransport is the Company's multi-protocol Managed File Transfer ("MFT") gateway for securing, managing, and tracking data file flow for business partners and external vendors. Files impacting billing, HR, Supply Chain, Finance, Alternate Energy Programs, Front Office, Back Office, Device Management, Outage Management and Business Reporting functions utilize these services. This project will update the platform to the current software version, enabling cost saving operational enhancements while retaining data security and platform supportability.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement As Axway Secure Transport is the public-facing managed file transfer gateway, maintaining platform version integrity is critical to ensuring it remains secure and supportable in the event of a cyber attack, outage or other critical incident. A prolonged outage or incident, for any reason, compromises the ability of the Company to perform mission-critical business transactions in finance, operations and direct customer support. Upgrading this application also gives the Company the opportunity to properly scale SecureTransport and take advantage of the growing demand for additional, cost-savings features of the tool, such as managing internal Electronic Data Interchange transactions.

Objectives The value this project brings Consumers Energy and customers includes: (1) Addressing known problems and limitations of the current software and hardware platforms. (2) Ensuring continued secure, scalable, and critical data transmission services running through Axway continue functioning. (3) Creating the capacity to methodically merge/streamline internal and external data file transfer services to eliminate waste. (4) Merging/streamlining the company data file transfer services reducing cyber-attack vectors and creates a more easily maintained and monitored security model.

Scope The scope of this project includes (1) Upgrading the application and database to the current released and supported versions. (2) Refreshing the underlying application infrastructure by upgrading to the latest operating system and hardware platforms. (3) Enable and test expanded Electronic Data Interchange (EDI) functionality.

Alternatives Alternatives considered include: (1) deferring the upgrade. This alternative was not selected because the Axway SecureTransport platform handles critical Company financial, HR and operational transactions--the risk associated with problems stemming from an outdated and unsupported version is too high. Nor would the waste elimination benefits of using the upgraded Axway platform to start consolidating EDI for CE be realized. (2) Replacing the platform. The estimated project costs and timetable for replacing the business functions currently performed by the existing Axway SecureTransport platform would be extensive, and operationally, it is not well suited for a cloud or hybrid cloud solution. In addition to significant platform, application, implementation and functional testing costs, replacing it would require extensive coordination and testing with all of the internal and external account holders, taking upwards of one calendar year. (3) Upgrading the platform. This provides the Company the most cost-effective alternative, balancing costs, known risks, and even growing business capacity and productivity.

BizTalk Services Migration and Retirement

Report Pulled: 4/16/2026 **Item ID: 11762**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias BizTalk Upgrade, BizTalk 2025 Upgrade, BizTalk 2026 Upgrade, BizTalk 2025 Upgrade, BizTalk 2025 Migration, BizTalk 2026 Migration, BizTalk 2026 Upgrade, BizTalk 2025 Migration, BizTalk Services Migration and Retirement

Description The Microsoft BizTalk application transfers data from one location to another with internal and external software systems and assists with securely communicating sensitive financial data. The project will migrate the BizTalk application services to other existing applications resulting in the retirement of the Biztalk application

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement Microsoft announcing end of life for this application a replacement is needed to avoid business impact. The current version of Biztalk running at Consumers Energy is already out of mainstream support. if major issues occur within the application, it could disrupt critical business processes. This includes financial concerns such as payroll, account receivable, and other essential operations. Ensuring continuity is vital.

Objectives This project creates and maintains value for the Company and its customers by migrating the Biztalk services to supported applications already present in the Consumers Energy environment that do have not end of life concerns and can provide the same functionality Biztalk was providing to meet business requirements.

Scope This project creates and maintains value for the Company and its customers by: (1) Migrating all current processes from the current application to replacement products. The secure file transport processes will be migrating to the existing Axway Secure Transport platform. The Electronic Data Interchange processes will be migrated to the existing SAP platform. (2) Ensuring current and future compliance with Information Security critical and sensitive data initiatives, such as patching, data encryption, and authentication requirements. (3) Guarantees 7x24x365 vendor support is available to the Company during significant outages by remaining on a version supported by the vendor.

Alternatives Alternatives considered included: (1) Using Azure native services to recreate all of the processes and services Biztalk provided. This was cost prohibitive due to time and effort this would take. (2) Purchasing a replacement product. Not seen as optimal as existing applications are already implemented within Consumers Energy that provide the same capability. (3) Leverage existing applications within the Consumers Energy application portfolio. This option was selected as lowest cost option and also to meet application rationalization goals to eliminate applications that are providing duplicate functionality.

Business Capability Mapping SaaS Tool

Report Pulled: 4/20/2026 **Item ID:** 14014

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Business Capability Mapping SaaS Tool

Description The Business Capability Mapping (BCM) SaaS Tool is a cloud based software solution which will visualize the Company's capabilities related to our metrics, data maturity, supporting technologies, financial allocations, and other view points. The tool will automate analysis and report generation to quickly provide information while supporting other efforts directly supporting technology investment planning and management.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-STRATEGY & GOVERNANCE

WORK OBJECTIVES

Problem Statement The current lack of a centralized tool for tracking enterprise-wide data, which is manually managed via Excel, poses significant challenges. This manual process limits data sharing and the distribution of business capability roadmaps, complicating investment planning and alignment. The absence of a centralized tool also hinders effective communication regarding prioritization and application stack updates, preventing a comprehensive view of impacted areas. Consequently, the enterprise architecture practice struggles to accurately plan and forecast investment opportunities, leading to misallocation of funds, labor, and potential delays in enabling strategic opportunities. The solution will include implementing a centralized tool to streamline data sharing, enhance communication, and support accurate planning and forecasting.

Objectives The company will see value through: (1) Implementing processes and supporting technical components to enable automated scoring of capabilities, including scores, measures, metrics, Key Performance Indicators (KPIs), and Objectives and Key Results (OKRs) for consistent and accurate analysis; (2) Developing a consolidated view of critical capabilities, applications, and infrastructure, ranked based on their efficiency and effectiveness in meeting company objectives; (3) Integrating key technology features supporting Application Rationalization, Enterprise Resource Planning (ERP) system and major platform upgrades, Business Capability Modeling, Application Stack Ownership, Enterprise Architecture Artifact Tool Repository, centralized repository and role based access; (4) Generate a consistent framework to support the prioritization of investments based on their impact on key capabilities across the enterprise; (5) Implement a shared platform to integrate architecture activities versus siloed practices; and (6) Consolidate empirical data used for investments and technical health to ensure accuracy and consistency in evaluations.

Scope The project scope includes: (1) Implement a role-based access SaaS product and integrate with ServiceNow and other internal systems; (2) Configure the SaaS product with identified tools for data gathering on capabilities and their performance; (3) Develop processes and automation to gather data on capabilities, including applications, technical infrastructure, and metrics; (4) Establish a framework for prioritizing investments; (5) Create role-based dashboards and reports to visualize the output of data analysis; (6) Develop automated communications for key business decisions, investment plans, data collection, and reports; (7) Enable self-reporting on data within the tool; (8) Connect supporting documentation to the capabilities; and (9) Provide training on how to use the tool including end-user training.

Alternatives Alternatives considered for this include: (1) Continue with current practices for initiative planning and Enterprise Architecture practices. This was not selected as it does not address gaps in enterprise-wide practices and consolidated roadmap capabilities addressing key company objectives. (2) Develop in-house applications using multiple platforms including Excel, PowerBI, and custom development. This was not selected due to complexity of the solution and cost of delivery. Additionally, the dependency on the automated processes would create additional hurdles for efficient delivery. (3) Acquire external tools to support BCM, Enterprise Architecture, and investment planning. This solution was selected as it provides quick and efficient access to automated tools within acceptable cost ranges.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Application Lifecycle Management - estimated $1.8m in avoided costs if we don't renew 12 apps per year and avoid pursuing 12 apps through more closely aligning application categories to business capabilities and functions.
Intangibles	Improving the planning process and cycles will enable architecture resources to allocate time away from lengthy project spin up activities. Conservative estimate suggests 2 weeks can be re-allocated per resource per project to other activities. Assuming 15 projects per year, this could lead to 30 weeks available for alternate activities.
Risk Mitigation	Reduction in technical debt stemming from applications not being upgraded to stay with current versioning standards. Applications on older versions have more risk of issues, failure points, and security breaches in addition to potential cost increases for maintenance on aging software.
Avoided Costs	Utilizing the software and improved planning process can lead to avoided costs for software maintenance associated with missed upgrades. Reasonable estimate places this at $90k/yr per application including extended maintenance, price increases, and technical debt.

Cascade Modernization and Prioritization

Report Pulled: 4/15/2026 **Item ID: 13433**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Cascade Modernization and Prioritization

Description The project will add additional features and enhancements to Cascade, the High Voltage Distribution (HVD) team's asset management database, which includes HVD line switches, all substation and mobile substation equipment and some Low Voltage Distribution (LVD) equipment. These new capabilities will improve the efficiency, add automation and visualization of these assets.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The Cascade Asset Management Database is currently lacking in two areas. 1) It does not currently have reporting for visual management that will show Asset Health. This results in not being able to prioritize equipment inspections and maintenance which causes wasted effort by operators spending time on the wrong equipment; and 2) integration to the Company's SCADA (Supervisory Control and Data Acquisition) system. Substation Operators inspect substations on a monthly/bi-monthly basis. Inspections require manual data entry that is already being collected by SCADA. Consequently, operators spend more time and effort on inspections focusing on data entry tasks rather than on meaningful inspection of equipment.

Objectives Completion of this project will provide value to the Company through: (1) providing visual management using standard and customizable reports which will allow the Company to make data driven decisions; (2) establishing a link between equipment and SCADA which will allow anomalies to be detected and alerts to be sent to the team. This will automate data collection for substations inspections; and (3) allow visual management to be updated daily to reflect Asset Health status and be able to prioritize maintenance.

Scope The project scope includes: (1) installing the Connect module to Cascade; (2) installing the Insight module to Cascade; (3) securing a connection to the PI Historian server; (4) installing on-premise web server; and (5) creating additional dashboards.

Alternatives Alternatives considered included: (1) Breaking the scope into separate projects to be completed individually. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work efforts resulting in higher costs. (2) Do nothing. This alternative was not selected because the Company is not able to evaluate the equipment to the best of its ability allowing the team to make the best decisions. (3) Combining the work efforts for both initiatives into a single project to realize the most potential. This alternative was selected because it provided the best balance between achieving the project objectives and controlling the cost. Installing both solutions will allow visual management to be updated daily to reflect Asset Health status and the ability to prioritize maintenance.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	$957,660 - By removing manual reads, inspections could be reduced by roughly 1 hour per substation due to the SCADA data being available in Cascade with this project. 1 hour saved, 8,706 inspections annually, $110/hour.
Intangibles	Currently, substation inspections occur on a monthly or bi-monthly basis. This project will automate pulling SCADA on a daily basis for the algorithms within Cascade to update asset health risk scores.
Intangibles	This project will reduce human struggle due to being able to visualize, prioritize, and maintain asset health information. Asset health data will be automated to display on dashboards for decision making based on risk prioritization.

Catastrophic Crewing (CatCrew) Version 2.0

Report Pulled: 4/15/2026 **Item ID:** 12558

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Catastrophic Crewing Database Replacement, Catastrophic Crewing (CatCrew) Version 2.0

Description The Catastrophic Crewing (Cat Crew) Version 2.0, formerly known as Catastrophic Crewing Database Replacement, will significantly overhaul and enhance the Catastrophic Crewing application, which is the software used during storms to manage storm resources and logistics, as well as key pieces of equipment during storm restoration.

Portfolio Electric Delivery Systems > Electric Operations > Emergent Repair Funds > Emergent Repair Funds > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The current features of the Catastrophic Crewing are not meeting the continually changing expectations and the enhancement update timeline will not allow for timely upgrades to be implemented in the current system - approximate timeframe is 2025-2028 for any changes or additional functionality. We are unable to see and track resources or storm data accurately. There is a significant amount of manual processes: which include hotel reservations tasks, external crews assignments, and ICS on-call schedules that need weekly identification and analysis. There is an opportunity for approximately 4,000 hours of automation annually identified from these processes. The current system is not easy to use or intuitive. The data and reporting history is not accurate or up to date. There is significant potential for human error in the current system, which in turn creates a large volume of waste and increases possible risk to the public and field crews.

Objectives The project will add value by: (1) streamlining the procurement of internal and external resources during storm conditions; (2) providing accurate information regarding hazard conditions and resource deficiencies; (3) enabling real time updates and safety visibility of all resources in the field; (4) reducing human struggle with office and field resourcing tasks; (5) improving reporting accuracy and reducing troubleshooting and data validation; and (6) improving resource management.

Scope The project scope includes: (1) identifying requirements for Catastrophic Crewing replacement; (2) developing, configuring, and testing interfaces, hardware, and software for the solution; (3) implementing the solution and process for the following work groups: Electric High-Voltage Distribution (HVD), Electric Low-Voltage Distribution (LVD), Mutual Assistance, Forestry, Restoration Management, and Storm Teams; (4) change management; (5) building system controls for validating that all required data entry is entered; (6) enhanced logic to automate callout for storm responders; (7) enhancing database exporting and reporting functionality; (8) error-proofing entries for all resources through data validation in the application; (9) archiving all resource data; (10) implementing functionality to identify the status of Forestry, Damage Assessment, Wire Down, and all other field resources in each area; (11) training resources on new technology and processes; and (12) automation of lodging capabilities for crews.

Alternatives The alternatives considered included: (1) continuing with the current system and processes. This alternative was not selected because it does not allow for the timely, data-driven management of resources required to improve service to customers and safety of our field resources; (2) a complete overhaul and enhancement of current system. This alternative was not selected because it is not expected to receive long term and timely enhancements to the platform, which would also require significant upfront investment and internal resource allocation; (3) Dividing the scope into separate projects to be completed individually. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work efforts, and therefore potentially higher costs; and (4) replacing the current system with a system that is capable of new functionality that will remedy the issues with the current system. This alternative was selected because it minimizes duplication of efforts; maximizes identified benefits in operating and cost savings; and increases management of project costs.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Intangibles	PERFORMANCE METRIC: System Average Interruption Duration Index (SAIDI) Improvement of customer outage minutes from 2352.1 to 2307.43. For a decrease of 44.67 minutes (2%).
Risk Mitigation	This project will make a significant impact to risk management, specifically life safety of Consumers Energy field personnel. There were three confirmed Stop the Jobs (STJ) in 2021 associated with potential energization on tree crews actively working on circuits in the areas being energized. This project enables full visibility of all field resources including forestry, damage assessment, wire down personnel, field leaders, contract crews, and internal crews within a single platform. This enhancement would allow Consumers Energy to eliminate these STJ events based on the new functionality within the platform.

Critical Substation Upgrade

Report Pulled: 4/15/2026 **Item ID: 13388**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Critical Substation Upgrade

Description This project will implement enhanced security measures at the Company's critical substations in order to prevent unauthorized access, deter criminal activity, and respond to threats in real-time. With the enhanced security posture, Consumers Energy will be better positioned to mitigate malicious activity through real-time detection and increase the reliability of electric delivery to our customers.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CORPORATE SECURITY

WORK OBJECTIVES

Problem Statement Today, Consumers Energy currently deems 16 substations as business critical to its electric system while an additional 34 substations fall under NERC-CIP compliance. Recent attacks to critical infrastructure have increased the likelihood of an adversary exploiting vulnerabilities at critical substation increasing the risk for large scale outages and customer impact. The Company's current security measures do not allow us to detect, deter, or monitor potential threats on site. Without the ability to monitor these assets in real-time, the Company is vulnerable to an adversary causing destruction without knowledge of when or how the event took place. A phased implementation would allow the Company to systematically mitigate risk to assets deemed most vulnerable.

Objectives The objective of this project is to implement enhanced security measures to better detect, deter, and respond to threats to the Company's electric substations in real-time. This enhanced security posture will align with other utilities that own and operate substations and mitigate disruption to electric service while improving reliability.

Scope Enhanced Security measures that will need to be implemented include but are not limited to: (1) access controls; (2) access readers; (3) cameras; (4) video and audio programming; (5) fence intrusion (which will be accomplished through camera systems); (6) subcontractor work of trenching poles, installing equipment etc.; (7) additional facility lighting; and (8) security equipment maintenance.

Alternatives Alternatives considered include: (1) maintaining the current security perimeter fencing and conducting routine inspections of the site. This alternative was not selected, as it does not provide the ability to prevent, detect, or respond to threats in real-time; (2) hiring contract security guards to patrol the sites. This alternative was not selected as ongoing O&M costs would be expensive; (3) outfitting sites with thermal cameras with built in analytics that would alarm to intrusions and subjects on the properties along with access control measures. This alternative was selected because of lower ongoing O&M costs and enhanced detection abilities.

OTHER VALUE

Type	Description
Risk Mitigation	Completing this project will help prevent the risk of a major grid outage if multiple substations are attacked at the same time. This project will provide intelligence to avoid attacks on substations that have been happening throughout the country, as documented in the 2025 Homeland Security Threat Assessment.
Risk Mitigation	Completing this project will prevent substation outages due to unauthorized access to substations throughout the state. These outages could affect critical facilities such as hospitals and government facilities, as well as, residential buildings. If the damage is extensive, these buildings could be affected by an extended outage.
Risk Mitigation	Completing this project will protect both employee and public safety since the Company will implement access readers, access controls, cameras and video/audio programming, additional facility lighting and security equipment.

Customer Consecutive Estimate Reduction Enablement

Report Pulled: 4/20/2026 **Item ID:** 14017

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - One Time **Work Type** Project

Alias , ELECTRIC DISCONNECT AND MOVE OUT PROCESS ASSOCIATED WITH CONSECUTIVE ESTIMATES PROBLEM SOLVING CAPA, ELECTRIC DISCONNECT AND MOVE OUT PROCESS ASSOCIATED WITH CONSECUTIVE ESTIMATES, Electric and Gas Disconect and Move Out Process associated with Consecutive Estimates, Electric and Gas Disconnect and

Description The project will resolve gas and electric accounts with consecutive estimates due to the service being disconnected and customer's usage being estimated.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement Consumers Energy experienced two show cause orders from MPSC for consecutive estimates and fines of $500,000 in 2016 and $1 million in 2023. There is also $3 million that is to be refunded to the customers from the money that is recovered from the vendor. If the funding is not recovered from the vendor, the total fine would result in $4 million as the Company is responsible for the difference between the dollars recovered from the vendor and the $3 million total established by MPSC.

Objectives The project objective is to reduce disconnected consecutive estimate accounts from 8% to less than 1% reducing non-compliance regulatory risk with MPSC rules.

Scope The project scope includes enhancing account and work management digital solutions to properly reflect disconnected account status.

Alternatives Process improvements were put into place after the 2016 show cause; however, increased electric meter failures, supply chain shortages, and a project focused on replacing meter technology due to the sunset of 3G communication led to issues that resulted in a second show cause order. Do nothing does not improve the customer experience. Our current solution of SAP CRM used by Call Center, SAP Work Management, ADMS for Storm and Service Suite for Field Work are all core platforms able to accomodate the change. Adding additional software or alternatives will complicate the technical solution and/or require additional training for Call Center & field personnel.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	10 minutes per creation of storm disconnect, dispatching from pending screen, and completing of the work order. Year to date since implementation of the new data analytics application there were 150 storm disconnect requests processed over the course of 6 months. This does not include requests processed by Dispatch or other departments that are not easily tracked. 0.17 hrs/order * 150 orders/half a year * 2 * 35 $/hour = $2k Though these savings are small due to limited data tracking, the frustration from Electric Field Operations with having to call Dispatch, wait for the order, or go into an application that is not part of the standard technology would be a significant positive impact to morale for both Electric Field Operations and Dispatch.
Avoided Costs	Contact Center completes 15 installation corrections per day. This task takes approximately 15 minutes per order. 15 installations/day * 0.25 hours/order * 38 $/hour * 260 days/year = $37k in efficiency
Avoided Costs	Electric Meter Operations Supervisor completes 16 hours of review and follow up on consecutive estimate accounts. Exempt labor rate of $55 per hour. 16 hours/week * 52 weeks/year * 55 $/hour = $46k in efficiency allowing the Field Supervisor to be more present in the field for employee safety and job oversight
Avoided Costs	Revenue Recovery and Meter Reading complete 56 hours of investigation per week. Assuming exempt labor rate of $35 per hour. There is also IT labor for running the report that is not accounted in these savings. 56 hours/week * 52 weeks/year * 35 $/hour = $102k in efficiency

Customer Order Service Tracker

Report Pulled: 4/14/2026 **Item ID: 9062**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Service Tracker, Customer Order Service Tracker

Description Short cycle orders including gas emergencies and meter services account for many of the incoming customer inquiries to the contact centers. This project will implement a service order status tracker to provide transparency to customers and oversight to internal teams supporting utility service orders across Company service areas. The tracker will provide timely and accurate service order updates, creating a more robust customer experience for tracking service order status and location-based updates.

Portfolio Customer Services > Customer Interaction Channels > Digital > Digital > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement Customers have limited visibility to when Company assigned crews will be on premise and what work will be completed. This is due to features missing within the Company's digital channels for accurate updates from dispatch, scheduling, and field crews. The lack of awareness drives calls into the call center, resulting in approximately 346,000 annual contact center calls related to short cycle requests. Additionally, this lack of visibility increases truck rolls due to dispatchers being unaware of crew locations and routes which can cause crews to be assigned when a local crew could have completed the work. This leads to overall customer dissatisfaction because of a lack of visibility to scheduled and ongoing short cycle work. Enabling a digital channel for communication regarding utility service orders will improve customer experience and reduce the waste of repetitive crew dispatching.

Objectives This project will add value to the Company and its customers by: (1) providing transparency for customers on the timing and location of the associated crew completing utility short cycle service orders, (2) reducing calls to contact centers by customers seeking clarification regarding arrival times through visibility to scheduling time-frames and providing notifications to customers when crews are en-route, (3) improving resource assignment by current location, which decreases wasted truck rolls through enabling location services for active crews, (4) increasing visibility into the service person(s) completing the order by enabling crews to connect with customers through digital channels, and (5) improving customer experience for short cycle service orders by implementing a channel of choice for Company interactions.

Scope The scope for the project includes: (1) modifying the customer self-service portal to include features that support utility service order tracking, including the location of crews en-route, (2) providing desktop and mobile capabilities, (3) enhancing the existing ServiceBench platform to allow real-time status updates that can be communicated to customers, (4) utilizing location-based services to update internal portal in real time, and (5) enabling text and email notifications to alert customers of service crews arrival times.

Alternatives Alternatives considered for this project include: (1) Deploy a mobile application to address utility service order tracking, (2) utilize a cloud hosted solution from a third-party, (3) modify the existing customer portal to enable customers and the Company to track utility service orders and crews. Options one and two were not selected as the cost associated with deployment would greatly outweigh the benefits with call reduction and improved customer experience. The third option was selected because it utilizes existing technologies, which reduces the implementation complexity and project cost and has faster value realization for the customer and the Company.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Intangibles	Improve safety for both the Company's employees and customers by providing accurate estimated times of arrival, reducing the likelihood of threats of violence.
Intangibles	Improved customer experience related to real time updates from service crews completing activities in their area. The crews will have the ability to provide accurate estimated times of arrival and detail what work is being completed via digital channels. Building trust between the Company and its customers regarding the work being completed correctly, the first time a crew arrives.
Avoided Costs	Reduce Truck Rolls for appointments that weren't rescheduled in a timely manner and limiting truck rolls in locations where a crew can complete multiple jobs in a geographic location. Each avoided truck roll saves the company approximately $450.
Avoided Costs	Reduction in calls to validate arrival times of field crews based on more clarity and transparency regarding the service being completed. Currently 346,000 calls take place yearly regarding status of service orders. The project anticipates a 60% reduction over three years resulting in potential avoided costs of $537,996 per year. (Avg cost per call $7.63 [$9.76/call internal & $5.50/call H&H] * 69,000 calls reduced each year.)
Intangibles	Reduction in Customer Complaints regarding service orders, delays in service, and maintenance visits. Last year, the company received 6 formal complaints and 11 informal complaints regarding non-emergency maintenance work.

Data & Analytics Platform Rationalization

Report Pulled: 4/15/2026 **Item ID:** 13961

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Data & Analytics Platform Rationalization

Description This project will optimize the Data & Analytics system landscape by creating connections, migrating data into the Data Lake in the cloud, and building visualizations from the data in the Data Lake.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement The IT Data & Analytics legacy systems (SingleStore Datalake (SSDL), SAP Business Warehouse (SAP BW), SAP Business Objects (SAP BOBJ), Native HANA, the SAP BW Portal, and BusinessObjects Data Services BODS)) are outdated, inefficient, and becoming duplicative in nature with the introduction of DL 2.0. If these legacy systems are not retired, they will continue to cost the Company money as major investments are needed to maintain and support them.

Objectives This platform rationalization project creates value for the Company and its customers by reducing the total cost of ownership associated with maintaining and supporting legacy systems including licensing fees, maintenance costs, infrastructure, and support resources.

Scope The project scope includes: (1) the assessment of the existing Data & Analytics platforms including SSDL, SAP BW, SAP BOBJ, Native HANA, the BW Portal, and BODS; (2) inventory of data and reports still being used by stakeholders; (3) determination of migration strategy; (4) data migration to the Azure Data Lake; (5) report migration to Power BI; (6) organization change management; and (7) the retirement/decommissioning of the legacy platforms and applications.

Alternatives Alternatives considered: (1) upgrade legacy systems in place (on-premise). This alternative was not selected because this is costly and misaligned with the Company's cloud strategy. (2) Lift and shift these on-premise systems to the cloud through the Hybrid Cloud Transformation Program. This alternative was not selected because it would duplicate the work being done as part of the DL 2.0 project and would not provide the same efficiencies that DL 2.0 introduces. (3) Migrate all data sources to DL 2.0 and retire legacy systems. This alternative was selected because of the expected cost benefits and technology capabilities it provides to the Company over a timeline that allows the Company to realize the value of existing investments.

Digital-Cloud Data and Analytics Platform

Report Pulled: 4/15/2026 **Item ID:** 13443

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Accelerate Data Strategy, Digital-Cloud Data and Analytics Platform

Description This project will provide Artificial Intelligence (AI) and analytics in the cloud across the business to uncover new paths to value, faster, allowing the organization to make better decisions and enable delivery outcomes for the NGDP, Electric Grid Integration, customer programs, and other business needs. The project will additionally establish data governance roles and responsibilities, processes, and implement tools to support best practices across the enterprise.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement Consumers Energy faces several challenges in the ongoing data modernization journey, which include: (1) legacy data platform operations; (2) long lead times for data exploration and identification of data assets; (3) lack of data ownership and quality, (4) limited data governance best practices across data ownership, access control & security; and (5) heavy dependence on IT for Business Intelligence reporting and analytics.

Objectives The project will add value by providing data to support business needs by: (1) optimizing data platform operations costs with workflow-based platform infrastructure deployment using pre-built modules and templates; (2) reducing data operations build complexity and data engineering costs through automation; (3) improving data quality and governance that leads to reduced costs of data provisioning, data duplication, and improved data accuracy; (4) streamlining data access requests, management, and governance to reduce risks and support efficiency; and (5) increasing the speed to deliver new data and data capabilities, improving productivity, and improving access to data. This project is an enabler for business areas to use these capabilities to build analytic models for asset and labor optimization that is anticipated to more than offset the project costs.

Scope The project scope includes: (1) developing and modernizing the analytics platform in the cloud to allow Consumers Energy to implement new use cases leveraging simplified infrastructure configurations and automated deployment processes; (2) build and deploy data management capabilities, controls, catalog, assets, and data flow; (3) developing data ordering workflows and data access management controls; (4) prioritization and new datasets; (5) simplifying infrastructure configuration; (6) automating deployment processes; (7) enabling data governance tools and processes.

Alternatives Alternatives considered include: (1) Address current pain points in existing on-premise and cloud analytics platforms. This alternative was not selected because the existing platforms requires new investment in licensing and infrastructure, delivery for new capabilities cannot keep pace with demand, still requires investment to address legacy system technical obsolescence, and business areas would not realize asset and labor optimizations. (2) Continue to utilize existing on-premise and cloud analytics platforms. This alternative was not selected because it would not address the current pain points in the existing on-premise and cloud analytics platforms, limiting the Company's ability to have required data and analytics capabilities to improve processes and realize asset and labor optimizations. (3) Implement a new data and analytics platform in the cloud. This alternative was selected because it provides improved analytics capabilities, faster access to data that is critical to improve business process, and reduces technical obsolescence.

OTHER VALUE

Type	Description
Avoided Costs	Automated deployments for infrastructure decreases build time and increases time spent on higher value work for the IT platform team. This will also decrease future project implementation hours and associated labor costs. Avoided benefits will be finalized following phase 1.
Intangibles	Enhance Workplace Productivity and Collaboration: Improve Analytics Efficacy and time to insights with data catalog and data democratization.
Risk Mitigation	Reduce Data compliance Risk and Exposure: Reduced exposure to data loss, compliance risk, or potential for data platform interruption with integrated data catalog, controls and governance.

Digital-Hybrid Cloud and Data Center Migration

Report Pulled: 4/15/2026 **Item ID:** 10502

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Hybrid Cloud and Data Center Migration, Digital - Hybrid Cloud and Data Center Migration, Digital-Hybrid Cloud and Data Center Migration

Description This project will optimize data center assets and asset replacement project purchases by migrating or retiring applications out of existing Company and co-location data centers into cloud services, reducing operational costs for running IT services and leveraging increased cloud capabilities to improve the efficiency, quality, and speed-to-market of customer-facing and internal IT services.

Portfolio IT Services > Infrastructure > Data Center - Enterprise Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & S

WORK OBJECTIVES

Problem Statement The technology currently deployed in the Company's data centers meets many customers' needs today. However, the pace of digital transformation is increasing rapidly, and requirements for applications are evolving faster than the technology in the Company's data centers can respond in a cost-effective manner. These data center constraints lead to longer implementation times, missing capabilities, or reduced functionality in the applications that the Company can deploy.

Objectives This project will create value by ensuring the Company's technology requirements are met through a comprehensive and cost-effective combination of data centers and public cloud services. Specifically, by migrating applications to cloud services, the project will: (1) reduce capacity, hardware maintenance, and security device costs at the co-location data center; (2) reduce hardware maintenance and security device costs at the production data center; (3) enable the ability to scale infrastructure quickly up or down without costly up-front hardware purchases; (4) reduce application risk through cost-effective, scalable infrastructure redundancy and availability; (5) reduce ongoing server and storage asset replacement costs; (6) reduce ongoing networking equipment replacement costs; (7) reduce operational support costs; and (8) enable the use of a vast array of cloud services to support Company applications.

Scope The project scope includes: (1) promoting the robust main co-location data center to become the primary data center for on-premise IT services; (2) demoting the Company's production data center to the disaster recovery data center for on-premise IT services; (3) analyzing applications for migration to cloud or retirement; (4) migrating applications from on-premise to cloud; (5) transforming applications to use cost-effective cloud services; (6) altering network architecture and deploying base infrastructure to allow each location (on-premise or in cloud) to function independently; (7) deploying cloud and on-premise cost management tooling and processes; (8) simplifying and optimizing backup and disaster recovery resources and processes using cloud services; (9) implementing additional automation for application deployment and management; (10) changing the operations model for support of cloud-based applications; (11) educating and increasing the skills of IT and other employees on leveraging public cloud services; and (12) transforming IT to become the broker of cloud services for the Company.

Alternatives Alternatives considered include: (1) migrating to public cloud services faster. This alternative was not chosen because the Company's ability to absorb new technologies coupled with the investments the Company has already made in data center equipment would prevent a faster move from being efficient and effective, introducing additional financial risk; (2) migrating to public cloud services slower or not at all. This alternative was not selected because delaying public cloud services and capabilities coupled with requiring an extension of the life of existing data center equipment creates increased financial and operational risk; and (3) contracting with an outside vendor to provide cloud services to run applications for the Company. This alternative was not selected because industry information shows the option as not yet cost effective or not providing a maturity level that the Company would be able to easily consume with limited in-house experience and expertise in public cloud. The alternative to migrate to a hybrid cloud and data center model was selected because of the expected cost benefits and technology capabilities it provides to the Company over a timeline

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	Consumption of public cloud services offers infrastructure redundancy and availability at scale that cannot be duplicated in the Company's data centers, reducing the risk of running applications.
Intangibles	This project makes consumption of all types of public cloud resources possible to provide IT services in support of all business processes, enabling technology capabilities for Administrative and General Support.
Avoided Costs	With applications running in public cloud, the Company can expand and contract the consumption of IT services at will as appropriate versus purchasing hardware to expand in quantity and having no simple ability to contract.

Electric Geographic Information System (GIS) Design Platform M

Report Pulled: 4/15/2026 **Item ID:** 13444

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias GIS-Integrated Design, GIS Integrated Design Application, GIS-Integrated Design, geoAIM Based Design, Electric Geographic Information System (GIS) Design Platform Modernization

Description This project will replace the existing design software for Electric Low Voltage Distribution (LVD) with a new solution that will be fully integrated to the ESRI (Environmental Systems Research Institute) GIS (Geographic Information System) platform which is already in use by the Company. This new solution will leverage GIS asset data to generate engineering designs. This will allow the Electric teams to have a single source and format to view asset data, construction drawings and redlines in both the back office and field. This change will further enable improvements to the mobile platform in quality of data that is used by the closeout team. This will also reduce the back end posting effort by using the native GIS data format; improving data quality by reducing the re-keying of data.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The current design software creates waste in three areas for many teams within Electric including Low Voltage Distribution (LVD) Engineering, Field Leaders, and Customer Energy Management (CEM) Service Designers. (1) The current software does not support the native GIS data format and will not support future enabling work management needs. This causes waste and room for error by having to redraw designs in GIS that have already been created and prevents optimization of the work process. (2) It is not able to integrate to SAP to automatically order materials based on the design. (3) The current software lacks needed mobile functionality due to its lack of support for the native GIS format. The designs are not georeferenced to the exact location and can't fully utilize redlining capability which causes a significant impact to data quality and crew performance.

Objectives This project will add value to the Company and its employees through: (1) eliminating the need to duplicate all design work so it is in both the design system and GIS; (2) enabling mobile editing and redlining on the design in GIS; (3) enabled integration to SAP; and (4) utilizing the capabilities of the next generation GIS platform that will be delivered through an in-progress business case.

Scope The project scope includes: (1) installing a new solution that will integrate to GIS; (2) utilizing GIS geospatial and asset information data and the GIS platform for generating Electric LVD engineering designs; (3) integrating to and from SAP to automate Compatible and Mass Unit material ordering capability; (4) installing new and upgrading existing geospatial platform infrastructure to support additional users (Electric LVD designers, Field Leaders, Planners, Schedulers, etc) of GIS; (5) integrating to ProjectWise (engineering content management system); (6) configuring mobile toolset; (7) re-engineering the existing GIS data model to handle asset life cycle; and (8) configuration for new ArcGIS services.

Avoided Costs	Reduction of "overlapping" designs, work orders, truck rolls to the same location: 1,920 hrs ($50) = $96K

Electric GIS Utility Network Transformation

Report Pulled: 4/15/2026 **Item ID:** 14022

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias Gas GIS Utility Network Platform Migration, Gas GIS Utility Network and UPDM Platform Migration, Gas GIS Utility Network and UPDM Platform Transformation, Electric GIS Utility Network and UPDM Platform Transformation, Electric GIS Utility Network Transformation

Description This project will transform the Company's current Geographic Information System (GIS) platform to the Environmental Systems Research Institute (ESRI) Utility Network Model and establish a unified high voltage distribution (HVD), low voltage distribution (LVD), and substations data model. This transformation aims to optimize core engineering and operational processes, technologies, and data.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The Company's GIS for electric records is expanding as an authoritative source for asset connectivity, location and health information. However, growing business requirements for advanced analytics and regulatory mandates necessitate more granular geospatial insights. Existing functionality does not meet business partner needs, and GIS data is refreshed in batch mode once a day, leading to mismatches with real-time systems. Managing HVD and LVD data in different models remains challenging. The Company's past implementation of ESRI's GIS for Electric, version 10.8.1, will be unsupported after March 1, 2028. Critical third-party solutions supporting key editing and business functionality are also ending support without upgrade options, posing risks for security updates. ESRI's development focus is shifting to the ArcGIS Utility Network Management extension, ArcGIS Enterprise, and ArcGIS Pro. The vendor's development team has reached the limits of ArcMap and the geometric network's capabilities and will no longer build additional functionality. Future development and enhancements are focused on the next-generation technologies of the Utility Network and ArcGIS Pro. ESRI utility solution partners are also moving their product lines away from the geometric network, soon supporting only the Utility Network.

Objectives The project creates value for the Company by: (1) mitigating risks associated with product support end of life; (2) enabling detailed asset management and location based analytics to bring clearer understandings around the assets that support energy delivery; (3) increasing productivity through use of shortcuts, templates, and streamlined workflows within the software; (4) providing extensive, out-of-the-box tracing tools; (5) providing 3D visualization functionality; (6) enabling users with editing tools, giving them guidance at every step of the process for developing workflows and enforcing stronger data integrity; (7) viewing the up to date network in a map or schematic diagram and be able to quickly toggle back and forth between them; and (8) enabling archiving and historical versioning to view the state of the electric network over time. All of these capabilities will result in greater insight and efficiency that improves the safety and delivery to customers of Michigan. The Utility Network enables implementation of third-party tools that will allow us to keep the operational model more up to date as circuits with temp conditions and/or control tags can be imported as needed.

Scope The project scope includes: (1) upgrading all database, web, and application servers to supported Windows version; (2) upgrading end user application from ArcGIS Desktop to ArcGIS Pro; (3) migrating and converting LVD and HVD GIS data from geometric network data schema to the Utility Network, iteratively publishing data to new model for consumption; (4) reconfiguring electric applications that are integrated with GIS or that consume GIS data; and (5) creating substation asset model.

Alternatives Alternatives considered include: (1) Continue to use geometric network. This alternative was not selected because the architecture is at the end of its life. Additionally, dependent third-party solutions are moving away from the geometric network, making it unsustainable for continued use. (2) Moving to Utility Network and migrating to a supported platform. This alternative was chosen to enable the Company to leverage a cloud-based solution and provide options for utilizing third-party solutions.

B/C Ratio (Overall) -1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
Technology Obsolescence	Medium	High	GIS 10.8.1 will be an unsupported platform in 2028. Keeping the platform version and supporting software versions compatible is becoming more challenging due to all development resources on the vendor side being focused on the Utility Network extension. GIS is also not positioned to support near real time systems
Major Application Failure	Medium	Medium	GIS resides on unsupported platform significantly increasing the likelihood of failure to one or more components.

OTHER VALUE

Type	Description
Risk Mitigation	A utility network has a built-in mechanisms to detect any logically inconsistent associations among features. This is done by system defined business rules and logic that allows the utility to enhance the geospatial system of record with network rules, attribute rules, and contingent values. Allows Consumers Energy to enforce data integrity by applying additional constraints to reduce the number of valid field inputs. Templates, which are a predefined collection of data construction tools, help streamline the adding data workflow. Attribute rules allow Consumers Energy to improve the user experience by restricting the valid entries on a field to a set list or range of values based on real world conditions. This enhanced integrity enables greater confidence in the analytics from the system of insight and reduces the potential for human error.
Risk Mitigation	Asset internals cannot be easily visualized or analyzed. Utility Network will Improve in how assets are visualized, analyzed and aid in equipment inspection and ability to field verify that GIS appropriately reflects the current state of the assets (not buried in tables, CAD files or SAP).
Intangibles	Create a platform to enable a simplified enterprise-wide mobile mapping solution focused on map-based workflows.
Avoided Costs	Current GIS configuration gives no ability to view gas network at different points in time. To achieve this today, GIS Analyst must export the entire database at various times of the year. Utility Network (UN)allows the model to be Design and configure OOTB functionality to query, view and extract data from different points in time.
Risk Mitigation	Deploy enterprise GIS hosted entirely in Microsoft Azure.
Capacity	Design a cloud operating model.
Risk Mitigation	Design and implement replication solution with the goal of simplifying the process and reducing points of failure.
Capacity	Develop a strategy for UN migration and migration to Azure cloud.
Intangibles	Downstream applications use different data models. UN offers a standardized data model which can serve as a foundation. The UN data model benefits from vendor support and upgrades resulting in faster speed to delivery and reduction in custom solutions requiring in-house maintenance.
Intangibles	Enhanced import/export procedures from CAD to reduce the complexity of features in GIS.

Energy Assistance Enhancements and Maintenance Annual Upd: Report Pulled: 4/15/2026 Item ID: 6683

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - Interval **Work Type** Project

Alias CARE 5.0, Consumers Affordable Resource for Energy (CARE) Annual Updates, Energy Assistance Enhancements and Maintenance Annual Updates

Description The Energy Assistance Enhancements and Maintenance Annual Updates project, formerly known as Consumers Affordable Resource for Energy (CARE) project, will implement software changes to offer energy assistance to low-income customers and streamline the process for the assistance agencies who use the assistance portal. This is accomplished through improved user interfaces and updates to SAP to process various requests. Upcoming modifications will be identified following an ongoing and annual review of requests, that includes criteria from the Department of Health and Human Services (DHHS) and Michigan Public Service Commission (MPSC) to prioritize the list of changes.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement Each grant year, DHHS and MPSC stipulate the criteria required for customers to enroll in the CARE program, how the Company and agencies will manage the enrollment process and track active CARE customers, and how they will administer the Michigan Energy Assistance Program (MEAP) benefits through bill credits and arrears forgiveness. The criteria changes significantly each year; therefore, the Energy Assistance Enhancement and Maintenance Annual Updates application requires modifications to meet the new requirements. If the regulatory requirements are not fulfilled, the Company is at risk of losing state Low Income Energy Assistance Fund (LIEAF) funds to assist low-income customers with paying their energy bills, thereby increasing the customers risk of shutoff for non-payment. In addition, our energy assistance programs function within all software platforms in the company which consistently need enhancements and updates.

Objectives The project will provide the following value: (1) complete modifications to internal SAP application and Agency Portal to receive LIEAF funding, which can be used to provide customers the bill credits and arrears forgiveness; (2) improve the data within the assistance agencies portal, thereby making it easier to assist customers in need of LIEAF funding; and (3) complete modifications to customer facing platforms.

Scope The project scope includes: (1) updating the enrollment and status process; (2) allowing for flat monthly bills; (3) improving reporting; (4) updating the arrears forgiveness plan; (5) satisfying additional regulatory requirements for the annual grant rule changes required by the Department of Health and Human Services and Michigan Public Service Commission; (6) updating CARE dunning process; and (7) updating the assistance portal (CE PASS) functionality to enhance Agency Self-Service.

Alternatives Alternatives considered include: (1) continue with current process. This alternative was not chosen because it would lead to loss of grant funding, thus decreasing or eliminating energy assistance dollars for customers; (2) transfer administration of Energy Assistance Programs to a third party organization. This alternative was not selected because it would remove ownership and visibility into the health of the program while increasing administrative costs; and (3) make annual updates to the application, which will allow agencies to easily enroll customers on assistance programs and allow placement of holds to stop or prolong credit activity until assistance decisions are granted. This option was selected since it provides long-term proactive energy assistance to customers and prevents loss of grant funds. Changes are required to internal systems such as SAP, a large internal system that supports broad areas of the business, and the Agency Portal, an internally developed web application, therefore a single cloud or third-party alternative is not viable. Additionally, retiring the existing Agency Portal for a new application would increase costs beyond that of the routine upgrades.

B/C Ratio (Overall) -1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	As a result of our compliance with CARE requirements, we have access to MEAP funds that help to pay down low-income customer's arrears, therefore preventing those from being written off. This year, we are expecting to enroll 9,350 customers with an average arrears of $285, thus potentially avoiding $2.6M in bad debt write-offs.
Risk Mitigation	As a result of our compliance with CE PASS requirements, Department of Health and Human Service and other agencies would not be able to assist our customers. This could result in $60-$70 million dollars not able to be funded to the company.

Enhancements - Customer Experience and Operations- Cap

Report Pulled: 4/14/2026 **Item ID:** 8776

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Enhancements - Customer Experience and Operations- O&M, Enhancements - Customer Experience and Operations- Cap

Description The Enhancements – Customer Experience – Operations project provides funding for small changes and improvements to existing software to address requests needed due to changing business requirements.

Portfolio IT Services > Applications > Customer Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement As business processes improve and change, new requirements surface requiring smaller effort software application changes. These software enhancements are neither projects nor operational work but require funding for resources. The annual budget cycle should ensure funding is provided for software enhancement small work efforts to ensure we are leveraging the value of existing IT investments to support business processes.

Objectives Requests for this funding are governed by a cross-functional board of representatives from each area which meets monthly to evaluate and prioritize the work. The board assesses requests for value using benefits that are categorized into hard cost savings, cost avoidance, safety, achieving corporate goals, and mitigating risk. Included in the implementation are small changes and functionality improvements to existing software application investments for Customer Experience and Operations.

Scope The enhancement requests are fulfilled to provide functionality for areas such as dunning, customer billing, programs for low income customers (i.e. Winter Protection Program, Special Protection Program), Company website, contact center, energy efficiency, and rates.

Alternatives Historically, specific budget was not allocated for enhancements work requiring efforts to identify funding for each request. As part of our review process the alternative considered was to not provide funding for enhancements. However, this limits our ability to make software changes to support process improvements, regulatory changes, and to meet legally required system changes.

Enhancements-CX&O-O&M

Report Pulled: 4/15/2026 **Item ID: 11375**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Applications Currency and Enhancements - CE&O - O&M, Application Currency and Enhancements - CE&O - O&M, Application Currency - CE&O - O&M, Enhancements - CE&O - O&M, Enhancements-CE&O-O&M, Enhancements-CX&O-O&M

Description The CX&O initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives.

Objectives The value of software enhancements in the CX&O Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment.

Scope Included in the implementation are small changes and functionality improvements to existing IT software application investments for CX&O. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience Operations, Applications Support and, Device Management.

Alternatives Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.

Enterprise Print - Scan Suite

Report Pulled: 4/14/2026 **Item ID:** 11651

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Enterprise Print - Scan Suite

Description The projects intent is to upgrade the current Enterprise Print and Capture suite for improved data security and integration for the work from home business partner.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** Unspecified

WORK OBJECTIVES

Problem Statement The company currently maintains a print and capture suite that will have support ending in 2025. Only high-level security patches will be available after this date. The company maintains a fleet of servers that are scheduled to be upgraded. The current print and capture suite is not compatible with the targeted server operating systems. The lack of internal resources requires the company to continue to absorb increased costs to contract administrative personal.

Objectives This project maintains cost savings achieved by eliminating wasteful print jobs and further enables a productive, and flexible workforce for business partners working remotely. This project also ensures that the latest data transmission security requirements of are met by the solution.

Scope The project scope includes: (1) upgrading the current suite to the latest version; (2) consolidating the amount of print servers in the environment; (3) training for company personal to administer the suite; (4) converting all workflows from the current system; (5) implementing remediation for security vulnerability risk;. (6) integrating device management with Enterprise Configuration Management Database (CMDB) for asset tracking and monitoring.

Alternatives Alternatives considered: (1) migrating to cloud services. This alternative was not chosen at this time due to maturity levels found with subscription services. (2) other print-scan products. This alternative was not selected as it would required new print and scanning specific to another print-scan product.. (3) Print-scan products that were less costs. This alternative was not selected, due to fewer capabilities offered than the current product, which would introduction inefficiencies in the current processes. (4) upgrade current product. This alternative was chosen due to lower overall cost of not requiring new hardware, maturity of current product, and providing same level of capabilities required to support current processes.

Enterprise Print & Scan Suite Upgrade

Report Pulled: 4/14/2026 **Item ID:** 14039

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Enterprise Print - Scan Suite, Enterprise Print & Scan Suite Upgrade

Description The projects intent is to upgrade the current Enterprise Print and Capture suite for improved data security and integration for the work from home business partner.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-INFRASTRUCTURE PLATFORMS & S

WORK OBJECTIVES

Problem Statement The company currently maintains a print and capture suite that will have support ending in 2028. Only high-level security patches will be available after this date. The company maintains a fleet of servers that are scheduled to be upgraded. The lack of internal resources requires the company to continue to absorb increased costs to contract administrative personal.

Objectives This project maintains cost savings achieved by eliminating wasteful print jobs and further enables a productive, and flexible workforce for business partners working remotely. This project also ensures that the latest data transmission security requirements of are met by the solution.

Scope The project scope includes: (1) upgrading the current suite to the latest version; (3) training for company personal to administer the suite; (4) maintaining all workflows from the current system; (5) continue with remediation for security vulnerability risk;.

Alternatives Alternatives considered: (1) migrating to cloud services. This alternative was not chosen at this time due to maturity levels found with subscription services. (2) other print-scan products. This alternative was not selected as it would required new print and scanning specific to another print-scan product.. (3) Print-scan products that were less costs. This alternative was not selected, due to fewer capabilities offered than the current product, which would introduction inefficiencies in the current processes. (4) upgrade current product. This alternative was chosen due to lower overall cost of not requiring new hardware, maturity of current product, and providing same level of capabilities required to support current processes.

Enterprise Risk Management

Report Pulled: 4/15/2026 **Item ID:** 10481

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Enterprise Risk Management

Description The project will implement software to streamline Enterprise Risk Management (ERM) processes, improve efficiency, provide risk identification and repository tools, and deliver real-time risk data.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement

The Enterprise Risk Team (ERT) collaborates with Risk Owners (ROs) annually to identify new risks, update existing ones, quantify impacts and likelihoods, document mitigation plans, identify trends, and formulate risk tolerance metrics. This process involves iterative exchanges between ERT and ROs to align on content. This effort culminates in multiple risk maps presented annually to senior management and the Board of Directors (BoD). The manual Enterprise Risk Management (ERM) process is intensive and time-consuming, creating risks of human error that can inaccurately quantify risks, introduce data anomalies, and create version tracking issues. The current process results in inefficient use of time by risk analysts and risk owners, limits the breadth of analysis, and affects the Company's ability to promptly identify, analyze, and communicate risks to senior leaders, potentially causing delays in responding to emerging risks. Due to its lengthy nature, the manual process is conducted only once a year but needs to be performed more frequently for proactive enterprise risk management. Utility industry peers use software to more effectively manage enterprise risk management programs.

Objectives

This project creates value for the Company by: (1) providing real-time risk information to stakeholders including the risk team, risk owners, senior management, and the Board of Directors (BoD); (2) supporting proactive risk management; (3) establishing a centralized repository for risk identification, management, and mitigation plans; (4) reducing waste through simplified processes; and (5) enhancing efficiency for risk owners and analysts.

Scope

The project scope includes: (1) creating risk analysis templates and tools for automated reporting; (2) establishing automated workflows to perform risk updates; (3) configuring dynamic templates that prompt the risk owners based on prior selections; (4) organizing risk assessments through an online and searchable data repository; (5) creating new reports and executive dashboards; (6) migrating data; and (7) setting record retention rules.

Alternatives

Alternatives considered include: (1) Continuing to use the current manual processes. This alternative was not chosen due to inefficiencies, poor quality results, and limited frequency of risk reviews. (2) Building a custom internal enterprise risk solution. This alternative was not selected because it does not incorporate best practices available in risk management software provided by industry leaders. (3) Implementing a software solution from a leading enterprise risk solution vendor. Although this introduces new license and ongoing support costs, it is preferred since it incorporates industry best practices, ensures application reliability, security, stability through vendor support, and provides innovation and insights via risk information reporting through management dashboards. Additionally, it aligns the Company with utility industry peer practices for more effective enterprise risk management.

B/C Ratio (Overall)	-1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	Implementing a centralized solution will enhance risk management by effectively addressing potential risks. Currently, one-third of the 150 risk tolerance metrics are categorized as red. The number of risks tracked by the Corporate Risk group is expected to increase over time.
Avoided Costs	The ERM Group can save up to 252 hours annually through efficiencies in: (1) Risk form configuration (24 hours saved); (2) Workflow including email/phone conversations, report creation, and quality control (229 hours saved). These efficiencies would allocate more time for activities such as ad hoc analysis, risk updates to management, emerging risk evaluation, and risk mitigation planning. Business areas can save up to 127 hours annually through efficiencies in: (1) Risk template updates (61 hours saved); (2) Emails/phone calls with the Risk Group (33 hours saved); (3) Alignment with the Risk Group and their own management chains (32 hours saved). These efficiencies would allow risk owners to concentrate on business operations and implementing risk reduction mitigation rather than administratively filling out risk forms.

Enterprise Service Bus Application 2024-2025 Upgrade

Report Pulled: 4/15/2026 **Item ID:** 11727

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ESB BW6 Upgrade,Enterprise Service Bus Application Upgrade, Enterprise Service Bus Application 2023-2024 Upgrade, Enterprise Service Bus Application 2024-2025 Upgrade

Description This project will upgrade and migrate the Business Works developer application to the next version.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement

Newer ESB software versions offer improved integration with Rest/API services and applications. It is critical that this vital data tool or pathway, be more scalable, secure, and capable of integrating to a service-based environment. In addition, the messaging and event modules within the ESB are currently outside of their standard support windows. While it is possible to continue to get extended support by paying an estimated premium of approximately $80,000 annually, this is just temporary coverage and serves only to delay the need for an upgrade.

Objectives

The value this project provides the Company includes: (1) cost avoidance to avoid extensive payments for extend support purposes; (2) avoid technical obsolescence; (3) operational resiliency; and (4) improved administrative and operational efficiencies.

Scope

The project scope includes implementing current version of all applications that are part of the ESB application, database version, and required database drivers.

Alternatives

Alternatives considered included: (1) Accept the annual $80,000 extended maintenance cost. Given the critical nature of this application, it is not recommended to lose mainstream support for any of the applications involved. Any sustained ESB product deficiency would impact many areas of the Company, such as billing, revenue collection, and remote meter management. The current implementation of the ESB platform was built with 5 years of growth in mind. This alternative was not chosen due to risk to Company operations , and the additional expense. (2) Replace the on-premise upgrade plan to implement a cloud-based solution. A cloud migration would also take longer to complete, which would put the Company at risk of falling outside of the current vendor support window for the products current version. (3) Upgrade the existing application. This option was selected because it best meets the Company needs for the near future by restoring vendor support for fixes and patches, and enables product scalability to the measure required of business capabilities.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	Consumers Energy will lose support on critical ESB software components that support OpenWay Collection Engine, SAP, ITRON, DIV, DRMS, MDM, BWP, PayGo, ADMS, Field Service Solution, and Digital Customer Experience. Rebuilding the ESB Platform and ensuring the current production integrations will not be impacted as well as meeting or exceeding current service levels is critical.
Avoided Costs	Consumers Energy will need to purchase an extended support contract with the vendor to maintain support of the older version. Going too long without upgrading puts Consumers at risk of losing any level of support from the vendor. Current estimate is $80,000 of extended support
Capacity	The current implementation of the ESB platform was built with 5 years of growth in mind. Upgrading the ESB on a regularly scheduled cadence will allow Consumers to grow the the application around the business' needs.

Enterprise Service Bus 2026-2027 Upgrade

Report Pulled: 4/15/2026 **Item ID: 14030**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Enterprise Service Bus 2027, Enterprise Service Bus 2026-2027 Upgrade

Description This project will upgrade the current ESB software versions in use at the company. This will also implement a container management system, which deploys, manages, and scales microservices or applications that send or receive data via the service bus, and migrate various services to containers.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement Newer ESB software versions offer improved integration with Rest/API services and applications. It is critical that this vital data tool or pathway, be more scalable, secure, and capable of integrating to a service-based environment. The lack of a container management solution prohibits the adoption of a more cloud native approach leading to retaining legacy solutions.

Objectives The value this project provides the Company includes: (1) implement a container management solution; (2) avoid technical obsolescence; (3) operational resiliency; and (4) improved administrative and operational efficiencies.

Scope The project scope includes (1) implementing the current version of all applications that are part of the ESB application, database version, and required database drivers and (2) implementing a Kubernetes solution for container management and migrate targeted services that are identified as microservices to containers.

Alternatives Alternatives considered included: (1) Accept the current version levels and continue to pay for extended support costs and accept technical obsolescence risk. (2) Only upgrade the existing applications. (3) Upgrade all of the applications as well as evolve the cloud-based instance to a more cloud native architecture by converting containers and implementing a Kubernetes solution to manage the containers. This option was selected because it best meets the Company needs for the near future by maintaining vendor support for fixes and patches, and enables product scalability to the measure required of business capabilities.

Enterprise Service Bus 2028-2029 Upgrade

Report Pulled: 4/15/2026 **Item ID: 14046**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Enterprise Service Bus 2027, Enterprise Service Bus 2026-2027 Upgrade, Enterprise Service Bus 2028-2029 Upgrade

Description This project will upgrade the current Enterprise Service Bus software versions in use at the Company.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement

Newer ESB software versions offer improved integration with Rest/API services and applications. It is critical that this vital data tool or pathway, be more scalable, secure, and capable of integrating to a service-based environment. In addition, the messaging and event modules within the ESB are currently outside of their standard support windows. While it is possible to continue to get extended support by paying an estimated premium of approximately $80,000 annually, this is just temporary coverage and serves only to delay the need for an upgrade.

Objectives

The value this project provides the Company includes: (1) cost avoidance to avoid extensive payments for extend support purposes; (2) avoid technical obsolescence; (3) operational resiliency; and (4) improved administrative and operational efficiencies.

Scope

The project scope includes implementing current version of all applications that are part of the ESB application, database version, and required database drivers.

Alternatives

Alternatives considered included: (1) Accept the annual $80,000 extended maintenance cost. Given the critical nature of this application, it is not recommended to lose mainstream support for any of the applications involved. Any sustained ESB product deficiency would impact many areas of the Company, such as billing, revenue collection, and remote meter management. The current implementation of the ESB platform was built with 5 years of growth in mind. This alternative was not chosen due to risk to Company operations , and the additional expense. (2) Replace the on-premise upgrade plan to implement a cloud-based solution. A cloud migration would also take longer to complete, which would put the Company at risk of falling outside of the current vendor support window for the products current version. (3) Upgrade the existing application. This option was selected because it best meets the Company needs for the near future by restoring vendor support for fixes and patches, and enables product scalability to the measure required of business capabilities.

Field Contractor Work Management Technology Enablement

Report Pulled: 4/21/2026 **Item ID:** 6740

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias FSS Release 4 - Contractor Enablement

Description The project provides the ability to electronically manage contractor work and increases accuracy and timeliness of information processing for field work deliverables. This project additionally creates new opportunities to measure and optimize field work processes supporting customer on-time delivery goals.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement Contractor field employees use manual, paper-based processes and generic communication technologies (phone, radio, email, collaboration sites) to perform work for the Company. Due to the non-electronic format, inaccuracy, and delay of information processing there are negative impacts to the availability and accuracy of work status. This limits the opportunity to measure and optimize field work processes that support customer on-time delivery and other goals.

Objectives The project will add value by: (1) improving on-time delivery of customer work by providing electronic work order information to contractors; (2) improving customer satisfaction through efficiency in scheduling work and reporting on the progress electronically; (3) increasing safety by tracking work and contractor status providing visibility into the last known location of the contractor; (4) improving material management; (5) making it easier to move emergent work to contractors to balance workloads and meet customer commitments; and (6) enabling real time updates to work order information, increasing data accuracy and reducing invoice reconciliation time.

Scope The project scope includes: (1) identifying requirements for a Bring Your Own Device (BYOD) field contractor work management technology solution and process; (2) developing, configuring, and testing interfaces, hardware, and software for the solution; (3) implementing the solution and process for the following work groups: Electric High-Voltage Distribution (HVD), Electric Low-Voltage Distribution (LVD), Mutual Assistance, Forestry, Gas Distribution, Gas Code Compliance, and Substation Operations Construction/Metro; (4) updating the following vendor contract types to support BYOD field contractor work management: zone, specific bid, ancillary, electric storm, and mutual assistance; and (5) training field contractors on the new technology and processes.

Alternatives The alternatives considered included: (1) Continue with the current paper-based process. This alternative was not selected because this approach does not allow for the timely, data-driven work management metrics required to improve service to customers. (2) Use the current Company mobile application. This alternative was not selected because the solution is not expected to receive long term investments by the vendor and the mobile application would require more upfront investment than the proposed option. (3) Use off-platform options such as ServiceBench. This alternative was not selected because contractors would not be able to leverage the benefits and integrations with the existing platform and it would require additional new integrations. (4) Provide Company-funded field devices to contractors. This alternative was not selected because the investment in hardware, management of on-boarding and off-boarding of devices to contractors, and training and change management is cost-prohibitive and introduces a risk of the loss of control of information security and corporate assets. Leveraging the existing field work management solution was chosen because it uses existing well-developed functionality while leveraging cloud-based, BYOD capabilities to move short-term and long-term contractors from paper processes to the established, standard work management system.

Type	Description
Intangibles	"CE Way" Maturity - The project enables data to be more accessible electronically so that it can be visualized, access to data provides increased visibility to problem solving, and Service Suite forms allow for increased standardization.
Intangibles	Customer On-time Deliver (COTD) - Provides real-time updates for work order progression and completion, and provides increased efficiency in dispatching work to contractors.
Intangibles	Electric Reliability - Improves efficiency in dispatching of emergent work to contractors.
Avoided Costs	Engineering/System Owner Efficiencies: Estimated 1 hour per week @ 50 weeks for 10 system owners = 500 hours annually *$50/hr = $25,000 Annual $ Saved (Max). Annual $ Avoided (Min - 75% of Max) = $18,750 * 29.8% (O&M) = $5,588 annual avoided costs
Avoided Costs	Field Leader & Back End Efficiencies: 1 Hour per week for each long cycle field leaders/back office personnel - "200 people*50weeks= 20K hours * $50/hr = $500K.* Annual $ Avoided (Min - 75% of Max) = $375K. $375K * 29.8% (O&M) = $111,750 annual avoided costs - ELECTRIC SPLIT
Avoided Costs	Field Leader & Back End Efficiencies: 1 Hour per week for each long cycle field leaders/back office personnel - "200 people*50weeks= 20K hours * $50/hr = $500K.* Annual $ Avoided (Min - 75% of Max) = $375K. $375K * 29.8% (O&M) = $111,750 annual avoided costs - GAS SPLIT
Avoided Costs	Increase Back Office Productivity for Contractor Admins: 1 employee for 6 hours a week and 50 weeks per year. Total hours reclaimed annually = 300 hours * $50/hr = $15,000. Annual $ Avoided (Min - 75% of $15,000) = $11,250 * 29.8% (O&M) = $3,353.
Avoided Costs	Increased Productivity for Contractors: 150 hours reclaimed per month * 12 Months a year = 1,800 total hours reclaimed annually * rate of $71.70/hr = $129,060 total. Annual $ Avoided (Min - 75% of $139,060) = $96,795 * 29.8 (O&M)= $28,845

Field Mapping and Graphics

Report Pulled: 4/14/2026 **Item ID: 8771**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias ArcPad Retirement, Field Mapping and Graphics

Description This project will implement a solution for the mobile field mapping and data collection that can search and view facility map data, view work order designs, and create work order as-built construction drawings in the field. This software technology increases process efficiency by consolidating field graphics functionality, reducing IT complexity and testing, and increasing adoption in the field through ease of use. In addition, it allows the Company to move to a supported application platform and retire the unsupported ArcPad solution.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement The current mapping and graphics application was implemented in 2002 and is no longer sold or supported in any capacity, and the customizations developed for the application cannot be changed. Due to the improved accuracy of the CE landbase (streets, political boundaries, etc.), the outdated electric maps that are referencing that data causes the map to be unreadable which causes a safety issue. Additionally, field employees have considerable challenges when attempting to use the software due to slowness, an aged interface, and dated processes.

Objectives The project will add value by: (1) providing more accurate geospatial data, including facility map data, pre-construction designs, and as-built construction drawings; (2) consolidating daily tasks into a more simplified process; (3) eliminating the process waste from duplicating asset data in two systems; (4) enabling the adoption of the Geographic Information System (GIS) standard; and (5) making mapping and graphics data available on field devices.

Scope The project scope includes: (1) installing a new mobile field mapping and graphics application; (2) creating the ability to search and view the facility map data in GIS format along with the ability to search by address; (3) viewing pre-construction work order designs in a new GIS format; and (4) creating as-built construction drawings in GIS format for assigned work orders.

Alternatives Four alternatives were evaluated and three were determined non-viable for the project: (1) Continue maintaining the current ArcPad application. This option was not selected because the Company is no longer able to make changes to the ArcPad application to mitigate issues if the application has critical defects. A total failure of the application could revert field crews back to paper-based facility maps, risking safety using static, outdated data; or require the creation of as-built construction drawings on paper documents. (2) Use the Adobe or Snagit applications for creating as-built construction drawings. This option was not selected because field users would have to use one solution for viewing facility maps and use rudimentary drawing tools like Adobe or Snagit for creating as-built construction drawings. This option was also not selected because it introduces additional costs due to the complexity and customization needed to integrate the applications. (3) Build a custom Mapping and Graphics solution. This option was not selected as existing industry solutions are available at a much lower cost with much less risk. (4) Implementing the new field mapping and graphics software was selected as this option will consolidate field graphics functionality into an efficient process and provide a current, supported solution.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Intangibles	Currently, there is a decrease in morale and increase in stress when redlines aren't processed in a timely way or get held up with technology problems. The current process is go back to the crew to inquire if the redline was completed. When this is a system issue, it causes frustration because then the field has to re-do work in the field. Doing this project will improve morale and improve the relationship between management and the Union by reducing administrative pain, human struggle and disagreements, and wasted time repeating work.
Intangibles	Make OVH (overhead) data available to the field device. The current OVH CAD files have not been maintained in over five years.
Intangibles	Make URD-(Underground Maps) assets readable on field device. This is currently a safety issue.
Intangibles	Reduced errors/defects and postings improves Safety by reducing lag time in data updates and if there's a revisit to the Asset. The correct information is on file.
Risk Mitigation	The application is at risk of failure. It is no longer supported, cannot be upgraded or changed in any manner. Retiring the application and moving to a new application must occur in order for the risk to be removed.

Forward Web Proxy Services

Report Pulled: 4/14/2026 **Item ID:** 13974

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias , Forward Web Proxy Services

Description This project will replace the Company's existing web proxy service platform with a new, modern, and more resilient platform designed to support both secure internet access and advanced data loss prevention capabilities. A web proxy service acts as a secure intermediary between users and the internet, evaluating, filtering, and forwarding traffic while enforcing company security policies. It acts as an intermediary that evaluates, modifies, and forwards the client's requests to the destination web server. This service offers many benefits for the Company such as advanced filtering. Advanced filtering in a forward web proxy service can filter out unwanted or harmful content from the internet, such as malware and phishing. This can protect the client's device and network from cyberattacks and improve their browsing experience. Without advanced filtering, the Company's cyber assets are at risk of attacks such as ransomware.

Portfolio Corporate Services > Security Services > Cyber Security & Shared Services > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STANDA

WORK OBJECTIVES

Problem Statement The current web proxy platform, implemented in 2021, has caused ongoing operational issues related to web filtering, inconsistent policy enforcement, and intermittent connectivity. These challenges have occasionally limited employee and contractor access to critical internet and cloud-based resources, impacting productivity and increasing security risk. As the Company accelerates its transition to cloud and Software-as-a-Service (SaaS) platforms, maintaining consistent, secure, and reliable internet access is critical. The new platform will provide high availability, improved performance, and enhanced visibility into outbound traffic to ensure that business operations continue seamlessly, even during peak or failover conditions. The platform will also be designed to support flexible deployment models for remote, hybrid, and field-based workers—ensuring that security policies apply consistently regardless of location. In addition to improving reliability, this project introduces data loss prevention (DLP) capabilities as a core function of the web proxy service. These DLP capabilities will help the Company prevent unauthorized transmission of sensitive or regulated information—such as customer data, intellectual property, or operational system details—to unapproved external destinations. Through content inspection, contextual analysis, and integrated policy enforcement, the new solution will identify and block risky behaviors before data leaves the organization. DLP policies will also align with existing information governance frameworks and compliance obligations to provide both proactive protection and auditable oversight of data handling practices

Objectives This project creates value for the Company by (1) increasing service reliability for employees and contractors to internet and cloud-based resources; (2) utilize technology to enable the Company to handle all types of different workloads from varying geographic locations and is highly available; (3) using a mature and scalable web proxy service provider; (4) providing Zero Trust by continuously verifying every connection request; and (5) implementing data loss prevention capabilities on our core web proxy services.

Scope The project scope includes: (1) replacing the current web proxy services solution and implementing a new system; (2) replacing physical web proxy hardware; (3) potentially changing SAAS cloud vendors; (4) and implementing data loss prevention for web proxy services. The Security team did extensive research on alternative web proxy services solutions.

Alternatives Alternatives considered include: (1) continue to use and maintain the current web proxy services platform as it currently is implemented. This alternative was not chosen due to the previous operational issues with the platform that make it unreliable. The result of an unreliable system means that employees and contractors are unable to access business critical services such as email, Teams, ServiceNow, SharePoint Online.; (2) Route all internet traffic through the Company's corporate data center. This alternative wasn't chosen because the capabilities of firewalls aren't as effective in stopping sophisticated cyber-attacks as using a web proxy service; (3) Perform an evaluation between existing product with expanded feature sets, such as data loss prevention and alternative vendors that could replace current system with modern vendor platform for web proxy services. This option was chosen because it offers additional analysis with the potential to enhance existing, in place, products with features such as enhanced data loss prevention mechanisms, browser isolation (the ability to contain web pages so that the web page can't affect the client workstation) and sandboxing (a way to safely execute malicious applications without impacting the Company's network). As part of the evaluation the Company reassessed based on outside advisors and industry trend analysis, focusing on the ability to execute and the vendor's company strategy.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
Information Theft	High	High	Avoid the cost and disruption of data loss from users, SaaS apps, and public cloud infrastructure due to accidental exposure, theft, or double extortion ransomware.
Information Theft	High	High	Stop advanced cyberthreats with built-in protections against botnets, command-and-control traffic, risky peer-to-peer sharing, malicious active content, cross-site scripting, fraud sites
Information Theft	High	High	The ability to know when patient zero phishing attacks are attempting to infiltrate the Company with advanced AI-based inline detection
Information Theft	High	High	The application will give the ability to know when patient zero phishing attacks are attempting to infiltrate the Company with advanced AI-based inline detection
Information Theft	High	High	The new solution will have the ability to filter risky and malicious domains and stop the use of DNS tunneling to transfer of malicious payloads and sensitive data

OTHER VALUE

Type	Description
Technology Capability	Browser isolation (the ability to contain web pages so that the web page can't effect the client workstation)
Technology Capability	Empower employees and contractors to securely access web applications and cloud services from anywhere, on any device—and ensure a great digital experience where applicable in the Company.
Technology Capability	Increase service reliability for employees and contractors to internet and cloud-based resources for employees and contractors
Technology Capability	Provide Zero Trust by continuously verifying every connection request
Technology Capability	Sandboxing (a way to safely execute malicious applications without impacting the Company's network)
Technology Capability	The new solution will provide more reliable protection against unwanted or harmful content from the internet, such as malware and phishing. This can protect the client's device and network from cyberattacks and improve their browsing experience. Without advanced filtering, the Company's cyber assets are at risk of being attacked by ransomware.

Generation Operations Digital Work Management

Report Pulled: 4/14/2026 **Item ID:** 6766

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias ER Mobility, Generation Operations Work Management Mobility, Generation Operations Digital Work Management, Generation Operations And Compression Digital Work Management, Generation Operations Digital Work Management

Description The project provides mobile software and digital forms for Renewable Generation.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The current work management process for Electric Generation at Renewable Generation sites is cumbersome and largely paper based. Information is currently buried in SAP, may not be complete and is not easily searchable. This system leads to process waste, re-work, and human error. An electronic mobile software will better capture maintenance, condition of equipment, provide visibility to data and records including regulatory tracking while working on equipment, and create a digital punch list for future work.

Objectives This project provides value to the Company through: (1) Productivity is improved and human struggle reduced by simplification of work tracking through the mobile software. Time sheet charging is incorporated to the work order when someone on the crew pushes the clock to start versus being separately entered through SAP Employee Self Service. If there is more than one person on a crew, information is entered for the full crew versus individually, including time tracking. Functionality is available to more easily create a digital punchlist in the field when a worker sees something instead of later writing it on a punchboard and entering it separately into SAP. (2) Employee Engagement improves as the more tech savvy candidate pool for these positions are looking for mobile software to help them do their jobs. (3) Quality is improved by creating a digital punchlist when the technicians find an issue versus manually documenting it later. Accuracy increases and rework decreases when updates are performed right at the time and place of the work instead of afterwards. Productivity can also be tracked and measured for further improvements. This level of tracking is not possible with

Scope The scope of the project includes: the initial roll out for Renewable Generation, which would include: (1) purchase of additional mobile work management software licenses, (2) development and configuration of forms and workflow for these groups (3) and implementing additional reporting capabilities and dashboards.

Alternatives Alternatives considered include: (1) Utilize an SAP work management mobile solution. An SAP work management solution is not preferred since it is a new solution and requires additional project and support cost. (2) Continue the manual paper-based process. Continuing the manual paper-based process was not chosen because of process waste, re-work, and human error. (3) Customize the existing electronic Shift Operations Management System (eSOMS) mobile application to add work management functions. A custom eSOMS mobile application was not chosen because it would require additional project cost and an ongoing support budget for a custom solution that the eSOMS product was not intended to support. (4) Utilize an out of the box solution to minimize cost and risk to the Company and its employees. The combined Service Suite and digital form solution is the preferred option because it is a proven solution and provides the mobility and digital benefits at a lower cost than other alternatives

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Intangibles	Employee Engagement improves as the more tech savvy candidate pool for these positions are looking for mobile software to help them do their jobs.
Avoided Costs	For Renewable Generation, the improved maintenance program will reduce equipment downtime resulting in an increase to Megawatt hours produced.
Avoided Costs	Functionality is available to more easily create a digital punch list in the field when a worker sees something instead of later writing it on a punchboard and entering it separately into SAP. 2,346 annual notifications (non-maintenance) x 5 minutes saved per notification = 11,730 mins or 195.5 hours per year. 195.5 hours x $56 per hour = $10,948 O&M avoided per year.
Intangibles	Quality is improved by creating a digital punchlist when the technicians find an issue versus manually documenting it later. Accuracy increases and rework decreases when updates are performed right at the time and place of the work instead of afterwards. Productivity can also be tracked and measured for further improvements. This level of tracking is not possible with the current process and information.
Intangibles	Safety is improved as employees have remote access to manuals to reference before moving forward with and during their work. The access to manuals increases productivity and better supports error reduction training by having the manuals available so a worker can move beyond "I think" and "I believe". The project will mitigate the risk of work and safety errors from using outdated procedures.

Genesys Cloud Migration

Report Pulled: 4/14/2026 **Item ID:** 13423

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias , Genesys Cloud Migration

Description The project will migrate the Company's existing on-premise customer contact solution and deploy it to the Genesys Platform As A Service ("PAAS") cloud-based solution. It will provide the Company with the ability to reduce operational costs for performing upgrades and maintenance, take advantage of new enhancements offered by the vendor, and ensure continued support of a critical customer communication channel.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement In 2028, standard vendor support ends for the current on-premise software and extended support is not available from the vendor. Without vendor support, the application no longer receives security patches, bug fixes, or functionality support from the vendor, which creates security, stability, and reliability risk. With the upcoming end of standard support, the vendor is no longer offering feature enhancements to the current on-premise solution limiting the Company's ability to invest in new ways to better serve its customers.

Objectives This project will provide value to both the Company and its customers through: (1) reducing costs with cloud allocated hardware scalable to current usage needs; (2) reducing operating costs with vendor managed feature updates and maintenance provided without service disruption; (3) providing access to new and innovative capabilities to enhance customer service; and (4) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support.

Scope The project scope includes: (1) deploying the new PAAS cloud-based solution in the vendor cloud environment; (2) installing a new internet circuit to directly connect the Company's systems to the vendors cloud environment; (3) updating existing customer interactive voice response ("IVR") system to accommodate the new cloud implementation; (4) implement new features supporting analytics, quality, and reporting; and (5) implement a built-in customer survey tool.

Alternatives Alternatives considered include: (1) Defer to later years. This alternative was not selected due to requiring upgrades of existing on-premise hardware, impeding our ability to take advantage of new features offered by the cloud solution, and reducing cost savings opportunities presented by moving to the cloud. (2) Deploy Genesys on-premise solution to new on-premise hardware. This alternative was not selected due cost associated with purchasing new hardware and does not address the security, stability, and reliability risk resulting from the vendor end of support for the on-premise software. (3) Select and migrate to a new vendor software. This alternative was not selected due to the complexity of our existing internal integrations between the Genesys platform and the Company's other internal systems. As a result, selecting a new system with a new vendor would make the switch cost prohibitive. (4) Migrate to the Genesys Cloud platform. This alternative was selected due to it building on the Company strategy of moving to cloud, reducing operating and maintenance costs, and reduces risk by ensuring consistent, seamless vendor support.

B/C Ratio (Overall)	-0.481

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Avoided costs of $1,000,000 associated with on-premise server upgrades which would require both internal and external labor to complete. Savings based on on-prem server upgrades estimated at a total of $970,000 and $30,000 in extended server support would not be needed for the year 2026.
Avoided Costs	Avoided costs of $2,669,170 associated with the Genesys indication of a 20% increase in on-premise software maintenance year over year until the on-premise end-of-life. Calculated by taking the difference between the IT forecasted on-premises software maintenance minus the estimated expected cost with 20% increase for each year starting in 2025. [2025: $1,717,174 (expected) - $1,623,397 (forecast) = $93,777] [2026: $2,060,608 (expected) - $1,638,077 (forecast) = $422,531] [2027: $2,472,730 (expected) - $1,638,077 (forecast) = $834,653] [2028: $2,967,286 (expected) - $1,638,077 (forecast) = $1,329,209] [Total Savings: $93,777 + $422,531 + $834,653 + $1,329,209 = $2,669,170]
Avoided Costs	Avoided costs of $365,000 associated with reduction of voice circuits. Savings based on $60,000 per year in SIP circuit costs + $60,000 per year in H&H voice circuit costs, minus $63,000 in annual costs for AWS direct connect. Assumes only partial year costs for AWS circuit in 2024. [2024: $120,000 - $40,000 = $80,000] [2025: $120,000 - $63,000 = $57,000] [2026: $120,000 - $63,000 = $57,000] [2027: $120,000 - $63,000 = $57,000] [2028: $120,000 - $63,000 = $57,000] [2029: $120,000 - $63,000 = $57,000] [Total Savings = $80,000 + $57,000 + $57,000 + $57,000 + $57,000 + $57,000 = $365,000]
Avoided Costs	Reduces annual ongoing costs associated with running on-premise solution including virtual machines and storage. Approximate avoided cost of $728,092 per year which was estimated by including the monthly HCL management expense per virtual machine, Azure 3rd copy backup storage, VMware licenses, on-premise Commvault backup storage, operating system licenses, and other shared infrastructure costs.

HR Support Pack and Business Software Inc Upgrade 2025

Report Pulled: 4/15/2026 **Item ID:** 12508

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - Interval **Work Type** Project

Alias , HR Support Pack and Business Software Inc Upgrade 2025

Description The HR Support Pack and BSI upgrade will update the SAP system with HR Support Packs that are released annually by SAP to comply with HR and tax changes.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement SAP releases annual HR support packs to ensure compliance. Without them, the Company would be unable to comply with HR and tax changes, resulting in the inability to calculate and distribute payroll.

Objectives This project creates value for the Company by: (1) ensuring that its systems are in compliance with new financial rules and regulations; and (2) ensuring that it can calculate and distribute payroll.

Scope The scope of this project is to add SAP HR corrections to ensure proper reporting of financial information by the Company.

Alternatives Alternatives considered include: (1) Not upgrading to the current support packs which results in noncompliance with financial rules and regulations and inaccurate payroll; (2) there is no economical cloud solution, so this option was not entertained; (3) apply the appropriate support pack upgrades. Option (3) is the preferred option because it enables the company to comply with HR and tax changes, resulting in the ability to correctly calculate and distribute payroll.

HR Support Pack and Business Software Inc Upgrade 2027

Report Pulled: 4/15/2026 **Item ID:** 12756

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - Interval **Work Type** Project

Alias , HR Support Pack and Business Software Inc Upgrade 2025, HR Support Pack and Business Software Inc Upgrade 2026, HR Support Pack and Business Software Inc Upgrade 2027

Description The Human Resources (HR) Support Pack and Business Software Inc (BSI) upgrade will update the SAP system with HR Support Packs that are released annually by SAP to comply with HR and tax changes.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement SAP releases annual HR support packs to ensure compliance. Without them, the Company would be unable to comply with HR and tax changes, resulting in the inability to calculate and distribute payroll.

Objectives This project creates value for the Company by: (1) ensuring that its systems are in compliance with new financial rules and regulations; and (2) ensuring that it can calculate and distribute payroll.

Scope The scope of this project is to add SAP HR corrections to ensure proper reporting of financial information by the Company.

Alternatives oAlternatives considered include: (1) not upgrading to the current support packs, which results in noncompliance with financial rules and regulations and inaccurate payroll. (2) there is no economical cloud solution, so this option was not entertained. (3) the Company decided the best alternative is to apply the appropriate support pack upgrades. This option is preferred because it enables the Company to comply with HR and tax changes, resulting in the ability to correctly calculate and distribute payroll.

HVD Supervisory Control and Data Acquisition (SCADA) Upgr; Report Pulled: 4/15/2026 Item ID: 13968

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias , HVD SCADA Upgrade, HVD Supervisory Control and Data Acquisition (SCADA) Upgrade, HVD Supervisory Control and Data Acquisition (SCADA) Upgrade 2025-2026

Description The Electric HVD Monitoring System Upgrade project upgrades the software (every 2 years) and hardware components (every 4 years) of HVD SCADA system. This will include the upgrade of the underlying operating systems and database platforms that the software resides on as needed to maintain vendor support. This system is used to monitor and control generation and high voltage distribution voltage circuits. This project will add additional features and enhancements to HVD Monarch, the Company's HVD SCADA platform that improves efficiency and reliability.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement Running on an older version of the HVD Software could have potential impacts on the reliability and resiliency of the low voltage distribution (LVD) system as well as the HVD system, as distribution reliability metrics depend upon HVD system availability. Maintaining an older version of the software and hardware creates risks associated with vendor responsiveness in addressing problems, as they arise. It will also take more effort to support any upgrades in the future because of difficulties resulting from longer durations between upgrade efforts. If upgrades are delayed, additional full-time resources will be required for the year upgrades occur to address upgrade complexities.

Objectives Upgrading the HVD SCADA software and hardware adds value to the Company by ensuring that problems are promptly addressed when they occur. Additionally, the upgrade includes enhancements and fixes to the core product that support the resiliency of electric delivery, ensuring that customers are receiving the energy they need when they need it. Also, the distribution system depends on availability of the HVD system, staying current with the solution provider upgrades is critical to the resiliency of both systems.

Scope The scope of this project is an upgrade to the HVD SCADA software and hardware, which encompasses the following: (1) upgrading the application software; (2) upgrading the underlying operating systems and database platforms; (3) upgrading the underlying application hardware; (4) implementing new functionality for improved value to the Company; (5) making necessary configuration changes; and (5) updating documentation related to the integration changes.

Alternatives Alternative considered include: (1) Defer the biennial upgrade of the SCADA application and its hardware. The Company targets SCADA biennial application upgrades to stay within two versions of the current application state to maintain application stability and cyber security, given the critical nature of the SCADA system. This alternative was not chosen due to increased security risk and need for vendor support of the application. Additionally, the hardware is already past the end of its useful life and has been moved over to a 3rd party warranty provider. (2) Alternative Vendor solution. This option was not chosen because the move from our current vendor would be time consuming and costly. It could also introduce instability as any alternative solutions have not been proven operationally. (3) Do nothing. This option was not chosen due to the critical nature of these systems and the potential operational risks associated with operating on an unsupported solution. (4) Move to cloud. This option was not chosen as CE's internal security requirement is to host control systems on premise. (5) The option chosen is to complete the upgrade project with associated hardware and software necessary to complete the project that will deliver new functionality for improved value.

Integrated Energy Management Platform Optimization

Report Pulled: 4/14/2026 **Item ID:** 14021

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Strategic Shift for PCI Energy Solutions, Strategic Shift for Energy Trading Platform, Strategic Shift for Energy Buying and Selling Platform, Integrated Energy Management Platform Optimization

Description This project will reduce data center assets running PCI Energy Solutions by migrating into vendor cloud hosting solution. This will optimize vendor support, reduce operational costs (upgrades, server maintenance) and allow the Company to leverage new cloud capabilities.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement PCI Energy Solutions (PCI) provides software the Company uses to fulfill the Federal Energy Regulatory Commission (FERC) requirement of communicating unit availability to the Regional Transmission Operator and become more efficient at buying and selling electricity in the wholesale market. Due to the solution being Company hosted, the Company is not able to leverage benefits of the functionality in the vendor's cloud hosting solution (Software as a Service (SaaS)). The complex nature of the solution requires various IT and business support teams to monitor, maintain and upgrade the system. Due to the critical nature of the application, the Company is looking to the SaaS hosting to benefit from the uptime SLA of 99.95% and the streamlined operational support for faster issue resolution.

Objectives This project creates value for the Company by: (1) utilizing the vendor's SaaS environment which provides efficiencies for timely operational support. Currently, as an example, IT sends PCI a database copy so they can replicate the Company's environment in the vendor's system. This leads to waste of resources, time and increased support costs. (2) Freeing up resources for more value add work. As the Company optimized the organization, it is very important to reduce waste and work on the most valuable items; (3) reducing Oracle footprint; (4) reducing IT labor support costs; (5) reducing ongoing networking equipment replacement and upgrade costs.

Scope The project scope includes: (1) planning and executing the data migration; (2) designing and configuring new and existing vendor SaaS components; (3) implementing integrations to COTS (Commercial Off-The-Shelf) and custom systems; (4) testing; (5) educating and increasing the skills of the employees to leverage the new vendor SaaS services; (6) decommissioning old infrastructure.

Alternatives Alternatives considered include: (1) continue to use the Company hosted installation of PCI. This alternative was not chosen due to the significant waste involved in maintaining the system, the inability to leverage Cloud functionality, and the failure to decrease the reliance on Oracle servers. (2) Move to a different energy market platform. This alternative was not selected because the different platform would have lesser options and would not be able to utilize PCIs bid to build process. (3) Move to the vendor SaaS. This alternative was selected as the Company will utilize the latest technology and optimize operational support.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	By reducing the IT labor needed to keep the system current and patched, the Company will avoid approximately $100,000 annually. This shift allows personnel to focus on other priorities and other technology investments.
Avoided Costs	By utilizing a vendor SaaS applications, the Company can avoid costs associated with purchasing hardware and software. Additionally, expenses related to maintenance and asset refreshes will be avoided.
Risk Mitigation	Since the Company adopted a cloud-first strategy, the Company will avoid costs associated with traditional infrastructure. This move to a vendor SaaS will also enhance uptime (SLA of 99.95%), reliability, and scalability, aligning perfectly with the Company's strategic goals thus shifting risk to the vendor.
Intangibles	The Cloud will provide improved response, issue resolution by product vendor, and higher platform availability.

ISIS Papyrus 2026 Upgrade

Report Pulled: 4/14/2026 **Item ID: 13461**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias ISIS Papyrus Upgrade, ISIS Papyrus 2026 Upgrade

Description This project will upgrade the Papyrus Objects suite of applications to the most recent version available per vendor recommendation. The ISIS Papyrus application is critical to creating electronic and paper correspondence for customers, including bills and dunnings.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement The application will be at least one major upgrade revision behind by 2026. It's imperative that customers retain unfettered access to their paper bills, dunning notices and other communications produced by ISIS. ISIS also makes customer bills available for online viewing through the website and mobile apps. Without the upgrade, vendors make no guarantee that any substantial patches or hot fixes impacting application reliability, capacity and security will be forthcoming. The upgrade will address these problems and challenges, as well as ensuring all other platform components comply with the Company's operational and security standards.

Objectives The value of this project includes: (1) providing a more stable operational model by upgrading to the most recent version available; (2) maintaining the necessary vendor support; and (3) resolving tuning and stability issues with the vendors.

Scope The scope of the project is to upgrade the various licensed products that comprise the Papyrus Objects suite of applications.

Alternatives Alternatives considered include: (1) delaying the upgrade and continuing to operate with the current version. This alternative was not chosen due to the risk of application stability and the inability to maintain cyber security patching. (2) The Company instead decided to upgrade to the current version. This alternative was chosen as it eliminates the risk of application instability and the inability to maintain cyber security patching.

Itron Enterprise Edition 2027 Upgrade

Report Pulled: 4/14/2026 **Item ID:** 13415

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Itron Enterprise Edition Upgrade 2028, Itron Enterprise Edition 2028 Upgrade, Itron Enterprise Edition 2030 Upgrade, Itron Enterprise Edition 2028 Upgrade, Itron Enterprise Edition 2027 Upgrade

Description This project will upgrade Itron Enterprise Edition (IEE), which collects the reads from meters to ensure non-estimated bill accuracy.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement Itron Enterprise Edition (IEE) is the Company's keystone application of the Advanced Metering Infrastructure (AMI), that provides billing data that includes time of use data. If this application does not stay current, the Company increases the risk business operations could be interrupted or compromised. Itron Enterprise Edition (IEE) is a key component in keeping the Company current, with billing capacity, stability, and accuracy obligations.

Objectives This project creates value for the Company by: (1) ensuring the features and functionality needed to meet and exceed customer satisfaction and billing accuracy are available to business partners and IT; (2) meeting Information Security's requirement to keep applications patched and protected from cyber attack.

Scope The scope of this project includes: (1) upgrading the Itron Enterprise Edition (IEE) applications to the next appropriate versions; (2) migrating the database to the next version required by the application; and (3) replacing hardware required by the next version to maintain operating system currency.

Alternatives Alternatives considered include: (1) deferring the upgrade. This alternative was not selected because it would decouple Itron IEE (Consumers Energy's Meter Data Management) from the Itron security infrastructure introducing application instability, security and dependency risks to the utility, possibly negatively impacting critical customer electric and gas billing operations. It would also likely affect other business critical Itron applications, creating more expense to support and no ability to leverage updated tool capability. (2) replacing the platform. Replacing IEE/MDM would require the application business owners to undertake a new initiative mirroring the expense and effort that went into the initial multi-million dollar project.(3) performing the upgrade is the best alternative. This option is superior for both customers and the Company because it maintains vendor support for hot fixes and patches, and aligns with all upgrade projects related to other Itron products.

OTHER VALUE

Type	Description
Risk Mitigation	If Consumers Energy does not upgrade this equipment, it would run the risk of losing support from the vendor, leading to security vulnerabilities and operational efficiency issues.
Risk Mitigation	Without the upgrade, supportability and operational efficiency issues may increase over time. Resolving these issues becomes very problematic if vendor support is not available. It would also be difficult to keep the system current with security updates.

Kubra 4.0 Upgrade

Report Pulled: 4/16/2026 | Item ID: 14018

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow | **Work Type** Project

Alias , Kubra 4.0 Upgrade

Description Consumers Energy (CE) has the overarching ambition of serving 1 in 3 Low-to-Moderate Income (LMI) customers (currently 1 in 6), while supporting the achievement of clean energy goals and reduction in Uncollectible Expense (UCX). 37% of CE customers are low to moderate income (LMI). Low Income (LI) accounts for 11% and means they are currently in crisis and unable to pay their bill. Moderate Income (MI) accounts for 26% and means they are one financial crisis away from being unable to pay their bill. As part of the LMI effort, we are prioritizing Behavior Based Direct Messaging: Meet the customer where they are, communicate about assistance options based on behavioral indicators, and increase the likelihood of enrollment into meaningful assistance programs ahead of a crisis, and Kubra 4.0 will aid in the success of those LMI goals.

Portfolio Customer Services > Customer Interaction Channels > Digital > Digital Operations > * > *

Org CX&T | **Bus Unit** INFORMATION TECHNOLOGY | **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement To help a customer avoid a crisis before it happens, we need the ability to proactively communicate to them when their behaviors signal the possibility of an issue, some examples being: (1) A customer misses a payment after record of making payments for several months, (2) The auto-pay system receives an insufficient funds alert from the customers' account, (3) Energy use is high, and a bill is projected to be 25-50% larger than usual, and (4) Localized / seasonal triggers such as heat waves, blizzards, and ice storms. Additionally, (5) it's imperative that we're able to test and modify message content that captures the customer's attention, so that we may drive awareness to programs that offer assistance ahead of a crisis. Kubra 4.0 platform is more flexible and configurable to help experimental design & marketing iterate on who/where/what to cut through digital noise.

Objectives This project creates value for the Company through improving customer communications by providing Consumers Energy (CE) with access to (1) templates and wording changes that previously required expensive Statement of Work (SOW) engagement to deliver and (2) reduce lengthy wait times to implement these aforementioned Statements of Work (SOWs). Finally, (3) this engagement will also introduce 12 net new alert messages, (4) allow for new means of communication and messaging via the mobile app push notification feature, and (5) provide better outage notification reliability and control via Application Programming Interface (API) data transfer instead of Secure File Transfer Protocol (SFTP) data transfer.

Scope The project scope includes: (1) 12 net new alerts including 4 for the Shut-off Protection Plan (SPP), missed payment(s), summer event alerting, winter event alerting, and 5 additional alerts to be detailed out during the plan & design phase of the effort based on current low-to-moderate income (LMI) customer communication needs, (2) new template editor as part of the upgraded platform, (3) New Push Notification option available for mobile app which will enable a fast follow enhancement to push notifications through more than just email and text, (4) all other updates and improvements through Kubra 4.0 including use of APIs and other technical improvements, and (5) a new Application Programming Interface (API) built specifically for CE's outage messages for better reliability - instead of the existing file transfer outage information which is less reliable.

Alternatives The alternatives considered include: (1) continue the expensive Statements of Work (SOW) approach for updating each message template and for bringing on any new messages. This would total approximately ~50k per new alert, for a total of 600k for all 12 net new alerts for this effort if pursued individually. This total is not including costs to any existing message adjustments. This alternative was not considered due to the extra cost and overhead. (2) Purchase a new customer communications system. This option was not selected as it would be extremely expensive to purchase and wouldn't have all of the requirements needed and would be a tremendous amount of labor to reintegrate with our existing communication channels. (3) Utilizing Microsoft Dynamics or Riverstar. This option was not selected as it would be a tremendous amount of labor to reintegrate with our existing communication channels nor would either of the platforms fully support the bandwidth or channels needed to properly communicate out what we send via Kubra today. (4) Implement the upgrade to include the new alerts. This alternative was selected because it will improve customer communications, improve accuracy and speed of message updates, and offer more message options to achieve the Low-to-Moderate income (LMI) 1-in-3 goal as we're able to keep expanding our communication options with the upgrade's features.

Live Wiredown Detection and ADMS Upgrade

Report Pulled: 4/15/2026 **Item ID: 10474**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Live Wiredown Detection, ADMS 3.4 Upgrade & Live Wiredown Detection, Live Wiredown Detection and ADMS Upgrade

Description The Live Wiredown Detection and ADMS Upgrade project, formerly known as Live Wire Down, enables, configures, tests, and implements an add-on module to the ADMS/Electra outage management system that provides the Company with the information on whether a wiredown has a live conductor or not, enabling dispatchers to prioritize truck-rolls and wire-guards to the live wiredowns first. The module provides this information based on any smart meter events being reported from behind that conductor. An upgrade to the ADMS system to the next version 3.4 is required to enable the Live Wiredown Detection module. The ADMS 3.4 version also contains several other functional enhancements the benefit the overall Electric service restoration process.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement Currently, the Company does not have the ability to remotely determine if a reported wire down is live. Therefore, the Company has to send truck-rolls to secure every location. Sometimes, it is a waste of time and resources for the public safety teams (police & fire) guarding a downed wire that may already be de-energized. There is no way currently to determine the priority of which wiredown the restoration team should be tending to. There are major public safety concerns around wire down operations as well as the logistics of team safety during wiredown operations. The Live Wiredown Detection module from the vendor requires an upgrade to version 3.4 of the current ADMS software. Therefore, this project would warrant an upgrade of the existing version 3.2 to new version 3.4 of the ADMS software, which itself comes with new functionality and several enhancements.

Objectives The project will add value by: (1) reducing the number of truck-rolls, (2) relieving public safety personnel from downed wires quicker, (3) reducing the size of the wire down operations teams, (4) decreasing wiredown secure times, (5) implementing the ability to prioritize wiredowns, (6) gaining efficiency in resourcing and less time spent troubleshooting, (7) meeting MPSC-regulatory standards, and (8) creating the ability to reduce isolating and enable restore or repair safer, faster, and cheaper.

Scope The scope of the project includes: (1) upgrade of the existing version 3.2 to new version 3.4 of the ADMS software, (2) turning on the "Live wire conductor" and other new functionality in the ADMS system, (3) testing the new functionality in various possible scenarios, (4) enabling the wiredown tool and other enhancements for all Low-Voltage Distribution (LVD) locations across the Company, and (5) communicating and training users on the new functionality.

Alternatives The alternatives considered are: (1) Developing an in-house application that provides process improvements. This option was not selected as it requires the Company to design and build the algorithm that the Electric Power Research Institute (EPRI) has already devised, and then integrate with the OMS system; (2) Using the LVD line sensors (to be deployed in 5 years) to provide some of the functionality. This option was not selected as the benefits realization would be much delayed; (3) Maintaining the current truck-roll process. This option was not selected due to the specific MPSC-regulatory standard expectations and the safety implications of doing nothing; and (4) Enabling and implementing the live wiredown module for OMS. This option of enabling and implementing the live wiredown module for OMS integrates with the new OMS system and is based on the algorithms that EPRI has already designed. This option was chosen as it has the least technology and integration risk, which avoids the need for the Company to develop their own logic and algorithm for live wiredown detection.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	$1.59M in avoided costs due to reduced truck rolls, by being able to differentiate between Live downed wire vs. a de-energized wire
Avoided Costs	$310,000 per year savings due to reduced Wire Down Operations Staffing
Avoided Costs	$47,000 per year savings due to reduced training re-qualification for wire guards
Risk Mitigation	Reduces the safety risk for employees and public by allowing prioritization of Live wiredowns over others, so they could be addressed first
Intangibles	The target is to secure Police/Fire wire downs within 4 hours 90% of the time in a year (reference MPSC rule 460.723), we are currently at 88.3% (2019), and with this implementation we will meet or exceed 90%. - PLACEHOLDER FOR PERFORMANCE METRIC

MS Self-hosted Gateway Solution and Migration

Report Pulled: 4/15/2026 **Item ID:** 14008

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias , Tibco Api Migration Zone B, MS Self-hosted Gateway Solution and Migration

Description This project is looking to retire the Application Programming Interfaces (API) Exchange Gateway used primarily by the Enterprise Service Bus and replace it with a new solution called Microsoft Self-Hosted Gateway in security Zone B. The API Exchange Gateway is used by The Information Bus Company Enterprise Service Bus (TIBCO ESB) to integrate corporate applications. New development will need to be done to integrate this solution.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement The TIBCO API Exchange Gateway is anticipated to be sunset by the vendor, as they have already dropped all development of enhancements for the platform. The end of life date is 6/30/25

Objectives This project creates value for the Company by: (1) Avoiding the risk of running a project no longer supported by the vendor (i.e. the TIBCO API Exchange Gateway Exchange module), and (2) Enabling the Company the opportunity to move to a product that is more stable, secure, and usable.

Scope The project scope includes: (1) Implement the Self Hosted Gateway into Zone B as a replacement solution. (2) Migrate all current work items to the new platform or existing equivalent based on use case. (3) Conduct appropriate testing to ensure all Service Level Agreements are met.

Alternatives Alternatives considered include: (1) Evaluating the replacement of the current product with a new product that is not already in the Company environment. This alternative was not selected because it would not be cost effective. (2) Keeping the current application as-is. This alternative was not selected as the vendor for the current platform has stopped all development for this product and the end of life has been set (3) Leveraging an existing solution already in the Company environment. This alternative was not selected as an existing product in the corporate Zone B layer does not exist. (4) Implement the Microsoft Self-Hosted Gateway and migrate current data into new platform. This alternative was selected as the most cost-effective solution that has ongoing support from the publisher.

Operational Technology (OT) Datacenter Migration

Report Pulled: 4/15/2026 **Item ID:** 13963

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , OT Datacenter Colo, OT Datacenter Migration, Operational Technology Datacenter Migration, Operational Technology (OT) Datacenter Migration

Description The OT environment consists of systems supporting the control and monitoring of electric grid, electric generation, gas compression, and natural gas pipeline. These systems are critical for safe and reliable natural gas and electric delivery. The OT Datacenter Migration project enhances the Company's capabilities by co-locating to an enhanced datacenter at a vendor facility.

Portfolio IT Services > Infrastructure > Data Center - Enterprise Computing > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement The Company's current datacenter for the OT environment needs modernization and relocation from the Parnall Data Center. The current location is not the preferred location to house servers and systems critical to the control of the Electric Grid or Gas Pipeline due to the close proximity to a railway system. The climate conditioners in the current OT datacenter are aging and have had faults resulting in unplanned shutdowns . The location of the datacenter in the basement of the Parnall building is nearby to the main water piping for the building. There have been instances of water infiltration in the past.

Objectives This project creates value for the Company by significantly strengthening capabilities through: (1) mitigating legacy physical and location risks at the current Parnall site; (2) migrating the OT infrastructure to a modern, highly secured environment with redundancy in climate conditions; and (3) better datacenter facilities support with a guarantee of redundant power.

Scope The scope of the project includes: (1) migration of the OT environment from the Parnall Data Center to a co-located vendor data center; (2) re-validation of the OT Production and Disaster Recovery procedures once migration is completed; (3) migration of IT systems required for supporting the OT environment; and (4) decommission the existing OT environment from the Parnall location.

Alternatives The Company performed an analysis of alternatives to expand capabilities as well as address constraints and risks: (1) Remain at the current Parnall Data Center; (2) migrate OT environments to the Cloud; and (3) relocate to a third-party co-location facility. Current industry best practices do not recommend migration of OT environments to the cloud. The co-location vendor provides the building, cooling, power, and physical security the Company lacks for its servers, storage, and other computing and networking equipment at the current Parnall location. Based on the analysis, the Company decided to implement the third alternative.

	Net	-	-	-	-	-	-	-	-	-

B/C Ratio (Overall) -1.000

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	The Company would be able to avoid ARP-OT Support Common and ARP-OT Support Electric project costs in future years. of the following amounts. ARP-OT Support Common $809,200 Capital and $83,440 O&M and ARP-OT Support-Electric $828,600 Capital and $87,8120 O&M
Risk Mitigation	The presence of a railway near a data center increases physical risk such as vibration and environmental hazards such as trains carrying hazardous material or fuels. A more recent Industry standard, ANSI/BICSI 002-2024, recommends maintaining a safe distance – typically 1.6 km (1 mi) or more – to ensure long-term stability and minimize risk. The current distance from the railway to the building, where the data center is located, is approximately 170 meters. The OT Data Center migration project will mitigate this risk and follow industry guidelines for safe distance to railroads
Intangibles	There could be impacts to business services, customer service, and Company reputation.
Risk Mitigation	There is a need for enhancement to Consumer Energy's DR capabilities. Without a clear understanding of the risks, mitigation of those risks, and communication to all key stakeholders, the Company may not be able to recover from a loss of the primary data centers at Parnall. This risk may result in impacts to day-to-day operations and customers, which could have broader financial, reputational, and regulatory impacts.
Avoided Costs	This project will avoid the costs of addressing aging climate control and continuing water filtration issues. The Company has estimated the costs of addressing the aging climate control equipment and continuing water filtration issues of the current location to be $5,082,728. The projected costs to replace the aging climate control equipment including labor is $4,965,728. To remediate the water infiltration issues which would require removal of architectural concrete and replacing the waterproof membrane, which is estimated to be $117,000. This does not address the risk of the datacenter location being in the basement of the Parnall building near the main water pipe for the building. By moving the data center to a new co-located facility, this cost would be avoided and mitigate the risk of the location of the datacenter being near the main water pipe for the building
Risk Mitigation	Using a vendor managed co-location datacenter reduces Company risk as it relates to NERC/CIP regulatory requirement Physical Security CIP-006-6
Intangibles	With the OT Datacenter migration, there is a highly secured environment, heating and cooling redundancy, and a guarantee of 100% power efficiency.

Privileged Access Management Cloud Migration

Report Pulled: 4/14/2026 **Item ID:** 14035

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Private Access Cloud Migration, Privileged Access Management Cloud Migration

Description This project will perform the implementation of a Privileged Access Management (PAM) solution to enhance security by securely storing, rotating, and isolating privileged credentials for both human and non-human users. It provides robust monitoring and control of privileged access across on-premises, cloud, and hybrid environments. Additionally, it automates password management, reducing administrative tasks and minimizing the risk of credential exposure.

Portfolio Corporate Services > Security Services > Cyber Security & Shared Services > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STAND/

WORK OBJECTIVES

Problem Statement The Company faces significant security risks related to the management of privileged access, including potential data breaches, unauthorized access, and compliance issues. The Company's current methods of managing privileged accounts are often manual, error-prone, and insufficient to address the complexities of modern IT environments. There is a critical need for a robust solution that can automate and secure the management of privileged credentials, provide comprehensive monitoring and control, and ensure compliance with security policies across on-premises, cloud, and hybrid environments.

Objectives This project creates value for the Company through: (1) securely storing and managing privileged credentials; (2) automating credential rotation; (3) isolating access to prevent unauthorized use; (4) improving compliance with regulatory requirements through comprehensive audit trails, and reporting; (5) increasing efficiency by automating password management; and (6) reducing manual tasks that can be prone to human error.

Scope The project scope includes migrating the Company's current system Privileged Access Management (PAM) system to a cloud vendor, implementing new features not available in the current on-prem solution.

Alternatives Alternatives considered included: (1) manual password rotation. This alternative was not chosen because it requires significant time and effort to manage and update passwords manually. It also increases the risk of human error including mistakes, such as forgetting to update passwords or using predictable patterns; (2) Access Control Lists (ACLs). This alternative was not chosen because of scalability issues. ACLs are difficult to manage as the number of users and resources grows. This option also requires regular updates and reviews to ensure accuracy and security; (3) manual audit logs. This alternative was not chosen because it is very labor intensive. It requires significant effort to maintain and review logs manually. The use of manual audit logs increases the risk of inaccuracy by having a higher chance of errors and incomplete records; (4) periodic security reviews. This alternative was not chosen because it is very resource intensive and requires time and expertise to conduct thorough reviews. Periodic security reviews may also miss issues that arise between review periods; and (5) implementation of a cloud based Privileged Access Management (PAM) solution was the chosen option. It provides robust monitoring and control of privileged access across on-premises, cloud, and hybrid environments. Additionally, it automates password management, reducing administrative tasks and minimizing the risk of credential exposure.

Product Family Enhancements-Application Platforms Services-Ca Report Pulled: 4/14/2026 Item ID: 13931

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Portfolio

Alias , Product Family Enhancements-IT/Digital Foundation-Capital, Product Family Enhancements-Application Platforms and Services, Product Family Enhancements-Application Platforms and Services-Capital, Product Family Enhancements-Application Platforms Services-Capital

Description The IT initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives.

Objectives The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment.

Scope Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management.

Alternatives Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.

Product Family Enhancements-Application Platforms Services-O Report Pulled: 4/14/2026 Item ID: 13933

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Product Family Enhancements-IT/Digital Foundation-O&M, Product Family Enhancements-Application Platforms and Services-O&M, Product Family Enhancements-Application Platforms Services-O&M

Description The IT initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement

As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives.

Objectives

The value of software enhancements that benefit the IT organization lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment.

Scope

Included in the implementation are small changes and functionality improvements to existing IT software application investments that are utilized by IT employees in support of tracking hardware and software fixes and managing technology projects for the various business areas within the Company. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as IT resource management, IT project management, IT financial and regulatory, IT applications operations, and IT infrastructure management.

Alternatives

Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.

OTHER VALUE

Type	Description
Intangibles	Maintaining an optimal degree of application currency helps the Company to avoid: (1) application failure, (2) an increased number of incidents, (3) paying increased support costs, and (4) disruption of employee work completion. The benefit of implementing the enhancements will be reviewed and agreed upon by the cross organization governance board.

Product Family Enhancements-Customer-O&M

Report Pulled: 4/16/2026 **Item ID:** 13375

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Product Family Enhancements-Customer-O&M

Description The Customer initiative will utilize O&M funding to make enhancements to existing software and to address requests generated by changing business requirements.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives.

Objectives The value of software enhancements in the Customer Portfolio lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment.

Scope Included in the implementation are small changes and functionality improvements to existing IT software application investments for Customer. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Customer Experience and Operations, Applications Support and, Device Management.

Alternatives Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.

Product Family Enhancements-Electric-Capital

Report Pulled: 4/14/2026 **Item ID:** 13378

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Product Family Enhancements-Electric-Capital

Description The Electric/Generation/Renewables Engineering and Operations initiative will utilize both Capital and O&M funding to make enhancements to existing software and to address requests generated by changing business requirements. O&M is included in this project to complete expense activities associated with Capital enhancements.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement As business processes improve and change, new requirements surface that call for smaller-effort software application changes that typically emerge from new or changing business conditions, compliance requirements, needs for new capabilities, customer feedback, and other improvement ideas Enhancing applications requires a short timeframe between inception and implementation and cannot and should not wait for rate case approval at an individual line-item level. Failure to make these changes to applications can have a direct negative impact on key customer and business processes, increase support costs, and limit the Company's ability to consistently meet objectives.

Objectives The value of software enhancements in Electric/Generation/Renewables Engineering and Operations lies in: (1) cost savings and cost avoidance; (2) technology and business process efficiencies; (3) improved customer experience; (4) risk mitigation; (5) safety improvements; and (6) achieving corporate goals, among others. While these small-work software efforts are neither projects nor operational work, funding for resources is still required to maintain business agility in the digital environment.

Scope Included in the implementation are small changes and functionality improvements to existing IT software application investments for Electric/Generation/Renewables Engineering and Operations. The scope of application enhancements encompasses: (1) making necessary system changes, and (2) updating documentation related to the changes. Additionally, enhancement requests are fulfilled to provide functionality for areas such as Electric/Generation/Renewables Engineering and Operations, Operations Performance, Operations and Financial Reporting and, Operations Compliance and Controls.

Alternatives Prior to implementing an enhancement, a review is completed to identify the best solution. During that review, requests for this funding are governed by a cross-functional board comprised of representatives from each area that routinely evaluates and prioritizes the work and to assess requests for value using categorized benefits. In addition, the overall enhancements budget is reviewed annually, and the alternative of a zero-budget allocation for enhancements is considered. This project fortifies the Company's ability to make software changes as part of process improvements and regulatory changes, and to meet legally required system changes. Without funding for enhancements, the Company will be limited in its ability to quickly provide needed capabilities and improvements.

Public Key Infrastructure (PKI) Upgrade

Report Pulled: 4/14/2026 **Item ID:** 13691

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias , Public Key Infrastructure (PKI) Upgrade

Description Replace on-premise PKI to stay supported by the manufacturer.

Portfolio IT Services > Infrastructure > Data Center - Enterprise Computing > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STAND/

WORK OBJECTIVES

Problem Statement The existing PKI that issues certificates to IT systems for secure communications needs to be upgraded to stay supported by the manufacturer. If the PKI is not maintained, in the event of a system failure the Company would not have support in recovering. All IT systems requiring secure communications via certificates would go offline within three days.

Objectives Replace existing PKI with new PKI that is supported by the manufacturer.

Scope The project will build and configure the servers necessary to provide Public Key Infrastructure services, put in place physical token management for maintaining security, migrate certificate issuing and management to the new system and decommission the old system.

Alternatives The Company has a limited use service for PKI on the Internet only. (1) The Company looked into expanding the service to include usage on the Company network but found the solution to not be economically viable. (2) The Company also looked at full cloud solutions, but it did not meet the security standards currently being used around physical token use. (3) The Company looked at continuing extended support, however the continuing extended support is not available by the vendor. (4) The Company selected a hybrid solution of part cloud and part on-premise to meet all operational and security compliance requirements. The opportunity is to retain ownership of the keys on-premise prior to evaluating ownership through the cloud.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description
System Failure (SAP & Other)	High	Medium	Consumers Energy's vendor, Thales only offers full support for seven years after purchase of a solution. After the end of support no more operational or security patches are available and if an issue is encountered the manufacturer will not assist in resolving.

OTHER VALUE

Type	Description
Risk Mitigation	DR Risks/Impacts Description – If the Company doesn't upgrade to a supported version and the system becomes unrecoverable, we are at risk of the of the following: (1) Lost productivity of approximately 8,000 employees and 4,000 contractors who are unable to access system is estimated to be 3.12M (Half day – 13,000 *$60 *4 hours) to 12.48M (2 days – 13,000 people * $60 * 16 hours). (2) Deferred revenue – payment from customers estimated to be $12-44M daily. (3) Life Safety Incidents – loss of ability to report a down powerline, gas leak type events. (4) Negatively impacts our ability to assist with Storm Restoration. (5) Call centers will go down.
Risk Mitigation	The Company's research demonstrates that industry standards on refreshing hardware are generally three to five years. Using these recommendations allows the Company to: (1) Avoid increasing costs as the result of hardware failures; (2) avert customer frustration and employee downtime; (3) reduce security risks by ensuring that devices are updated and patched to prevent vulnerabilities; (4) continue operating system support as older versions are retired by the manufacturer; and (5) ensure employees have the required software to perform their work.

Ransomware Recovery-OT-Electric & Generation

Report Pulled: 4/15/2026 **Item ID:** 13428

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Ransomware Recovery, Ransomware Recovery - OT, Ransomware Recovery - OT - Electric & Generation, Ransomware Recovery-OT-Electric & Generation

Description This project will implement a multi-layered security approach to our Operational Technology (OT) data center backups to mitigate data loss risk from a ransomware attack for OT.

Portfolio IT Services > Infrastructure > Data Center - Storage > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement As an American energy provider, the company is at an increased risk of ransomware attacks by nation-states and other advanced threat actors. A severe ransomware attack could leave the Company without access to critical data or processes and little to no ability to recover the associated systems and information. In a best-case scenario, a successful ransomware attack would likely result in primary systems outages, severely limiting our capability to provide services to our customers, for up to a week and could result in months of work to recover auxiliary systems.

Objectives This project will add value to the Company, and its customers, by: (1) Implementing a 3-2-1-1 (3 copies, 2 media, 1 offline, 1 immutable) strategy to protect the production data center systems, data, and backups from ransomware and broader potential cyber-attacks; (2) Providing a diverse set of restoration options to reduce data loss and improve the recovery time of mission-critical systems; (3) Mitigating the risk of complete data loss by storing backups offline and in a format that cannot be modified by any threat (internal or external); (4) Defining an Operational Technology (OT) specific ransomware recovery plan that the Company can use to respond to a wide array of cyber-attacks with a practiced process; and (5) Providing the ability for OT to sever all communications from the industrial control systems to the public internet and corporate Informational Technology (IT) networks.

Scope The scope of this project is to deliver one-day of hardware storage level recovery points, local immutable copies of production OT data, an offline third copy of production OT data, and deliver a ransomware recovery plan with a scenario-based approach to ransomware response including plans for monitoring, testing, containment, ransomware/malware removal, and full system recovery.

Alternatives The alternatives considered include: (1) Paying the associated ransom, a plan to pay the ransom introduces unnecessary risk by either trusting the attacker to provide the encryption keys while taking a financial loss or the regulatory ramifications such action would result in. (2) Restoring from tape is a possibility but significantly increases Operational Technology's (OT) restoration times in the event of a severe ransomware attack (over one week to restore mission-critical systems). (3) Primary restoration from the public cloud was considered but delivery would have been extremely complex and capabilities are limited in ransomware recovery situations due to public internet connections being severed to the OT datacenter when a ransomware attack is identified (Island Protocol). (4) The alternative chosen was to host ransomware capabilities in the Consumers Energy (CE) OT datacenter, with the exception of the 3rd data copy being hosted in the public cloud. This solution provides enhanced recovery times and uninhibited restoration of mission critical systems.

Rate Change Maintenance

Report Pulled: 4/14/2026 **Item ID: 13957**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Comply - Interval **Work Type** Project

Alias Rates Case Implementation, Rate Cases Annual Upgrade Implementation, Rate Cases Annual Upgrade, Rate Case Annual Upgrade, Rate Case Annual Requirements, Rate Case Maintenance, Rate Change Maintenance

Description The Rates Change Maintenance project will modify SAP billing in accordance with pricing and rate change requirements.

Portfolio IT Services > Applications > Customer Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement For the Company to continue to meet and comply with certain MPSC requirements and to enable it to update its rates when rate changes are approved, there is a need to make periodic updates/modifications to existing prices and rate structures. These updates help ensure accuracy of billing and provide optimal rates for customers.

Objectives The project will add value for both the Company and its customers through: (1) improved customer satisfaction by providing accurate billing; (2) optimized rate configuration enabling rate changes to be made more efficiently; and (3) timely updates to Company applications that incorporate mandatory changes to the rate structure that includes new surcharges, price changes, and energy efficiency programs.

Scope The scope of this project encompasses (1) implementation of annual or monthly (or both) electric and gas customer price changes, and rate structure changes as approved by the MSPC; and (2) optimizing the rate configuration in the Company's back-end system for more efficient rate changes.

Alternatives Alternative considered include: (1) a fully dedicated offshore development model. The option ensured resources were readily available with a more cost-effective labor expense. This alternative was not chosen due to the risk of billing inaccuracies and customer complaints. These risks were deemed too high because of the complexities of the rate structure, new development, and the time it would take for testing of this model; and (2) Instead, the Company chose to leverage onshore resources to plan, coordinate, and execute the rate changes. This option was selected as it supports the Company's operation model for rate changes.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	Completing timely rate changes reduces the risk of increasing noncollectable revenue due to delays with rate implementation. The Company could risk millions of dollars if rate changes are delayed; establishing an optimized process for rate changes is crucial to mitigate this risk.
Avoided Costs	Following the Rate Optimization implementation the team responsible for rate changes can streamline their efforts; preventing waste in the form of waiting and rework. Multiple changes can be completed at once versus sequencing them which causes rework when priorities shift.
Risk Mitigation	Maintain compliance by fulfilling MPSC rates requirements, ensuring customer bills remain accurate as the Company implements various rate changes. This will help the Company provide the best rates for customers as they're identified.

SAP HANA Database Migration

Report Pulled: 4/15/2026 **Item ID: 11774**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SAP HANA Database Migration

Description In preparation for SAP's planned end of support for its Business Suite product in 2027, the Company will migrate its existing SAP databases from Oracle to SAP HANA in advance of the required move to S/4HANA.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement The Company's SAP applications currently utilize Oracle's relational database management system as their underlying database storage technology. SAP has informed its customers that standard support for its legacy Business Suite (aka ECC) product will end in 2027, along with support for all non-SAP database platforms. SAP has also informed customers that the future direction for their enterprise solution is S/4HANA, a solution built explicitly for their HANA database platform. To prepare for these upcoming events, the company will migrate all of its SAP databases off of Oracle and onto SAP HANA.

Objectives This project lays the groundwork for the company's eventual shift to SAP's HANA-based solutions by: (1) proactively migrating SAP databases to a database technology that is fully supported by SAP beyond 2027; and (2) mitigating the risk of a complete loss of support for the current Oracle database technology in 2027.

Scope Project scope includes: (1) procurement of HANA software licensing to cover all migrated SAP applications; (2) data migration for all SAP applications from the Oracle database to SAP HANA; and (3) implementation of new application support policies, procedures and tools required to manage the newly migrated SAP HANA applications.

Alternatives Given SAP's announcement regarding the end of support for its ECC product in 2027, all customers running SAP on database software other than HANA will also lose support for their associated database software in 2027. SAP is offering no other options for databases other than HANA beyond 2027. While there is no alternative to the HANA database for SAP going forward, the Company has considered multiple options: (1) Perform a direct migration from SAP Business Suite on Oracle to S/4HANA. A direct migration to S/4HANA brings greater operational risk to the Company as both the underlying database technology and the SAP application's functionality would change simultaneously, so this alternative was not selected. (2) Remain on the current SAP Business Suite product but competitively bid support services to a third-party provider instead of SAP. This alternative was not selected because moving to a third-party support model forces the Company to remain on outdated SAP software and eliminates any possibility of benefitting from new business functionality provided by S/4HANA. It will also require the Company to accept significant risk due to the fact that SAP security patches, application patches and upgrades will not be available upon termination of the SAP maintenance agreement. (3) Migrate to SAP's Software as a Service (SaaS) implementation of S/4HANA. This alternative was not selected because an S/4HANA SaaS migration is a much more disruptive option as the Company's business processes must be adjusted to accommodate functionality differences between ECC and S/4HANA. The risk of negative business impact is significantly greater than simply changing the underlying database technology. (4) Migrate the SAP databases to HANA prior to implementing S/4HANA. This alternative was selected as it gives the Company several years to solidify its HANA database infrastructure before introducing the substantial business process changes required with S/4HANA.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	By completing this work in advance of December 2027, when SAP will cease support of its Business Suite (ECC) product, and by performing this work in a phased approach (migrating to HANA database first, before migrating the application to S/4HANA), the Company avoids potential operational stability issues.

SAP Support Pack Upgrade 2026

Report Pulled: 4/14/2026 **Item ID: 12501**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SAP Support Pack Upgrade 2025, SAP Support Pack Upgrade 2026

Description The SAP Support Pack Upgrade project is to maintain the currency levels of all SAP applications. This will ensure the applications are at version levels that are supported by SAP, have the latest patches and bug fixes, and provide cross-application compatibility for business partners.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement To continue to maintain SAP application version currency, across all applications, the support packs released by SAP must be routinely applied. Without maintaining application currency, the core business applications running on the SAP platform are at risk of losing vendor support, resulting in the inability to apply bug fixes and patches, including security patches, and maintain application interoperability and stability.

Objectives The project will add value by: (1) maintaining supportability of SAP applications; (2) mitigating system security, stability and reliability risks by ensuring the applications are up-to-date with the most current patches and bug fixes released by SAP; and (3) ensuring ongoing cross-application compatibility.

Scope The scope of this project includes routine support pack upgrades to all SAP applications, which include: Enterprise Core Component (ECC), Customer Relationship Manager (CRM), Enterprise Portal, Process Orchestration (PO), Business Warehouse (BW), Business Objects (BOBJ), Data Services (DS), Solution Manager, Data Quality Manager (DQM), Graphical User Interface (GUI), Single Sign On (SSO), System Landscape Directory (SLD) and other related SAP applications.

Alternatives Alternatives considered include: (1) dividing the scope into individual projects by SAP application. This alternative was not selected because the efforts are interrelated and completing them separately could lead to duplication of work, especially testing efforts, and therefore potentially higher costs. (2) migrating to SAP S/4HANA. This option was not selected because SAP S/4HANA is a multi-year project that is not expected to be completed by year-end 2026. So an alternative approach is needed to perform the application upgrades and maintain currency in the meantime. (3) Ultimately, the Company chose to balance the project scope through regular support pack upgrades. This alternative was selected because it provides the best balance of minimizing cost and maintaining support by combining multiple application upgrades through a single support pack upgrade effort.

Saviynt Enterprise Identity Governance and Access (EIGA) Impl

Report Pulled: 4/14/2026 **Item ID:** 13302

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Access Now Upgrade 2023, Access Now Upgrade 2024, Saviynt EIGA Implementation, Saviynt Enterprise Identity Governance and Access (EIGA) Implementation

Description The project will implement Saviynt EIGA module, consolidate Identity Access Management (IAM) functionality into Saviynt, and retire the Identity Manager application. By implementing the new solution, the Company will optimize IAM functionality, eliminate complexity, and reduce support costs. In addition, the project will integrate the OT network with an IAM solution that will allow for automated management of users and entitlements in the OT Active Directory domains and applications.

Portfolio Corporate Services > Security Services > Security > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STAND/

WORK OBJECTIVES

Problem Statement The current version of AccessNow reached end of life in December 2022, with support discontinued in January 2023. The application has numerous custom workflows and integrations, requiring professional services for ongoing use and changes. It lacks proper data analytics and reporting, posing risks such as inability to fix critical defects, software incompatibility, compliance issues, increased costs, and degraded performance. The Company uses multiple IAM tools, each performing critical functions, leading to numerous required interfaces and customizations. While beneficial for end users, these integrations increase the risk of system failures, higher support costs, multiple subscriptions, infrastructure and maintenance costs, and more expensive upgrades. The current solution utilizes SAP HR batch file processes that introduces failure points, delays, and data integrity issues. Failures in these processes can prevent new or transferred employees from accessing necessary systems, leading to operational disruptions and potential compliance risks due to inappropriate access retention.

Objectives The current version of AccessNow reached end of life in December 2022, with support discontinued in January 2023. The application has numerous custom workflows and integrations, requiring professional services for ongoing use and changes. It lacks proper data analytics and reporting, posing risks such as inability to fix critical defects, software incompatibility, compliance issues, increased costs, and degraded performance. The Company uses multiple IAM tools, each performing critical functions, leading to numerous required interfaces and customizations. While beneficial for end users, these integrations increase the risk of system failures, higher support costs, multiple subscriptions, infrastructure and maintenance costs, and more expensive upgrades. The current solution utilizes SAP HR batch file processes that introduces failure points, delays, and data integrity issues. Failures in these processes can prevent new or transferred employees from accessing necessary systems, leading to operational disruptions and potential compliance risks due to inappropriate access retention.

Scope This project scope includes: (1) Implementing the Saviynt EIGA module to consolidate IAM platforms; (2) Standardizing processes by removing customized code and using out-of-the-box functionality; (3) Replacing and improving access system; (4) Addressing issues with aging applications, multiple IAM platforms, integration challenges, and antiquated HR processing.

Alternatives Alternatives considered include: (1) Implementing hot fixes to AccessNow version 8.1.5 to ensure support through mid-2023; (2) Upgrading only the application to current supported version, excluding the new web portal but will include new application functionality; (3) Remaining on current version that will be unsupported as of January 2023, requiring vendor professional services for any break/fix. Patches and enhancements may potentially introduce additional risk of version instability; (4) Implementing IAM functions in Saviynt platform to manage access requests, including Active Directory, SAP, SAP HR, disconnected systems, and existing API integrations. The alternative selected was implementing the new Saviynt system, eliminating AccessNow software.

Security/OT Field Modernization

Report Pulled: 4/15/2026 **Item ID: 13949**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Security/OT Field Modernization

Description This project will implement new infrastructure for accomplishing improved security in the field for OT assets.

Portfolio IT Services > Infrastructure > * > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERVI

WORK OBJECTIVES

Problem Statement Gas and Electric technicians are using corporate laptops, to manage critical OT infrastructure which does not follow cyber security best practices for managing critical infrastructure. Vendors and contractors have access to the Company's critical infrastructure using non-Company laptops. Best practice is to use dedicated laptops to connect to critical infrastructure.

Objectives The value of this project is deploying dedicated Company OT laptops and associated OT infrastructure that can move between OT locations only and providing a secure environment.

Scope This project will procure and configure approximately 130 devices that will be used to manage critical OT infrastructure.

Alternatives The Company reviewed several options to mitigate cyber security risks inherent with the use of standard corporate laptops managing critical infrastructure. The alternatives considered are: (1) Continue utilizing existing workflow of using Corporate domain laptops with software installed; (2) Bring in an outside vendor to design and implement a proposed infrastructure; (3) Complete disallowance of all local access to critical systems; (4) Extending the OT network to remote Company locations; (5) Deploy a dedicated Company OT laptop and OT communications circuits, which includes cellular connectivity. The dedicated OT laptop and communications circuits presented the best way to secure the critical infrastructure by limiting internet and e-mail access. Vendors and contractors could also utilize these approved dedicated systems for managing infrastructure they help support at Company locations. Based on the analysis performed, the Company chooses to deploy a dedicated OT laptop and communications circuits which is not a cloud related solution, since it is hardware and not software.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	By utilizing dedicated Operational Technology (OT) laptops without internet or e-mail access, we are mitigating the risk of a device with internet and e-mail access compromising the critical infrastructure at various Electric and Gas sites while connecting to critical control systems.
Risk Mitigation	Mandating vendors to use a dedicated Consumers Energy devices to connect to CE industrial infrastructure mitigates risk to critical systems from unknown and untrusted devices.
Intangibles	There could be impacts to business services, customer service, and Company reputation.

Service Restoration Artificial Intelligence

Report Pulled: 4/14/2026 **Item ID: 14031**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Service Restoration Artificial Intelligence, Service Restoration Artificial Intelligence Solution, Service Restoration Artificial Intelligence

Description Artificial Intelligence (AI) Machine Learning (ML) can enhance decision-making during restoration events by quickly evaluating multiple datasets, reduce non-value-added time, and continuously improve through learning. This project will show the value of AI ML in Storm Declarations, Resource Planning, Resource Utilization/Crew Movements, and Asset Identification.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The Company faces challenges in efficiently managing storm response and restoration efforts. Historically, storm declarations, resource planning, and crew movements have relied on manual processes and estimations, leading to delays and inefficiencies. The need for a more effective and timely response during restoration events has become increasingly critical, especially given the complexity and scale of modern storm events.

Objectives This project creates value for the Company by (1) enhancing the storm response capabilities. This will enable faster and more consistent decision-making during restoration events, optimizing resource planning and crew movement and improving asset identification. (2) Delivering business value. The utilization of AI ML in service restoration processes is expected to reduce non-value-added time, improve public safety and create savings for customers. (3) Providing customer value. The AI ML applications will benefit customers by optimizing storm declarations, resource planning, crew movement and asset identification. These enhancements will lead to more efficient outcomes, faster restoration times and improved public safety. Furthermore, AI ML's learning abilities enable the decision-making to continuously improve, and those learnings have the durability to live beyond the human experience and mitigate learning curves as people transition from role to role.

Scope The project scope includes: (1) developing AI ML models for storm declarations, resource planning, resource utilization/crew movements, and asset identification. (2) Integrating with existing systems like Advanced Distribution Management System (ADMS), Customer Resource Manager (CRM) and Catastrophic Crewing in house built application. (3) Training and deploying. (4) Performance monitoring and (5) customer communication.

Alternatives Alternatives considered include: (1) continuing with the manual process. This option was not chosen because it results in underutilized crews, non-value-added time, and increased human error and difficulty. (2) Purchasing a storm work management solution. This option was not chosen due to its high cost, vendor dependency during the Company's most critical times, and complexity. (3) Creating an AI ML solution. This option was selected as it meets the criteria and will be scalable across service restoration and electric distribution.

SiteCore Primary Upgrade 2025

Report Pulled: 4/14/2026 **Item ID: 12727**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , SiteCore Upgrade 2025, SiteCore Primary Upgrade 2025

Description The project will refresh all components of the website hosting, delivery, search, and analytics applications to add new features and improve search capabilities. Sitecore is the content management application for the consumersenergy.com website, a channel many customers use for accessing account information and bill payment.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement Sitecore is currently operating on version 10.3, which is due to end mainstream support at the end of 2025. If this occurs, there will be an increase in support and maintenance fees of 10% above the annual subscription spend in order to purchase extended support, security updates and fixes will only be made available if the extended support is purchased, and product support for errors or required hotfixes that may impact platform stability will not be available even if extended support is purchased.

Objectives The project will add value for the Company by: (1) avoiding costs for extended maintenance agreements required at the end of mainstream support; (2) ensuring that the website retains the most up-to-date security posture; and (3) supporting the Company's CXI goals by improving reliability and performance.

Scope The project scope includes: (1) upgrading the Sitecore content management software to include content hosting and delivery allowing the use of new features and functionality; (2) migrating the Sitecore platform to the most up-to-date "hardware" and software by refreshing the application and database servers to a newer version of Windows Server and SQL Server and placing them into Azure Cloud (PaaS & IaaS); (3) implementing autoscaling App Services within Azure to reduce or increase the amount of compute we are paying for based on the need of the customers (i.e. more compute during storm).

Alternatives Alternatives considered include: (1) Delay the upgrade. This alternative was not chosen due to the current version falling outside of the mainstream support window, requiring an additional 10% in maintenance fees. Along with rapidly changing feature sets that are continually being developed by the vendor, the Company would be in a worse position to handle constantly changing cyber threats; (2) Migrate to Sitecore's cloud SaaS solution. This alternative was not chosen due to the cost/benefit analysis of re-architecting our current Sitecore implementation to facilitate use of their SaaS/PaaS not being viable at this time; and (3) Upgrade Sitecore on a two-year cycle. This alternative was chosen as it provides up-to-date functionality, stability, and mitigates cyber security risks while minimizing cost and impact.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Avoid the cost of purchasing extended support from the vendor which comes at a 10% increase from normal licensing costs.
Risk Mitigation	If this project is not completed the company and the customers are at greater risk of encountering more reliability issues and cyber threats which could compromise the website. Keeping the Sitecore platform up to date will improve overall performance and reduce likelihood of operational issues. Additionally, the risk of cyber threats is reduced as patches and fixes are released on routine schedules.
Risk Mitigation	If website is either unavailable or not performing sufficiently, it will lead to a negative impact to Consumers Energy reputations with customers and lower JD Power scores. The website is a core contact point for the Company to interact with their customers. When Sitecore is not functioning completely the website will be impacted; potentially preventing customers from viewing their bill, make a payment, report an outage, and other functions.

SiteCore Secondary Upgrade 2027

Report Pulled: 4/14/2026 **Item ID: 12740**

WORK OBJECTIVES

Problem Statement Sitecore requires regular upgrades to adhere to the vendors support lifecycle to ensure system reliability, take advantage of new application features, maintain current security updates, and improve the customer's website experience.

Objectives The project will add value for the Company by: (1) avoiding costs for extended maintenance agreements required at the end of mainstream support; (2) ensuring that the website retains the most up-to-date security posture; and (3) supporting the Company's Customer Experience Index (CXI) goals by improving reliability and performance.

Scope The project scope includes: (1) upgrading the Sitecore content management software to the latest available version.

Alternatives Alternatives considered include: (1) Delay the upgrade. This alternative was not chosen due to the need to prevent the application from falling outside of the mainstream support window, requiring an additional 10% in maintenance fees. Along with rapidly changing feature sets that are continually being developed by the vendor, the Company would be in a worse position to handle constantly changing cyber threats; (2) Migrating to a cloud solution was also considered. This alternative was not chosen due to the cost/benefit analysis of re-architecting the Company's current Sitecore implementation to facilitate cloud migration that is not viable at this time; and (3) Rejecting these alternatives, the Company chose to upgrade Sitecore on a two-year cycle because it provides up to-date functionality, stability, and mitigates cyber security risks while minimizing cost and impact.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Risk Mitigation	If this project is not completed the company and the customers are at greater risk of encountering more reliability issues and cyber threats which could compromise the website. Keeping the Sitecore platform up to date will improve overall performance and reduce likelihood of operational issues. Additionally, the risk of cyber threats is reduced as patches and fixes are released on routine schedules.
Risk Mitigation	If website is either unavailable or not performing sufficiently, it will lead to a negative impact to Consumers Energy reputations with customers and lower JD Power scores. The website is a core contact point for the Company to interact with their customers. When Sitecore is not functioning completely the website will be impacted; potentially preventing customers from viewing their bill, make a payment, report an outage, and other functions.

Spatial Asset Management

Report Pulled: 4/14/2026 | Item ID: 13940

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow | **Work Type** Project

Alias , Spatial Asset Management

Description This initiative will implement SAP's Spatial Asset Management module. It will allow users to view assets, notifications, and orders geospatially using a map. The module will allow the Company to create and maintain asset maintenance plans for each segment of our gas and electric distribution networks (linear assets). The Company will create linear assets as technical objects (such as functional locations and equipment) and store linear data. The Company will enable creation of maintenance plans for these technical objects which result in notifications, maintenance orders, and measurement documents. We will enable monitoring the condition of our linear assets, identify where there is damage or a defect (using the start point and end point and offset), and manage all types of maintenance tasks (planned, unplanned, and preventative).

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T | **Bus Unit** INFORMATION TECHNOLOGY | **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement Currently, the Company lacks spatial visualization and spatial awareness of work and assets impacting requirements for first time quality and impacting the ability to plan, bundle and execute nearby work. The lack of a linear asset management capability affects the full work management value stream resulting in overproduction of asset maintenance activity such as assessments, surveys, and inspections.

Objectives This project creates value for the Company by (1) providing capability in SAP to view assets, notifications, and work orders on a map; (2) providing location awareness in SAP for assets and work; (3) establishing linear asset management capability in SAP for gas and electric delivery networks; and (4) enabling end-to-end map-based workflows.

Scope The scope of this project encompasses implementation in SAP of the Spatial Asset Management module.

Alternatives Alternatives considered include: (1) Implement a cloud-based individualized asset integration between GIS and SAP. This alternative was not selected as it proves ineffective in addressing needs of the end-to-end work management value stream while increasing the technical footprint of customization. There are also performance concerns with cloud to on-prem integrations; (2) Implement work group centric approaches to viewing work on a map. This alternative was not selected as it does not support standard operation through the entire work management value stream; (3) Do nothing. This alternative was not selected as this would result in increasing costs and inefficiencies in gas and electric work management; and (4) The alternative to implement the Spatial Asset Management module in SAP was chosen as it expands use of a core technology investment, supports current investment in our work management value stream, and is compatible with our GIS technology.

Streetlight Outage and Restoration Optimization

Report Pulled: 4/15/2026 **Item ID: 13926**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Streetlight Outage and Restoration Optimization

Description This project will optimize the Streetlight Outage and Restoration (SOAR) application to better meet our customers need. The SOAR application is used by the Company's customers to report streetlight outages. This project will add new functionality to meet our customers' needs.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CUSTOMER EXP & OPS

WORK OBJECTIVES

Problem Statement While 98% of our customers are using SOAR to submit issues, between 15-20% of those issues are more than a lightbulb change/luminaire replacement, leading to multiple truck rolls, and work requiring long cycle scheduling. It lacks the most current source data due to manual process of updating the data, automation, and SMS text messaging, which leads to waste and customer dissatisfaction. By integrating these optimizations, Consumers Energy will streamline the work management system, reduce errors and provide a more comprehensive and efficient solution for our customers, our schedulers and our field workers.

Objectives This project creates value for the Company by: (1) improving customer and municipality communications; (2) adding visualizations to improve accuracy and speed of repair; (3) adding field improvements such as getting the issue to the right department the first time and knowing what materials are needed so the light is fixed on the first visit; and (4) automating and updating the map which will allow for more accuracy. All of these will eliminate waste by using automation and properly routing of orders.

Scope The project scope includes: (1) identifying correctly outages versus other work; (2) improving GIS data to include proper stock material and Temporary Traffic Control (TTC) requirements and prioritizing scheduled work based on outage repair needs; (3) offering SMS text messaging; (4) improving email communications by including more accurate details to customers; (5) daily automation of map data updating; (6) adding functionality for user-generated reliability reports; and (7) adding a new process to advise municipality of extended repair outages.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Enhancing this application puts the company in a position to defend streetlight outage percentage. This is a strong tactic to avoid statewide nighttime patrols recommended by rate case interveners. $346,000 of avoided O&M annually.
Intangibles	Implementation will improve streetlight status, giving the customer a more reliable representation of where the work currently is.
Risk Mitigation	Less regulatory risk with these changes. Service Commission has recently required DTE to provide reliability reporting for streetlights. CE will be doing this proactively. This will help improve utility coordination with municipalities.
Risk Mitigation	Proper routing of orders and more accurate communications to our customers will help to mitigate the risk of low Customer Experience index (CXi) and more timely repair time.
Avoided Costs	When this work is completed, trucks will have accurate materials and the Company will be able to streamline temporary traffic control. This will increase productivity and reduce human struggle by being able to quickly route the order to appropriate work center. 30 hours per week efficiency savings. $94.95 hourly. $2,848.50 per week. $148,122 annually.

Talent Management Enablement

Report Pulled: 4/14/2026 **Item ID:** 11828

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Talent Management Enablement

Description The project will deliver technology solutions to enable best-in-class Talent Management programs and processes that are critical to achieve the Company's overarching Talent Strategy Plan. The Talent Strategy Plan is a key enabler of the company's Integrated Resource Plan (IRP), Electric Distribution Infrastructure Investment Plan (EDIIP), and Natural Gas Delivery Plan (NGDP). Effective Talent Management programs and processes are critical to develop the skills, capabilities, productivity, and experience necessary to successfully execute these plans that deliver clean, reliable, affordable energy through an exceptional customer experience.

Portfolio IT Services > Applications > Corporate Services > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement Significant technology improvements are required to transform Human Resources (HR) to develop the skills and capabilities necessary to achieve the Company's strategic destination. Currently, many Talent Management processes are manually managed with little or no technology enablement. Specifically, the talent compensation processes are mostly manually done outside the system which introduces waste, and a potential for errors. In addition there is a limited visibility of competency gaps within the workforce. The Company cannot effectively place talent in accelerated development programs aligned to competency gaps, nor can it recognize and motivate employees for quickly increasing competency and performance. Furthermore, the Company operates in an increasingly competitive job market where candidates and employees expect best-in-class processes, technologies and experiences relative to their employment and career development. The lack of full technical enablement across Talent Management programs poses a risk to employee attraction, retention and limits the ability to develop the right skills at the right time to deliver on

Objectives This project will add value to the Company through technology that will enable: (1) fully functional integrated compensation module; (2) accelerated and targeted talent development of critical skills necessary to deliver on the Company's commitment to clean energy and exceptional customer experience; (3) transparency into talent and skill gaps in order to identify retention and service delivery risks within critical areas, as well as inform succession and hiring strategies; (4) improved knowledge transfer, business continuity, and customer service during a time when retirement eligibility is high and risk of knowledge loss has the potential to negatively impact customer service and satisfaction; and (5) increased efficiency and quality of talent management through simplified and automated processes that reduce costs associated with recruiting, onboarding, and developing employees. Talent Management Enablement will deliver the best-practice technology to enable and enhance (1) Fully functional integrated talent compensation management; (2) Simplified and automated talent management process for employee lifecycle management from on-

Scope The scope will include: (1) implementation of each system/application; (2) integration with current systems, applications and processes as applicable; (3) retrofit current systems and applications to ensure a seamless end-to-end experience of HR processes; (4) delivery of mobile capabilities for in scope processes; (5) reporting and analytics dashboards and report insights for in scope processes.

Alternatives Three alternatives were considered for these Talent Management programs and processes: (1) Develop custom, internally built solutions that could meet most requirements. This alternative was not selected because a custom solution would result in higher overall costs, higher maintenance costs, fewer upgrades, and would not leverage industry best practices to ensure best-in-class delivery. (2) Select an on-premise software tool. This alternative was not selected because it requires internal maintenance, increases infrastructure costs, and would have less frequent upgrades which would hinder the Company's ability to ensure processes are evolving alongside industry trends and best practices. (3) Evaluate and select cloud/SaaS solution(s) which would have lower infrastructure costs, less internal maintenance than an on-premise solution, and would be built and evolved with upgrades based on industry best practices. Based on research, internal experience with successful best practice implementations, and vendor demonstrations, option three was selected

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Intangibles	Avoid inability to meet and support quality and timely delivery of the Company's customer centric strategy
Technology Capability	Deliver mobile-enabled Talent Management processes that will facilitate leaders' ability to minimize administrative downtime by increasing accessibility to core talent management processes, forms, approvals, and tracking.
Intangibles	Delivery of best-in-class technically enabled talent programs will enhance the attraction and retention of top talent in an increasingly competitive and geographically expanding job market.
Technology Capability	Eliminate wasted hours associated with the manual management of the Succession Planning process
Risk Mitigation	Mitigate risk due to 19% of the current customer-facing workforce that has 25+ years tenure by enabling effective Talent Management processes to prepare for these retirements to ensure continuation of strong customer delivery by facilitating employee development, engagement, succession planning and performance management
Risk Mitigation	Mitigate the risk of losing high performing talent or not being able to recruit the strongest talent to deliver on company strategies which support customer service and value delivery.
Technology Capability	Reduce waste generated by manual consolidation of data for reporting purposes by delivering standard and custom Talent Management reporting.

Tibco API Exchange Gateway Replacement

Report Pulled: 4/14/2026 **Item ID: 11728**

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Tibco API Exchange Gateway Replacement

Description This project is looking to retire the API Exchange Gateway within the Tibco ESB and replace it with a new solution called Microsoft Self-Hosted Gateway. The API Exchange Gateway is used by the TIBCO ESB to integrate to external vendors, all new development will need to be done to integrate this solution.

Portfolio IT Services > Applications > Foundational Enterprise Applications > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-APPLICATION PLATFORMS & SERV

WORK OBJECTIVES

Problem Statement The Tibco API Exchange Gateway is anticipated to be sunset by the vendor, as they have already dropped all development of enhancements for the platform.

Objectives This project creates value for the Company by: (1) Avoiding the risk of running a project no longer supported by the vendor (i.e. the Tibco Enterprise Service Bus API Exchange module), and (2) Enabling the Company the opportunity to move to a product that is more stable, secure, and usable.

Scope The project scope includes: (1) Conducting a RFP to procure a replacement product and work with architecture team to migrate the product. (2) Migrate all current work items to the new platform. (3) Conduct appropriate testing to ensure all Service Level Agreements are met.

Alternatives Alternatives considered include: (1) Evaluating the replacement of the current product with a new product that is not already in the Company environment. This alternative was not selected because it would not be cost effective. (2) Keeping the current application as-is. This alternative was not selected as the vendor for the current platform has stopped all development for this product. (3) Leveraging an existing solution already in the Company environment. This alternative was selected as it avoids multiple solutions with redundant capabilities and avoids costs for supporting and maintaining a second solution.

Transmission Outage Application (TOA) Upgrade

Report Pulled: 4/20/2026 **Item ID:** 12481

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Condition **Work Type** Project

Alias , Transmission Outage Application (TOA) Upgrade

Description This project will modernize and streamline the high voltage system outage process, substation asset management, construction management and maintenance processes, as well as the high voltage project management process by replacing obsolete systems with an industry standard alternative and providing future integration opportunities with corporate systems.

Portfolio IT Services > Applications > Electric Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-ELECTRIC

WORK OBJECTIVES

Problem Statement The current software version is no longer supported by the vendor and does not allow for the enhancements that would increase the functionality of the software. Also, the solution is susceptible to human error and duplication of efforts due to the manual nature of the work. Lastly, the ongoing support of the software is also costly and time consuming due to the outdated version and the requirements for the existing solution.

Objectives The project will add value by: (1) simplifying the process of managing and rescheduling large HVD projects; (2) enhancing the ability to quickly identify conflicts created by schedule changes; (3) allowing the Company to internally support future integrations with existing applications; (4) improving resource management and visibility by planning Substation Construction, Substation Operations, and High Voltage Distribution (HVD) Lines resources by project; (5) implementing ability to plan Control Center resources based on planned work and control center capacity; (6) improving visibility and repeatable reporting for defects and problem solving; (7) simplifying communication with stakeholder groups including Low Voltage Distribution (LVD) Scheduling, Business Customer Solutions, Electric Field Lab, and Substation Operations for outage requests requiring resource coordination; and (8) including 24x7 application support and patching due to using a Cloud solution.

Scope The scope of the project includes: (1) upgrading to the newest version of software for a real-time electric operations application; (2) migration of applications and data to cloud servers; and (3) end-user testing.

Alternatives The alternatives considered for the project include: (1) continuing with the current system and processes. This alternative was not selected because the current version is out of support, is prone to human error and duplication, and is costly to maintain. (2) breaking the project into separate Company built applications. This alternative was not selected because these individual applications would have integration complications and support issues, as they would all be separate entities. (3) purchase an off-the-shelf cloud option. This alternative was selected as it would not have customization of the base product or integration issues and comes with 24x7 cloud support.

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Automated Notification Module with Query Builder - Labor waste reduction for Scheduled Outage by eliminating manual emailing for specific types of resource coordination requests that will now be handled through automated notifications vs manual emails
Avoided Costs	Project Module - Reduction in deconfliction labor for Substation Operations, Substation Construction, and HVD Lines
Avoided Costs	Project Module - Reduction in Scheduled Outage labor due to simplified schedule management for large outage schedule changes.
Avoided Costs	Reporting Module with Query Builder - 1 hour weekly avoided labor for avoiding manual exports of TOA data to support visual management reporting via Power BI
Avoided Costs	Reporting Module with Query Builder - 1 hour weekly waste elimination for TOA owner to perform Daily Listing reporting and improved data accuracy and visibility
Avoided Costs	Resource Planning Module - Elimination of 1 hour of weekly waste for Scheduled Outage, System Control Center, and Distribution Control Center Superintendents for control center capacity management
Avoided Costs	Resource Planning Module - Improvement in field resource labor efficiency though reduction of stranded resources and allowing better balancing of resources across all existing work based on target completion dates
Avoided Costs	Sun-Net Cloud Hosting and Technical Annual Support - Update the iTOA software to the latest version to reduce recurring waste for software updates and bring software to a version that is supported by the vendor
Avoided Costs	System Protection Event Analysis Module / Interruption Outage Module: 5% reduction of logging by Lead System Control, System Control Center, and Distribution Control Center during storms and large events. Approximately 65 hours per year avoided.

Total Information Management (TIM) Platform Upgrade

Report Pulled: 4/13/2026 **Item ID:** 14013

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Maintain - Interval **Work Type** Project

Alias , Open Text (TIM) SaaS Migration, Total Information Managment (TIM) Platform Upgrade, Total Information Management (TIM) Platform Upgrade

Description The project will replace the existing Total Information Management (TIM) on-premise solution with a cloud-based OpenText Software as a Service (SaaS) solution. It will provide the Company with the ability to reduce operational costs for performing upgrades and maintenance, take advantage of new enhancements offered by the vendor, and ensure continued support of the platform.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-CORPORATE

WORK OBJECTIVES

Problem Statement The existing on-premise Total Information Management (TIM) solution hardware and software is at end of support. The state of the current infrastructure creates security, stability, and reliability risk for the platform. Without vendor support, the application no longer receives security patches, bug fixes, or functionality support from the vendor, which creates additional security, stability, and reliability risk.

Objectives This project will provide value to the Company through: (1) reducing costs with cloud allocated hardware scalable to current usage needs; (2) reducing operating costs with vendor managed feature updates and maintenance provided without service disruption; (3) providing access to new and innovative capabilities; and (4) reducing security, stability, and performance risk by ensuring consistent, seamless vendor support.

Scope The project scope includes: (1) migrating, upgrading, and transforming the dataset to the latest version of OpenText Extended Enterprise Content Management (xECM) Cloud Edition and deploying in the vendor hosted cloud; (2) migrating on-premise documents to the vendor hosted OpenText Core Archive cloud; and (3) enabling new functionality including a new user interface, new workflow capabilities, new workgroup management features, and new integrations with Microsoft 365 applications.

Alternatives Alternatives considered include: (1) Defer to a future date. This alternative was not selected due to requiring upgrades of existing on-premise hardware, impeding our ability to take advantage of new features offered by the cloud solution, and reducing cost savings opportunities presented by moving to the cloud. (2) Deploy OpenText on-premise solution to new on-premise hardware. This alternative was not selected due to cost associated with purchasing new hardware, cost associated to maintain, and it does not free up internal resources to focus on other value-added initiatives. (3) Select and migrate to a new vendor software. This alternative was not selected due to the cost, effort, and complexity of replacing the platform with a whole new technology. (4) Migrate to the OpenText cloud platform. This alternative was selected due to it building on the Company strategy of moving to cloud, reducing operating and maintenance costs, and it reduces risk by ensuring consistent, seamless vendor support.

Risk Tolerance

Corporate Risk	Impact	Likelihood	Description

OTHER VALUE

Type	Description
Avoided Costs	Migrating OpenText solution from on-premise to SaaS is projected to result in $220K of annual cost avoidance ($1.1M for 5 years) due to avoiding annual costs associated with application currency, software maintenance, upgrades, infrastructure maintenance, server patching, vulnerability testing, and cloud hosting services.
Intangibles	Migrating to a SaaS cloud managed service simplifies the company's IT environment, makes it easier and less costly to maintain, minimizes potential for downtime and disruptions, and frees up IT resources to focus less on maintaining the platform and allocate more time to delivering solutions within the platform or value through other initiatives.
Intangibles	New features will be available by upgrading from the Extended ECM plan to the X1 X-Plan SaaS solution which includes Microsoft 365 Integration, Electronic Signature, Controlled Viewing and Printing, XML Workflow Extensions, and will optimize user licensing and provide additional add-on opportunities.
Risk Mitigation	Risk will be mitigated using the SaaS solution by providing infrastructure scaling as needed, minimizing service disruption through vendor managed feature updates and maintenance, enabling access to new and innovative capabilities, and reducing security, stability, and performance risk by leveraging a vendor managed cloud-based SaaS solution. Mitigates Security Vulnerability: Oracle_JRE_VAPT-CVE-2022-34169. Our current version of TIM runs Tomcat v8, which is subject to this vulnerability. We need to upgrade our TIM environment to the latest vendor supported version, so that we can migrate to the version of Apache Tomcat (v9.0.x or later) that closes this vulnerability. All other JAVA vulnerabilities were closed with the migration to Azul.

Vulnerability and Exposure Management Program Enablement

Report Pulled: 4/13/2026 **Item ID:** 14033

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Vulnerability Management - Exposure Management, Vulnerability and Exposure Management Program Enablement

Description This project will enhance the Company's Vulnerability Management program by implementing a cohesive suite of technologies focused on Vulnerability Management. These technologies will include minimally the following capabilities: vulnerability management, web application static and dynamic analysis, and attack surface management. Vulnerability Management is a critical process for identifying, assessing, and mitigating security weaknesses within an organization's IT infrastructure. This proactive approach involves continuous monitoring and evaluation of systems to detect vulnerabilities that could be exploited by cyber threats. By prioritizing vulnerabilities based on risk, cost, and potential impact, organizations can effectively allocate resources to address the most critical issues first. Implementing a robust Vulnerability Management program not only enhances the security posture of the organization but also ensures compliance with industry regulations and standards, thereby reducing the risk of data breaches, malware infections, ransomware, and other cyber threats. This Vulnerability Management program supports business continuity and protects sensitive information and systems, making it an essential component of any comprehensive cybersecurity strategy.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STANDA

WORK OBJECTIVES

Problem Statement The Company's current Vulnerability Management program relies on multiple disparate tools to perform core activities such as scanning, analysis, and remediation tracking. This multi-tool approach can create inefficiencies, increase the likelihood of data gaps, and require additional effort from users to correlate and interpret information across platforms. The use of several systems to manage vulnerabilities can lead to inconsistent workflows, duplicated efforts, and reduced coordination between teams. Streamlining the tool set or improving integration between existing solutions would enhance operational efficiency and support a more cohesive vulnerability management process.

Objectives This project creates value for the Company by (1) enhancing the efficiency and effectiveness of the Vulnerability Management program through improved integration and reduced reliance on multiple standalone tools; and (2) supporting risk-based decision-making by enabling more consistent identification, prioritization, and remediation of vulnerabilities. These improvements will reduce operational overhead, minimize security exposure, and help ensure continued alignment with industry regulations and cybersecurity frameworks.

Scope The project scope includes evaluating and implementing a new vulnerability solution. The scope also includes enablement of active scanning with the new solution, consolidating data sources, and improving cross-platform visibility.

Alternatives Alternatives considered include: (1) continuing with the current multi-tool Vulnerability Management program. This option was not selected as it perpetuates inefficiencies, inconsistent workflows, and limited visibility across platforms; (2) increasing manual efforts to correlate and manage data between existing tools. This alternative was not chosen due to the high resource demands and increased risk of human error, which may further delay remediation timelines; (3) procurement of a new, cloud-based consolidated vulnerability management platform. This option was chosen as it allows the Company to enhance vulnerability data, threat intelligence, and process efficiencies within the current environment to deliver immediate value with high confidence in the vulnerability data that is being provided.

Work Management Scheduling Analytics and Reporting

Report Pulled: 4/13/2026 **Item ID:** 6811

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias DCO Scheduling Tool Project, DOET Scheduling Tool Project,Work Management Scheduling, Analytics, and Reporting, Work Management Scheduling Analytics and Reporting

Description The project will implement a solution to optimize the key components of the Distribution Planning and Scheduling functions including forecasting, work order intake, resource identification, work schedule creation, work execution preparation and associated work order analytics.

Portfolio IT Services > Applications > Common Delivery Systems > * > * > *

Org CX&T **Bus Unit** INFORMATION TECHNOLOGY **Dept** CX&T-IT-WORK MANAGEMENT

WORK OBJECTIVES

Problem Statement The Distribution Planning, Scheduling and Administrative Support & Financial Services (Work Plan Strategy) teams are utilizing manually intensive work methods, systems and forecasting models. These inefficiencies impact the creation of work plans, lack predictive capacity planning, and reduce productivity of operational partners.

Objectives The project will add value by providing: (1) streamlined processes tied to workload review and preparatory analysis, leading to increased focus on workload priority, execution of work and a reduction of human struggle; (2)increased accuracy in crew work schedules, leading to improved customer satisfaction and on-time delivery of customer requested work, system integrity work, and gas compliance requirements; (3) reduced manual scheduling steps, reporting and analysis of data associated with work management processes and systems; thereby minimizing the risk of human error hours spent developing and updating crew route sheets; and (4) improved forecasting accuracy, that results in greater transparency into the weekly schedule and associated work plan.

Scope The project scope includes: (1) implement a solution to facilitate the review of work orders from various engineering organizations, allowing for streamlined check-in of work orders; (2) implement a scheduling tool that utilizes predictive modelling and advanced analytics and streamlines daily schedule modifications; (3) enhance integration with the Arcos application to bring in employee capacity and availability information; (4) integrate with SAP to retrieve work order data and manage record keeping requirements; (5) enhance integration with Field Service Suite (FSS) for quicker access to MISS DIG information and work order assignments; and (6) implement associated analytics and reporting.

Alternatives Three primary alternatives were considered for this project: (1) Automating manual data movement across excel and current systems through Robotic Process Automation. This option was not chosen because it will not meet base requirements and will not provide desired insights into whether the schedule supports operating priorities and metrics, financial scenarios, first time completion of work, and daily goals; (2) Integrating an off-the-shelf planning and scheduling system. This option is not preferred due to associated up-front and long-term costs; and (3) Implementing a hybrid of an off-the-shelf planning component with custom built scheduling functions. This is the preferred option to provide a more cost-effective and targeted fit for the organization.

OTHER VALUE

Type	Description
Intangibles	As a result of improved forecasting accuracy, greater transparency into the weekly schedule and associated work plan would lead to improved on time completion of workplan elements relating to customer requested work and system improvement projects. It would also support problem solving in unit/hourly costs.
Intangibles	Employee engagement is improved by reducing human struggle, while being able to focus on priority and execution of work versus relying on workarounds and extra steps to meet daily scheduling needs.
Intangibles	Increased accuracy in crew work schedules, resulting in increased on-time completion of electric system integrity and gas compliance work. Based on the reduction of scheduling errors, a projected increase of 10% in the First Time Quality scheduling metric.
Intangibles	Increased accuracy of crew work schedules and First Time Quality are projected to lead to a 4% increase in Customer Satisfaction as measured by CXi
Avoided Costs	Initial savings based on implementation at one Company service center yielded $50,000 in savings from reduced truck rolls and reduced job delays through an enhanced quality control process . It is the intention of the Company to expand this statewide where further savings will be realized.

Workstation Temporary Administrative Access

Report Pulled: 4/15/2026 **Item ID:** 10497

EXECUTIVE SUMMARY

BASIC INFORMATION

Work Category Strategic/Grow **Work Type** Project

Alias , Workstation Temporary Administrative Access

Description This project will implement controls that will allow local least administrative access to workstations on a time limited basis. Non-IT and Security resources will be able to request this access. Temporary administrative access to workstations is required to support some application installations, local system configuration, or to troubleshoot workstation issues. Currently, administrative access is only allowed on employee workstations for authorized users that is granted by a manual process. The current process allows the authorized user to have access to everything on the employee workstation which allows for human error. The process is resource intensive and requires manual removal of access.

Portfolio Corporate Services > Security Services > Cyber Security & Shared Services > * > * > *

Org CX&T **Bus Unit** SECURITY **Dept** CX&T-SECURITY-CYBER SEC ENG & STAND/

WORK OBJECTIVES

Problem Statement Cyber Security and Information Technology (IT) teams do not have controls in place to restrict the usage of local administrative accounts or monitoring capabilities to detect misuse without human intervention. The current state creates an environment for misuse where broad admin access could be leveraged for data breaches and ransomware. A successful attack would impact the Company's ability to serve our customers.

Objectives This project creates value for the Company by: (1) reducing risk by eliminating over 1,000 local administrative accounts; (2) adding the ability to implement security controls and restrictions on local administrative functions; (3) increasing productivity by reducing the time and resources needed to provision, manage, and audit local accounts for security compliance; (4) adding the ability to provide administrative access for a specific and limited duration of time, thereby reducing cyber security risk of workstation compromise.

Scope This project will implement a platform that can enforce security controls and audit the security compliance of local administrative accounts for Company workstations. The features of this platform include: (1) the ability to give administrator access for a specific duration of time; (2) enable applications to automatically run in a privileged state; (3) the ability to remotely change the administrator password; and (4) generate a single-use administrator password.

Alternatives Alternatives considered include: (1) accepting the risk of using local accounts that are not managed centrally for end point administration. This alternative was not chosen because the usage of these accounts doesn't follow company standards for software provisioning and introduces unsupported software versions and vulnerabilities into the environment; (2) continuing the existing practice of manual oversight to grant local administrative access which does not eliminate the risk of misuse of administrator access. This alternative was not selected because it doesn't follow company standards for software provisioning and introduces unsupported software versions and vulnerabilities into the environment; (3) developing a platform for administrative account access internally. This alternative was not chosen due to the time frame it would take internal resources to develop and maintain the solution at the same level of quality and feature parity as a commercial product; and (4) implement a cloud platform specifically developed for managing local administrative accounts. This option was chosen because of the features designed for managing local administrative accounts will reduce the risk of misuse of administrative credentials within the Company.

Ties to 13-Month Average in Exhibit A-14 (MRB-2), Schedule D-1a, pg. 2

Calculations:

Column (i) = Yield formula based on inputs from column (b),column (c), column (d), column (d1), and column (h) calculated on an annualized basis.
Column (j) = Represents the average amount of debt outstanding for the test year.
Column (k) = column (i)*column (j).
Lines 27, 30, and 31 Coupon Rate = Projected SOFR Rate of 3.42% minus 0.04%.
Lines 6, 20, 35, 47, and 48 - As this is a partial year debt outstanding, pro-rata balance and pro-rata interest expense are used which would result in the same cost rate as an annual analysis, but provides a more accurate average debt balance for the Test Year. This would make the Total Debt balance line 65 tie to the debt balance shown on Exhibit A-14 (MRB-2), Schedule D-1a, page 2.
Line 59 - Amortization of losses on reacquired debt projected for the test year ending April 30, 2028.

Projected SOFR Rate	Test Year Avg.
Bloomberg (Apr. 20, 2026)	3.42%

Projected New Debt Issue Interest Rates	New Debt #1 May 2026	New Debt #2 Aug. 2026	New Debt #3 May 2027	New Debt #4 Aug. 2027
Projected 30-Yr Treasury Rate (Bloomberg)	5.00%	5.01%	5.04%	5.05%
Add: Historical 30-Year Bond Spread	1.34%	1.34%	1.34%	1.34%
	6.34%	**6.35%**	**6.38%**	**6.39%**

Summary

Line No.	Facility	Agreement Date	Expiration	Facility Amount	Test Year Assumption: Less: Avg. Borrowings (A)	Less: Letters of Credit (B)	Amount Unused[a] (C)	Upfront Fee Amort (D)
1	1. JPMorgan Revolver	Nov. 2025	Nov. 2030	$ 1,100.0	$ -	$ 53.1	$ 1,046.9	$ 0.4
2	2. Commercial Paper Facility	Sep. 2014	N/A	$ 500.0	$ 156.0	N/A	N/A	$ -
3	3. MUFG Revolver	Nov. 2025	Nov. 2028	$ 300.0	$ -	$ -	$ 300.0	$ 0.3
4	4. LC Facility - ScotiaBank	Nov. 2025	May 2027	$ 100.0	N/A	$ 27.7	N/A	$ -

Cost of Short-Term Debt

(A) **Interest on Borrowings** - Calculated on the projected drawn balance at SOFR plus the spread on borrowings.

Facility	SOFR[b]	Plus: Spread	Projected Rate	Avg. Borrowings	Cost
1. JPMorgan Revolver	3.42%	0.875%	4.30%	$ -	$ -
2. Commercial Paper Facility	3.42%	0.000%	3.42%	156.0	5.3
3. MUFG Revolver	3.42%	0.875%	4.30%	-	-
					$ 5.3

(B) **Letter of Credit Fees** - Calculated on the projected letters of credit outstanding at a rate equal to the spread.

Facility	Letter of Credit Type	Projected Rate	Letters of Credit	Cost
1. JPMorgan Revolver	Regular Operating	0.875%	$ 53.1	$ 0.5
2. Commercial Paper Facility	N/A	N/A	N/A	-
3. MUFG Revolver	N/A	0.875%	-	-
4. LC Facility - ScotiaBank	MISO Margin	0.850%	27.7	0.2
				$ 0.7

(C) **Unused (Commitment) Fees** - Calculated on the unused portion of the revolver at a rate stated in the facility agreement.

	Projected Rate	Amount Unused[a]	Cost
1. JPMorgan Revolver	0.075%	$ 1,046.9	$ 0.8
2. Commercial Paper Facility	N/A	N/A	-
3. MUFG Revolver	0.075%	$ 300.0	$ 0.2
			$ 1.0

(D) **Amortization / Expense of Facility Fees** - Fees paid upfront at the inception or amendment to the facility, amortized over the life of the facility.

	Annual Cost
1. JPMorgan Revolver	$ 0.4
2. Commercial Paper Facility	-
3. MUFG Revolver	0.3
	$ 0.7

Total Cost of Short-Term Debt **$ 7.7**

[a] Commercial Paper drawn balances go against, or are "backstopped," by the Company's JPMorgan Revolver. To the extent amounts are borrowed under the Commercial Paper Facility, the availability of the JPMorgan Revolver are reduced. These borrowings do not, however, reduce the "unused" portion of the revolver in calculating the unused (commitment) fees.

[b] Projected SOFR rate per Exhibit A-14 (MRB-4), Schedule D-2. Forecasted SOFR assumed to closely approximate commercial paper rate.

Schedule D-4

Source: Individual state commission electronic docket records search.

Selection Criteria:
1. Regulated subsidiary of the Company's ROE proxy group. Refer to Exhibit A-14 (AEB-1), Sch D-5, page 2.
2. Rate order issued from January 1, 2021 through April 15, 2026.
3. Rate order available through online docket search that includes an authorized equity ratio
4. For each regulated subsidiary, latest authorized equity ratio for each state / jurisdiction.

Note: Excludes final orders received by in-state proxy DTE Energy as well as the Company.

Consumers Energy Company

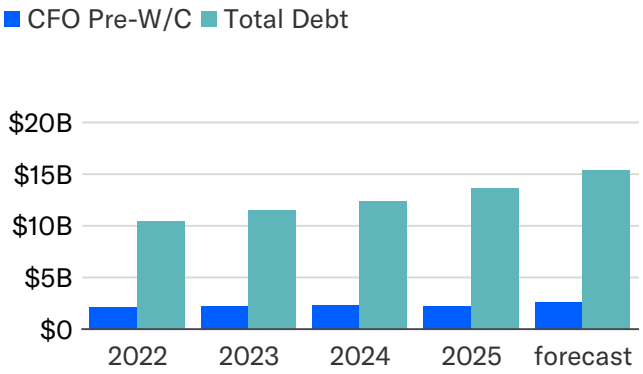
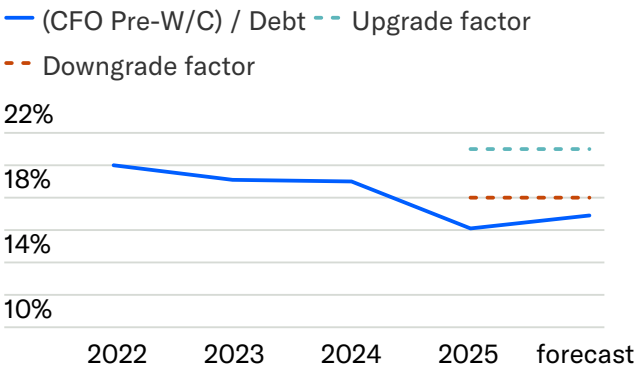
Update to credit following outlook change to negative



Summary

Consumers Energy Company's (Consumers Energy, A1 senior secured negative) credit profile reflects its business risk as a vertically integrated electric and gas utility operating in a generally credit supportive Michigan regulatory environment. The utility plans to invest approximately $24 billion over the next five years to support its load growth as well as to meet Michigan's clean energy goal by retiring coal-fired power plants and adding new natural gas-fired power plants and renewable sources. Although we view the regulatory environment in Michigan to be credit supportive, the significant step up in the company's capital investment plan without contemporaneous cost recovery through higher equity capital structure and more timely cash recovery mechanisms for large projects, will constrain the company's ability to produce credit metrics that are appropriate for its credit rating. In 2025, Consumers Energy's cash flow from operations before changes in working capital (CFO pre-WC) to debt ratio was 16.8%, excluding securitization bonds, lower than its 18% downgrade threshold primarily due to extreme storms in its service territory. Importantly, a constructive outcome on its pending rate case proceeding as well as supportive regulatory decisions on the company's capital investments will be critical to the company's ability to improve its financial profile.

Recent development



On 19 March, we changed the rating outlook of Consumers Energy to negative from stable. We affirmed its ratings, including the A1 first mortgage bond rating and Prime-2 commercial paper rating. At the same time, we affirmed the ratings of its parent company CMS Energy Corporation (CMS) and maintained its stable rating outlook.

Exhibit 1
CFO Pre-W/C and Total Debt

All data based on adjusted financial data, which follow our Financial Statement Adjustments in the Analysis of Nonfinancial Corporations methodology.
Moody's forecasts are Moody's opinion and do not represent the views of the issuer.
Forecast reflects 2 year average of 2026F and 2027F.
Sources: Moody's Financial Metrics™ and Moody's Ratings forecasts

Exhibit 2
Consumers' metric is likely to remain pressured below 18%

All data based on adjusted financial data, which follow our Financial Statement Adjustments in the Analysis of Nonfinancial Corporations methodology.
Moody's forecasts are Moody's opinion and do not represent the views of the issuer.
Forecast reflects 2 year average of 2026F and 2027F.
When adjusting for the impact of securitization debt, Consumers Energy's CFO pre-W/C to debt ratio would be 20.5%, 20.1% and 16.8% in 2023, 2024 and 2025, respectively.
Sources: Moody's Financial Metrics™ and Moody's Ratings forecasts

Credit strengths

» Generally credit supportive regulatory environment in Michigan

» Several timely cost recovery mechanisms including future test years applied during rate cases

Credit challenges

» Significantly higher capital investment plan will require additional debt issuance

» Maintaining regulatory support for these capital investments

» Lack of geographic and regulatory diversity with single state service territory

Rating outlook

The negative outlook for Consumers reflects our expectation that the company's elevated investment plan will continue to pressure its credit metrics including CFO pre-WC to debt below 18%, excluding the impact of securitization debt, without appropriate regulatory support.

Factors that could lead to an upgrade

Given the negative outlook, a rating upgrade for Consumers is not likely in the near term. The outlook could be changed to stable if Consumers' financial profile improves, including a ratio of CFO pre-WC to debt expected to be sustained well above 18%. A constructive outcome on its pending rate case and future regulatory decisions will be important to preserve the company's credit quality and an outlook change back to stable.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on https://ratings.moodys.com for the most updated credit rating action information and rating history.

Factors that could lead to a downgrade

A rating downgrade of Consumers would be considered if the company's CFO pre-WC to debt ratio remains below 18% on a sustained basis; or if there is a material deterioration in the credit supportiveness of the Michigan regulatory environment, including a less constructive outcome of its pending rate case or future regulatory decisions.

Profile

Consumers Energy is a vertically integrated electric and gas utility serving approximately 1.9 million electric and 1.8 million gas customers in the state of Michigan with an average rate base of $28 billion at the end of 2025. Consumers Energy's electric operations account for approximately two thirds of its revenue, cash flow and asset base. The utility is the primary subsidiary of CMS as it represents over 95% of CMS's consolidated earnings and cash flows. In addition to Consumers Energy, CMS has a subsidiary called NorthStar Clean Energy, a non-utility domestic independent power producer and marketer.

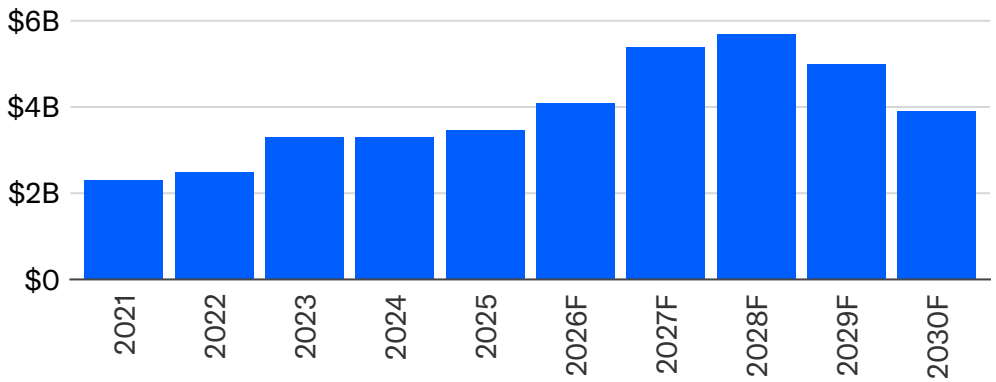
Detailed credit considerations

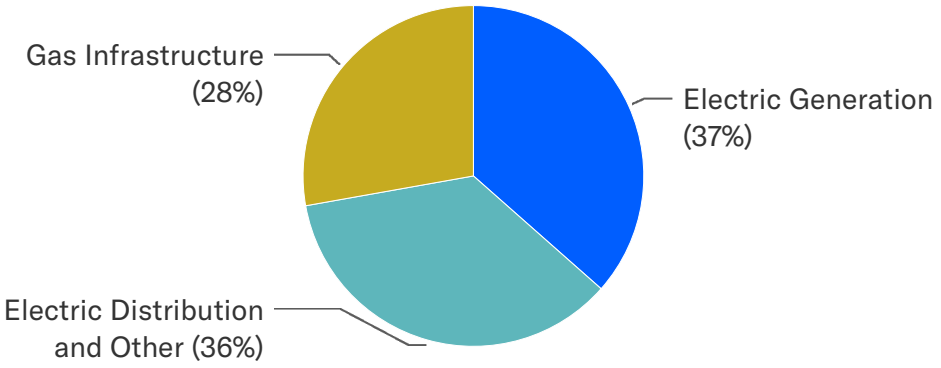


Weakened metrics to remain pressured due to heightened capital investment plan

Consumers Energy's latest investment plan over the next five years is approximately $24 billion, which is approximately $4 billion higher than its previous plan. About 72% of the investments are earmarked for its electric utility, with about even split between generation and distribution investments. Consumers Energy will invest approximately $6.7 billion primarily to maintain and upgrade its gas utility infrastructure; $8.6 billion related to its electric distribution and other infrastructure; and $8.8 billion related to clean energy generation.

The preview of Consumers Energy's upcoming Integrated Resource Plan (IRP), which will be filed in June, included the company's "all-of-the-above" approach with over 13 GW of new power generation capacity. This included expanded renewable investments, including solar, wind and battery storage as well as two new natural gas-fired power plants with total capacity of around 1.5 GW. Based on the investment plan previewed by the company, we expect that Consumers Energy's credit metrics will remain pressured, including its CFO pre-WC to debt ratio sustained below the current threshold for a potential downgrade of 18%. Importantly, a constructive outcome on its pending rate case proceeding as well as supportive regulatory decisions on the company's capital investments will be critical to the company's ability to improve its financial profile. In 2025, Consumer's ratio of CFO pre-WC to debt was approximately 16.8%, excluding the impact of securitization debt. Primarily, the weakness was due to extreme storms in it service territory during the year.

Exhibit 5



Consumers Energy's elevated capital program will extend at least through 2030

Source: Company filings

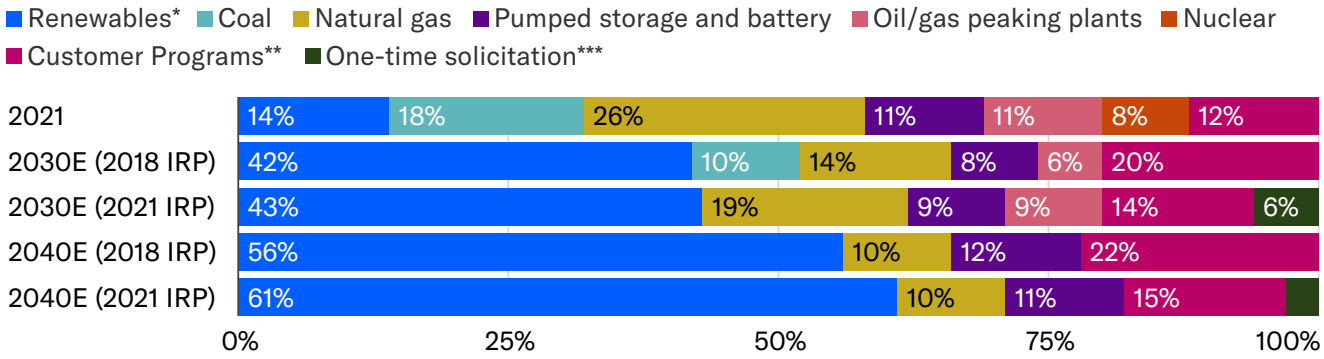
Funding for these investments will be provided by internally generated cash flow, the issuance of debt at Consumers Energy and equity contributions from CMS. We expect CMS to increase it equity issuance to support the utility's higher capital expenditure. For example, CMS issued $1 billion of junior subordinated notes in 2025. The company's current financing plan includes approximately $700 million of equity issuance compared to $525 million issued in 2025.

Exhibit 6
Planned Capital Expenditures 2026 - 2030 totals around $24 billion

Total may be higher than 100% due to rounding.
Source: Company filings

Generally supportive regulatory environment

Consumers Energy is regulated by the Michigan Public Service Commission (MPSC) and we view the regulatory framework in Michigan to be more credit supportive than most other states. The state of Michigan has a long history of enacting legislations that are supportive of utility investments in the state. As a result of 2008 and 2016 energy legislation in Michigan, the regulatory framework has been streamlined, improving both the rate case process and the timeliness of cost recovery. The 2016 legislation provided additional assurance of utility investment recovery by expanding the certificate of necessity (CON) process, which had already included pre-construction approval for large generating resources, into an integrated resource planning (IRP) process. The IRP process considers a wide range of factors including fuel costs, demand forecasts, resource adequacy, competitive pricing, environmental mandates and transmission options before the construction of major projects.



The latest energy legislation enacted in Michigan (2023 Energy Law) laid out the state's renewable energy standards. Under the new law, renewable energy standards were raised to 50% by 2030 and 60% by 2035 from the previous 15% by 2021 requirement. It also set a clean energy standard of 80% by 2035 and 100% by 2040. Under the law, zero to low-carbon emitting sources, such as nuclear generation and natural gas generation with carbon capture, are considered clean energy sources. Along with these new standards, the new legislation expanded the authority of the MPSC to oversee their implementation. Consumers Energy updated its Renewable Energy Plan, which was approved by the MPSC in September 2025.

Consumers Energy will file its next IRP in June. It is subject to the approval of the MPSC and we expect a constructive outcome similar to the last IRP's approval. As a result of the settlement agreement related to Consumers Energy's last IRP, the utility is allowed to record approximately $1.3 billion of the remaining book value of the coal-fired power plants that are anticipated to retire as a regulatory asset and earn a 9% return on equity (ROE) through the remaining life. Instead of securitizing the remaining book value, the settlement minimized the impact of the accelerated coal retirements on Consumers Energy's credit metrics. We viewed this settlement to be constructive and evidence of continued credit supportiveness in Michigan.

In September 2025, the MPSC approved Consumers Energy's latest Renewable Energy Plan, which enables the company to achieve 60% renewable energy by 2035 and 100% clean energy by 2040. Through 2040, Consumers Energy will add up to 8 GW of solar power, which is 3 GW more than what was approved in the company's 2018 IRP. Consumers Energy will grow its solar portfolio to 9 GW and wind portfolio to 4 GW. To backfill the retirement of its Karn 1 and 2 coal units, the utility acquired the Covert natural gas-fired power plant for approximately $815 million in 2023. Under the financial compensation mechanism (FCM), Consumers Energy is allowed earn a return on the PPAs. Pre-tax weighted average cost of capital is approximately 9%. This mechanism allows the utility to earn returns without incurring additional construction risks since building new generation isn't the only way the utility could earn a return, a credit positive. Under the current plan, approximately half of Consumers Energy's renewable generation will be owned and the remaining requirement met through PPAs.

Exhibit 7

Based on the latest IRP settlement, more than 60% of Consumers Energy's generation sources will be renewables by 2040

*Does not include renewable RECs.
**Includes energy waste reduction, demand response, and conservation voltage reduction program.
***One-time solicitation to acquire approximately 700 MW of capacity from sources in Michigan's Lower Peninsula beginning in 2025.
Source: Company filings

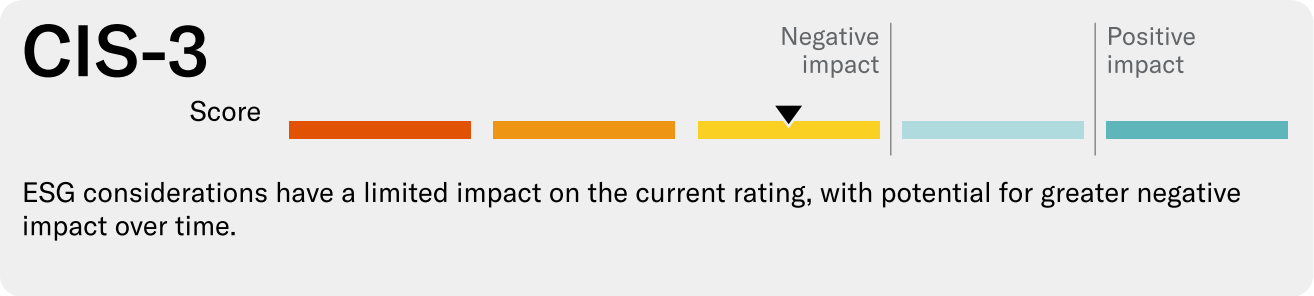
Timeliness of cost recovery based on a prescriptive suite of recovery mechanisms

Michigan utilities benefit from numerous rate adjustment mechanisms that typically provide cash flow stability and assurance of recovery. For example, Consumers Energy has forward-looking Power Supply Cost Recovery (PSCR) and Gas Cost Recovery (GCR) mechanisms that are intended to ensure that it can recover prudently incurred power and gas supply costs. The PSCR covers fuel and purchased power costs as well as transmission and emission allowance costs. Differences between actual and forecast costs are deferred for recovery or refunded in the following year. The PSCR is a surcharge mechanism and provides a degree of base rate and cash flow stability. The GCR mechanism may be adjusted monthly within a capped range to minimize over or under recoveries although interim gas inventory buildup could substantially increase the company's working capital financing when gas prices increase sharply.

Gas utilities in the state also benefit from programs designed to assure recovery of needed infrastructure improvements. The company's enhanced infrastructure replacement program (EIRP) is a MPSC authorized 25-year incremental investment program to upgrade natural gas infrastructure, including the replacement of 2,700 miles of natural gas distribution and service pipelines with more durable material.

Active rate case cadence likely to continue

Consumers Energy maintains an active regulatory schedule with its electric and gas general rate cases typically filed annually in an alternating pattern. Although there was some pressure, due to customer affordability concerns in the state, to lower the allowed ROE level over the last three years, the MPSC has maintained a 9.9% allowed ROE for electric. For its gas utility operations, the allowed ROE is 9.8%. However, further deterioration of the allowed ROE is likely to put negative pressure on the company's overall financial profile.



Consumers Energy currently has both electric and gas rate cases pending. In June 2025, Consumers Energy filed its latest electric rate case. Its revised requested increase of $423 million is based on a 10.25% ROE for the test year ending 30 April 2027. The MPSC must issue its final order either before or in April 2026. The final order for its previous electric rate case was received in March 2025. The final order authorized an increase of $154 million, including the approval of a $22 million surcharge related to distribution investments in prior years, in electric base rate revenue based on a 9.9% allowed ROE. The rate increase was also based on a test year ending February 2026 and the total rate base was approximately $14.86 billion.

The company filed its gas rate case in December 2025, requesting an annual rate revenue increase of $240 million based on a 10.25% allowed ROE for the projected period ending 31 October 2027. The final order must be issued either before or in October 2026.

ESG considerations

Consumers Energy Company's ESG credit impact score is CIS-3

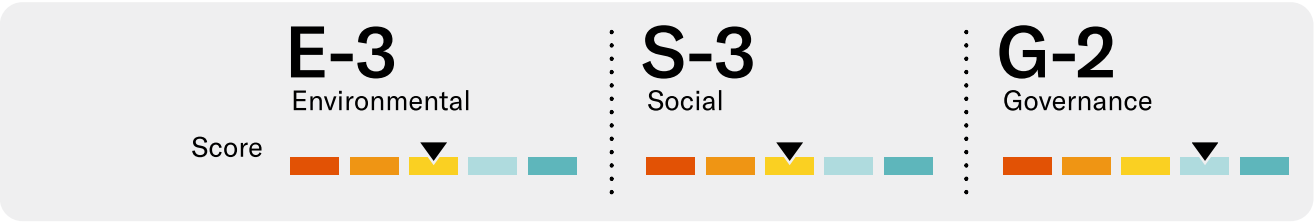


Exhibit 8
ESG credit impact score

Source: Moody's Ratings

Consumers Energy's **CIS-3** indicates that ESG considerations have limited impact on the current credit rating with greater potential for negative impact over time. It reflects some exposure to physical climate risk due to increasing frequency and severity of storm activities. It also incorporates social risks stemming from inherent risk associated with regulated utilities.

Exhibit 9
ESG issuer profile scores

Source: Moody's Ratings

Environmental

Consumers Energy's **E-3** issuer profile score reflects some exposure to physical climate risk, which highlights the increasing severity and frequency of extreme storm activities. It also incorporates exposure to carbon transition risk associated with its gas utility operations and gas-fired power plants. Based on its latest Renewable Energy Plan, the company is projected to increase its generation mix to be 60% renewable by 2035 and 100% clean energy by 2040.

Social

Consumers Energy's **S-3** issuer profile score is primarily related to its customer and regulatory relations as well as demographic and societal trends. The utility's regulatory environment, as well as its interaction with the MPSC, are important in considering the utility's social risk. Also, the safety and reliability of its operations are important social considerations.

Governance

Consumers Energy's **G-2** issuer profile score reflects our view that its governance does not pose a particular risk.

ESG Issuer Profile Scores and Credit Impact Scores for the rated entity/transaction are available on Moodys.com. In order to view the latest scores, please click here to go to the landing page for the entity/transaction on MDC and view the ESG Scores section.

Liquidity analysis

We expect Consumers Energy's liquidity profile to be adequate over the next 12-18 months.

Consumers Energy's external liquidity sources include a $1.1 billion senior secured revolving credit facility expiring in November 2030. As of 31 December 2025, net availability was $1.094 billion with $6 million of letters of credit outstanding. Consumers Energy also maintains a $300 million senior secured credit facility terminating in November 2028 and had $300 million available as of 31 December 2025. Both facilities are secured by first mortgage bonds. In addition, Consumers Energy has a $100 million senior secured letter of credit facility expiring in May 2027 with $100 million letters of credit outstanding at the end of 2025. It also has a $50 million unsecured letter of credit facility expiring in March 2028 with $43 million letters of credit outstanding, and two $100 million unsecured letter of credit facilities with automatic renewal provisions with $97 million and $100 million letters of credit outstanding, respectively, at the end of the same period. These credit facilities provide support for working capital needs and act as a backstop to Consumer Energy's $500 million commercial paper program. At 31 December 2025, the company had no commercial paper notes outstanding under the program. The credit facilities do not include a material adverse change representation for new borrowings, and have only one financial covenant, setting the maximum debt to capital at 65%. At 31 December 2025, its debt to capital ratio was 51%.

The utility's continuing capital expenditure program and dividend policy will result in negative free cash flow for the foreseeable future. However, the company has a reasonable amount of external liquidity, demonstrated market access, and regularly receives capital contributions from its parent. In addition, Consumers Energy will manage the financing of its capital investment program to maintain its targeted capital structure authorized by its regulators.

For the period ended 31 December 2025, Consumers Energy generated approximately $2.2 billion of cash from operations, invested $3.3 billion and distributed $900 million of dividends to CMS, resulting in negative free cash flow of approximately $2.0 billion. Given its robust investment plan, we expect Consumers Energy to maintain its negative free cash flow position over the 12-18 months.

In May 2025, Consumers issued $500 million 4.5% first mortgage bonds due 2031 and $625 million 5.05% first mortgage bonds due 2035.

Methodology and scorecard

We use our global Regulated Electric and Gas Utilities rating methodology as the primary methodology for analyzing Consumers Energy Company. The scorecard-indicated outcome reflects the implied senior unsecured rating and the actual rating assigned of A1 is Consumers Energy's senior secured rating, which would be two notches higher than its implied senior unsecured rating.

Executive Summary

Introduction

RRA evaluates the regulatory climate for energy utilities in each of the jurisdictions RRA evaluates the regulatory climate for energy utilities in each of the jurisdictions within the 50 states and the District of Columbia — a total of 53 jurisdictions — on an ongoing basis. The evaluations are assigned from an investor perspective and indicate the relative regulatory risk associated with the ownership of securities issued by each jurisdiction's energy utilities.

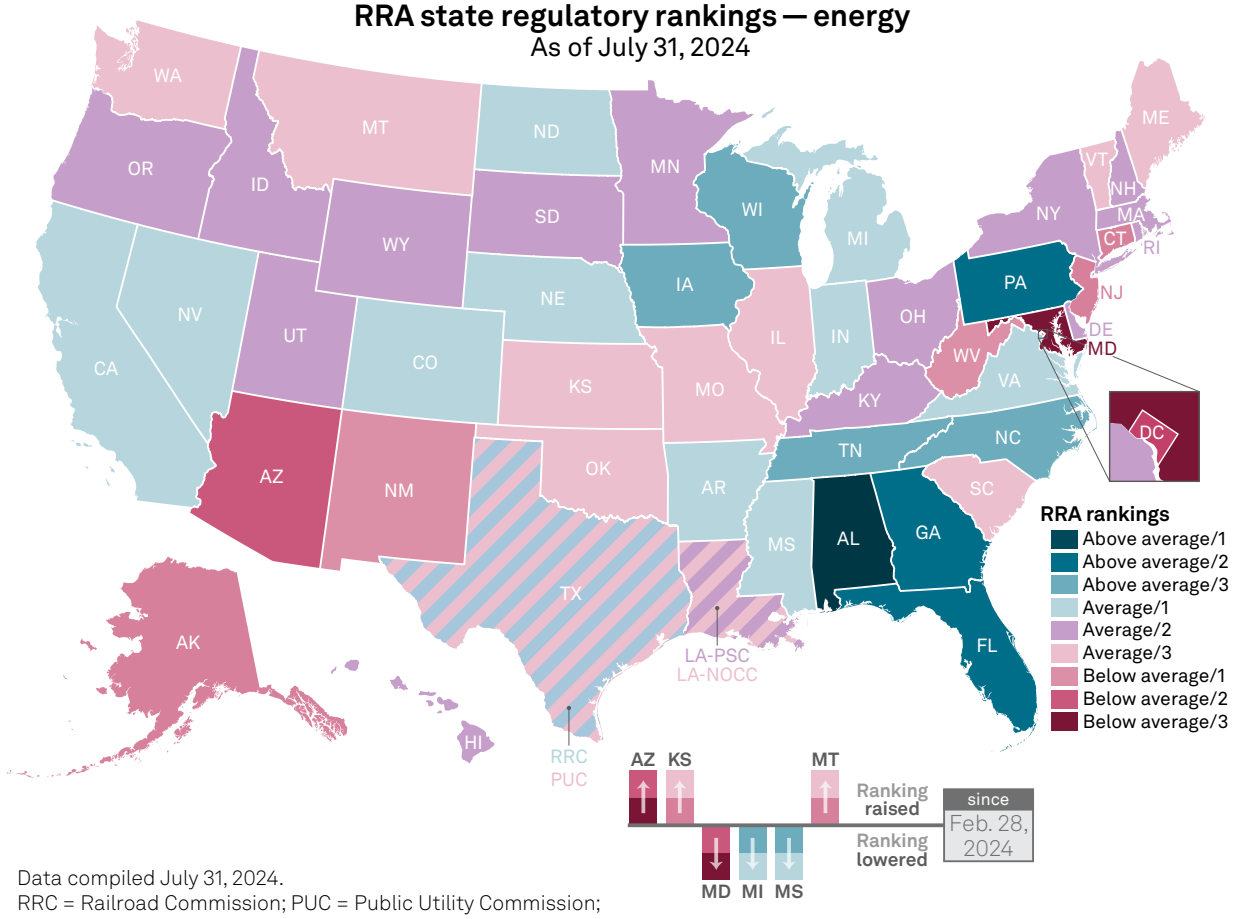
Each evaluation is based upon consideration of the numerous factors affecting the regulatory process, including gubernatorial involvement, legislation and court activity, and may be adjusted as events occur that cause RRA to modify its view of the regulatory risk for a given jurisdiction.

RRA reviews the ranking of a particular jurisdiction on an ongoing basis as developments occur and then holistically reviews the rankings when preparing the quarterly comprehensive ranking reports. The issues considered are discussed in RRA Research Notes, Commission Profiles, Topical Special Reports and Rate Case analyses. RRA also considers information obtained from contacts with the commissioners and staff, as well as company and government personnel. The final evaluation is an indicator of the probable level and quality of the earnings to be realized by the state's utilities as a result of regulatory, legislative and court actions.

It is important to note that RRA's rankings are from an investor perspective and are intended to provide insight into the relative risk associated with owning the securities of the jurisdictions in question. They are not an assessment of whether regulators are "doing a good job." In addition, the rankings look at not only the commission's actions but those taken by the jurisdiction's legislature, courts and chief executive, as well as the various stakeholders that intervene in the regulatory process.

About This Report

This report provides a discussion of recent changes in RRA's energy regulatory rankings, with details regarding the rationale for these changes. The report also identifies jurisdictions with ongoing proceedings or developing issues that have the potential to impact the relative regulatory risk for utilities operating within a given jurisdiction and, by extension, the ranking of that jurisdiction. The report also provides a discussion of key regulatory issues that impact the sector outlook as a whole. Finally, the report includes an overview of RRA's ranking methodology and the issues RRA examines in deriving the rankings.



The Take

In light of recent and ongoing developments, Regulatory Research Associates has altered the regulatory rankings of six state-level jurisdictions under coverage and identified nine jurisdictions that bear watching, given recent commission, legislative, gubernatorial and/or court activity.

Developments continue to unfold on a variety of key issues across the regulated utility sector nationwide on an ongoing basis, including evolving public policy related to the energy transition, accelerated capital spending driven largely by programs to meet a variety of societal goals, and higher inflation and interest rates than the US had seen in the prior four decades.

State regulators will play a pivotal role in determining the direction and magnitude of these impacts on the financial performance of the utilities that fall under their purview. How the individual jurisdictions meet these challenges will continue to inform RRA's prospective comparative risk assessments.

Recent ranking changes

Following a comprehensive review of the current rankings conducted during July, RRA made six ranking changes. RRA is raising the ranking of **Arizona**, **Kansas** and **Montana**, while lowering the rankings of **Maryland**, **Michigan** and **Mississippi**. The reasons for these changes are discussed in the paragraphs that follow.

Recent rate case decisions issued by the **Arizona** Corporation Commission (ACC) have been relatively constructive. The commission's decision for Pinnacle West Capital Corp. subsidiary Arizona Public Service Co. earlier in 2024 in particular represents a marked improvement over a 2021 ACC ruling that incorporated one of the lowest equity return authorizations observed by RRA in the last 40 years. Several recent commission electric rate orders have also authorized the state's investor-owned utilities to implement a constructive system reliability benefit mechanism to recognize rate base additions between rate cases. Based on these developments, RRA upgraded its rating of the Arizona regulatory environment for energy utilities to Below Average/2 from Below Average/3.

RRA also raised the ranking of the **Kansas** regulatory climate to Average/3 from Below Average/1 to recognize the recent enactment of legislation that allows the use of plant-in-service accounting for electric utility infrastructure investments that are made between a utility's base rate proceedings. Prospectively, the utilities will be permitted to defer, for future recovery, 90% of the depreciation expense and rate of return associated with "qualifying electric plant" investments. The resulting regulatory asset balances, which are to accrue carrying charges at the utility's weighted average cost of capital and be amortized over a 20-year period once included in rates, are to be adjusted to reflect any prudence disallowances ordered by the Kansas Corporation Commission. The new law is expected to mitigate the impact of regulatory lag for the electric utilities operating in the state and improve their prospects for earning their authorized returns.

Additionally, RRA also raised the ranking of the **Montana** regulatory climate to Average/3 from Below Average/1, in recognition of the constructive aspects of recent electric and gas rate case decisions issued by the Montana Public Service Commission for NorthWestern Energy Corp. In these proceedings, the Montana PSC authorized returns on equity that exceeded nationwide averages approved in settled cases for both electric and gas utilities. The authorized electric return on equity (ROE) exceeded nationwide average for all electric cases, while the authorized gas ROE approximated the nationwide average. In addition, the orders allow NorthWestern Energy to defer, for later rate recovery, incremental wildfire expenses that are capped annually. Given that the Montana PSC relies upon historical test periods and average rate base valuations that tend to exacerbate regulatory lag and that the magnitude of wildfire-associated costs appears to be accelerating rapidly for many utilities across the US Northwest, RRA views the ability of NorthWestern Energy to defer its wildfire expense for future recovery as constructive from an investor viewpoint. In pending rate cases before the Montana PSC, NorthWestern Energy is seeking a new balancing account for wildfire management costs, which may help to further reduce regulatory lag as it pertains to investments in wildfire mitigation programs and insurance costs.

By contrast, the **Maryland** regulatory climate has become increasing risky from an investor standpoint since the governor changed in January 2023. The incoming governor, Democrat Wes Moore, quickly removed three members of the Maryland Public Service Commission from office, including the chairman. The incoming chair, who has now been in the position for a little over a year, is a former attorney in the Office of People's Counsel (OPC). In the wake of this change, the OPC has become more vocal and taken a more contentious stance in regulatory proceedings.

One of the new commissioners is a former state legislator, while the other is an attorney who has represented various stakeholder interests before state and federal regulators. Since these changes, the commission's decisions have become more restrictive from an investor viewpoint, culminating in a June 2024 decision rejecting a multiyear rate plan proposed by Exelon Corp. subsidiary Potomac Electric Power Co., and raising questions regarding future use of that framework in the state.

Contemporaneous with this decision, Anthony O'Donnell, a long-time commissioner who did not participate in issuing the order, resigned, creating uncertainty with respect to the future makeup of the commission and opening up the prospect for another more consumer-oriented replacement.

In light of these developments, RRA is again lowering the ranking for Maryland regulation, this time to Below Average/3 from Below Average/2. This is the third reduction in the jurisdiction's ranking since mid-2023.

RRA is also lowering the ranking of **Michigan** regulation — to Average/1 from Above Average/3. While the jurisdiction remains more constructive than average from an investor viewpoint, the outcomes of recent rate proceedings have been mixed and could indicate a tightening in the regulatory climate.

RRA had placed the state on watch following a 2022 rate case decision in which the Michigan Public Service Commission authorized DTE Energy Inc. subsidiary DTE Electric Co. (DTE-E) an increase in rates that was less than 10% of that requested. At the time, RRA viewed the decision to be an anomaly.

The company filed a new rate case less than three months later, asserting that existing rates and projected electricity sales could not sustain its major capital investment program. Even though the ultimate outcome of this case was more constructive, DTE-E filed a third case within four months of the decision (on March 28, 2024), which is pending. The filing has met significant resistance from consumer groups who characterize the request as "absurd in both the astounding dollars and obnoxious timing," implying that this case will be more contentious than usual.

In a July 2 fully litigated electric rate decision for American Electric Power Co. subsidiary Indiana Michigan Power Co. (IMP), the commission authorized the company a rate increase that was about half of what IMP had requested. Rate of return and expense items accounted for most of the revenue requirement differences; among the items disallowed by the PSC were costs associated with employee incentive compensation and enhanced customer service technology, as well as a company-proposed inflation adjustment. Similar to the DTE-E proceedings, the commission voted to keep IMP's ROE unchanged despite recent increases in interest rates.

While a recently decided (July 23) gas rate case for CMS Energy subsidiary Consumers Energy Co. (CE) was settled rather than fully litigated, the stipulated revenue requirement increase was also less than half of that requested by CE and the authorized ROE remained unchanged from the last case.

While the approved ROEs for DTE, IMP and CE remain above prevailing industry averages, they compare less favorably to these averages, which have risen, albeit modestly, in recent periods.

Against this backdrop, six major utility rate cases are pending, including the aforementioned DTE-E electric rate case, most of which are driven at least in part by capital spending programs intended to comply with state reliability and energy transition policies; outcomes consistent with the above recently completed cases could render it difficult for the companies to continue to support these initiatives.

Also of concern, the electric utilities have been subject to more intensive scrutiny since extensive outages ensued in August 2021, following a major storm.

The **Mississippi** energy utilities continue to operate under streamlined, formulaic alternative rate plans in lieu of general base rate cases. The plans provide for annual rate adjustments and reflect timely recognition of new investments and fluctuations in operating costs. When specified, authorized equity returns as calculated under the plans have generally exceeded prevailing industry averages. However, RRA is lowering the rating of Mississippi regulation at this time to Average/1 from Above Average/3. The change partially reflects the relative inexperience of the three new commissioners that were seated at the Mississippi Public Service Commission earlier in 2024 but is also necessary to maintain a normalized balance in RRA's relative ranking of US regulatory bodies.

In conjunction with the prior review conducted during February 2024, RRA changed the ranking of **Virginia** regulation, raising it to Average/1 from Average/2, to reflect the removal of significant regulatory uncertainty with the election of two individuals to fill long-standing vacancies on the Virginia State Corporation Commission.

RRA also noted that in December 2023, RRA had lowered the ranking of the **Illinois** regulatory climate to Average/3 from Average/2 to reflect the impact of adverse rulings issued for Exelon Corp. subsidiary Commonwealth Edison Co. and Ameren Corp. subsidiary Ameren Illinois Co. in their respective multiyear grid and rate plan proceedings.

Jurisdictions to watch

In addition to the jurisdictions discussed above, where RRA has observed a shift in the regulatory climate, there are nine states where current trends and expected near-term developments could signal a shift in the level of regulatory risk for investors. Even though RRA recently revised the ranking of the regulatory climates in Arizona, Connecticut and Illinois, these jurisdictions continue to bear monitoring.

While RRA raised the ranking of **Arizona** regulation as part of its current review (discussed in the preceding section of this report), ongoing issues merit continued scrutiny, including the ACC's actions earlier in 2024 to reexamine certain long-standing rules, raising the prospect of a rollback of the commission's renewable energy requirements, among other things. While some commissioners have asserted that the rules have unnecessarily burdened ratepayers, the state's major electric utilities are continuing to transition toward more renewable heavy generation portfolios, and a disruption in the policy could have unforeseen consequences for the companies. In addition, three of the ACC's five commissioner seats are up for election this year, as are the governor and both chambers of the Arizona legislature. Changes in the makeup of these branches of state government could result in significant commission policy changes.

After lowering the ranking of **Connecticut** regulation in August 2023, RRA has continued to closely monitor the jurisdiction, which continues to be one of the most challenging in the US. Changes are currently underway to the makeup of the Connecticut Public Utilities Regulatory Authority (PURA), which under state law can be comprised of up to five members. Gov. Ned Lamont (Democrat) recently announced that long-standing commissioner John Betkoski (Democrat), who is serving beyond the end of his term, will be stepping down at the end of 2024. At the same time, Lamont announced the nomination of former state legislator and utility government affairs employee, David Arconti, Jr, (Democrat) as a new PURA commissioner to begin serving Aug. 5, subject to confirmation by the General Assembly in 2025. The other current members of the PURA, Chair Marissa Gillett (Democrat) and Michael Caron (Republican) continue to serve beyond the expiration of their terms.

Recent rate case decisions have demonstrated significant constriction in the regulatory climate and have created additional uncertainty surrounding the overall tenor of regulatory policy in the state. An appeal is ongoing of a 2023 rate case decision, in which the PURA authorized Avangrid Inc. subsidiary The United Illuminating Co. an 8.63% that reflected a 47-basis-point penalty for management and operational performance issues. Even without the penalty, the implied base ROE of 9.10% was among the lowest approved for an energy utility in recent years.

There are two gas rate cases pending for other Avangrid subsidiaries, as well as a legislatively mandated alternative ratemaking proceeding where the PURA is reviewing rules governing multiyear rate plans, earnings-sharing mechanisms, revenue decoupling and potential performance-based ratemaking measures for the electric utilities.

Even though RRA recently lowered the ranking of Illinois to reflect restrictive **Illinois** Commerce Commission (ICC) rate case rulings issued in late 2023, the state continues to bear watching, as Exelon Corp. subsidiary Commonwealth Edison Co. (ComEd) and Ameren Corp. subsidiary Ameren Illinois Co. have revised grid plan filings, pending ICC consideration. The commission is expected to render decisions on the proposals in December.

Further, the ICC's determinations in gas proceedings in late 2023 raise the possibility of the commission continuing to disregard the recommendations put forth by its own internal experts to the detriment of the state's utilities, raising the potential for further constriction in the regulatory climate. Three of the five commissioners are relatively new, having been in office for about a year; so, even though one of the "new" commissioners has served before, the commissioners are evolving in terms of how they work together. In addition to the revised grid plan requests, there is one pending rate case for a relatively small gas utility.

Iowa remains a jurisdiction to watch, considering the Iowa Utilities Commission's (IUC) actions in recent advanced ratemaking decisions regarding new renewable generation projects. In October 2023, the IUC made modifications to a settlement for Alliant Energy Corp. subsidiary Interstate Power and Light Co. (IPL), including a reduction in the authorized ROE for new solar generation; the settlement had specified a 10.75% ROE, but the IUC authorized a 10.25% ROE. While being higher than prevailing industry averages, the modified ROE is below previously approved ROEs for these types of facilities.

Prior to that, in April 2023, the IUC approved Berkshire Hathaway Inc. subsidiary MidAmerican Energy Co.'s Wind PRIME project but rejected a settlement regarding the associated advance ratemaking principles, leaving the ROE to be determined in a future rate case. On rehearing, the parties reached a revised agreement that the IUC approved without modification in December 2023, including an authorization of a 10.75% ROE for the project. However, in the ruling, one commissioner expressed concerns about approving a "premium ROE" within mature renewable energy markets, potentially indicating an eventual conclusion to the practice of approving premium ROEs for these types of investments.

It is noteworthy that two of the three current commissioners are relatively new to the IUC, having joined in May 2023. Consequently, two pending rate cases may face some uncertainty. IPL is in the midst of its first major electric and gas base rate case since 2019; hearings are underway after certain parties signed a nonunanimous settlement. Black Hills Iowa Gas Utility Co. LLC also has a case in progress — its first in about three years.

Kentucky continues to bear watching, as the Kentucky Public Service Commission's pattern of imposing modifications to rate case settlements over the past couple of years remains a cause for concern. The most recent rate case decision for a large utility occurred in January 2024, when the PSC authorized American Electric Power Co. Inc. subsidiary Kentucky Power Co. a rate increase that was meaningfully below the stipulated hike the parties had agreed to in a settlement; the revenue requirement difference stemmed largely from an adverse ruling on transmission-related cost recovery. The commission also rejected a settlement provision that called for the company to implement a distribution reliability rider.

Separately, legislation enacted earlier in 2023 prohibits the Kentucky PSC from approving requests to retire fossil fuel-fired facilities, unless the utility can demonstrate that the plant's retirement would not adversely impact ratepayers or the region's electric grid reliability. The Kentucky PSC recently approved one such proposal — by PPL Corp. subsidiaries Louisville Gas and Electric Co. and Kentucky Utilities Co. — that will result in meaningful changes to the composition of the companies' generation portfolios.

On a constructive note, a separate bill signed in 2023 allows the electric utilities to securitize certain costs associated with retired generation facilities and storm restoration efforts. The PSC recently approved Kentucky Power's securitization request. Even so, it is unclear how the commission will approach future requests.

The term of former Chairman Kent Chandler, a Democrat, expired June 30, and he left the commission instead of seeking reappointment. Gov. Andy Beshear, a Democrat, has not named a replacement. This development adds uncertainty to the state's regulatory climate at the same time that investors are seeking clarity regarding the commission's stance on a variety of regulatory matters.

New Jersey bears watching at this juncture, as Public Service Enterprise Group Inc. subsidiary Public Service Electric and Gas Co. — the largest utility in the state — is in the midst of its first combination electric and gas base rate case in several years. Proceedings are also underway for two of the major gas local distribution companies (LDCs), New Jersey Resources Inc. subsidiary New Jersey Natural Gas Co. and Elizabethtown Gas Co., with Elizabethtown Gas affiliate South Jersey Gas Co. expected to file a case by the end of 2024. The latter two LDCs are held by South Jersey Industries Inc., which is owned by Infrastructure Investments Fund US Holding 2 LP.

With these cases, as well as various energy transition proceedings under way, including a review of the state's Energy Master Plan, the New Jersey Board of Public Utilities is operating with one vacancy and three new members who took office in 2023, including the recently named president.

Due to uncertainty caused by changes in the composition of the **Oklahoma** Corporation Commission (OCC), the combative stance taken in recent proceedings by one of the long-time OCC members and the commission's decision to depart from customary practice and require significant changes to a rate case settlement, RRA lowered its ranking of Oklahoma regulation in November 2023. RRA continues to consider Oklahoma a state to watch, as two of the major energy utilities in the state have substantial rate requests pending.

The regulatory climate in **Texas**, as it pertains to the electric utilities under the purview of the Public Utility Commission of Texas, continues to bear watching. The regulatory framework in Texas and the PUC has been the focus of intense scrutiny, since a 2021 severe weather event caused widespread multiday outages and price spikes within Electric Reliability Council of Texas (ERCOT). While various proceedings are ongoing to transform the framework, the dramatic controversies that arose following that event have largely abated. Recent wildfire and severe storm activity could cause renewed focus on the utilities and the market structure in Texas.

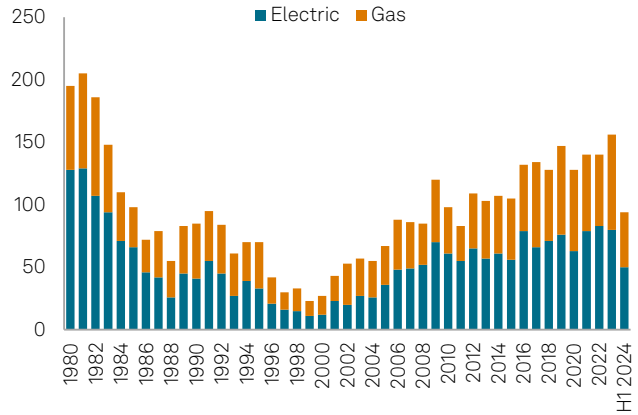
Gov. Greg Abbott's reelection in 2022 provided a measure of stability, though there continues to be turnover at the PUC. One commissioner is serving beyond the end of term that expired in 2021, and both the PUC chair and a newly appointed commissioner are serving pending confirmation by the Senate when the legislature reconvenes in 2025.

Against this backdrop, both CenterPoint Energy Inc. subsidiary CenterPoint Energy Houston Electric Co. and American Electric Power Co. subsidiary AEP Texas Inc. filed rate cases in the first quarter of 2024 and certain intervenors took restrictive positions in their direct testimony in these cases. While a settlement was reached in the AEP Texas case, CenterPoint has filed a motion to withdraw its case in light of ongoing controversy surrounding the company's response to outages caused by Hurricane Beryl and the PUC has initiated a review of CenterPoint's actions during and following the storm.

Several of the utilities have also filed system resiliency proposals in accordance with 2023 legislation; these proceedings may prove challenging in light of the recent weather-related events.

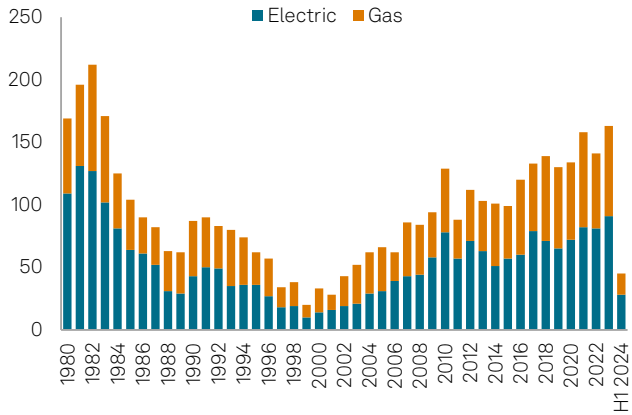
The **Wyoming** regulatory climate bears watching, as the legal and legislative ramifications of a contentious electric general rate case decision for Berkshire Hathaway Inc. subsidiary PacifiCorp continue to play out. The utility has already filed a federal suit against the Wyoming Public Service Commission's order issued in January, arguing that the commission failed to account for the costs of maintaining reserve capacity, as mandated by the Federal Energy Regulatory Commission. PacifiCorp also plans to pursue action in state court, although the company has not specified when it plans to file.

In addition, multiple pieces of legislation enacted during the 2024 session addressed several issues that arose in recent commission proceedings, including recovery of costs associated with neighboring states' environmental policies and cost-tracking mechanisms to allow utilities to recover changes in certain electric supply costs between rate cases.



Outlook

Developments continue to unfold on a variety of key issues across the regulated utility sector nationwide. Accelerating capital spending to address a variety of public policy goals, inflation and rising interest rates present challenges for utilities and regulators and are driving an active rate case agenda across the US.



There were 164 electric and gas rate cases decided for the US investor-owned energy utilities in RRA's coverage universe during 2023, with an aggregate $9.3 billion of rate increases approved in those cases. During the first half of 2024, 45 cases were decided, netting $2.3 billion in rate increases.

The covered companies filed 156 new electric and gas rate cases, including limited-issue rider proceedings in 2023, with 94 filed in the first half of 2024. The combined rate increases requested in the 2023 cases aggregated to more than $18.1 billion, while those sought in the 2024 filings added up to almost $12.3 billion.

RRA anticipates this trend of robust rate case activity will persist for the foreseeable future, driven by continued expansion in capital spending.

Capital spending has risen steadily since 2006, when the energy utilities included in RRA's sample of the publicly traded US energy utilities reported total actual capital spending of about $52 billion; actual capital spending for the group came in at $166 billion in 2023.

According to data gathered by RRA in March, spending is expected to expand to $184 billion in 2024, increase to $191 billion in 2025 and moderate to $183 billion in 2026, bringing the total for the forecast period (2024–2026) to $559 billion.

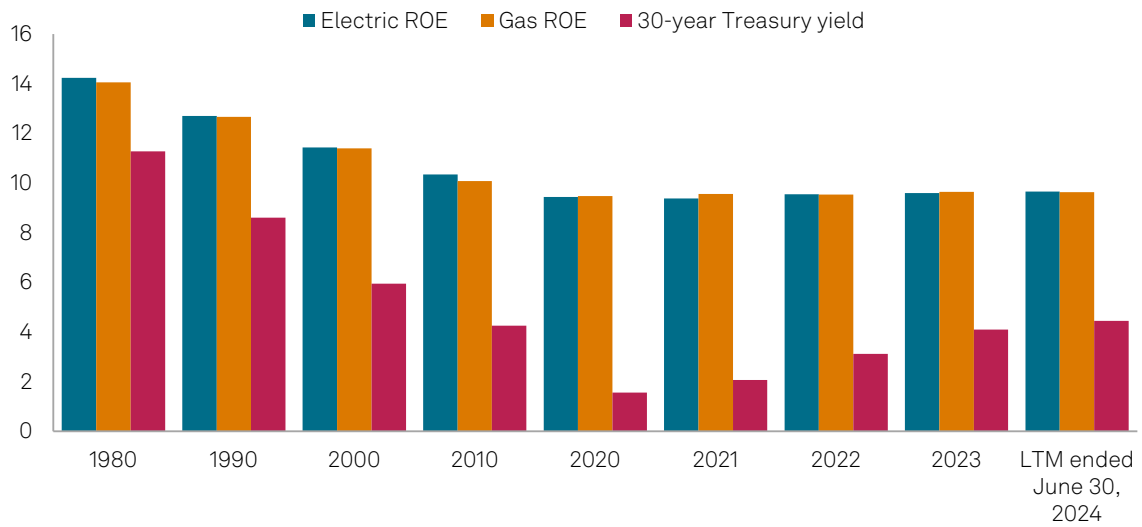
The impacts of severe weather events, such as hurricanes, winter storms and wildfires, continue to play a more prominent role in utility financial outlooks and are contributing to the active rate case agenda.



The need to recover the related costs, together with the previously listed factors, will continue to put upward pressure on rates, exacerbating prevailing concerns about ratepayer impacts and affordability, and rendering it challenging for companies to reflect higher financing costs in their authorized returns.

The spread between average authorized ROEs and US Treasury bond yield contracted to roughly 550 basis points in 2023 from almost 800 basis points in 2020. The spread has continued to shrink in 2024, such that for the 12 months ended June 30, 2024, the spread approximated 520 basis points.

Still, the spread remains higher than it was during previous periods. For example, during the early 1980s — another time when the industry faced aggressive capital spending and persistently high levels of inflation and interest rates — the spread between Treasury yields and authorized ROEs was less than 300 basis points.

The evolving energy transition presents unique challenges for the electric and gas utility sector, but also offers potential for growth. Much of the evolution has come via state legislative initiatives and energy issues continue to be a focus in the current legislative session.

Energy issues will be a factor in the 2024 US presidential election, as well as state level elections, with gubernatorial elections scheduled in 11 states, legislative elections in 44 states and utility commissioners on the ballots in 10 states.

State renewable and clean energy standards and goals

California	100%	2045	Illinois	100%	2050	New Jersey	100%	2035	Washington	100%	2045
Colorado	100%[3]	2050	Maine	100%	2050	Texas	10,000 MW	2025			
Connecticut	100%	2040	Nevada	100%	2050	Virginia	100%	2040			

Data compiled July 29, 2024.
Targets indicate the final requirement and do not include interim steps. The data also does not include voluntary targets adopted by utilities, corporations, public power districts, etc.
* There are interim steps within the renewable portfolio standard that allow for a target to be met with renewable energy resources; however, the carbon-free target is the ultimate target resource policy.
[1] Massachusetts currently has in place a Clean Energy Standard and a separate Renewable Portfolio Standard. The 40% renewables by 2030 standard does not have a stated expiration date; the standard is to increase by 1% each year and will reach 100% renewable energy by 2090. The clean energy standard requires 80% clean energy by 2050.
[2] The state's clean energy targets legislation requires retail electricity providers to reduce emissions by 100% by 2040; while it is a separate policy, it is complementary and works in tandem with the renewable portfolio standard.
[3] The goal is in place for a retail utility that provides service to more than 500,000 customers, such as Xcel Energy, or any utility that decides to opt in.
[4] Legislation enacted in June 2024 modifes and increases the state's renewable portfolio standard to 100% retail sales by 2030 or 2035, depending on the size of the provider. The state's largest utility, Green Mountain Power, must reach the 100% target by 2030.
[5] Washington has an additional 15% renewable energy standard in place. The state's 2045 target of 100% renewable and nonemitting resources is a mandate and not a voluntary goal.

These factors raise the overall level of uncertainty, or investor risk, across the sector. State regulators will play a pivotal role in determining the direction and magnitude of these impacts on the financial performance of the utilities that fall under their purview. How the individual jurisdictions meet these challenges will continue to inform RRA's prospective comparative risk assessments.

RRA's rankings process

RRA ranks the regulatory climate in a total of 53 state-level jurisdictions, including the District of Columbia and the New Orleans City Council, and two regulatory bodies in Texas — the Public Utility Commission of Texas regulates electric utilities, while the Railroad Commission of Texas regulates gas local distribution companies.

RRA maintains three principal ranking categories — Above Average, Average and Below Average — with Above Average indicating a relatively more constructive, lower-risk regulatory environment from an investor viewpoint and Below Average indicating a less constructive, higher-risk regulatory climate.

The numbers 1, 2 and 3 within each principal ranking category indicate relative position. The designation 1 indicates a stronger or more constructive ranking from an investor viewpoint; 2, a midrange rating; and 3, a less constructive rating.

Hence, if you were to assign numeric values to each of the nine resulting categories, with a "1" being the most constructive from an investor viewpoint and a "9" being the least constructive from an investor viewpoint, then Above Average/1 would be a "1" and Below Average/3 would be a "9."

Methodology

RRA designed the rankings to reflect the interest of equity and fixed-income investors across more than 30 individual metrics. The metrics are scored based on the covering analysts' subjective judgment and then aggregated to create a single score for each state, with certain categories, such as the state's history with respect to authorized equity returns, practice with respect to rate case test years and presence, or lack of alternative ratemaking provisions, weighted more heavily than others.

RRA then ranks the states from lowest to highest and distribute them among the nine categories to create an approximate normal distribution. The team then reviews the distribution and may adjust individual state rankings based on the covering analysts' recommendations, subject to review by a designated panel of senior analysts.

The variables that RRA considers in determining each state's ranking are largely the broad issues detailed in state commission profiles and those that arise in the context of rate cases, generic policy proceedings, legislation and gubernatorial directives.

RRA's articles and reports on these issues are accessible through the S&P Capital IQ Pro platform, as are the jurisdictional commission profiles and RRA's database of major investor-owned utility rate case decisions going back to 1980.

As implied by the above discussion, the rankings reflect the state regulatory commission's decisions and the impact of the actions taken by the governor, the legislature, the courts and consumer advocacy groups. The policies examined pertain largely to rate cases and the ratemaking process, but RRA also consider issues such as industry restructuring, corporate governance, treatment of proposed mergers and those related to the ongoing energy transition.

In the charts within this report that depict the rankings by category, the jurisdictions within each category are listed in alphabetical order rather than by relative position within the category.

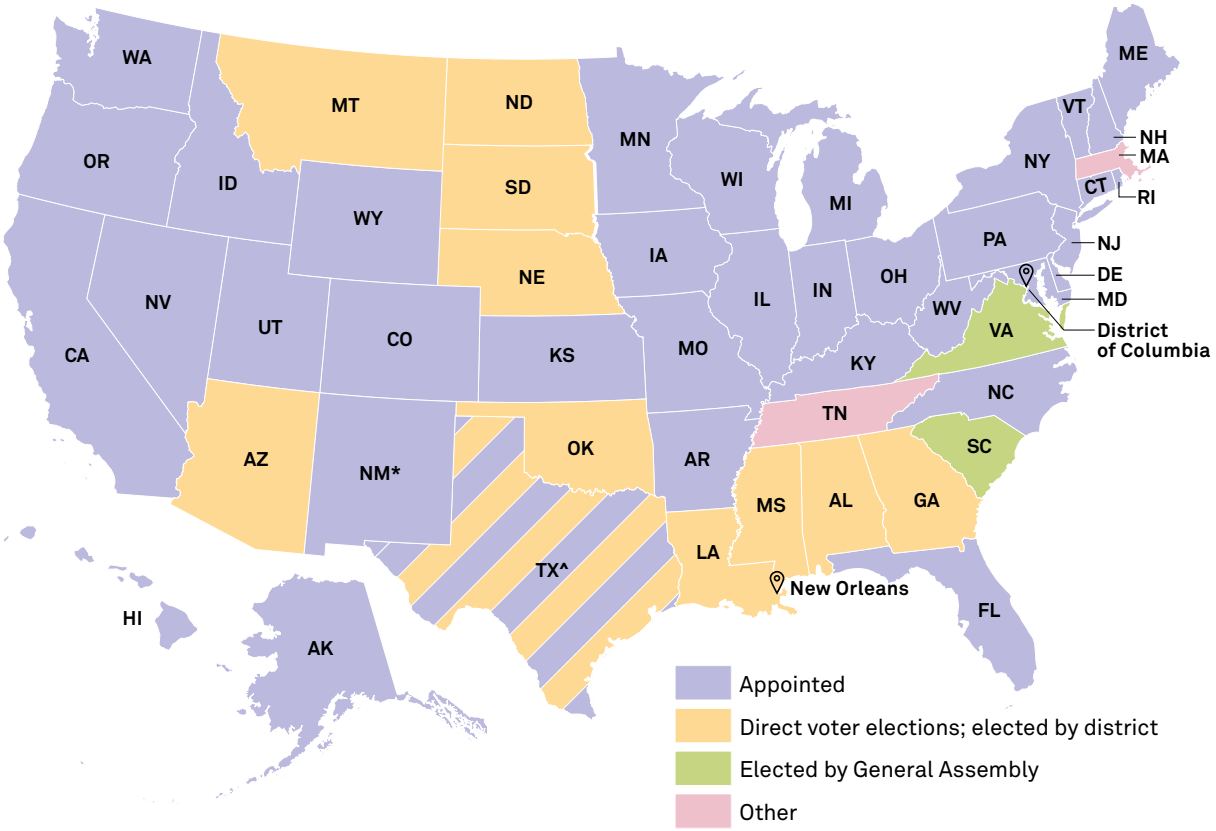
RRA endeavors to maintain an approximately normal distribution, with most rankings in the three average categories and the remainder split almost evenly between the Above Average and Below Average categories.



Overview of issues considered in the ranking process

The summaries below provide an overview of the variables RRA looks at, including a brief discussion of how each can impact the ranking of a given regulatory environment.

Governor/Mayor — Actions of the governor (or the mayor in the District of Columbia/City of New Orleans) may impact a jurisdiction's ranking. RRA takes no view on which political party is the more constructive option but does consider to what extent energy issues were of focus of recent elections, whether the governor seeks to become involved in the regulatory process and the type of influence the governor seeks to exert.

Commissioner selection process/membership — RRA examines how commissioners are selected in each state. All else being equal, RRA attributes a greater level of investor risk to states where commissioners are elected rather than appointed. Generally, energy regulatory issues are less politicized when they are not subject to debate in the context of an election.

Commissioner selection methods in US

Data compiled July 31, 2024.
* Prior to Jan. 1, 2023, commissioners were chosen through general elections.
^ The Public Utility Commission of Texas members are appointed by the governor, while members of the Railroad Commission of Texas are elected in statewide elections.

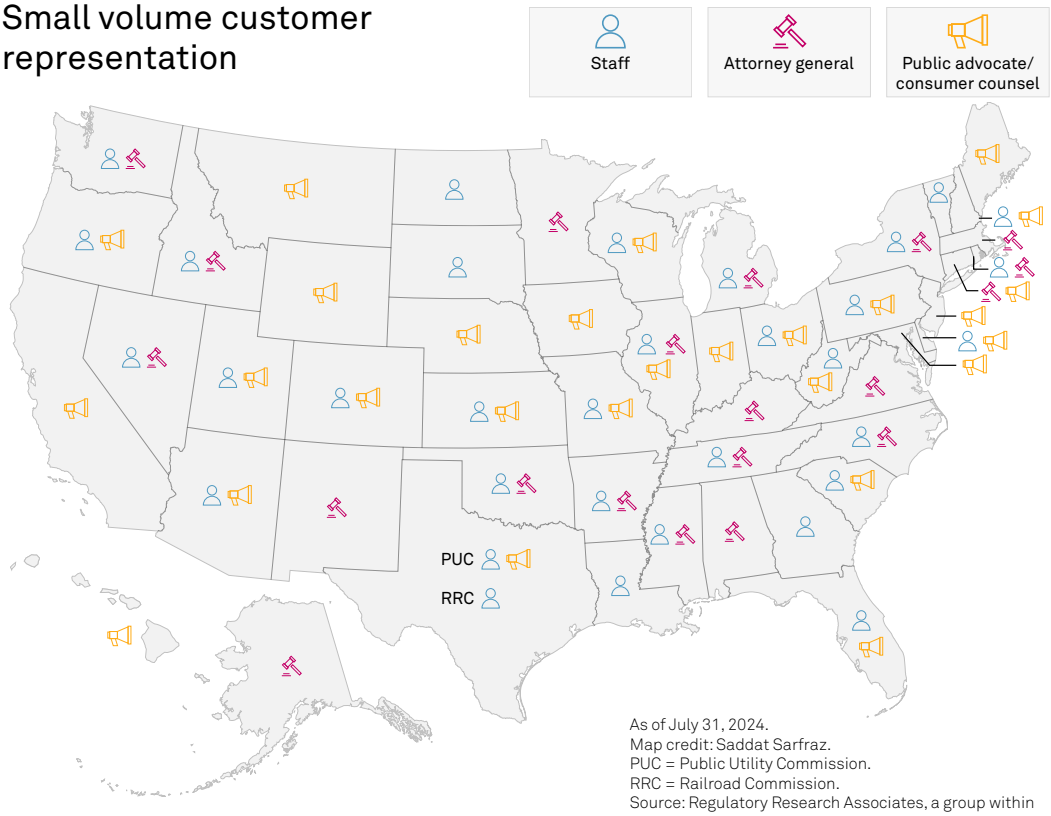
Realistically, a commissioner candidate who indicates support for the utilities and their shareholders or appears amenable to rate increases is unlikely to be popular with voters. In addition, there might not be specific experience requirements to run for commissioner, so a newly elected candidate may have a steeper learning curve with respect to utility regulatory and financial issues, which could make discerning the decisions that an individual might make more difficult and could increase regulatory uncertainty.

There have been some notable instances, however, in which energy issues played a key role in gubernatorial/senatorial elections in states where commissioners are appointed, with detrimental consequences for the utilities.



In addition, RRA looks at the commissioners themselves and their backgrounds. Experience in economics and finance and/or energy issues is generally seen as a positive sign. Previous employment by the commission or a consumer advocacy group is sometimes viewed as a negative indicator.

New commissioners with little experience or exposure to utility issues represent the highest level of risk simply because there is no way to foresee their actions or the time they will take to “get up to speed.” Controversy or “scandal” surrounding an individual and/or the potential for a conflict of interest are also crucial factors to consider.

Similarly, a high rate of turnover, extended vacancies, and leaving commissioners serving for a long period of time beyond the end of their terms all add to the level of regulatory risk in RRA's view.

Commission staff/consumer interest — Most commissions have a staff that participates in rate proceedings. The staff may represent the consumer interest, act as advisors to the commissioners or play a less defined role. In addition, there may or may not be additional state-level organizations that are charged with representing the interests of a certain class or classes of customers, such as the attorney general or a consumer advocate, coalitions of cities in which the utility operates, private consortia or lobbying groups that represent certain stakeholder groups and/or large-volume commercial and industrial customers that intervene directly in rate cases.

Generally, the greater the number of consumer intervenors, the greater the level of uncertainty for investors, as in most instances, the only party representing investors' interests is the company. The level of risk for investors also depends on the caliber and influence of the intervening parties and the level of contentiousness in the rate case process. Even though a commission may not adopt an extreme position taken by an intervenor, the inclusion of an extreme position in the record for the case widens the range of possible outcomes, increasing the risk of a negative outcome for investors. RRA's opinion on these issues is largely based on experience and observations.

Settlements — An increasing number of cases in recent years have been resolved by settlements rather than through a fully litigated process. There are often clear incentives for utilities and entities with vested interests in the sector to compromise. Utilities often obtain settlement benefits in the form of key utility policy objectives and more timely and favorable rate case outcomes than would otherwise be achievable. In some instances, however, settlement negotiations can be protracted and extend the duration of a rate case.

A settlement may set out all of the typical rate case parameters, such as rate of return and rate base, but many are "black box" settlements. These black box settlements are filed when the parties settle all, or nearly all, of their differences in the proceeding, but none of the parties want to disclose the final outcome on a given issue to avoid establishing a precedent.

Or, during settlement discussions, each party may have contemplated a certain revenue change amount as acceptable and may have performed calculations regarding the rate base and rate-of-return parameters behind their revenue requirement positions. Different values for these inputs, however, could be used in varying combinations to determine the same revenue requirement.

All else being equal, the ability of the parties to reach an agreement without having to go through a fully litigated proceeding is considered constructive, particularly since it reduces the likelihood of an after-the-fact court review. However, the agreements are generally less detailed than a fully litigated decision; so, there is a lack of clarity regarding how certain key issues were resolved.

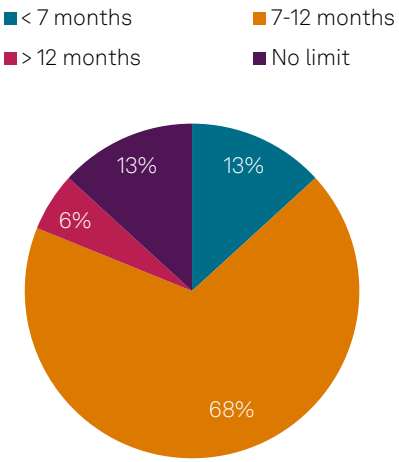
In some instances, the parties may agree on only certain issues and will execute a partial settlement on those issues, while the remaining issues in the case will be litigated.

Rate case timing — For each state commission, RRA considers whether there is a set time frame within which a rate case must be decided, the length of any such statutory time frame and the degree to which the commission adheres to that time frame.

About two-thirds of state commissions nationwide have a rule or statute that requires a rate case to be decided within seven to 12 months of filing; very few have requirements that a case be completed in less than seven months.

Shorter time frames may apply for limited-issue proceedings or if the parties reach an agreement.

RRA generally views a set time frame as preferable, as it provides a degree of certainty as to when any new revenue may begin to be collected. In some states, however, the time frame may be extended with the company's agreement.



In addition, a shorter time frame for a decision generally reduces the likelihood that the actual conditions, during the first year the new rates will be in effect, will vary markedly from the test period utilized to set new rates, thus keeping regulatory lag to a minimum.

Interim procedures — RRA views the ability to implement all or a portion of a proposed rate increase on an interim basis prior to a final decision as constructive.

In jurisdictions that allow interim rate increases, the utility is required to refund any related over-collections, generally with interest, if the commission approves a rate change that is below the interim rates.

Implementation of an interim increase may be permitted by state law or may require prior approval by the commission, which may not be easy to obtain. Certain states allow a commission to establish an effective date for new rates prior to the final order in the case. The company would then be permitted to recoup any revenue not collected between the effective date and the decision date.

Rate case time frame

Data compiled as of July 31, 2024.

Rate base — A utility's rate base is essentially the company's "prudent" capital investment as determined by the applicable regulatory authorities, net of accumulated depreciation and other adjustments. Rate base is the net asset base of an electric, gas or water utility upon which an allowed rate of return — usually the company's weighted average cost of capital — is applied. The rate base value is a key variable that regulatory bodies use in a rate case to determine a utility's revenue requirement.

A commission's rate base policies can impact a utility's ability to earn its authorized ROE. State statutes often outline these policies, and the commission usually does not have much latitude with respect to these overall policies.

A key factor in assessing whether the company has been accorded a reasonable opportunity to earn the authorized return is the methodology the commission uses to determine rate base.

Commissions are nearly evenly split between those that employ a year-end, or terminal, valuation and those that utilize an average approach, with one using a "date certain" methodology. In some instances, the commission may employ a different rate base valuation method, depending on the utility type or case type or based on the test year selected by the company. For example, a forward-looking test year may be used in a limited-issue rider proceeding or a multiyear rate plan, even though a historical test year is used in traditional single-step base rate cases. Some states allow the utility to choose between a forecast or historical test year but require that an average rate base be used if a forecast test year is requested, while a year-end rate base must be used if a historical test period is selected.

Rate base valuation method

Data compiled July 31, 2024.
Source: Regulatory Research Associates, a group within S&P Global Commodity Insights.
© 2024 by S&P Global.

In general, assuming that rate bases are rising, i.e., new investment is outpacing depreciation, a year-end valuation is preferable from an investor viewpoint.

This again relates to how well the parameters used to set rates reflect actual conditions that will exist during the rate-effective period; hence, the more recent the valuation, the more likely it is to approximate the actual level of rate base being employed to serve customers once the new rates are placed into effect.

Some commissions permit post-test-year adjustments to rate base for 'known and measurable' items. Generally, this practice benefits the utilities when operating costs are rising and/or the company is making significant investments in infrastructure and other capital items.

The rules with respect to what constitutes a known and measurable adjustment, however, are not always specific, and there can be a good deal of controversy about what is and is not acceptable under state law or commission rules.

Another key consideration is whether state law and/or the commission generally permits the inclusion in rate base of construction work in progress (CWIP) for a cash return. CWIP represents assets that are not yet operational but ultimately will serve customers. Some states prohibit the inclusion in rate base of items that are not currently, i.e., during the test year or within a reasonably short period of time following the end of the test year, 'used and useful' in providing service to customers. Thus, CWIP must be excluded.

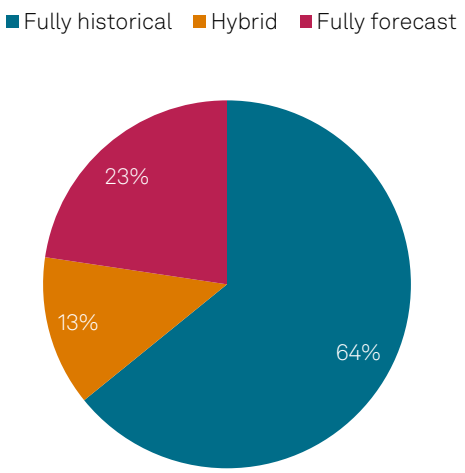
In these instances, the companies are permitted to accrue allowance for funds used during construction (AFUDC), which is essentially booking a return on the construction investment as a regulatory asset that is recoverable from ratepayers once the project in question becomes operational. While this method bolsters earnings, it does not augment cash flow and does not support credit metrics.

Investors generally view the inclusion of CWIP in rate base for a cash return as constructive since it helps to maintain cash flow metrics during a large construction cycle. In addition, if the company is not able to time its next rate case to coincide with the in-service date of a project, there may be a time period where the plant is operating and, therefore, the company can no longer accrue AFUDC but the utility is incurring operations and maintenance costs and booking depreciation expense, none of which are yet reflected in rates.

This becomes particularly challenging when the utility's construction program consists of several smaller projects with short ramp-up times, making it more difficult for the company to file a case quickly enough to reflect each new project.

Test year — The rate case test year is simply the 12-month period used as a baseline in examining the utility's actual revenues, expenses and rate base. In assessing the level of regulatory risk, RRA examines whether a historical test year is chosen or a future 12-month period with a forecast of the utility's revenues, expenses and rate base.

Almost two-thirds of the 53 jurisdictions covered by RRA utilize a test year that is historical at the time of filing, which increases regulatory lag and uncertainty for investors.



A fully forecast test year is generally considered to be most constructive, particularly in periods of robust capital spending, high inflation and rising interest rates.

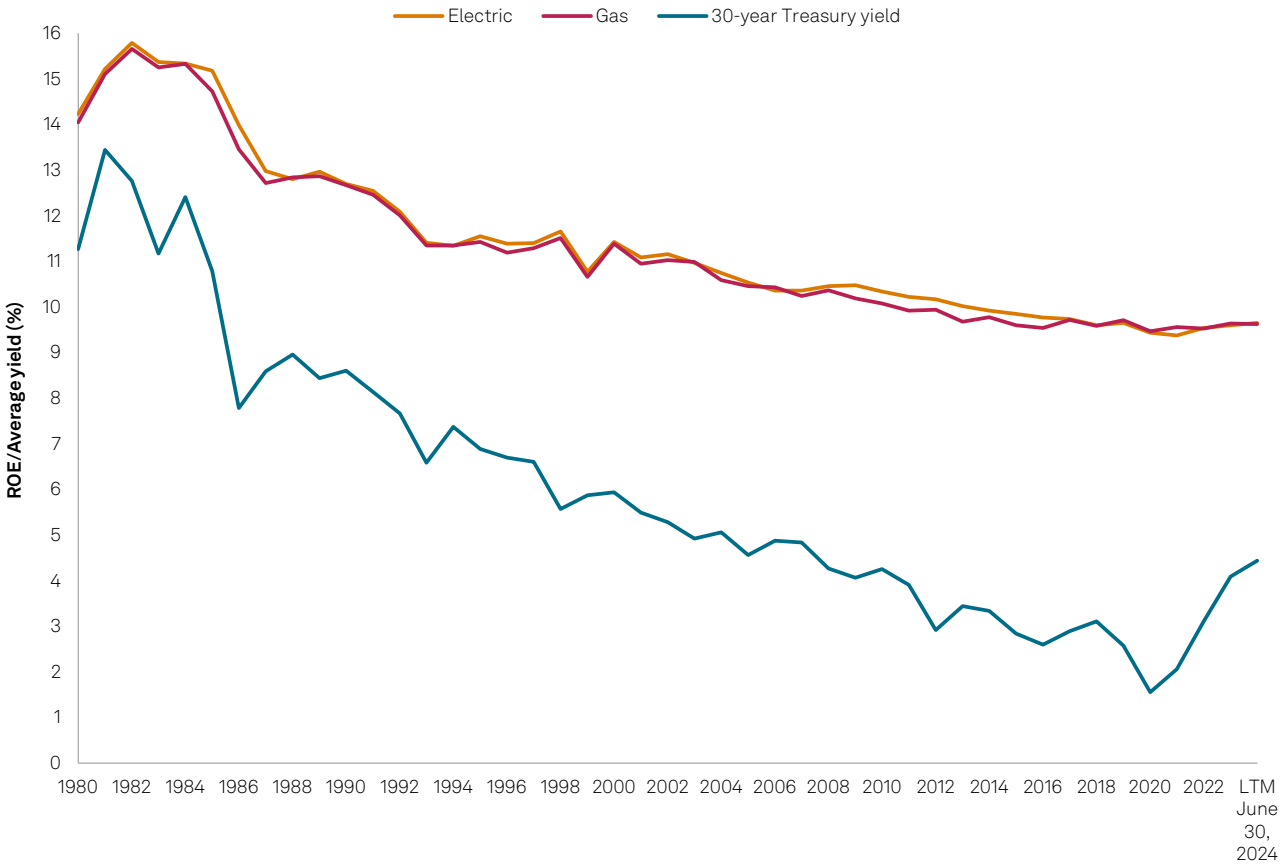
Under a hybrid approach, the test year is partially forecast at the time the case is filed but is fully historical by the time the case is decided. The company generally files updates during the proceeding to reflect actual results as they become available.

Some jurisdictions use different test period types for different kinds of proceedings or utilities. For example, the commission may use a historical test year for single-year base rate cases but the use forward-looking test years for multiyear rate cases, alternative regulation plans and/or adjustment clauses.

Many jurisdictions allow for known and measurable adjustments to the test year, but there is considerable variability regarding how far beyond the end of the test year these adjustments may go, and statutes governing the definition of known and measurable can be ambiguous. Consequently, there can be wide disagreement among the rate case parties as to which adjustments qualify.

Rate case test year

Data compiled July 31, 2024.
Source: Regulatory Research Associates, a group within S&P Global Commodity Insights.
© 2024 by S&P Global.



Conversely, in periods where there is only a modest amount of capital spending, i.e., depreciation is outpacing new spending, low inflation and falling interest rates, the use of a historical test year and the associated regulatory lag would work in the utility's favor, as rates would likely reflect higher costs than the utility incurs.

Rate of return — The capital structure, debt cost rates and authorized equity return combine to determine the company's weighted average cost of capital, which is known as the return on rate base in the context of a rate case.

Return on equity (ROE) — The authorized ROE is perhaps the single-most litigated issue in any rate case. Commissions generally rely on financial formulas, such as the discounted cash flow, capital asset pricing model and risk premium approaches, as applied to a proxy group of companies with similar risk characteristics.

Average authorized ROE for US utilities, 30-year Treasury bond yields

Calendar years 1980 - 2023. LTM June 30, 2024

LTE = Last 12 months.
© 2024 S&P Global.

While these financial models appear objective, there are subjective judgments that go into many aspects of the analysis: the appropriate peer group, the level of risk in the subject company's operations and how it may differ from that of the proxy group and whether there are any other factors that warrant an adjustment to the base calculations.

In establishing rankings, RRA looks at the ROEs historically authorized utilities in a given state and compares them to nationwide industry averages, as calculated in RRA's Major Rate Case Decisions Quarterly Update reports. When referring to these "averages," RRA means the simple average of the ROEs approved in cases decided in a particular period; returns carried over from prior years are not included in the averages.

How the authorized ROEs in a given state compare to prevailing nationwide industry averages is only one aspect of RRA's analysis. Any given utility may be authorized a relatively high ROE, but factors such as the age or "staleness" of the test period, rate base valuation method, adjustments to the company-proposed rate base and expenses, and the way the commission chooses to calculate test year revenue and other adjustments may render it unlikely that the company will earn the authorized return.

Hence, a given rate case decision may be restrictive from an investor viewpoint, even though the authorized ROE is equal to or above the average.

Capital structure — The equity layer in the authorized capital structure is another aspect of a commission rate case decision that may impact the utility's ability to earn the authorized ROE. Most commissions utilize the company's actual capital structure at a given point in time, but in some instances, the commission may rely on an imputed capital structure that represents a mix of debt and equity that the commission views as more reasonable or economically efficient. These are known as hypothetical capital structures.

The commission may include short-term debt and/or other items not generally considered to be part of the utility's cost of capital for financial reporting purposes, such as job development investment tax credits, customer deposits or accumulated deferred taxes (as an alternative to reflecting accumulated deferred tax balances as an offset to rate base). These are generally considered "ratepayer supplied capital" and are accorded a blended cost based on the company's financial weighted average cost of capital or may be assigned a cost rate of zero. Such capital structures are known as regulatory capital structures.

If a commission uses a capital structure that is more highly leveraged than the company's actual structure, this will lower the authorized overall return and the revenue requirement ultimately approved and render it more difficult for the company to earn the authorized return on its actual equity, all else being equal.

Senior capital cost rates — The costs of long- and short-term debt are generally set at the weighted average interest rate on the outstanding issuances. While it is rare, a commission may choose to exclude a recent debt refinancing that alters the company's debt cost rate or may determine that the company was slow to take advantage of opportunities to refinance debt at a lower cost rate. If this occurs, and the senior capital cost rates used to set rates are lower than those that the company will experience while rates are in effect, then the utility will have a more difficult time earning its authorized ROE.

The cost of preferred stock, where there is any, is set based on the guaranteed dividend rate on the outstanding shares.

Accounting — RRA looks at whether a state commission has permitted unique or innovative accounting practices designed to bolster earnings. Such treatment may be approved in response to extraordinary events, such as severe weather events or the COVID-19 pandemic, and changes in federal tax laws, or for volatile expenses, such as fuel and pension costs. Generally, such treatment involves deferral of expenditures that exceed the level of such costs reflected in base rates. In some instances, the commission may approve an accounting adjustment, such as a change in depreciation rates, to temporarily bolster certain financial metrics or to eliminate over-earnings without requiring a full-blown rate case.

Actions taken to address emerging issues and their impact on the utilities are also key. For example, in the wake of the energy transition movement, an increasing number of fossil generation facilities and legacy meters are being retired early. Other types of utility assets are also at risk of becoming "stranded" costs as the transition progresses. In some states, companies have been permitted to accelerate depreciation of certain facilities to complete recovery of the investment prior to an accelerated shutdown of the asset. In others, the utilities are permitted to defer the remaining book value at closure as a regulatory asset that is to be recovered over a period of years; the unamortized balance may or may not be accorded a return.

Alternative regulation — RRA generally views as constructive the adoption of alternative regulation plans that are designed to streamline the regulatory process and accelerate cost recovery or allow utilities to augment earnings in some way. These plans can be broadly or narrowly focused.

Narrowly focused plans may allow the company to retain a portion of cost savings relative to a base level of some expense type (e.g., fuel, purchased power, pension cost, etc.), permit a company to retain a portion of off-system sales revenues for shareholders or provide a company an enhanced ROE for achieving operational performance and/or customer service metrics or for investing in certain types of projects (e.g., demand-side management programs, renewable resources, new traditional plant investment, etc.).

Broad-based plans include ROE-based sharing mechanisms, formula-based rates and MRPs that apply to all cost-of-service issues rather than specific investments or expenses. These types of plans may also include performance-based incentives.

The use of plans with somewhat broader scopes, such as ROE-based earnings-sharing plans, is, for the most part, considered to be constructive, but it depends upon the level of the ROE benchmarks specified in the plan — if any deadband that applies is symmetrical around the ROE target, and whether variations from the benchmark or outside the deadband are shared symmetrically.

Formula-based ratemaking plans generally refer to frameworks where the commission establishes a revenue requirement, including a target ROE, capital structure and rate of return for an initial rate base as part of a traditional cost-of-service base rate proceeding. Once the initial parameters are set, rates may adjust periodically to reflect changes in expenses, revenue and capital investment. These changes generally occur on an annual basis, and there may be limitations on the percentage change that can be implemented in a given year or a period of years.

Others use multiyear rate plans, under which the commission approves a succession of rate changes that are designed to consider anticipated changes in revenues, expenses and rate base. The commission may approve a static authorized ROE, or the plan may provide for adjustments to the ROE during the plan's term. These plans often include true-up mechanisms to ensure that the company makes the investments it committed to at the time the plan was approved. The plans often include earnings-sharing mechanisms and may also include PBR provisions or stay-out provisions, preventing a company from filing a successive rate case until a future point in time.

Court actions — This aspect of state regulation is particularly difficult to evaluate. Common sense would dictate that a court action that overturns restrictive commission rulings is a positive. However, the tendency for commission rulings to come before the courts and for extensive and sometimes protracted litigation as appeals go through several layers of court review may add an untenable degree of uncertainty to the regulatory process. Also, as is the case with commissioners, RRA looks at whether judges are appointed or elected, as political considerations are more likely to influence elected jurists.

Legislation — While RRA's commission profiles provide statistics regarding the makeup of each state legislature, RRA has not found a specific correlation between the quality of energy legislation enacted and the political party controlling the legislature.

If the governor and legislature are of the same political party, it is less likely that controversy will arise around key policy initiatives, which may directly or indirectly impact the energy regulatory framework. In instances where energy issues are a main focus, a lack of consensus between the legislative and executive branches of the state government can create uncertainty and increase risk for utility investors and other industry stakeholders.

Key considerations with respect to legislation include how prescriptive newly enacted laws are; whether the bill is clear or ambiguous and open to varied interpretations; whether it balances ratepayer and shareholder interests rather than only "protecting" the consumer; whether the legislation takes a long-term view or is a "knee-jerk" reaction to a specific set of circumstances; and whether it could constrict the utilities' opportunities to achieve their business objectives.

Legislative activity impacting utility regulatory issues has been robust in recent years as state policymakers, utilities and industry stakeholders seek to address 'disruptors' that challenge the traditional regulatory framework.

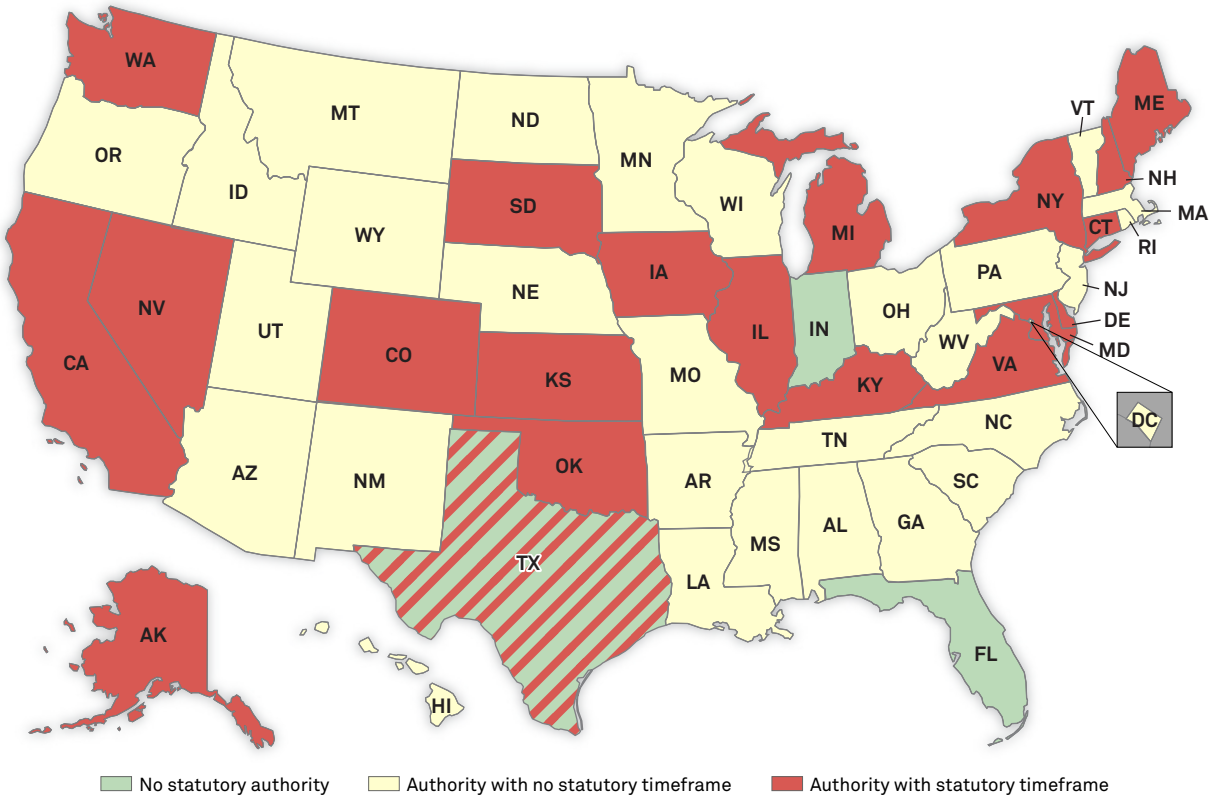
RRA follows these developments closely to assess whether the states take a balanced, sustainable approach and how the adopted policies will affect legacy utility providers.

Corporate governance — The term corporate governance generally refers to a commission's ability to intervene in a utility's financial decision-making process through required preapproval of all securities issuances, limitations on leverage in utility capital structures, dividend payout limitations, ring-fencing protocols and authority over mergers. Corporate governance may also include oversight of affiliate transactions.

RRA views a modest level of corporate governance provisions to be the norm, and in some circumstances, these provisions, such as ring fencing, have protected utility investors as well as ratepayers. However, a degree of oversight that would allow the commission to "micromanage" the utility's operations, limit the company's financial flexibility or significantly reduce the company's ability to pursue strategic mergers would be viewed as restrictive.

In recent years, RRA has observed an increasing emphasis on environmental, social and governance issues, and supplier and workforce diversity and social justice issues. In many instances, these policies are part of the ongoing energy transition. At this time, RRA takes no view on whether policymakers/regulators should adopt these practices, but when specific policies or targets are implemented, RRA evaluates how compliance costs are addressed.

M&A activity — The pace of merger activity fluctuates over time and consequently, so does the importance of a commission's merger policies.



Deals involving regulated utilities are subject to review by all but three of the 53 state-level jurisdictions followed RRA follows.

The review process and standards vary widely for the 50 jurisdictions where commission preapproval is required. In 20 of the jurisdictions, the commission must complete a merger review within a prescribed period, but the remaining jurisdictions have no timeline for their merger reviews, which means a commission could effectively "pocket veto" a transaction by delaying a decision until either the merger agreement between the applicants expires or pursuing the transaction is no longer feasible.

The definition of what constitutes a transaction that is subject to review can vary widely and may include sales of individual assets or a marginal minority interest, as well as larger transactions where a controlling interest or the whole company is changing hands. State law often lacks specificity with respect to what constitutes a transaction that is subject to regulatory review.

In cases where the state commission has authority over mergers, RRA reviews the type of approval standard that is contained in state law and/or has been applied in specific situations.

Utility mergers — statutory authority

As of July 31, 2024.
In Texas, mergers involving electric utilities are subject to commission review; mergers involving local gas distribution companies are not.

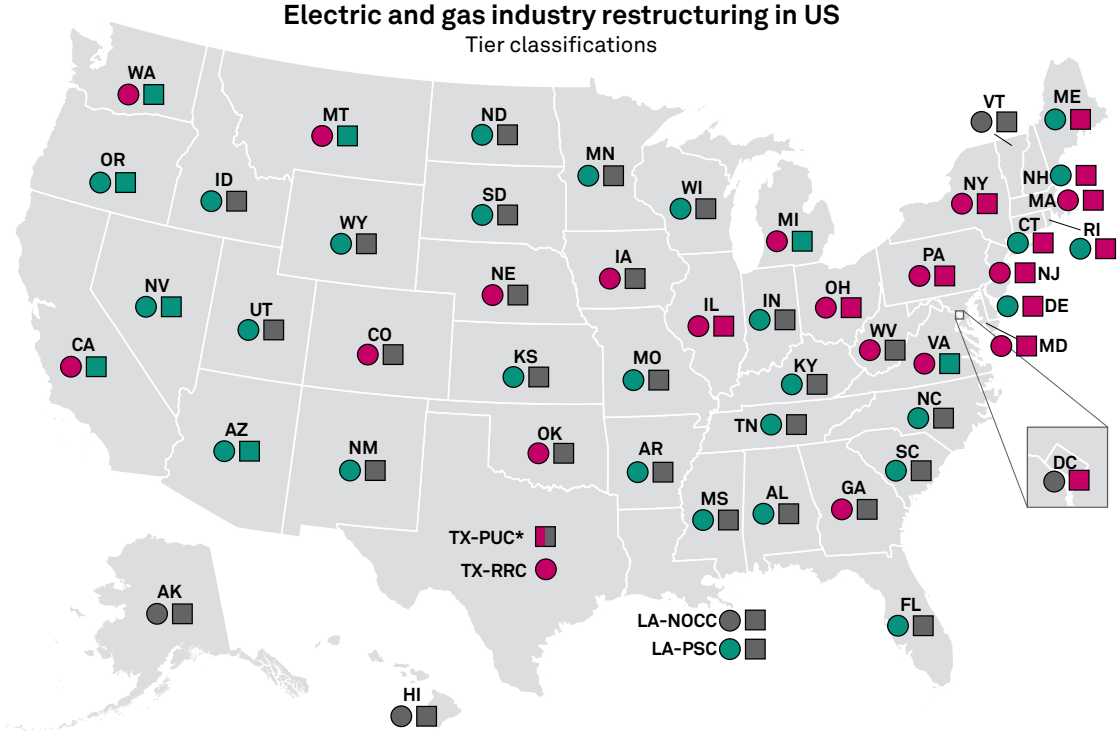
For discussion purposes, RRA groups the statutory standards into three general buckets: public interest, which is generally thought to be the least restrictive; no net ratepayer harm, which is somewhat more restrictive; and net ratepayer benefit, which is the most restrictive.

In many instances, regulators have broad discretion to interpret what the statutes mean by these terms. So, the standard of review is often more readily apparent by looking at how prior transactions were addressed than by reading the statutory language — one commission's public interest might be another's net ratepayer benefit.



In addition, RRA considers whether the parties reached a settlement and, if so, whether the commission honored that settlement or required additional commitments. RRA also examines how politicized the process was: Did the governor (or the mayor in the District of Columbia and the City of New Orleans) play a role? Did the transaction garner much local media attention in the affected jurisdiction?

More narrowly, RRA reviews the conditions placed on the commission's approval of these transactions, including whether the company will be permitted to retain a portion of any merger-related cost savings, if guaranteed rate reductions or credits are required that are or are not directly related to merger savings, whether certain assets were required to be divested, the type of local control and workforce commitments required, whether there are requirements for certain types of investment to further the state's public policy goals that may or may not be consistent with the companies' business models and if the related costs will be recoverable from ratepayers and whether the commission placed stringent limitations on capital structure and/or dividend policy or composition of the board of directors.

Electric regulatory reform/industry restructuring — Electric industry restructuring refers to the implementation of a framework under which some or all retail customers can obtain their generation service from a competitive supplier of their choice. In a movement that began in the mid-1990s, about 20 jurisdictions implemented retail competition for all or a portion of the customers in the utilities' service territories. The last of the transition periods ended as recently as 2011, when restructuring-related rate freezes concluded for certain Pennsylvania utilities.

Electric and gas industry restructuring in US

Tier classifications

Gas tiers

Tier 1 — All customers are permitted to competitively procure their gas supply, irrespective of volumes.

Tier 2 — Select customers are permitted to competitively procure their gas supply, usually based on volume.

Tier 3 — All customers procure their gas supply from the utility under bundled rates.

Power tiers

Tier 1 — Power prices are competitively determined for all retail customers within the jurisdiction; both standard-offer-service and retail-access customers. Retail access is permitted for all customers.

Tier 2 — Retail access is permitted to at least some customers/customer classes. Competitively priced power is limited to retail access customers. Power prices for standard-offer-service customers remain regulated. For the most part, utilities remain vertically integrated.

Tier 3 — Power prices are fully regulated for all retail customers. All retail customers must purchase their power from the franchised utility. Utiities are vertically integrated.

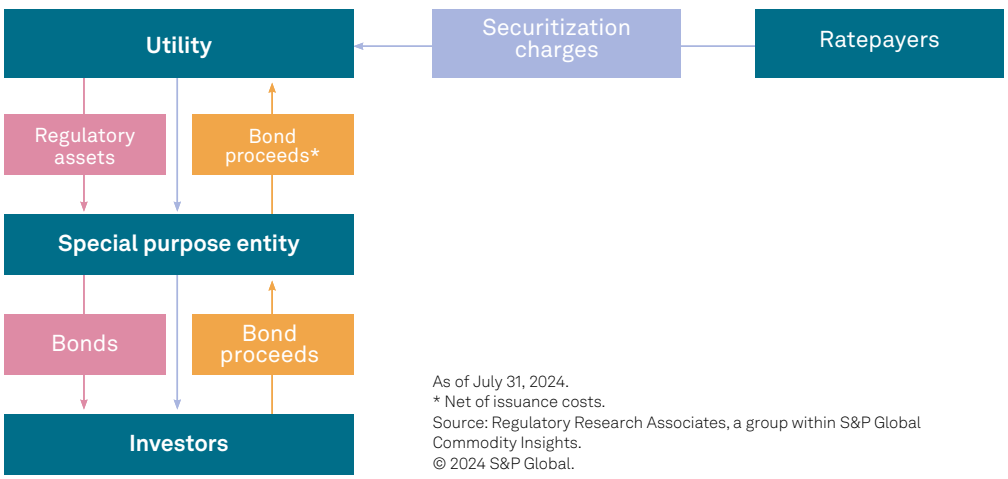
Once the transition periods were completed, RRA focused more on how standard-offer or default service is procured for customers who do not select an alternative provider and how much, if any, market-price risk the utility must absorb. RRA classifies each of the regulatory jurisdictions into one of three tiers based on their relative electric industry restructuring status.



Gas regulatory reform/industry restructuring — Retail competition for gas supply is more widespread than electric retail competition, and the transition was far less contentious, as the magnitude of stranded asset costs was much smaller due to the more disaggregated structure of the industry.

Large-volume customers in most states can select their gas supply provider; the availability of gas customer choice is much more limited for small-volume customers. Like electric retail competition, RRA generally does not view a state's decision to implement retail competition for gas service as either positive or negative from an investor viewpoint. RRA primarily considers how stranded costs are addressed and how default-service, obligation-related costs are recovered.

Securitization — As it pertains to utilities, securitization refers to the issuance of bonds backed by a specific existing revenue stream that regulators and/or state legislators have 'guaranteed.' This does not mean that the securities are backed by the 'full faith and credit' of the jurisdiction but instead provides certainty that the revenue collections and/or underlying assets cannot be deemed imprudent and disallowed in the future.

Securitization generally requires a utility to assign an eligible regulatory asset and a designated revenue stream for that asset to a 'bankruptcy remote' special-purpose entity or trust; in some instances, a state financing authority fulfills this role. The trust or financing authority, in turn, issues bonds that the transferred revenue stream will service. The proceeds from the bond issuance flow to the utility and, in many cases, are used to retire outstanding higher-cost debt and/or buy back common equity, thus lowering the company's weighted average cost of capital.

Securitization flow chart

While it is unclear if securitization requires legislation, a specific legislative mandate generally improves the rating accorded securitization bonds and lowers the associated cost of capital, given that a legislatively supported revenue stream may be more difficult to rescind than a stand-alone order of a state commission. In RRA's experience, no state commission has authorized securitization in the absence of enabling legislation.

Securitization is viewed as an attractive option because it allows regulators to minimize the customer rate impacts related to the recovery of a particular utility asset. The carrying charge on the asset would be the lower interest rate applied to a highly rated, usually AAA, corporate bond rather than the utility's weighted average cost of capital or even the interest rate on typical utility bonds, which are generally rated BBB and carry higher interest rates.

At the same time, securitization reduces the investment risk for the utility by providing the utility with up-front recovery of its investment in what are usually non-revenue-producing assets. The company can then redeploy those investment dollars elsewhere.

Securitization has been used for various purposes to finance energy efficiency and conservation investment, address stranded costs associated with the implementation of retail competition or the extension of energy transition policies, reduce the impact on ratepayers of recovery of extraordinary storm costs or unusually high deferred balances or to finance bankruptcy reorganization plans.

Adjustment clauses — Adjustment clauses have been widely utilized to allow utilities to recover fuel and purchased power costs outside of base rate cases, as these costs are generally subject to a high degree of variability. In some instances, a baseline level is reflected in base rates, with only deviations from that amount addressed in the adjustment clause, whereas in others, the entire annual fuel/purchased power cost amount is reflected in the clause.

Over time, the types of costs recovered through these mechanisms were expanded in some jurisdictions to include items such as pension and healthcare costs, demand-side management program costs, Federal Energy Regulatory Commission-approved regional transmission organization costs, new generation plant investment, and transmission and distribution infrastructure spending.

RRA generally views the use of these types of mechanisms as constructive but also looks at the frequency with which the adjustments occur and whether: there is a true-up mechanism; adjustments are forward-looking or based on a historical period; a cash return on CWIP is permitted for mechanisms involving new investments; the mechanism includes an earnings-sharing mechanism that offers the utility upside earnings potential; or incentive(s) for making certain types of investment or for achieving benchmark performance that provide the opportunity to increase earnings.

Another class of adjustment clauses, known as revenue decoupling mechanisms, allows utilities to adjust rates between rate cases to reflect fluctuations in revenues versus the level approved in the most recent base rate case due to various factors.

Some of these factors, such as weather, are beyond a utility's control, and the mechanism can work both ways — it can allow the company to raise rates to recoup revenue losses associated with weather trends that reduce customer usage, and conversely, it can also require the company to reduce rates when weather trends cause usage to be higher than normal.

As energy efficiency initiatives have expanded, decoupling mechanisms have also been implemented to reduce the disincentive for utilities to pursue these types of programs by making the utilities whole for reductions in sales volumes and revenues associated with customer participation.

Some of these mechanisms also allow the utility to adjust rates to reflect fluctuations in customer usage that are brought about by broader economic issues, such as demographic shifts, large commercial/industrial customers migrating to other service areas, businesses shutting down due to changes in their respective industries, recessions and, theoretically, broad-based crises like the COVID-19 pandemic.

RRA considers a decoupling mechanism that adjusts for all three of these factors to be a "full" decoupling mechanism and designates those that address only one or two of these factors as "partial" decoupling mechanisms.

Generally, an adjustment mechanism would be viewed as less constructive if there are provisions that limit the utility's ability to fully implement revenue requirement changes under certain circumstances, e.g., if the utility is earning more than its authorized return or if the adjustment exceeds a certain threshold.

Integrated resource planning — RRA generally considers the existence of a resource-planning process to be constructive from an investor viewpoint, as it may provide the utility at least some measure of protection from hindsight prudence reviews of its resource acquisition decisions. In some cases, the process may also provide for preapproval of the ratemaking parameters and/or a specific cost for a new facility. RRA views these types of provisions as constructive, as the utility can make more informed decisions as to whether it will proceed with a proposed project based on the expected level of support a utility proposal receives from regulators.

Renewable energy/emissions requirements — Goals for renewable energy deployment and emissions reductions have become increasingly intertwined in recent years and often need to be viewed in tandem.

As with retail competition, RRA does not take a stand as to whether the implementation of renewable portfolio standards or an emissions reduction mandate is positive or negative from an investor viewpoint. However, RRA considers whether there is a defined preapproval and/or cost-recovery mechanism for investments in projects designed to comply with these standards.

RRA also reviews if there is a mechanism, such as a rate increase cap, that limits the impact of the related public policy goals on customers. Such a mechanism could impede the utility's ability to recover program-related costs, pursue additional investments and/or recover increased costs related to other facets of its business. RRA also looks at whether incentives, such as an enhanced ROE, are available for these types of projects.

The proliferation of renewables, particularly those that are customer-sited or distributed resources, and the related rise of battery storage and electric vehicles have raised questions regarding the traditional centralized industry framework and whether that framework needs to change, ushering in a second phase of electric industry restructuring. How these changes are implemented is something RRA considers in its rankings.

With respect to emissions, the threat of a federal carbon emissions standard for utilities and the spread of state-level initiatives have caused many companies to rethink legacy coal-fired generation, causing plants to be shut down sooner than anticipated. The way the commissions address these potential stranded costs also poses a risk for investors and is factored into the rankings.

The zero-carbon movement has also caused utilities/states to reexamine investments in nuclear facilities and, in some cases, to develop programs designed to support the continued operation of those facilities, even though they may not be economic from a competitive-market standpoint. RRA also considers the way these issues are addressed.

Rate structure — RRA looks for existing rate structures related to economic development or load retention. If such structures are in place, RRA examines whether and how any associated revenue shortfall is addressed. More broadly, RRA looks at any steps taken in rate cases to reduce/eliminate interclass rate subsidies, i.e., to equalize rates of return across customer classes.

In addition, RRA considers whether the commission has adopted or moved toward a straight-fixed-variable rate design, under which a greater portion of a company's fixed costs are recovered through the fixed monthly customer charge, thus providing the utility greater certainty of recovering its fixed costs.

This is increasingly important in an environment where weather patterns are more volatile, energy efficiency/conservation programs proliferate and large amounts of nonrevenue-producing capital spending are required to upgrade and harden the grid.

In conjunction with the influx of renewables and distributed generation, issues surrounding the level of compensation owed to customer-owners for excess power they put back into the grid have become increasingly important and, in some instances, controversial. The way these pricing arrangements, known as net metering, are structured can impact the ability of the utilities to recover their fixed distribution system costs and, by extension, their ability to earn their authorized returns.

RRA also looks at whether the state has implemented policies to address electric vehicle charging and time-of-use rates, as well as tariffs for renewable natural gas.

Fixed vs. variable costs

Fixed	Variable
Depreciation	Gas commodity
Delivery O&M	Electric commodity
Property taxes	Generation O&M
Return on investment	
Customer service

Updated Regulatory Rankings

We have updated the regulatory rankings of the 58 jurisdictions in North America across five Tiers (Tier 1 is most constructive, Tier 5 is least constructive). See Figure 3. We rate the jurisdictions using seven criteria. We believe constructive regulation provides a positive feedback loop of consistent and fair outcomes for investors, that also results in better customer service and satisfaction, which is what regulators want to see to constructively regulate. Jurisdictions that moved up are AL, ID, and PA (to Tier 1 from Tier 2), CA, MO, and ND (to Tier 2 from Tier 3), and NY (to Tier 4 from Tier 5). We would also note that while LA remained in Tier 3 it moved up significantly from the bottom to the top of that Tier. Jurisdictions that moved down are IN and MI (to Tier 2 from Tier 1), AK (to Tier 4 from Tier 3), and DC, MS, and NM (to Tier 5 from Tier 4).

Lower Relative Pricing Power a Risk to Regulation and Growth

Our pricing power analysis tends to point to where regulatory strain or growth pressures may develop. We saw this last year when our metric showed lower relative pricing power for EXC, PEG, NI, EMA, D, PCG, WEC, and NEE. Most either lowered or rebased their growth - EXC, PEG, and NI; or, faced material regulatory headwinds - EMA and the rate cap legislation in NS, and D with the overall strategic review and legislation in VA reworking the regulatory construct. For WEC, although the rate case outcome was constructive in WI, the rhetoric during the hearing was not encouraging. Where pricing power did not pressure regulation or earnings growth was for NEE and PCG. We rank FL as the most constructive regulatory jurisdiction in North America and NEE's rates at FPL are set through 2025. We also believe CA regulation is increasingly constructive around wildfire and clean energy policy goals, as evidenced by the move to Tier 2 in this year's jurisdiction rankings. Companies that show lower relative pricing power in our updated analysis that did not in May 2022 are AES, CMS, CNP, DTE, ED, ES, and EVRG. Of these names we are Buy rated on AES mainly for the unregulated story, and CNP, where we think significant customer growth in TX can help alleviate pricing pressures. We are Neutral on the remaining names with lower pricing power in '23 vs. '22 and remain diligent in watching regulatory processes in MI for CMS and DTE, in CT for ES, and in KS for EVRG as well as policy in NY for ED. Names that showed continued lower relative pricing power in '23 vs. '22 are D, EXC, NI, PEG, and WEC where D, EXC, NI, and PEG have either gone into or completed a strategic review and/or lowered/rebased their growth rates. WEC remains in a Tier 1 regulatory jurisdiction in WI, but the LNT rate case in that state, as well as WEC's gas case in IL are worth watching.

Updated Pricing Power Analysis - Affordability Inflation vs. Growth

Our analysis places the group across one of four quadrants, although a little more than half of companies are clustered around the combined medians (see Figure 1). We have overlayed the weighted average regulatory ranking quartile of each company on this matrix indicated by color as noted. Those companies outside the median zone in one of the four quadrants are: (I) Pricing power with lower costs or higher weighted average disposable income growth: PCG, PPL, and SO; (II) Lower pricing power, requiring constructive regulation to maintain growth: AES, CMS, CNP, EXC, ES and NI; (III) Lower pricing power that would require constructive regulation or policy support to accelerate growth: D, DTE, ED, EVRG, PEG, and WEC; (IV) Pricing power and opportunity to accelerate growth if regulation is constructive: EIX, OGE, and PNW.

This report has been prepared by UBS Securities LLC. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES, INCLUDING INFORMATION ON THE QUANTITATIVE RESEARCH REVIEW PUBLISHED BY UBS, BEGIN ON PAGE 8.** UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

ANALYSIS OF PRICING POWER IN REGULATED UTILITIES

Given investor focus on inflation and its potential impacts, and the potential for accelerating capital expenditures and rate base growth into the clean energy transition (Cap-Ex Update: Breakthroughs in Spending, 30 March 2023) we analyzed the "pricing power" of regulated utilities. Instead of just a straight analysis of annual increases in bills, we took the estimated bill increase divided by the weighted average personal income by jurisdiction for each company. We then estimated the total increase in that metric through 2029 and annualized that number. We believe this is a more accurate representation of "pricing power" for a utility as it takes into account the relative affordability of the projected bill increases across the relative incomes of the customer base across a company's jurisdictions.

To calculate bill inflation, we used each company's projected capital plan and extended that at flat capex to 2029 from the end of each company's forecast to determine rate base growth. For fuel expenses, we used forward curves and retired all coal generation by 2028 and replaced it with a third each of solar, wind, and natural gas. We incorporated non-fuel O&M increases of 2%/year, held interest expense at 5.5%, used 30-year depreciation, and an allowed return of 10.2% and a 48% equity ratio. While individual companies may achieve better or worse metrics, we tried to create an average metric across companies over the eight-year time frame. Retail sales growth averaged approximately 1% per year.

To calculate disposable income, we took each state or province's disposable income in 2021 and grew it by forecast gross state or provincial product through 2025 and then held annual gross state or provincial product growth constant through 2029. For each company we weighted this by earnings power by jurisdiction to estimate the weighted average disposable income.

Dividing annual bills by weighted average disposable income projected into 2029 and seeing how much that grew versus the same metric in 2021, and annualizing that growth provides a measure of bill affordability inflation. When we graph this against annualized projected utility and parent only EPS growth, the results are shown in Figure 1 below. We have also overlayed the weighted average regulatory ranking quartile onto this graph through the color of the dots: 1st quartile is green, 2nd quartile is blue, 3rd quartile is yellow, and 4th quartile is red. This relative regulatory quartile is important, as more constructive regulation will likely allow for more EPS growth with more affordability inflation, all else equal.

In Figure 1, about half of the companies end up around the median level of growth and affordability inflation of ~6.3% and just under 1%, respectively. Those outside of the median grouping end up in one of four quadrants: (I) high growth and low affordability inflation - where there is clear pricing power due to lower cost structures or higher disposable income growth; (II) high growth and higher affordability inflation, where pricing power needs to be maintained by constructive regulation or policy support to maintain growth; (III) lower growth and higher affordability inflation - where there is lower relative pricing power and it would require constructive regulation or, more likely a state or provincial energy policy initiative to accelerate growth above the median, and (IV) low growth and low affordability inflation - where there is an opportunity to accelerate growth if regulation is constructive or where a company might get stuck at lower than median growth if regulation is more challenging.

Our pricing power analysis tends to point to where regulatory strain or growth pressures may develop as we saw last year when our metric showed lower relative pricing power for EXC, PEG, NI, EMA, D, PCG, WEC, and NEE. Most either lowered or rebased their growth - EXC, PEG, and NI or faced material regulatory headwinds - EMA and the rate cap legislation in NS; D with the overall strategic review and legislation in VA reworking the regulatory construct. For WEC although the rate case outcome was constructive in WI the rhetoric during the hearing was not encouraging. Where pricing power did not pressure regulation or earnings growth was for NEE and PCG. We rank FL as the most constructive regulatory jurisdiction in North America and NEE's rates at FPL are set through 2025. We also believe CA regulation is increasingly supportive around wildfire and clean energy policy goals, as evidenced by the move to Tier 2 in this year's jurisdiction rankings. Companies that show lower relative pricing power in our updated

analysis that did not in May 2022 are AES, CMS, CNP, DTE, ED, ES, and EVRG. Of these names we are Buy rated on AES mainly for the unregulated story, and CNP, where we think significant customer growth in TX can help alleviate pricing pressures. We are Neutral on the remaining names with lower pricing power in '23 vs. '22 and remain diligent in watching regulatory processes in MI for CMS and DTE, in CT for ES, and in KS for EVRG as well as policy in NY for ED. Names that showed continued lower relative pricing power in '23 vs. '22 are D, EXC, NI, PEG, and WEC where D, EXC, NI, and PEG have either gone into or completed a strategic review and/or lowered/rebased their growth rates. WEC remains in a Tier 1 regulatory jurisdiction in WI, but the LNT rate case in that state, as well as WEC's gas case in IL are worth watching.

Figure 1: EPS Growth vs. Affordability Inflation May 2023

Source: Company filings, FactSet, S&P Global Market Intelligence, UBS Equity Research estimates

NOTES:

Wtd. Avg. Regulatory Rank in indicated by color. Green is 1st quartile, Blue is 2nd quartile, Yellow is 3rd quartile, and Red is 4th quartile.

Bill inflation is calculated as the increase in annual bills/disposable income, annualized. Disposable income is grown at state forecast GDP, and a weighted average is taken by company.

Figure 2: EPS Growth vs. Affordability Inflation May 2022

NOTES:

Wtd. Avg. Regulatory Rank in indicated by color. Green is 1st quartile, Blue is 2nd quartile, Yellow is 3rd quartile, and Red is 4th quartile.

Bill inflation is calculated as the increase in annual bills/disposable income, annualized. Disposable income is grown at state forecast GDP, and a weighted average is taken by company.

UPDATED REGULATORY RANKINGS

We are updating our jurisdictional regulatory rankings which we do approximately every 6 months. Our last update was in November 2022 Shifting Reguatory and Growth Quartiles.

We rate the jurisdictions using seven criteria. We believe that constructive regulation provides a positive feedback loop of consistent and fair outcomes for investors, that also results in better customer service and satisfaction, which is what regulators want to see to constructively regulate. At the bottom of Figure 3 we show the average JD Power Customer Service scores, which are mostly consistent with our tiered rankings. Those jurisdictions highlighted in green moved up, and those highlighted in red moved down versus our previous rankings. As a reminder the table reads as an ranking histogram so Florida in Tier 1 is more constructive than British Columbia in Tier 1, and so on.

Figure 3: UBS North America Jurisdictional Regulatory Rankings

UBS REGULATORY JURISDICTION RANKINGS - May 2023 Update

TIER 1	TIER 2	TIER 3	TIER 4	TIER 5
		New Jersey		
		Louisiana		
		Massachusetts		
		Oregon		
		South Carolina		
		Tennessee		
	Arkansas	Washington		
Florida	Indiana	Newfoundland & Labrador	Rhode Island	Alberta
British Columbia	Kentucky	Ontario	Nova Scotia	District of Columbia
North Carolina	Michigan	Virginia	West Virginia	Mississippi
Utah	California	Wyoming	Alaska	New Mexico
Wisconsin	FERC	Ohio	Kansas	Connecticut
Iowa	Missouri	Oklahoma	Minnesota	Maine
Alabama	North Dakota	Texas	Nevada	Montana
Georgia	Colorado	Maryland	New Hampshire	South Dakota
Idaho	Delaware	Prince Edward Island	Nebraska	Vermont
Pennsylvania	Illinois	Hawaii	New York	Arizona
JD Power Average Customer Service Scores				
751	718	727	717	719

Source: S&P Capital IQ Pro, FactSet, JD Power, UBS Equity Research

NOTES: Green indicates moved up a Tier since last rankings, Red indicates moved down a Tier. LA is highlighted given it moved significantly within Tier 3 since the last rankings

The ranking criteria are as follows:

1) Elected vs. Appointed Commissions: Elected commissioners tend to focus more closely on managing customer affordability which can dampen investment vs. appointed commissions that tend to be more policy driven, all else equal.

2) Tendency to Settle vs. Litigate Rate Cases: Settlements have the advantage of being quicker, less risky and less prone to legal appeal than fully litigated rate proceedings. States that regularly settle are preferred by investors.

3) Regulatory Lag: Regulatory lag is the difference between authorized returns on equity and earned returns resulting from time lag between dollars invested in rate base and authorized revenues reflecting that spending. We rank regulatory lag based on the time it takes to reach a decision in rate cases.

4) Rate and Customer Bill Levels: Utilities' prices are often a material factor in state economic development. States with high prices versus their surroundings tend to scrutinize utility investment more closely than states with low bills. We look at the average rate and the average residential bill.

5) Allowed Return Spread: We measure the return spread over 10-year Treasury note of the ordered rate cases since 2010 by jurisdiction. As rate of return setting policies and practices are grounded in decades of case law, jurisdictions that allow high and low return spreads tend to continue with that practice.

6) Regulatory Mechanisms: We include an average of eight mechanisms. These include things like tracking mechanisms, forward test years, formula rate plans, and performance based regulation.

7) UBS Subjective Investor Friendliness Factor: Based on our knowledge of current commission actions.

Biggest Changes to the State Rankings

With this review we highlight the largest positive and negative ranking votes out of 58 total jurisdictions we are covering in the United States and Canada:

Positive Changes

- Alabama. Constructive tracking mechanisms, high ROE spreads, and lower relative rates moved the state into Tier 1 relative to other jurisdictions.
- Idaho. Continued low rates moved the jurisdiction into Tier 1 relative to other jurisdictions.
- Pennsylvania. Relative improvement given other states fell to Tier 2.
- California. Regulatory lag improved from 5th quintile to 4th which moved the state from the top of Tier 3 in our May 2022 analysis into Tier 2.
- Missouri. Regulatory lag improved from 3rd quintile to 2nd, moving the state to Tier 2 from near the top of Tier 3 in our prior analysis.
- North Dakota. Settlements became more common, and historical ROE spread improved to 2nd quintile from 3rd quintile, offset slightly by regulatory lag increasing, moving to the 4th quintile from the 3rd.
- Louisiana. Did not move out of Tier 3, however did have a significant move worth highlighting from the bottom to the top of that Tier. ROE spread to the 10 year improved and it moved to 2nd quintile from 4th in that category.
- New York. Settle vs. Litigate improved to 1st quintile from the 2nd.

Negative Changes

- Indiana. Cost to customers got a bit worse with a move to the 3rd quintile from the 2nd which was enough to move the state to Tier 2 from the bottom of Tier 1 in May 2022.
- Michigan. ROE spread to the 10 year came in to 3rd quintile from 2nd, and we moved our subjectiveness ranking to 2nd quintile vs. 1st quintile.
- Alaska. Moved lower as other states moved higher so lost relative positioning into Tier 3
- District of Columbia. Lower rate of settlements, 5th quintile ROE spreads, and 4th quintile regulatory lag pushed this jurisdiction to the top of Tier 5 relative to other jurisdictions from the bottom of Tier 4 in May 2022.
- Mississippi. Elected commission with higher relative costs to customers average regulatory lag, and 5th quintile ROE spreads versus risk free rates, pushed this state into Tier 5 relative to other jurisdictions.
- New Mexico. Was at the bottom of Tier 4 in our May 2022 analysis and was a relative mover to Tier 5 as New York improved into Tier 4.

Valuation Method and Risk Statement

North America Utilities: Our valuation methodology for the group is price to earnings based. The adjustments applied fall into 7 categories. These are as follows: 1) Group Valuation Bias: Flowing from our valuation work comparing Baa corporate yields to group dividend yields and RU price to earnings ratios to those for the S&P 500, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%; 2) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; 3) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%; 4) Clean Energy Transition: A potential 5% premium for a risk adjusted clean energy transition growth opportunity; 5) Earnings Consistency Adjustment: For companies that fall in the top quartile of % Time Beat/Meet, we include +4%; 6) Multi Utility Diversified Valuation: For multi utilities (those with more than 15% of unregulated earnings), we perform a sum-of-the-parts analysis applying business/region appropriate valuations to those diversified businesses; 7) One-off Adjustments: In special situations, we value risk on an issue-specific basis. Common areas where we apply such an adjustment include: large project construction risk, legal risk, and announced M&A completion risk. We identify the following risk factors: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

IPPs: Our valuation methodology is based on mid-cycle EV/EBITDA multiples of 7.1x.

CEG: Our valuation methodology is based on an infrastructure comp on EV/EBITDA.

Water Utilities: Our valuation methodology for the group is price-to-earnings based. Our methodology includes: 1) Growth Adjustment: We adjust our valuations based on the growth quartile each utility occupies. First quartile receives a 4% premium, second quartile a 2% premium, third quartile a 2% discount and fourth quartile a 4% discount; and 2) Regulatory Adjustment: Our valuation adjustments for regulation are based on our proprietary Regulatory Rankings. First quartile jurisdictions receive 10%, second quartile 5%, third quartile -5% and fourth quartile -10%.

North American utilities: We identify the following risk factors for the sector overall: rising interest rates; regulatory and policy risks; operational risks; construction risks; cybersecurity risk to the transmission grid and/or customer data, and extreme weather events.

IPPs: We identify the following risks for the sector: Power prices, fuel prices, capacity prices, supply and demand for electricity, extreme weather, economic conditions, and cost of financing and collateral hedging.

CEG: We identify the following risks for CEG: Power price volatility above the nuclear PTC price, uranium fuel prices, supply and demand for electricity, cost of financing and nuclear operational risk.

Water Utilities: We identify the following risks: rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit https://www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 10 May 2023 07:22 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations. **Quantitative Research Review:** UBS publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. Views contained in this assessment on a particular stock reflect only the views on those short term factors which are a different timeframe to the 12-month timeframe reflected in any equity rating set out in this note. For the latest responses, please see the Quantitative Research Review Addendum at the back of this report, where applicable. For previous responses please make reference to (i) previous UBS research reports; and (ii) where no applicable research report was published that month, the Quantitative Research Review which can be found at https://neo.ubs.com/quantitative, or contact your UBS sales representative for access to the report or the Quantitative Research Team on qa@ubs.com. A consolidated report which contains all responses is also available and again you should contact your UBS sales representative for details and pricing or the Quantitative Research team on the email above.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	54%	22%
Neutral	FSR is between -6% and 6% of the MRA.	36%	21%
Sell	FSR is > 6% below the MRA.	10%	18%
Short-Term Rating	**Definition**	**Coverage[3]**	**IB Services[4]**
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%

Source: UBS. Rating allocations are as of 31 March 2023.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/ qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo. Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab and you would like to access that data please contact your UBS sales representative. UBS Evidence Lab data is available on UBS Neo. The level and types of services provided by Global Research and UBS Evidence Lab to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (https://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (https://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (https://www.ubs.com/global/en/legal/privacy/users.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

In certain circumstances (including for example, if you are an academic or a member of the media) you may receive Global Research otherwise than in the capacity of a client of UBS and you understand and agree that (i) the Global Research is provided to you for information purposes only; (ii) for the purposes of receiving it you are not intended to be and will not be treated as a "client" of UBS for any legal or regulatory purpose; (iii) the Global Research must not be relied on or acted upon for any purpose; and (iv) such content is subject to the relevant disclaimers that follow.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. The recipient should carefully read this document in its entirety and not draw inferences or conclusions from the rating alone. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at https://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas

within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. The information does not apply to, and should not be relied upon by, retail clients. UBS Europe SE is authorised by the European Central Bank (ECB) and regulated by the BaFin and the ECB. **Germany, Luxembourg, the Netherlands, Belgium and Ireland:** Where an analyst of UBS Europe SE has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE. In all cases it is distributed by UBS Europe SE and UBS AG, London Branch. **Turkey:** Distributed by UBS AG, London Branch. No information in this document is provided for the purpose of offering, marketing and sale by any means of any capital market instruments and services in the Republic of Turkey. Therefore, this document may not be considered as an offer made or to be made to residents of the Republic of Turkey. UBS AG, London Branch is not licensed by the Turkish Capital Market Board under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instruments/services may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the Capital Market Board. However, according to article 15 (d) (ii) of the Decree No. 32, there is no restriction on the purchase or sale of the securities abroad by residents of the Republic of Turkey. **Poland:** Distributed by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce regulated by the Polish Financial Supervision Authority. Where an analyst of UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE (spolka z ograniczona odpowiedzialnoscia) Oddzial w Polsce. **Russia:** Prepared and distributed by UBS Bank (OOO). Should not be construed as an individual Investment Recommendation for the purpose of the Russian Law - Federal Law #39-FZ ON THE SECURITIES MARKET Articles 6.1-6.2.**Switzerland:** Distributed by UBS AG to persons who are institutional investors only. UBS AG is regulated by the Swiss Financial Market Supervisory Authority (FINMA). **Italy:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Italy Branch. Where an analyst of UBS Europe SE, Italy Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, Italy Branch. **France:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, France Branch. Where an analyst of UBS Europe SE, France Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, France Branch. **Spain:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Spain Branch. Where an analyst of UBS Europe SE, Spain Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, Spain Branch. **Sweden:** Prepared by UBS Europe SE and distributed by UBS Europe SE and UBS Europe SE, Sweden Branch. Where an analyst of UBS Europe SE, Sweden Branch has contributed to this document, the document is also deemed to have been prepared by UBS Europe SE, Sweden Branch.**South Africa:** Distributed by UBS South Africa (Pty) Limited (Registration No. 1995/011140/07), an authorised user of the JSE and an authorised Financial Services Provider (FSP 7328). **Saudi Arabia:** This document has been issued by UBS AG (and/or any of its subsidiaries, branches or affiliates), a public company limited by shares, incorporated in Switzerland with its registered offices at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH-8001 Zurich. This publication has been approved by UBS Saudi Arabia (a subsidiary of UBS AG), a Saudi closed joint stock company incorporated in the Kingdom of Saudi Arabia under commercial register number 1010257812 having its registered office at Tatweer Towers, P.O. Box 75724, Riyadh 11588, Kingdom of Saudi Arabia. UBS Saudi Arabia is authorized and regulated by the Capital Market Authority to conduct securities business under license number 08113-37. **UAE / Dubai:** The information distributed by UBS AG Dubai Branch is only intended for Professional Clients and/or Market Counterparties, as classified under the DFSA rulebook. No other person should act upon this material/communication. The information is not for further distribution within the United Arab Emirates. UBS AG Dubai Branch is regulated by the DFSA in the DIFC. UBS is not licensed to provide banking services in the UAE by the Central Bank of the UAE, nor is it licensed by the UAE Securities and Commodities Authority. **Israel:** This Material is distributed by UBS AG, London Branch. UBS Securities Israel Ltd is a licensed Investment Marketer that is supervised by the Israel Securities Authority (ISA). UBS AG, London Branch and its affiliates incorporated outside Israel are not licensed under the Israeli Advisory Law. UBS may engage among others in issuance of Financial Assets or in distribution of Financial Assets of other issuers for fees or other benefits. UBS AG, London Branch and its affiliates may prefer various Financial Assets to which they have or may have an Affiliation (as such term is defined under the Israeli Advisory Law). Nothing in this Material should be considered as investment advice under the Israeli Advisory Law. This Material is being issued only to and/or is directed only at persons who are Eligible Clients within the meaning of the Israeli Advisory Law, and this Material must not be furnished to, relied on or acted upon by any other persons. **United States:** Distributed to US persons by either UBS Securities LLC or by UBS Financial Services Inc., subsidiaries of UBS AG; or by a group, subsidiary or affiliate of UBS AG that is not registered as a US broker-dealer (a **'non-US affiliate'**) to major US institutional investors only. UBS Securities LLC or UBS Financial Services Inc. accepts responsibility for the content of a report prepared by another non-US affiliate when distributed to US persons by UBS Securities LLC or UBS Financial Services Inc. All transactions by a US person in the securities mentioned in this report must be effected through UBS Securities LLC or UBS Financial Services Inc., and not through a non-US affiliate. UBS Securities LLC is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule"), and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule. **Canada:** Distributed by UBS Securities Canada Inc., a registered investment dealer in Canada and a Member-Canadian Investor Protection Fund, or by another affiliate of UBS AG that is registered to conduct business in Canada or is otherwise exempt from registration. **Brazil:** Except as otherwise specified herein, this Material is prepared by UBS Brasil Corretora de Câmbio, Títulos e Valores Mobiliários S.A. (UBS Brasil CCTVM) to persons who are eligible investors residing in Brazil, which are considered to be Professional Investors (Investidores Profissionais), as designated by the applicable regulation, mainly the CVM Resolution No. 30 from the 11th of May 2021 (determines the duty to verify the suitability of products, services and transactions with regards to the client´s profile). UBS Brasil CCTVM is a subsidiary of UBS BB Servicos de Assessoria Financeira e Participacoes S.A. ("UBS BB"). UBS BB is an association between UBS AG and Banco do Brasil (through its subsidiary BB – Banco de Investimentos S.A.), of which UBS AG is the majority owner and which provides investment banking services and coverage in Brazil, Argentina, Chile, Paraguay, Peru and Uruguay. **Hong Kong:** Distributed by UBS Securities Asia Limited. Please contact local licensed persons of UBS Securities Asia Limited in respect of any matters arising from, or in connection with, the analysis or document **Singapore:** Distributed by UBS Securities Pte. Ltd. [Co. Reg. No.: 198500648C] or UBS AG, Singapore Branch. Please contact UBS Securities Pte. Ltd., an exempt financial adviser under the Singapore Financial Advisers Act (Cap. 110); or UBS AG, Singapore Branch, an exempt financial adviser under the Singapore Financial Advisers Act (Cap. 110) and a wholesale bank licensed under the Singapore Banking Act (Cap. 19) regulated by the Monetary Authority of Singapore, in respect of any matters arising from, or in connection with, the analysis or document. The recipients of this document represent and warrant that they are accredited and institutional investors as defined in the Securities and Futures Act (Cap. 289). **Japan:** Distributed by UBS Securities Japan Co., Ltd. to professional investors (except as otherwise permitted). Where this report has been prepared by UBS Securities Japan Co., Ltd., UBS Securities Japan Co., Ltd. is the author, publisher and distributor of the report. Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates (**"UBS"**) with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is **for your information only**; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes: (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and UBS Global Research) and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit https://www.ubs.com/research-methodology.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other

areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosures_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Bahrain: UBS is a Swiss bank not licensed, supervised or regulated in Bahrain by the Central Bank of Bahrain to undertake banking or investment business activities in Bahrain. Therefore, prospects/clients do not have any protection under local banking and investment services laws and regulations. **Brazil**: This report is only intended for Brazilian residents who are directly purchasing or selling securities in the Brazil capital market through a local authorized institution. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This report and any offering material such as term sheet, research report, other product or service documentation or any other information (the "Material") sent with this report was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the material erroneously, UBS asks that you kindly delete it and inform UBS immediately. This report is prepared by UBS Switzerland AG or its offshore subsidiary or affiliate (collectively as "UBS Offshore"). UBS Offshore is an entity incorporated out of China and is not licensed, supervised or regulated in China to carry out banking or securities business. The recipient should not contact the analysts or UBS Offshore which produced this report for advice as they are not licensed to provide securities investment advice in China. UBS Investment Bank (including Research) has its own wholly independent research and views which at times may vary from the views of UBS Global Wealth Management. The recipient should not use this document or otherwise rely on any of the information contained in this report in making investment decisions and UBS takes no responsibility in this regard. **Czech Republic**: UBS is not a licensed bank in the Czech Republic and thus is not allowed to provide regulated banking or investment services in the Czech Republic. This communication and/or material is distributed for marketing purposes and constitutes a "Commercial Message" under the laws of Czech Republic in relation to banking and/or investment services. Please notify UBS if you do not wish to receive any further correspondence. **Denmark**: This publication is not intended to constitute a public offer under Danish law. It is distributed only for information purposes to clients of UBS Europe SE, Denmark Branch, filial af UBS Europe SE, with place of business at Sankt Annae Plads 13, 1250 Copenhagen, Denmark, registered with the Danish Commerce and Companies Agency, under No. 38 17 24 33. Should you have received the Material erroneously, UBS asks that you kindly delete the

e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed without the consent of UBS. None of the Material has been registered or filed under the prevailing laws and with any financial or regulatory authority in your jurisdiction. The Material may not have been approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or products or futures contracts). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including futures contracts) nor is it an offer to buy or to sell any securities or products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Israel**: UBS is a premier global financial firm offering wealth management, asset management and investment banking services from its headquarters in Switzerland and its operations in over 50 countries worldwide to individual, corporate and institutional investors. In Israel, UBS Switzerland AG is registered as Foreign Dealer in cooperation with UBS Wealth Management Israel Ltd., a wholly owned UBS subsidiary. UBS Wealth Management Israel Ltd. is an Investment Marketing licensee which engages in Investment Marketing and is regulated by the Israel Securities Authority. This publication is intended for information only and is not intended as an offer to buy or solicitation of an offer. Furthermore, this publication is not intended as an investment advice. No action has been, or will be, taken in Israel that would permit an offering of the product(s) mentioned in this document or a distribution of this document to the public in Israel. In particular, this document has not been reviewed or approved by the Israeli Securities Authority. The product(s) mentioned in this document is/are being offered to a limited number of sophisticated investors who qualify as one of the investors listed in the first supplement to the Israeli Securities Law, 5728-1968. This document may not be reproduced or used for any other purpose, nor be furnished to any other person other than those to whom copies have been sent. Anyone who purchases the product(s) mentioned herein shall do so for its own benefit and for its own account and not with the aim or intention of distributing or offering the product(s) to other parties. Anyone who purchases the product(s) shall do so in accordance with its own understanding and discretion and after it has received any relevant financial, legal, business, tax or other advice or opinion required by it in connection with such purchase(s). The word "advice" and/or any of its equivalent terms shall be read and construed in conjunction with the definition of the term "investment marketing" as defined under the Israeli Regulation of Investment Advice, Investment Marketing and Portfolio Management Law. The Swiss laws and regulations require a number of mandatory disclosures to be made in independent financial research reports or recommendations. Pursuant to the Swiss Financial Market Infrastructure Act and the Financial Market Infrastructure Ordinance-FINMA, banks must disclose the percentage of voting rights they hold in companies being researched, if these holdings are equal to or exceed the statutory thresholds. In addition, the Directives on the Independence of Financial Research, issued by the Swiss Bankers Association, mandate a number of disclosures, including the disclosure of potential conflicts of interest, the participation within previous 12 months in any securities issues on behalf of the company being researched, as well as the fact that remuneration paid to the financial analysts is based generally upon the performance of (i) the new issues department or investment banking; or (ii) securities trading performance (including proprietary trading) or sales. **Italy**: This publication is not intended to constitute a public offer under Italian law. It is distributed only for information purposes to clients of UBS Europe SE, Succursale Italia, with place of business at Via del Vecchio Politecnico, 3-20121 Milano. UBS Europe SE, Succursale Italia is subject to the joint supervision of the European Central Bank, the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin"), as well as of the Bank of Italy (Banca d'Italia) and the Italian Financial Markets Supervisory Authority (CONSOB - Commissione Nazionale per le Società e la Borsa), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by BaFin. **Jersey**: UBS AG, Jersey Branch, is regulated and authorized by the Jersey Financial Services Commission for the conduct of banking, funds and investment business. Where services are provided from outside Jersey, they will not be covered by the Jersey regulatory regime. UBS AG, Jersey Branch is a branch of UBS AG a public company limited by shares, incorporated in Switzerland whose registered offices are at Aeschenvorstadt 1, CH-4051 Basel and Bahnhofstrasse 45, CH 8001 Zurich. UBS AG, Jersey Branch's principal place of business is 1, IFC Jersey, St Helier, Jersey, JE2 3BX. **Luxembourg**: This publication is not intended to constitute a public offer under Luxembourg law. It is distributed only for information purposes to clients of UBS Europe SE, Luxembourg Branch ("UBS Luxembourg"), R.C.S. Luxembourg n° B209123, with registered office at 33A, Avenue J. F. Kennedy, L-1855 Luxembourg. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea (HRB n° 107046), with registered office at Bockenheimer Landstrasse 2-4, D-60306 Frankfurt am Main, Germany, duly authorized by the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, "BaFin") and subject to the joint prudential supervision of BaFin, the European Central Bank and the central bank of Germany (Deutsche Bundesbank). UBS Luxembourg is furthermore supervised by the Luxembourg prudential supervisory authority (Commission de Surveillance du Secteur Financier), in its role as host member state authority. This publication has not been submitted for approval to any public supervisory authority. **Malaysia**: This communication and any offering material term sheet, research report, other product or service documentation or any other information (the "Material") sent with this communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. Any and all advice provided on and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Mexico**: This information is distributed by UBS Asesores México, S.A. de C.V. ("UBS Asesores"), an affiliate of UBS Switzerland AG, incorporated as a non-independent investment advisor under the Mexican regulation due to the relation with a Foreign Bank. UBS Asesores is registered under number 30060-001-(14115)-21/06/2016 and subject to the supervision of the Mexican Banking and Securities Commission ("CNBV") exclusively regarding the rendering of (i) portfolio management services, (ii) securities investment advisory services, analysis and issuance of individual investment recommendations, and (iii) anti-money laundering and terrorism financing matters. This UBS publication or any material related thereto is addressed only to Sophisticated or Institutional Investors located in Mexico. Research reports only reflect the views of the analysts responsible for the report. The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management of any entity of UBS Group to which such analyst(s) render(s) services. **Monaco**: This document is not intended to constitute a public offering or a comparable solicitation under the Principality of Monaco laws, but might be made available for information purposes to clients of UBS (Monaco) S.A., a regulated bank having its registered office at 2 avenue de Grande Bretagne 98000 Monaco operating under a banking license granted by the "Autorité de Contrôle Prudentiel et de Résolution" (ACPR) and the Monegasque government which authorizes the provision of banking services in Monaco. UBS (Monaco) S.A. is also licensed by the "Commission de Contrôle des Activités Financières" (CCAF) to provide investment services in Monaco. The latter has not approved this publication. **Nigeria**: The investment products mentioned in this material are not being offered or sold by UBS to the public in Nigeria and they have not been submitted for approval nor registered with the Securities and Exchange Commission of Nigeria. If you are interested in products of this nature, please let us know. The investment products mentioned in this material are not being directed to, and are not being made available for subscription by any persons within Nigeria other than the selected investors to whom the offer materials have been addressed as a private sale or domestic concern within the exemption and meaning of Section 69(2) of the Investments and Securities Act, 2007 (ISA). This material has been provided to you at your specific unsolicited request and for your information only. **Philippines:** This communication was done so as a result of a request received by UBS from you and/or persons entitled to make the request on your behalf. Should you have received the Material erroneously, UBS asks that you kindly delete the e-mail and inform UBS immediately. The Material, where provided, was provided for your information only and is not to be further distributed in whole or in part in or into your jurisdiction without the consent of UBS. The Material may not have been reviewed, approved, disapproved, endorsed, registered or filed with any financial or regulatory authority in your jurisdiction. UBS has not, by virtue of the Material, made available, issued any invitation to subscribe for or to purchase any investment (including securities or derivatives products). The Material is neither an offer nor a solicitation to enter into any transaction or contract (including future contracts) nor is it an offer to buy or to sell any securities or derivatives products. The relevant investments will be subject to restrictions and obligations on transfer as set forth in the Material, and by receiving the Material you undertake to comply fully with such restrictions and obligations. You should carefully study and ensure that you understand and exercise due care and discretion in considering your investment objective, risk appetite and personal circumstances against the risk of the investment. You are advised to seek independent professional advice in case of doubt. You are advised to seek independent professional advice in case of doubt. Any and all advice provided and/or trades executed by UBS pursuant to the Material will only have been provided upon your specific request or executed upon your specific instructions, as the case may be, and may be deemed as such by UBS and you. **Turkey**: The information in this document is not provided for the purpose of offering, marketing or sale of any capital market instrument or service in the Republic of Turkey. Therefore, this document may not be considered as an offer made, or to be made, to residents of the Republic of Turkey in the Republic of Turkey. UBS Switzerland AG is not licensed by the Turkish Capital Market Board (the CMB) under the provisions of the Capital Market Law (Law No. 6362). Accordingly, neither this document nor any other offering material related to the instrument/service may be utilized in connection with providing any capital market services to persons within the Republic of Turkey without the prior approval of the CMB. However, according to article 15 (d) (ii) of the Decree No. 32 residents of the Republic of Turkey are allowed to purchase or sell the financial instruments traded in financial markets outside of the Republic of Turkey. Further to this, pursuant to article 9 of the Communiqué on Principles Regarding Investment Services, Activities and Ancillary Services No. III-37.1, investment services provided abroad to residents of the Republic of Turkey based on their own initiative are not restricted. **United Arab Emirates (UAE)**: UBS is not a financial institution licensed in the UAE by the Central Bank of the UAE nor by the Emirates' Securities and Commodities Authority and does not undertake banking activities in the UAE. UBS AG Dubai Branch is licensed by the DFSA in the DIFC. This document is provided for your information only and does not constitute financial advice. **United Kingdom**: This document is issued by UBS Wealth Management, a division of UBS AG which is authorised and regulated by the Financial Market Supervisory Authority in Switzerland. In the United Kingdom, UBS AG is authorised by the Prudential Regulation Authority and is subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. Details about the extent of regulation by the Prudential Regulation Authority are available from us on request. A member of the London Stock Exchange. This publication is distributed to retail clients of UBS Wealth Management. **Ukraine**: UBS is not registered and licensed as a bank/financial institution under Ukrainian legislation and does not provide banking and other financial services in Ukraine. UBS has not made, and will not make, any offer of the mentioned products to the public in Ukraine. No action has been taken to authorize an offer of the mentioned products to the public in Ukraine and the distribution of this document shall not constitute financial services for the purposes of the Law of Ukraine "On Financial Services and State Regulation of Financial Services Markets" dated 12 July 2001. Any offer of the mentioned products shall not constitute an investment advice, public offer, circulation, transfer, safekeeping, holding or custody of securities in the territory of Ukraine. Accordingly, nothing in this document or any other document, information or communication related to the mentioned products shall be interpreted as containing an offer, a public offer or invitation to offer or to a public offer, or solicitation of securities in the territory of Ukraine or investment advice under Ukrainian law. Electronic communication must not be considered as an offer to enter into an electronic agreement or other electronic instrument within the meaning of the Law of Ukraine "On Electronic Commerce" dated 3 September 2015. This document is strictly for private use by its holder and may not be passed on to third parties or otherwise publicly distributed. **USA**: Distributed to US persons by UBS Financial Services Inc. or UBS Securities LLC, subsidiaries of UBS AG. UBS Switzerland AG, UBS Europe SE, UBS Bank, S.A., UBS Brasil Administradora de Valores Mobiliários Ltda., UBS Asesores México, S.A. de C.V., UBS SuMi TRUST Wealth Management Co., Ltd., UBS Wealth Management Israel Ltd. and UBS Menkul Degerler AS are affiliates of UBS AG. **UBS Financial Services Inc. accepts responsibility for the content of a report prepared by a non-US affiliate when it distributes reports to US persons. All transactions by a US person in the securities mentioned in this report should be effected through a US-registered broker dealer affiliated with UBS, and not through a non-US affiliate. The contents of this report have not been and will not be approved by any securities or investment authority in the United States or elsewhere. UBS Financial Services Inc. is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule") and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule.**

Consumers Energy Co.

September 15, 2025202x

This report does not constitute a rating action.

Ratings Score Snapshot

Credit Highlights

Overview

Key strengths	Key risks
Monopolistic vertically integrated electric utility and gas distribution utility operations.	Lack of operating diversity that makes the company largely depend on Michigan regulators to sustain its credit quality.
Favorable regulatory construct in Michigan.	A 2024 third-party audit that indicated below-average system reliability as measured by system and customer average interruption indices.
Large customer base of 1.9 million electric and 1.8 million gas customers.	Negative discretionary cash flow, reflecting robust capital spending, which indicates external funding needs.
Insulated subsidiary of its parent, CMS Energy Corp., allowing us to rate it one notch above the parent.	Susceptibility to adverse weather events, including winter and convective storms.
	Exposure to cyclical commercial and industrial customers, which account for 45%-50% of electric utility revenues and 20%-25% of gas utility revenues.

We expect Consumers Energy Co. (CE) to continue to effectively manage its regulatory risk. We believe Michigan's regulatory construct is above average compared with peers because of the benefit of a streamlined 10-month rate case process. Other constructive rate mechanisms

include the use of forward test-years, power supply cost rider adjustments, and natural gas cost rider adjustments. These mechanisms help the company earn its allowed return on equity (ROE) and minimize regulatory lag.

CE is currently seeking rate increases in both electric and gas businesses. In June 2025 CE filed for a $460 million electric rate increase, based on a 10.25% ROE (previously approved 9.9%) and an equity layer of 42.94% (previously approved 41.73%). Separately, CE is seeking a $217 million rate increase in its gas business. This is premised on a ROE of 10.25% (previously approved 9.9%) and an equity layer of 42.58% (previously approved 41.48%).

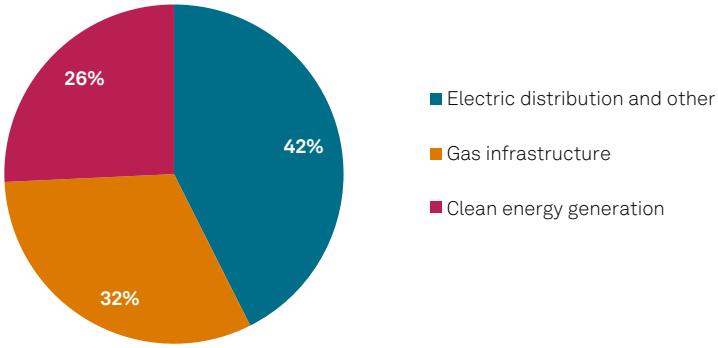
We continue to monitor related developments. We will also continue to monitor the company's performance in light of a 2024 third-party audit which indicated a below-average system reliability assessment for CE as measured by system and customer average interruption indices.

Table 1

Consumers Energy Co. rate-case details

	Electric rate case		Gas rate case	
	Present case: Requested by CE 6/2/2025	Previous case: Authorized by MPSC 3/21/2025	Present case: CE revised request 6/25/2025	Previous case: Authorized by MPSC 7/23/2024
Rate change amount (mil. $; excluding deferrals)	438.8	153.8	217.1	35.0
Return on equity (%)	10.25	9.90	10.25	9.90
Common equity to total capital (%)	42.94	41.73	42.58	41.48

MPSC--Michigan Public Service Commission. N.A.--Not available. Sources: Company, S&P Capital IQ Pro.



The company's elevated capital spending plan prioritizes infrastructure upgrades and its energy transition plans. Over the next five years, CE plans to invest $20 billion to maintain and upgrade its electric distribution systems and gas infrastructure, as well as reduce its carbon emissions. This includes $8.5 billion for electric distribution upgrades--such as strengthening circuits, replacing poles, and connecting clean energy sources--and $6.3 billion for gas infrastructure improvements to enhance safety, sustain deliverability, and cut methane emissions. Additionally, $5.2 billion will fund clean generation investments in wind, solar, and hydroelectric resources.

The company also intends to reduce its carbon exposure in line with its Integrated Resource Plan (IRP), which the MPSC approved in June 2022. The plan includes a goal to reach net-zero carbon emission by 2040 and a goal to retire CE's owned coal-fired generation plants in 2025. However, on June 1, 2025, the US Department of Energy (DOE) ordered CE to extend the retirement of its coal fired J.H. Campbell power plant by 90 days. Furthermore, the company's IRP targets a gradual reduction in its gas-fired generation dependence after 2025. The company has also announced a net-zero greenhouse gas emissions target by 2050 and a zero-methane emissions target by 2030 for its gas distribution system.

Consumers Energy Co.

Chart 1

CE's five-year investment plan (2025-2029)

Source: Company fillings.

Copyright © 2025 by Standard & Poor's Financial Services LLC. All rights reserved.

A portion of CE's service territory has a relatively high wildfire risk classification from the Federal Emergency Management Agency (FEMA). This area is contiguous and has a population of 10,000-15,000 people, 7,000-9,000 housing units (about 40%-60% occupied), and median home values of $100,000-$150,000, according to 2024 U.S. census data. Part of the company's capital spending plan is focused on smart electric systems and anticipates pursuing further undergrounding pilots, with the potential to underground up to 400 miles of electric lines per year, starting in 2027, to address some of its climate-related risks.

While CE has not been found culpable for any wildfires in its service territory and is not currently party to any material litigation, we will continue to monitor the company's ability to effectively manage its risks associated with adverse weather events.

We expect CE's credit measures to remain within the significant financial risk profile category. Throughout our base-case scenario, we expect funds from operations (FFO) to debt of 17%-20%.

Outlook

The stable rating outlook on CE reflects our expectation that management will focus on its core utility operations and reach constructive regulatory outcomes to avoid increasing business risk. We expect CE will maintain stand-alone financial measures consistent with the middle of the range for its financial risk profile category, specifically FFO to debt of 17%-20%.

Downside scenario

We could lower our rating on CE if:

- The stand-alone financial measures weaken such that FFO to debt weakens to consistently below 15%; or
- We lower our rating on parent CMS Energy.

Upside scenario

Although less likely, we could raise our rating on CE if:

- We raise our rating on CMS Energy; and
- CE's stand-alone financial measures improve, reflecting FFO to debt consistently above 20%.

Our Base-Case Scenario

Assumptions

- Consistent rate case filings and use of existing regulatory mechanisms;
- Elevated capital spending over the forecast period averaging $4 billion annually;
- Annual dividends averaging $1 billion-$1.2 billion annually;
- Equity infusion by the parent to maintain the company's capital structure;
- All debt maturities refinanced; and
- Continued negative discretionary cash flow financed in a balanced manner to support the regulated capital structure.

Company Description

CE is a subsidiary of CMS Energy and operates as an electric and gas utility serving about 1.9 million electric and 1.8 million natural gas customers in Michigan. CE's electric business operates as a vertically integrated utility that generates, distributes, and sells electricity. The electric utility sources 25%-30% of its generation from purchased power, rather than from its own plants. The company also sells, stores, and transports natural gas. It is based in Jackson, Mich. CE contributes to about 95% of CMS' EBITDA.

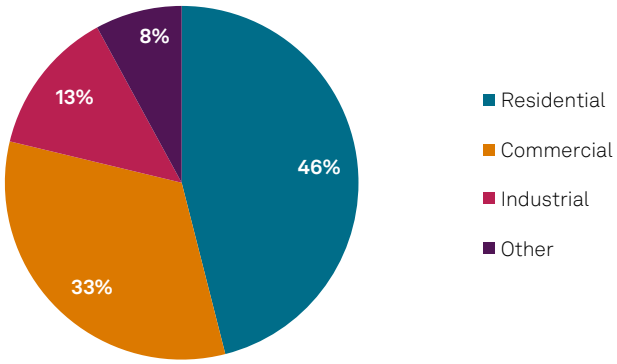
Business Risk

Our assessment of CE's business risk profile reflects the company's monopolistic electric and natural gas utility operations and effective management of regulatory risk. The MPSC regulates

CE, and we view the regulatory environment in Michigan as above average compared with peers. This is demonstrated through the company's use of forward-looking test years and a streamlined 10-month rate case process. Furthermore, CE benefits from other constructive rate mechanisms, such as the power supply cost recovery adjustment rider, and the gas cost recovery adjustment rider.



In 2023, the state passed a law that allows electric utilities in the state to earn a return equal to their pre-tax weighted average cost of capital on payments made under new purchased-power agreements. These constructive rate mechanisms enable CE to generally earn its allowed ROE and minimize regulatory lag.

The company actively manages its gas supply to reduce price volatility and support its gas system operations by injecting natural gas into storage during the summer months for use during the winter months. During 2024, 47% of the natural gas supplied to all customers during the winter months came from storage. Additionally, CE's large customer base of about 1.9 million electric customers and about 1.8 million natural gas customers throughout Michigan bolsters the company's business risk profile.

That said, the company’s service territory is susceptible to localized storms and adverse weather conditions. It is also exposed to cyclical commercial and industrial customers for its electric operations, which contribute about 45%-50% of the company’s electric revenues. Furthermore a 2024 third-party audit indicated below-average system reliability assessment for CE as measured by system and customer average interruption indices, which we will continue to monitor.

Financial Risk

We assess CE's financial measures using our medial volatility table, reflecting the company's lower risk regulated electric and gas utility operations and its effective management of regulatory risk. Under our base-case scenario, we expect:

- Elevated capital spending averaging about $4.0 billion annually over the forecast period;
- Dividends averaging $1.0 billion-$1.2 billion annually;
- Equity infusion by the parent to maintain the company's capital structure;
- Continued use of existing regulatory mechanisms;
- Negative discretionary cash flow; and
- The refinancing of all debt maturities.

As such, we anticipate financial measures to be consistent with the middle of the range for the significant financial risk category. Specifically, we forecast FFO to debt of 17%-20%.

Liquidity

We assess CE's liquidity as adequate, with sources covering uses by 1.1x over the coming 12 months, and that its sources cover uses even if forecast consolidated EBITDA declines 10%. We believe the supportive regulatory framework provides manageable cash flow stability for the company even in times of economic stress, supporting our use of slightly lower thresholds to assess liquidity.

In addition, CE can absorb high-impact, low-probability events, in our view, as the company maintains about $1.1 billion in committed credit facilities through 2027, and can likely lower its capital spending (averaging $2.8 billion-$3.0 billion annually) during stressful periods, indicating a limited need for refinancing under such conditions. CE can borrow $500 million from parent CMS Energy as per its renewed credit agreement in December 2024.

Furthermore, our assessment reflects the company's prudent risk management and sound relationships with its banking group. Overall, we believe that the company can withstand adverse market circumstances over the next 12 months with sufficient liquidity to meet its obligations. As on June 30, 2025, CE had about $570 million of debt maturities in the next 12 months, and we

expect the company to proactively address these maturities well in advance of their scheduled due dates.

Principal liquidity sources

- Estimated cash FFO of about $2.8 billion;
- Credit facilities of about $1.1 billion; and
- Available cash of about $600 million as on June 30, 2025.

Principal liquidity uses

- Debt maturities of about $570 million over the next 12 months as on June 30, 2025;
- Working capital outflows of about $170 million; and
- Estimated maintenance capital spending of about $3.1 billion; and
- Dividends of about $1 billion.

Covenant Analysis

Requirements

CE's credit agreements contain a covenant for CE to maintain debt to capitalization below 65%.

Compliance expectations

In our base-case scenario, we expect CE to remain compliant with this covenant and have sufficient headroom.

Environmental, Social, And Governance

Environmental factors are a negative consideration in our credit rating analysis of CE. The company's use of fossil fuel generation sources exposes it to heightened energy transition risks. The capacity of its generation portfolio comprises about 35% natural gas, 19% coal, 17% hydroelectric, 17% oil and gas, and 12% wind and solar as of Dec. 31, 2024. The company's accelerated coal retirement plan for its utility partially mitigates this risk. It includes a goal to be coal-free in owned generation in 2025 and have 60% of its utility's capacity portfolio sourced from clean energy resources by 2030 and 100% by 2040.

Furthermore, the company experienced heightened winter and convective storm activity in recent years.

While CE has not been found culpable for any wildfires in its service territory and is not currently party to litigation concerning these matters, a portion of its service territory has a relatively high wildfire risk classification from FEMA. This area is contiguous and has a population of about 10,000-15,000 inhabitants, 7,000-9,000 housing units, of which about 40%-60% are occupied, and median home values of $100,000-$150,000 according to 2024 U.S. Census data. Part of the company's capital spending plan is focused on smart electric systems and anticipates pursuing further undergrounding pilots, with the potential to underground up to 400 miles of electric lines per year starting in 2027. We will continue to monitor the company's ability to effectively manage its risks associated with adverse weather events.

Group Influence

Under our group rating methodology, we consider CMS Energy to be the parent of the group with a group credit profile (GCP) of 'bbb+'. We assess CE as a core subsidiary of CMS Energy largely because we view the utility as integral to the group's identity, highly unlikely to be sold and having a strong commitment from management, given the company's emphasis on maintaining the size of the regulated utility operations relative to the nonutility businesses.

Given CE's stand-alone credit profile, and because CE is operationally separate and maintains sufficient insulating measures, we rate the utility one notch above the GCP. Some of the key insulating measures are:

- CE is a separate and stand-alone legal entity that functions independently (both financially and operationally), files its own rate cases, and is independently regulated by MPSC;
- CE has its own records and books, including stand-alone audited financial statements;
- The utility has its own funding arrangements, including issuing its own long-term debt, and it has a separate committed credit facility to cover its short-term funding needs;
- CE does not comingle funds, assets, or cash flow with parent CMS Energy or its other subsidiaries, and it does not participate in a money pool;
- We believe there is a strong economic basis for CMS Energy to preserve CE's credit strength, reflecting CE's low-risk, profitable, and regulated utility business model. CE is also a significant portion of CMS Energy, accounting for about 95% of the consolidated company; and
- There are no cross-default provisions between parent CMS Energy and CE that could directly lead to a default at the utility.

Issue Ratings--Subordination Risk Analysis

Capital structure

- As on Dec. 31, 2024, CE's capital structure comprised about $12.2 billion of long-term debt, including about $11.4 billion in first-mortgage bonds (FMBs), $700 million of securitized debt (all of which is deconsolidated from our credit metrics), and about $110 million of tax-exempt revenue bonds.

Analytical conclusions

- We rate the company's senior unsecured debt 'A-', in-line with the long-term issuer credit rating on CE as the rated issuances are senior unsecured debt issued by a qualifying investment grade utility as per our criteria.
- We base our 'A-2' short-term rating on our 'A-' issuer credit rating.

Issue Ratings--Recovery Analysis

Key analytical factors

- We assign recovery ratings to FMBs issued by U.S. utilities, which can result in issue ratings being notched above an issuer credit rating on a utility, depending on the rating category and

the extent of the collateral coverage. The FMBs issued by U.S. utilities are a form of secured utility bonds that qualify for a recovery rating as defined in our criteria.

- CE's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue rating one notch above the issuer credit rating.

FitchRatings

Corporates
Electric-Corporate
United States

Consumers Energy Company

Consumers Energy Company (Consumers Energy; A–/Stable) ratings derive support from its regulated utility operations under continued regulatory support in Michigan. Sizeable capital expenditure (capex) plans focused on reliability, decarbonization and evolving load demand in the state are expected to pressure Consumers Energy's funds from operations (FFO) leverage to its 4.5x rating threshold in the near term before improving to 4.4x in 2028 and 4.2x in 2029.

Key Rating Drivers

Decarbonization and Reliability Drive Capex: Consumers Energy's capex plan increased to $20 billion for 2025-2029, from $17 billion for 2024-2028. The increase is partly driven by the 9 GW solar and 4 GW wind pipeline filed as part of Consumer Energy's November 2024 Renewable Energy Plan, aligning with Michigan's target of 60% renewable energy by 2035. The increase also pertains to reliability spend on the electric distribution side. Consumers Energy is also on track to eliminate coal from its generation mix by mid-2025.

Fitch anticipates further capex for system resource adequacy and potential load growth in the state as Consumers Energy plans an Integrated Resource Plan in 2H26. Michigan's recent energy legislation include expanded incentives and improved economics for PPAs, which provide some investment flexibility in Fitch's view. Fitch believes concerns on the capex are largely mitigated by the Michigan Public Service Commission's (MPSC) constructive ratemaking policies and alignment with state policy, which is key to maintaining credit metrics. Monetization of tax credits on renewable projects and parent equity should provide further support.

Near-Term Leverage Pressured: Fitch expects Consumers Energy's FFO leverage to be weaker than previously forecasted in the near term, with no headroom, but then improve to 4.4x in 2028 and 4.2x in 2029. This is due to higher capex, though partially offset by rate base growth and load growth. Subsequent leverage improvement is expected from increasing tax credit monetizations on completed projects and continued regulatory support.

Fitch estimates Consumers Energy will sell about $600 million of tax credits over the forecast period. Fitch assumes any changes in the ability to monetize tax credits will result in adjustments to Consumers Energy's financial plan, supporting current credit metrics.

Retails Sales Growth Expected: Fitch expects Consumers Energy to benefit from increasing energy demand from manufacturing activity and data center demand in Michigan. Fitch now estimates previously flat retail sales to grow by 1% to 3% annually through 2029. A further uptick is likely in the outer years given the evolving data center activity in the state, especially after the recent sales and use tax exemption on data center equipment. While load growth is cash flow accretive, the continued ability to recover capital investments in a credit-supportive manner will remain key to the ratings.

Rate Case Activity: In December 2024, Consumers Energy filed a gas rate case requesting a $248 million increase, with a 10.25% return on equity (ROE) and a test year ending in October 2026. A decision is expected in 4Q25. An electric rate case requesting a $277 million increase, based on a 10.25% ROE and a test year ending February 2026, was also filed in May 2024. The MPSC recently delivered a largely constructive decision authorizing a $154 million revenue increase, with a 9.9% allowed ROE, and recovery of $22 million through a separate surcharge for distribution deferral.

Michigan Regulation Remains Supportive: Fitch notes that the regulatory environment under the MPSC has been characterized by some recent lighter-than-expected rate outcomes and increased scrutiny on storm responses. Nevertheless, Fitch believes the framework remains constructive from a credit perspective, allowing for full pass-through of fuel costs and purchased power, forward-looking test years and a timely 10-month rate case resolution. Furthermore, Consumers Energy's authorized ROE of 9.9% compares favorably with industry averages. Fitch expects continued annual rate case filings.

Storm Audit Concluded: An MPSC-ordered audit of utility compliance with storm outages and safety regulations was concluded in late 2024. The audit findings cited the need to address aging infrastructure, improve maintenance practices and manage outages more effectively to enhance service reliability. While Fitch does not expect an immediate material negative outcome, the audit could highlight higher reliability investment needs and higher regulatory scrutiny in subsequent rate cases. Fitch continues to believe that the risk of performance-based penalties is manageable within Consumers Energy's current credit profile.

Parent/Subsidiary Linkage: There is parent-subsidiary rating linkage between CMS Energy Corporation (CMS Energy; BBB/Stable) and Consumers Energy. Fitch considers CMS Energy's standalone credit profile (SCP), based upon consolidated metrics, to be weaker than Consumer Energy's SCP. Emphasis is placed on the latter's status as a regulated entity. Legal ring-fencing is considered porous, given the general protections afforded by economic regulation. Access and control are also evaluated as porous. CMS Energy centrally manages the treasury function; however, both entities issue their own long-term debt. Fitch will limit the difference between the Long-Term IDRs of CMS Energy and Consumers Energy to two notches.

Financial Summary

(USD Mil.)	2021	2022	2023	2024
Gross revenue	6,987	8,116	7,127	7,050

Peer Analysis

The credit profile of Consumers Energy is comparable to peers like DTE Electric Company (DTEE; A-/Stable), Northern States Power Company-Minnesota (NSP-Minnesota; A-/Stable) and Northern States Power Company-Wisconsin (NSP-Wisconsin; A-/Stable), and Public Service Company of Colorado (A-/Stable). All four are regulated utilities with single state operations albeit in generally constructive environments.

Fitch forecasts Consumer Energy's FFO leverage to average at its 4.5x threshold in the near term and then improve to 4.2x through 2029. This is better than the 4.5x to 4.8x projected in 2025-2027 for the pure gas utility, DTE Gas Company (BBB+/Stable). Financial metrics at other electric peers are marginally stronger, with leverage forecasted to average 3.8x through 2027 at DTEE, 3.8x-4.2x for NSP-Wisconsin and 3.6x for NSP-Minnesota, making them well-positioned for their ratings.

Rating Sensitivities

Factors that Could, Individually or Collectively, Lead to Negative Rating Action/Downgrade

- FFO leverage expected to exceed 4.5x on a sustained basis;
- A material deterioration of the Michigan regulatory environment;
- A downgrade to CMS Energy's Long-Term IDR.

Factors that Could, Individually or Collectively, Lead to Positive Rating Action/Upgrade

- A positive rating action on Consumers Energy would also require an equally positive rating action on its parent, CMS Energy, under Fitch's Parent and Subsidiary Linkage Criteria;
- FFO leverage expected to be less than 3.5x on a sustained basis.

Exclusively for the use of Heather Wilson at CMS Energy Corporation. Downloaded: 30-May-2025

Liquidity and Debt Structure

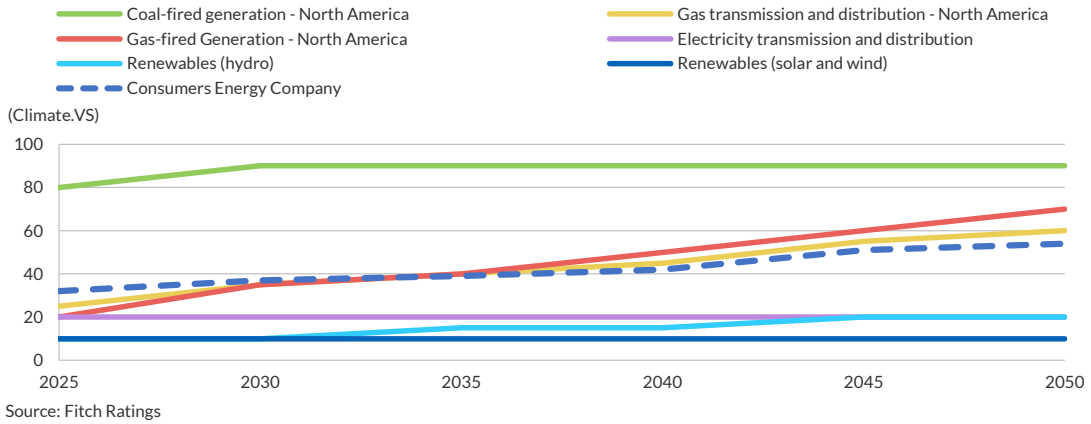
Fitch considers liquidity for Consumers Energy to be adequate.

Consumers Energy's $500 million CP program is supported by its $1.1 billion revolving credit facility (RCF) maturing in December 2027, with $1 billion available as of Dec. 31, 2024. It also has a separate $250 million RCF with $192 million available.

Consumers Energy had $44 million in unrestricted cash as of Dec. 31, 2024. Consumers Energy has bond maturities of $115 million in 2026, $135 million in 2027 and $725 million in 2028. Fitch views these maturities as manageable given the history of successful refinancing and expected continued access to capital markets. As of Dec. 31, 2024, Consumers Energy was compliant with its consolidated debt to capitalization covenants of 65%.

ESG Considerations

The highest level of ESG credit relevance is a score of '3', unless otherwise disclosed in this section. A score of '3' means ESG issues are credit-neutral or have only a minimal credit impact on the entity, either due to their nature or the way in which they are being managed by the entity. Fitch's ESG Relevance Scores are not inputs in the rating process; they are an observation on the relevance and materiality of ESG factors in the rating decision. For more information on Fitch's ESG Relevance Scores, visit https://www.fitchratings.com/topics/esg/products#esg-relevance-scores.



Climate Vulnerability Considerations

Fitch uses Climate Vulnerability Signals (Climate.VS) as a screening tool to identify sectors and Fitch-rated issuers that are potentially most exposed to credit-relevant climate transition risks and, therefore, require additional consideration of these risks in rating reviews. Climate.VS range from 0 (lowest risk) to 100 (highest risk). For more information on Climate.VS, see Fitch's Corporate Rating Criteria. For more detailed, sector-specific information on how Fitch perceives climate-related transition risks, see Climate Vulnerability Signals for Non-Financial Corporate Sectors.

The 2024 asset-weighted Climate.VS for Consumers Energy is 39 for 2035 out of 100. The Climate.VS is a function of ownership of around 1.3 GW of coal-fired generating capacity and 2.5 GW of gas-fired capacity. The score also reflects growing opposition to methane and other greenhouse gas (GHG) emissions in recent years, driven by growing concern about the impact of global climate change and evolving state and federal policies to reduce GHG emissions.

Consumers Energy remains on track to phase out coal generation by 2025. Consumers Energy projects to be net zero in terms of CO2 emissions by 2040 in its electric system and net zero menthane by 2030 in its natural gas distribution system and net zero GHG by 2050 in its overall system. By 2035, Consumers Energy expects to move towards a portfolio supported by around 60% renewable energy generation as it adds solar, wind and storage resources.

Key Assumptions

- Constructive regulatory environment in Michigan with continuance of authorized ROEs for both electric and gas utility operations;
- Gas rate case decision in 4Q25;
- Annual rate case filings;
- Largely flat annual natural gas sales growth;
- Electric sales growth ranging from 1% to 3% over 2025-2029;
- Total utility capex in line with management's assumptions;
- Dividend growth of 5% per year;
- Normal weather;
- Annual equity issuances of around $500 million near term, and lower subsequently;
- Tax credit transfers of $600 million over 2025-2029.

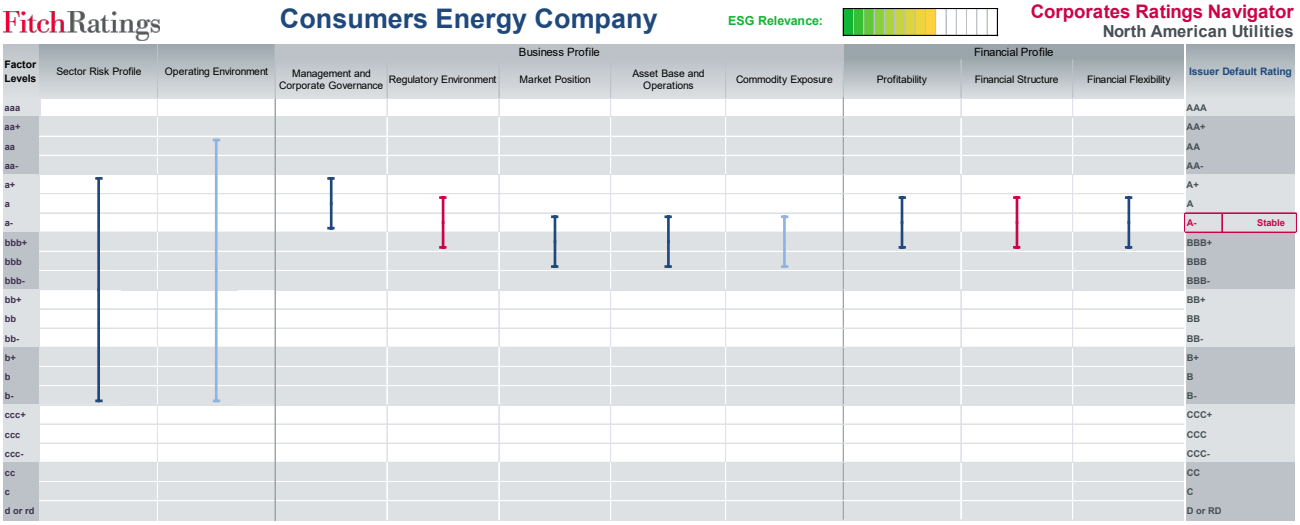
How to Interpret the Forecast Presented



The forecast presented above is based on Fitch Ratings' internally produced, conservative rating case forecast. It does not represent the forecast of the rated issuer. The forecast set out above is only one component used by Fitch Ratings to assign a rating or determine a rating outlook, and the information in the forecast reflects material but not exhaustive elements of Fitch Ratings' rating assumptions for the issuer's financial performance. As such, it cannot be used to establish a rating, and it should not be relied on for that purpose. Fitch Ratings' forecasts are constructed using a proprietary internal forecasting tool, which employs Fitch Ratings' own assumptions on operating and financial performance that may not reflect the assumptions that you would make. Fitch Ratings' own definitions of financial terms such as EBITDA, debt or free cash flow may differ from your own such definitions. Fitch Ratings may be granted access, from time to time, to confidential information on certain elements of the issuer's forward planning. Certain elements of such information may be omitted from this forecast, even where they are included in Fitch Ratings' own internal deliberations, where Fitch Ratings, at its sole discretion, considers the data may be potentially sensitive in a commercial, legal or regulatory context. The forecast (as with the entirety of this report) is produced strictly subject to the disclaimers set out at the end of this report. Fitch Ratings may update the forecast in future reports but assumes no responsibility to do so. Original financial statement data for historical periods is processed by Fitch Solutions on behalf of Fitch Ratings. Key financial adjustments and all financial forecasts credited to Fitch Ratings are generated by rating agency staff.

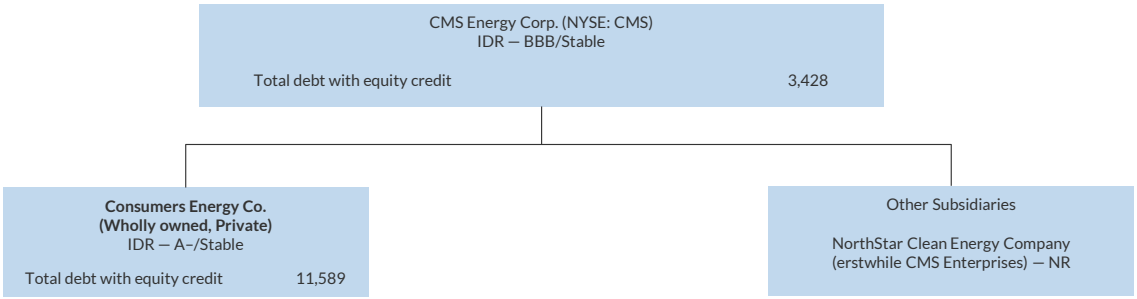
Financial Transparency	3	Quality and timing of financial disclosure	Management and Corporate Governance

G Relevance

How to Read This Page
ESG relevance scores range from 1 to 5 based on a 15-level color gradation. Red (5) is most relevant to the credit rating and green (1) is least relevant.
The Environmental (E), Social (S) and Governance (G) tables break out the ESG general issues and the sector-specific issues that are most relevant to each industry group. Relevance scores are assigned to each sector-specific issue, signaling the credit-relevance of the sector-specific issues to the issuer's overall credit rating. The Criteria Reference column highlights the factor(s) within which the corresponding ESG issues are captured in Fitch's credit analysis. The vertical color bars are visualizations of the frequency of occurrence of the highest constituent relevance scores. They do not represent an aggregate of the relevance scores or aggregate ESG credit relevance.
The Credit-Relevant ESG Derivation table's far right column is a visualization of the frequency of occurrence of the highest ESG relevance scores across the combined E, S and G categories. The three columns to the left of ESG Relevance to Credit Rating summarize rating relevance and impact to credit from ESG issues. The box on the far left identifies any ESG Relevance Sub-factor issues that are drivers or potential drivers of the issuer's credit rating (corresponding with scores of 3, 4 or 5) and provides a brief explanation for the relevance score. All scores of '4' and '5' are assumed to reflect a negative impact unless indicated with a '+' sign for positive impact.
Classification of ESG issues has been developed from Fitch's sector ratings criteria. The General Issues and Sector-Specific Issues draw on the classification standards published by the United Nations Principles for Responsible Investing (PRI), the Sustainability Accounting Standards Board (SASB), and the World Bank.

CREDIT-RELEVANT ESG SCALE
How relevant are E, S and G issues to the overall credit rating?



5	Highly relevant, a key rating driver that has a significant impact on the rating on an individual basis. Equivalent to "higher" relative importance within Navigator.
4	Relevant to rating, not a key rating driver but has an impact on the rating in combination with other factors. Equivalent to "moderate" relative importance within Navigator.
3	Minimally relevant to rating, either very low impact or actively managed in a way that results in no impact on the entity rating. Equivalent to "lower" relative importance within Navigator.
2	Irrelevant to the entity rating but relevant to the sector.
1	Irrelevant to the entity rating and irrelevant to the sector.

SOLICITATION & PARTICIPATION STATUS

For information on the solicitation status of the ratings included within this report, please refer to the solicitation status shown in the relevant entity's summary page of the Fitch Ratings website.

For information on the participation status in the rating process of an issuer listed in this report, please refer to the most recent rating action commentary for the relevant issuer, available on the Fitch Ratings website.

DISCLAIMER & DISCLOSURES

All Fitch Ratings (Fitch) credit ratings are subject to certain limitations and disclaimers. Please read these limitations and disclaimers by following this link: https://www.fitchratings.com/understandingcreditratings. In addition, the following https://www.fitchratings.com/rating-definitions-document details Fitch's rating definitions for each rating scale and rating categories, including definitions relating to default. Published ratings, criteria, and methodologies are available from this site at all times. Fitch's code of conduct, confidentiality, conflicts of interest, affiliate firewall, compliance, and other relevant policies and procedures are also available from the Code of Conduct section of this site. Directors and shareholders' relevant interests are available at https://www.fitchratings.com/site/regulatory. Fitch may have provided another permissible or ancillary service to the rated entity or its related third parties. Details of permissible or ancillary service(s) for which the lead analyst is based in an ESMA- or FCA-registered Fitch Ratings company (or branch of such a company) can be found on the entity summary page for this issuer on the Fitch Ratings website.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third- party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed. Fitch Ratings makes routine, commonly-accepted adjustments to reported financial data in accordance with the relevant criteria and/or industry standards to provide financial metric consistency for entities in the same sector or asset class.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US$1,000 to US$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US$10,000 to US$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.

Fitch Ratings, Inc. is registered with the U.S. Securities and Exchange Commission as a Nationally Recognized Statistical Rating Organization (the "NRSRO"). While certain of the NRSRO's credit rating subsidiaries are listed on Item 3 of Form NRSRO and as such are authorized to issue credit ratings on behalf of the NRSRO (see https://www.fitchratings.com/site/regulatory), other credit rating subsidiaries are not listed on Form NRSRO (the "non-NRSROs") and therefore credit ratings issued by those subsidiaries are not issued on behalf of the NRSRO. However, non-NRSRO personnel may participate in determining credit ratings issued by or on behalf of the NRSRO.

What's changed?

Electricity sales growth. After nearly two decades of stagnant growth, sales growth has returned, powered by data center expansion.

Rising capital spending. Capital spending broke a new record in 2025 for the fourth consecutive year, reflecting about $250 billion.

Hybrid issuance. Hybrid security issuance also exceeded prior levels at about $30 billion.

What are the key assumptions for 2026?

Credit-supportive funding of cash flow deficits. The industry's cash flow deficits at about $100 billion requires balanced equity and debt funding to maintain credit quality.

Managing regulatory risk. The industry's rate case filing revenue requirements are materially increasing, requiring consistently fair rate case orders to maintain credit quality.

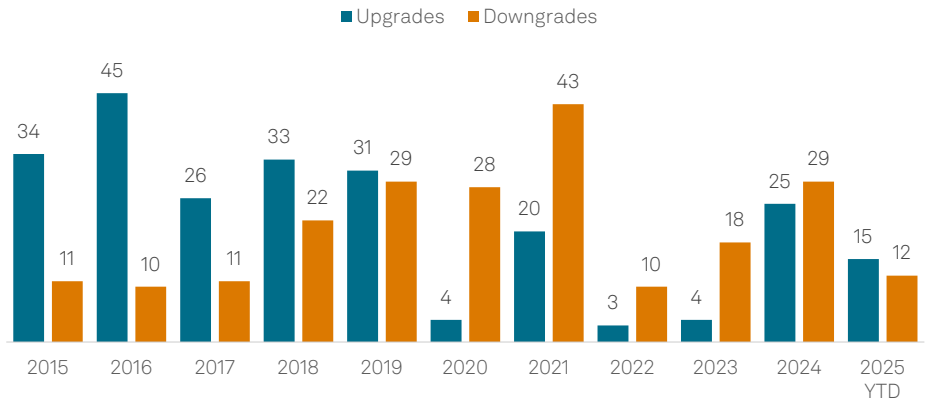
Managing the customer bill. The electric bill represents about 2% of household income, and significant bill increases could challenge a utility's ability to manage regulatory risk.

What are the key risks around the baseline?

Physical risks. Climate change is increasing the frequency of extreme and devastating hurricanes, storms, and wildfires, which is heightening credit risks for North America's investor-owned utilities (IOUs).

Common equity issuance. Common equity issuance at about $16 billion in 2025, or 40% higher than 2024, must be sustained given the industry's robust cash flow deficits.

Minimal financial cushion from downgrade threshold. About 40% of the industry is operating with limited ability to absorb unexpected events beyond their base case.



Industry Outlook

Ratings trends and outlook

After five years of downgrades consistently outpacing upgrades, 2025 upgrades have finally outpaced downgrades. Furthermore, the percentage of companies with a negative outlook has decreased to about 10% compared to the more recent historical average of about 20%. This all points to a potentially more stable environment for credit quality in 2026.

Chart 1

Upgrades and downgrades

Source: YTD—Year to date as of Nov. 30, 2025. Source: S&P Global Ratings.

Main assumptions about 2026 and beyond

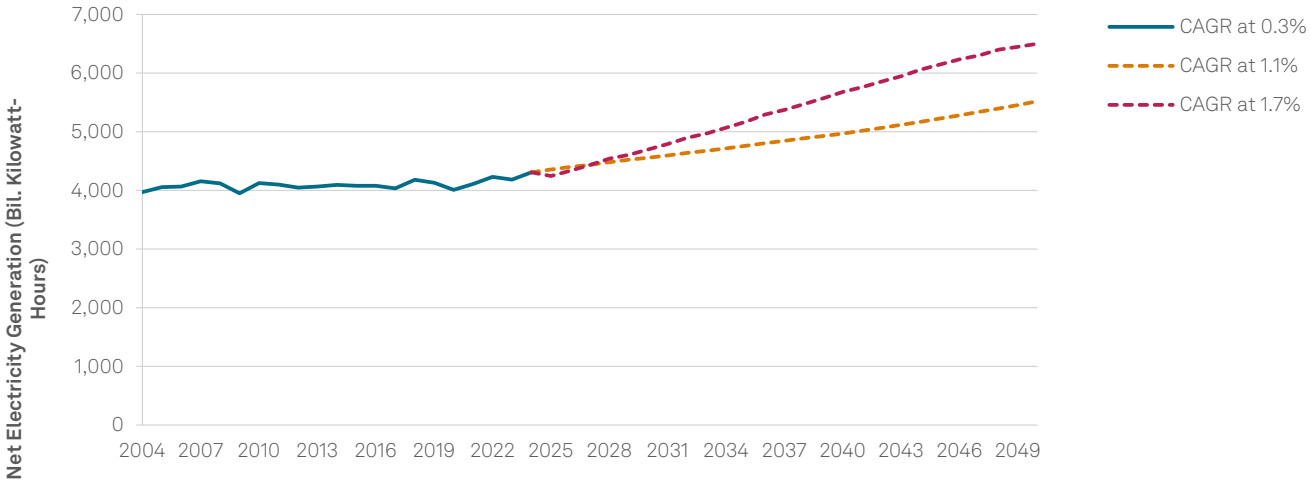
1. Electricity sales growth

For nearly the past two decades electricity sales have been flat, reflecting conservation efforts that have offset new customer growth. However, with data center growth, we expect the industry's electricity sales will increase by 1%-2%. This transformation represents an opportunity but still brings considerable risks to credit quality.

2. Phase out of tax credits

Under the 2025 U.S. budget bill, solar or wind projects started by June 2026 should qualify for tax credits. As such, the industry should benefit from tax credit transferability through 2030, which we assess as supportive of credit quality. Furthermore, we believe the transition period allows for ample adjustment time.

3. Legislative enactments to reduce regulatory lag and wildfire risks



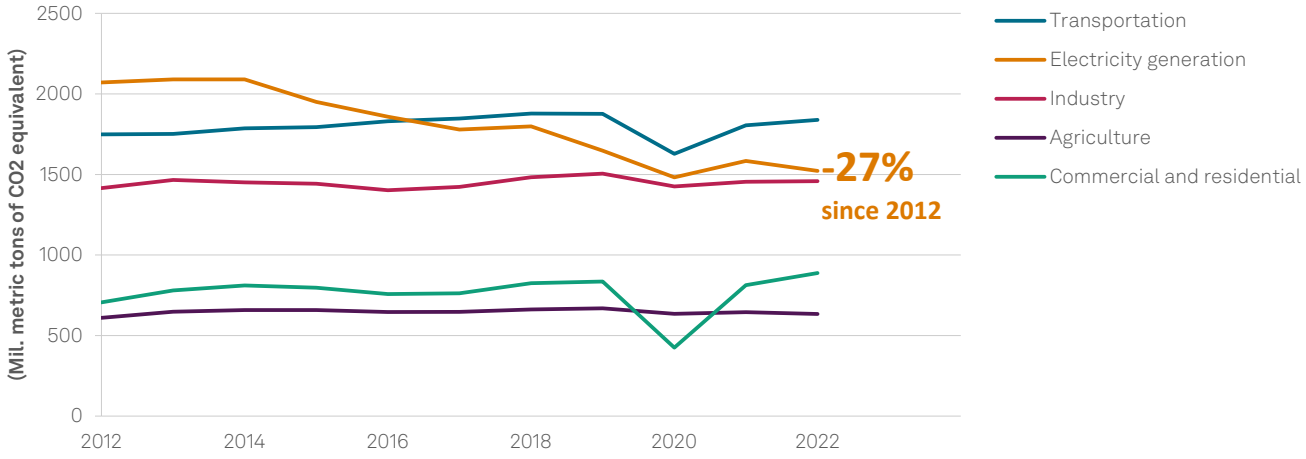
Given the increasing opportunities for the utility industry, no less than 14 states enacted legislation in 2025 that either reduces regulatory lag (the timing difference between when a utility incurs costs and when it's recovered from ratepayers) or reduces wildfire risks. We assess these developments as supportive of credit quality and expect this trend will persist, reducing the industry's risks and improving the industry's profitability.

A transformative industry shift. During the past two decades of stagnant electricity sales growth, the industry concentrated on managing regulatory risk and reducing regulatory lag, as there was no sales growth that could offset regulatory delays. This was a particularly challenging period for the industry, especially considering it also had to manage other concurrent risks, including declining interest rates, inflation, supply-chain issues, and commodity price spikes.

Given our expectations for rising electricity sales from data center growth at 1%-2% annually, the new growth should bolster the industry's financial measures, even given some regulatory lag.

Chart 2

U.S. electricity demand



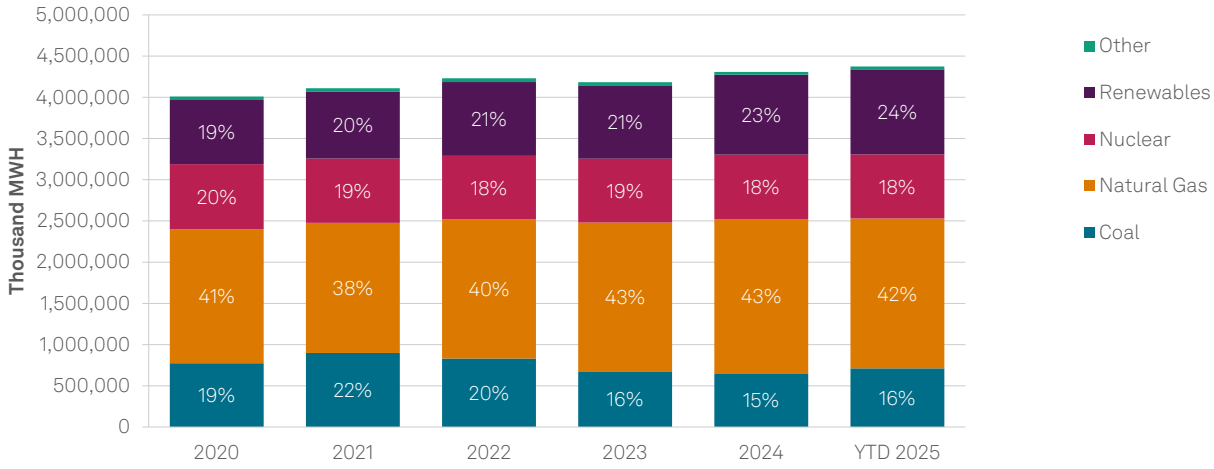
Source: CAGR--Compound annual growth rate. Data as of Nov. 30, 2025. Sources: U.S. Energy Information Administration (historical and 1.1% CAGR) and S&P Global Commodity Insights (1.7% CAGR).

In addition, customer bills are likely to benefit from this data center expansion, as the industry can distribute its fixed costs over a larger customer base. We view these developments as positive for the industry's credit quality but sustaining credit quality hinges on effectively managing the risks associated with this growth. These risks include: construction risks, data center service agreement risks, the expiration of the data center service agreements, the risk of bill increases for existing customers, and concentration risk. Managing these risks is central for the industry to maintain credit quality.

Capital spending is exploding. The industry's capital spending over the past decade has been growing at a compound annual growth rate at about 6%. The industry's spending was mostly focused on safety, reliability, and energy transition, successfully reducing its greenhouse gas emissions by about 27%.

Chart 3

GHG emission | Economic sector (2010-2022)

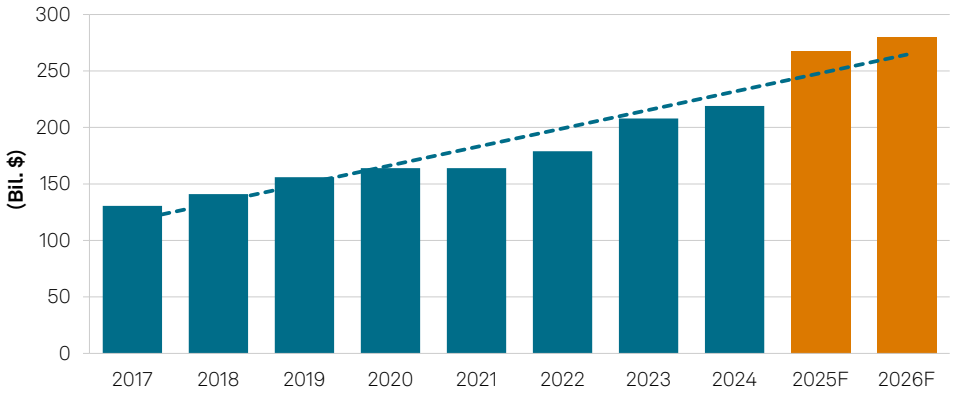


Data as of Oct. 31, 2025. Source: U.S. Environmental Protection Agency.

To accomplish its goals, the industry has transformed its generation, increasing its reliance on renewables (about 25% of total generation) and decreasing its reliance on coal fired generation (about 15% of total generation).

Chart 4

U.S. generation mix

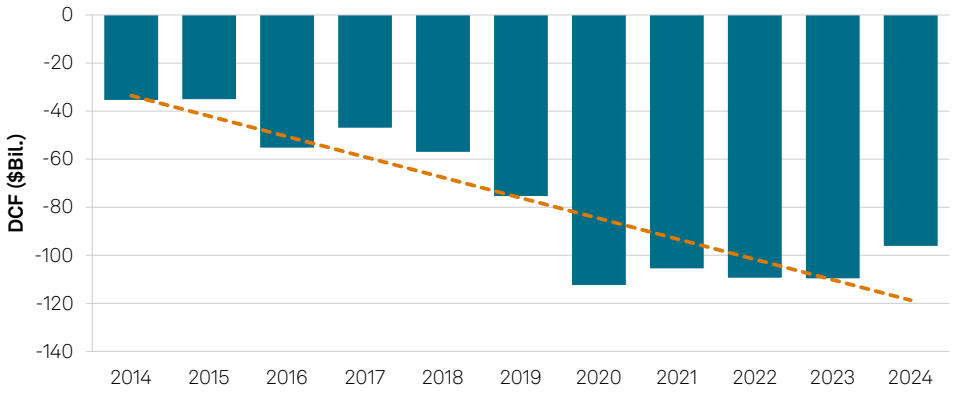


Data as of Oct. 31, 2025. Source: U.S. Energy Information Administration.

However, because of data center growth, we expect IOU capital spending will grow at unprecedented levels during the next decade. To maintain credit quality over this timeframe, the industry must fund these projects in a credit-supportive manner.

Chart 5

Rising capital spending

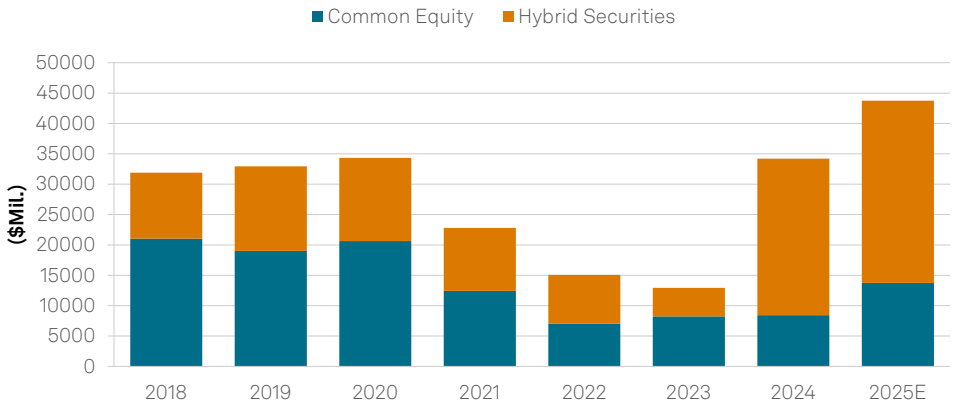


F--Forecast. Data as of Oct. 31, 2025. Sources: S&P Global Ratings and S&P Market Intelligence.

Robust cash flow deficits. The IOU industry consistently operates with high cash flow deficits at about $100 billion annually. The modest improvement is 2024 is mostly attributable to the transferability of tax credit that we expect will continue to increase through 2030.

Chart 6

High cash flow deficits

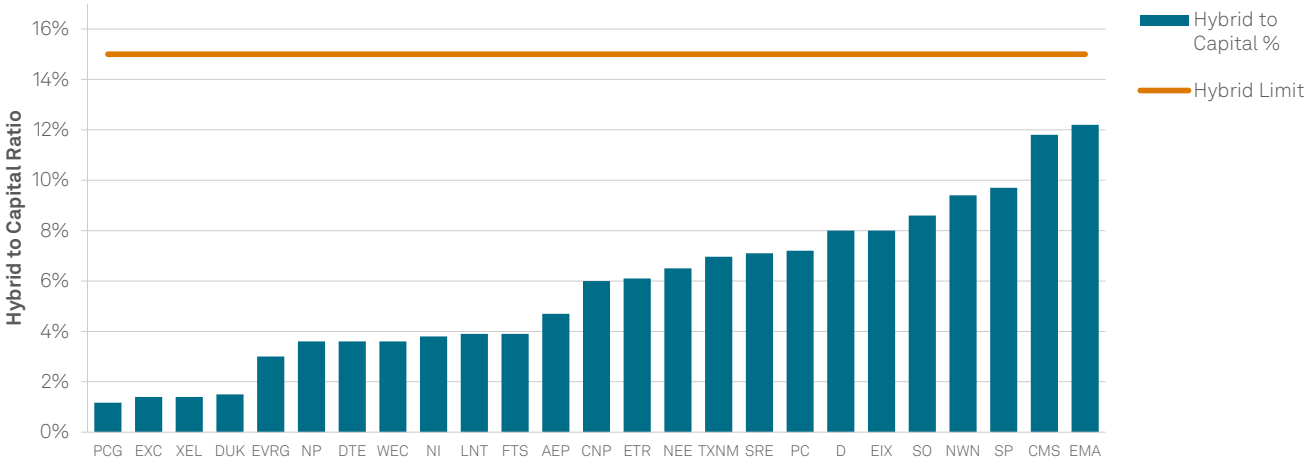


DCF – Discretionary cash flows. Data as of Oct. 31, 2025. Sources: S&P Global Ratings and S&P Market Intelligence.

Since 2020, the industry's funds from operations to debt has weakened by more than 150 basis points primarily because the industry's robust cash flow deficits that were not sufficiently funded in a credit-supportive manner. However, the industry's financial performance began stabilizing in 2024, reflecting record level of hybrid security issuance. In 2025 both the issuance of hybrid securities and common equity were materially higher than in 2024, increasing by about 16% and 90%, respectively.

Chart 7

Hybrids and common equity issuance



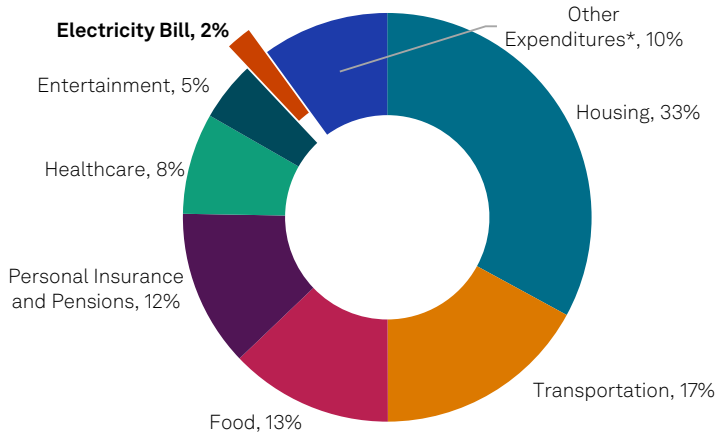
Data as of November 30, 2025. Source: S&P Market Intelligence.

Under our base case, we expect hybrid securities will remain key component for funding the industry's cash flow deficits over the next three years. S&P Global Ratings assesses equity content for hybrid securities so far as the securities account for less than 15% of total capitalization. Currently, most of the industry has considerable capacity, and as such we expect hybrid securities will continue to be heavily used over the near-term

Chart 8

Hybrid to total capital

Data as of Oct. 31, 2025. Source: S&P Global Ratings.
PCG—PG&E Corp. EXC—Exelon Corp. XEL—Xcel Energy Inc. DUK—Duke Energy Corp. EVRG—Evergy Inc. NP—Nevada Power Co. DTE—DTE Energy Co. WEC—WEC Energy Group Inc. LNT—Alliant Energy Corp. FTS—Fortis Inc. NI—NiSource Inc. AEP—American Electric Power Co. Inc. CNP—CenterPoint Energy. ETR—Entergy Corp. Inc. NEE—NextEra Energy Capital Holdings Inc. TXNM—TXNM Energy Inc. SRE—Sempra. PC—PacifiCorp. D—Dominion Energy Inc. EIX—Edison International. SO—The Southern Co. NWN—Northwest Natural Holding Co. SP—Sierra Pacific Power Co. CMS—CMS Energy Corp. EMA—EUSHI Finance Inc.



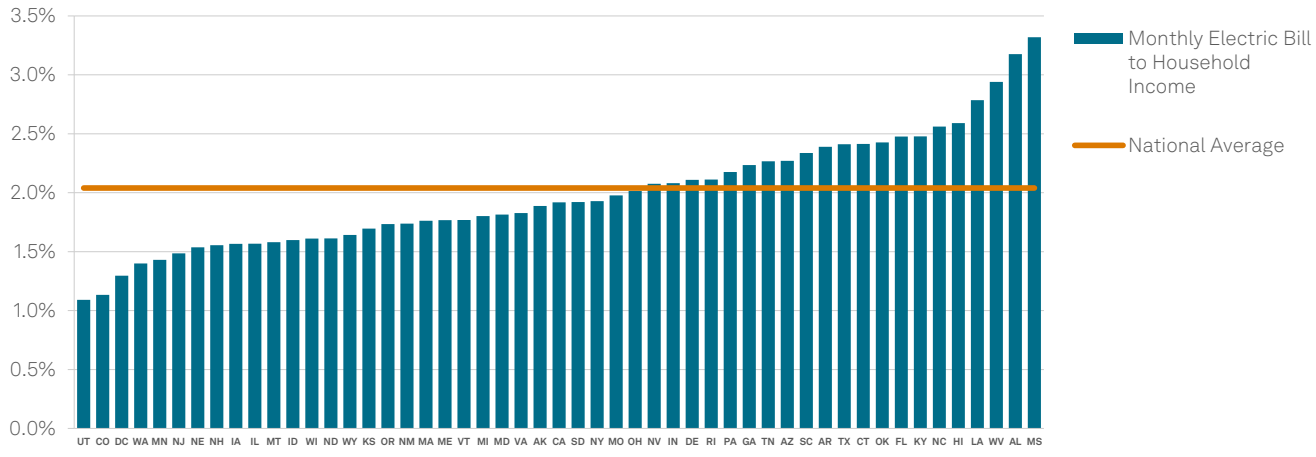
Managing the customer bill. One of the key credit risks for the IOU industry is to ensure that data centers are responsible for their share of electricity consumption. If existing customers subsidize the new data center customers, the existing customer bill will increase, which could strain a

utility's ability to manage regulatory risk. While the electricity bill for existing customers will nevertheless rise because of rising costs, the bill must not rise solely due to data center growth.

We assess the customer electric bill based on its relative size compared to total household income and based on the annual increase of the electric bill. Currently, on average, the U.S. electric bill only represents about 2% of household income.

Chart 9

2023 U.S. customer expenditures

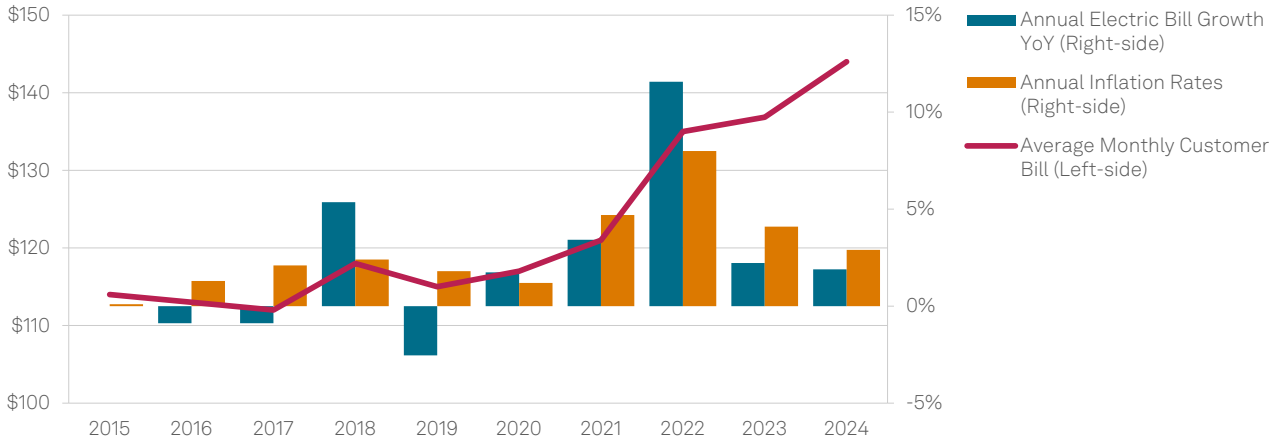


Sources: U.S. Energy Information Administration and U.S. Bureau of Labor Statistics.
*Other expenditures include alcoholic beverages, apparel and services, personal care products and services, reading, education, tobacco products and smoking supplies, cash contributions, and miscellaneous.

While the U.S. average is an important indicator, we assess each individual utility on a more granular basis, such as the electric bill's percentage of household income in each city, state, or regulatory jurisdiction.

Chart 10

Electric customer bill affordability by state



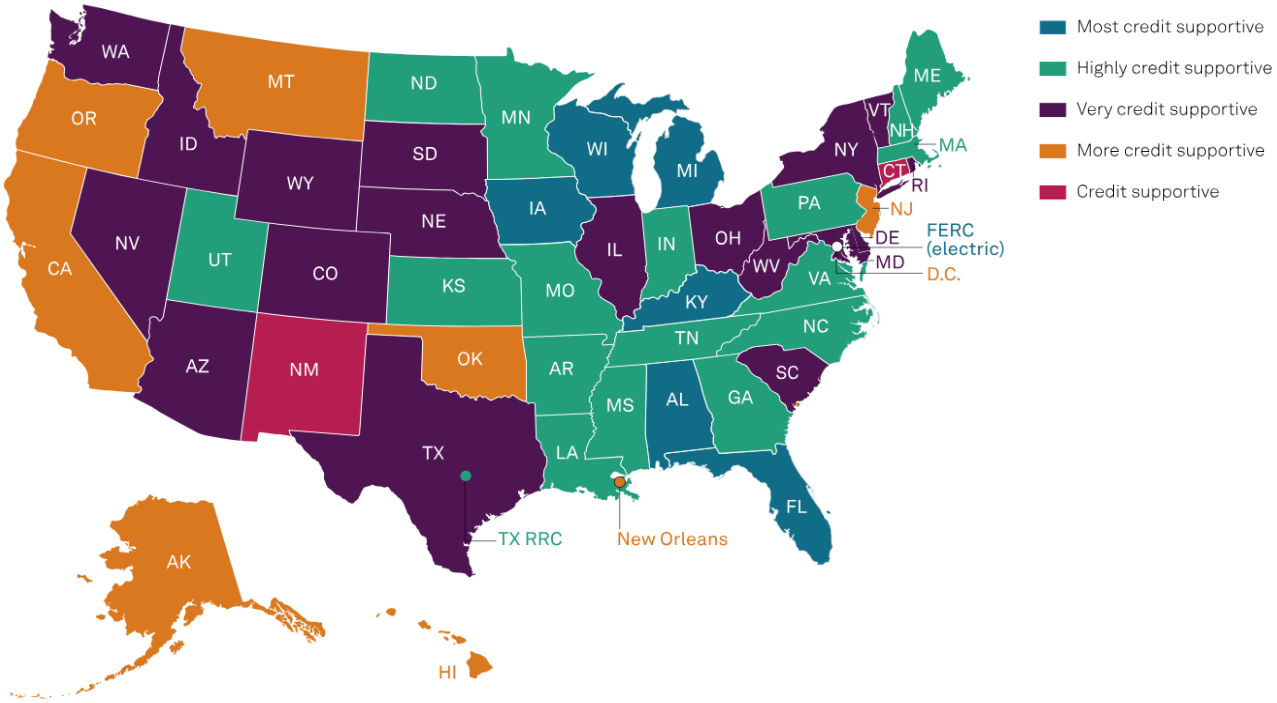
Data as of Oct. 31, 2025. Sources: Federal Reserve Bank of St. Louis and Energy Information Administration.

While states such as Utah, Colorado, Washington, Minnesota, and New Jersey, may have a relative lower electric bill, it is equally important for utilities, even in these states, to manage the

annual electric bill increases at or below inflation. For example, in 2022 electric bills increased by nearly 12%, driven by high commodity costs. Had these higher costs persisted, it likely would have resulted in higher risk for the entire IOU industry.

Chart 11

Inflation outpaces electric bill growth

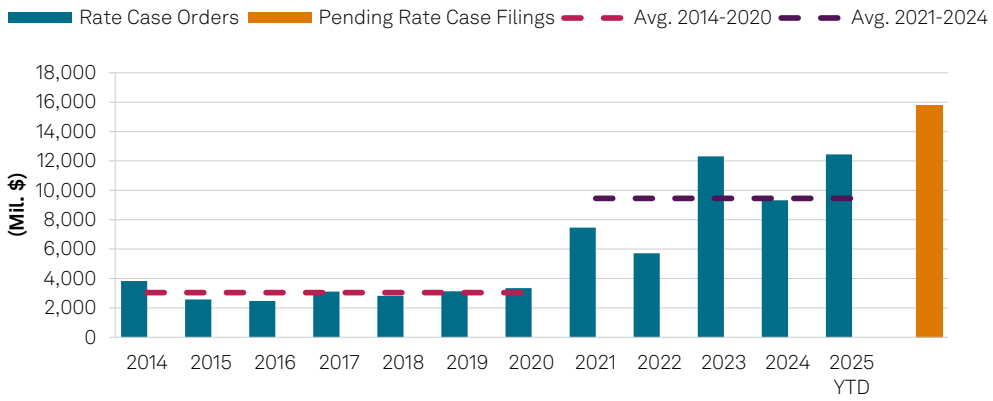


Data as of Oct. 31, 2025. Sources: U.S. Energy Information Administration and U.S. Bureau of Labor Statistics.
For 2015 to 2024, annual residential electric bills have increased at a 2.5% CAGR compared to a 2.8% CAGR for inflation.

Effective management of regulatory risk is critical for maintaining credit quality. We assess all of North America's regulatory jurisdictions as credit supportive or better, reflecting the industry's generally stable and predictable cash flows. Over the past decade much of the industry has implemented regulatory mechanisms such as decoupling, interim rates, capital trackers, formula rate plans, forward test years, muti-year rate case filings, and regulatory riders to significantly improve cash flow stability while minimizing regulatory lag.

Chart 12

U.S. regulatory jurisdiction assessments



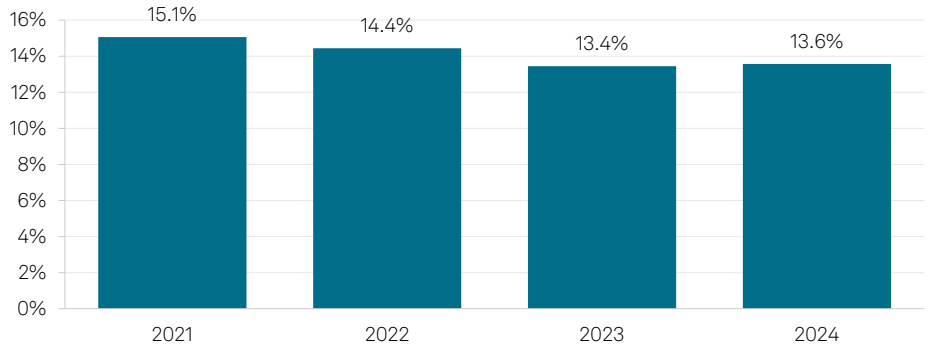
Data as of Nov. 4, 2025. Source: S&P Global Ratings.

Recently we revised upward our assessments for South Carolina, Missouri, and Arizona. Our improved assessment of South Carolina reflects the May 2025 House Bill 3309 that was signed into law, allowing electric utilities to request annual rate adjustments. In Missouri, the improvement reflected the April 2025 Senate Bill 4 that was signed into law, allowing natural gas, water, and sewer utilities to file rate cases using a future test period, which we expect will reduce regulatory lag. In Arizona, the improvement reflected constructive rate case orders and the approval of alternative regulation that may lead to formula rate plans that we believe would meaningfully reduce the regulatory lag.

Because of the industry's robust capital spending, its revenue requirement authorized in its rate case orders have more than doubled over the past decade, increasing the importance for the IOU industry to maintain and effectively manage regulatory risk.

Chart 13

Rate case orders reflect higher ROEs, inflation, and robust capital spending



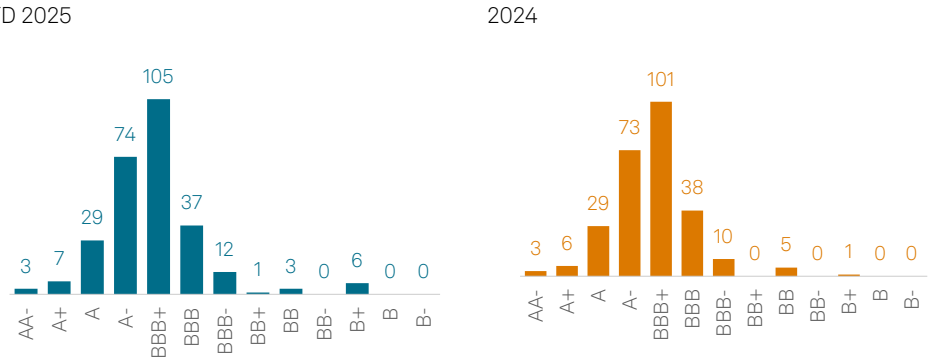
Source: Regulatory Research Associates, a group within S&P Global Commodity Insights. YTD – Year to date and as of Nov. 30, 2025.

Credit metrics and financial policy

The industry's funds from operations (FFO) to debt was about 15% in 2021 and has gradually fallen to about 13.5%, primarily reflecting rising leverage. However, given the robust hybrid securities issued in 2024 and 2025 and the rising common equity issued in 2025, we believe financial measures have stabilized, despite the industry's year-over-year record capital spending.

Chart 14

Industry average FFO to debt



FFO– Funds from operations. Data as of Oct. 31, 2025. Sources: S&P Global Ratings and S&P Market Intelligence.

We also expect that the industry will continue to rely heavily on the transferability of tax credits and receive credit-supportive rate case orders that will allow the industry to generally maintain its credit quality despite rising capital spending. The industry's median rating is at 'BBB+' and we expect it will be maintained over the next several years.

Chart 15

Ratings distribution

Data as of November 30, 2025. Source: S&P Global Ratings.

Key risks or opportunities around the baseline

1. Wildfire risk.

Climate change is contributing to more frequent and severe weather events, including making conditions drier for longer periods. When high winds bring dry trees and other combustible materials into contact with power lines it raises the probability of a wildfire, raising the IOUs' wildfire risks and putting downward pressure on credit quality. Just in 2025 we downgraded four IOUs because of insufficient action to address wildfire risks.

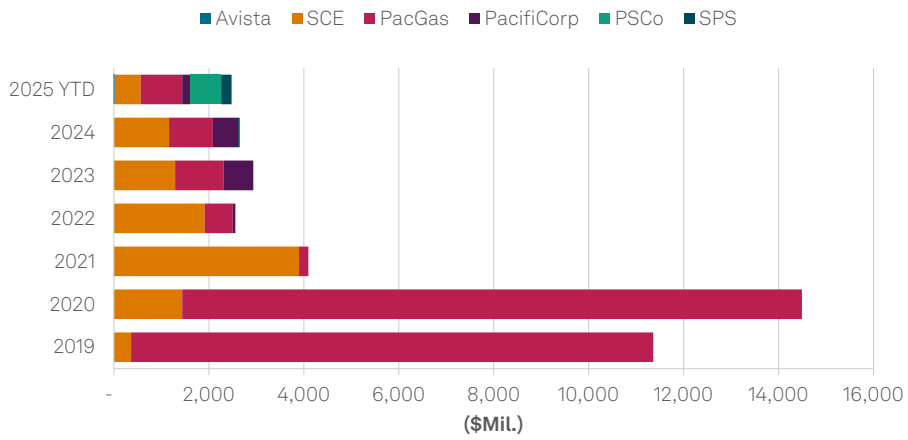
2. Managing transmission and distribution (T&D)-only utilities could become more challenging.

Rising capacity costs are increasing the customer bill, raising the number of customer complaints, and potentially increasing the difficulties for T&D utilities to manage regulatory risk. We see this issue as a growing risk for the T&D utilities over the next several years.

3. Work order stoppages.

We assess the recent offshore wind work stoppages as negative for credit quality. In general, businesses expect consistent practices and steady implementation of rules. When work stoppages are suddenly announced, businesses lose confidence, putting future projects at risk. The industry is spending hundreds of billions of dollars in all type of generation including renewables, gas, and nuclear. The industry needs the confidence that regardless of the generation that is being built, after the project is fully approved, work stoppages will not be issued. These events could significantly increase a project's costs and even potentially derail the entire project.

Wildfire risks were never intended to be to be borne by the IOU industry. While the IOU industry continues to implement mitigation efforts, including system hardening and improving situational awareness, perfection is still not possible. Even if a utility proactively implements public safety power shutoff (PSPS) protocols--the deenergizing of power lines in advance of elevated wildfire conditions--a single severe wildfire could still devastate a utility's credit quality.



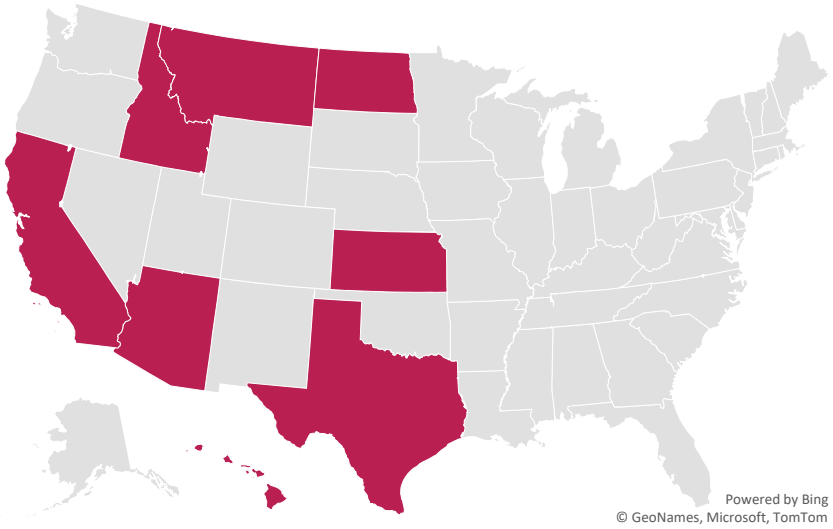
Reducing utility-related wildfire risk to zero is not feasible, due to resource constraints (both human and financial) and uncertainty associated with precisely where and when wildfire hazards may occur. Furthermore, IOUs were never designed to serve as the financial backstop for wildfire

risk. The industry was established about a century ago to ensure reliable service within a regulated monopoly construct. As such, a utility is typically authorized modest returns on equity, generally between 9% and 11%, at a leverage ratio that approximates 50%. At these levels the IOU industry lacks the financial flexibility to absorb large liabilities from increasingly frequent and severe wildfires, and was never equipped to handle such heightened risks. Other industries, such as insurance companies, which are generally characterized by lower financial leverage, are better positioned to take on these risks, having greater capacity to absorb high potential losses from extreme weather.

Wildfire risks remain high for many utilities. About 5% of the industry has already been named in wildfire lawsuits and wildfire related utility settlements continues to grow for the industry.

Chart 16

Lawsuit settlements attributable to wildfires



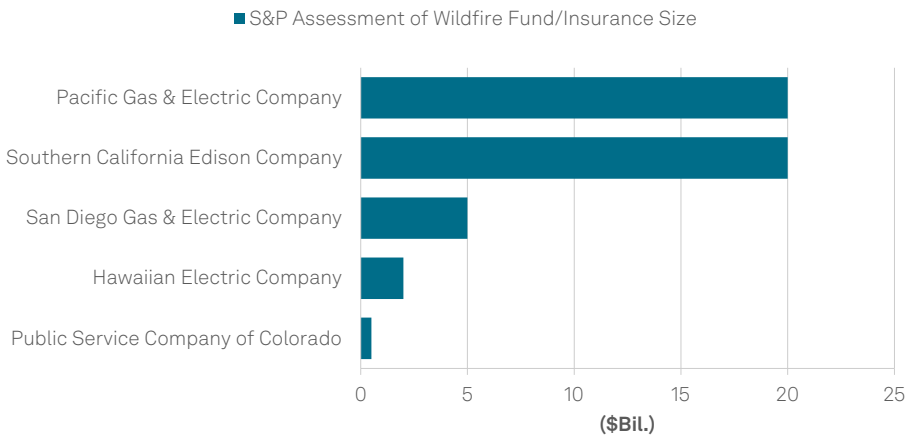
Sources: S&P Global Market Intelligence and issuer company documents, including 10-Ks and 10-Qs.

SCE—Southern California Edison Co. PacGas—Pacific Gas & Electric Co. PSCo—Public Service Co. of Colorado. Avista—Avista Utilities Inc. SPS—Southwestern Public Service Co. YTD—Year to date as of Oct. 31, 2025.

To reduce wildfire exposure many states enacted legislation in 2025. These enactments include approving and expanding a utility's wildfire mitigation plan, establishing a liability cap, authorizing securitization, increasing the funding of a wildfire fund, and allowing for self-insurance.

Chart 17

States that have recently enacted wildfire legislation to reduce risk

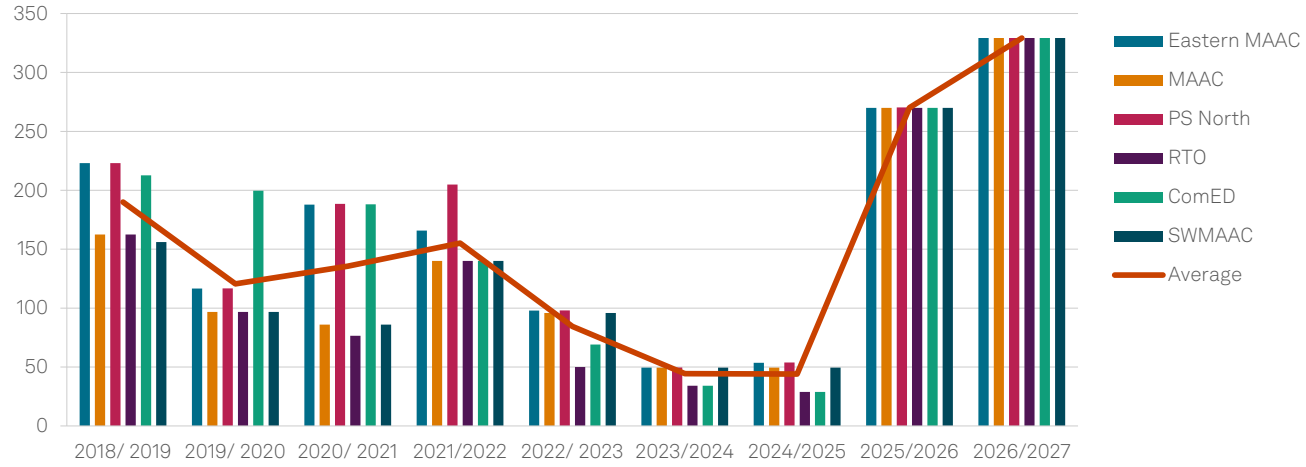


Data as of Oct. 31, 2025. Source: S&P Global Market Intelligence.

However, despite these improvements and much of industry implementing wildfire mitigation plans that include system hardening and investing in situational awareness, there are utilities with higher wildfire exposure than peers. In our view, these utilities based on their geography and topography, the effectiveness of its wildfire mitigation plan, the historical frequency and severity of wildfires within its service territory and projected future changes in wildfire conditions, the financial impact of past events, available insurance coverage, and existing legislative support require a minimum level of insurance and/or the size of a wildfire fund necessary for maintaining credit quality. Accordingly, the level of insurance or the size of a wildfire fund that is necessary for maintaining credit quality will greatly vary based on each utility's unique risk profile.

Chart 18

S&P assessment of wildfire fund/insurance size

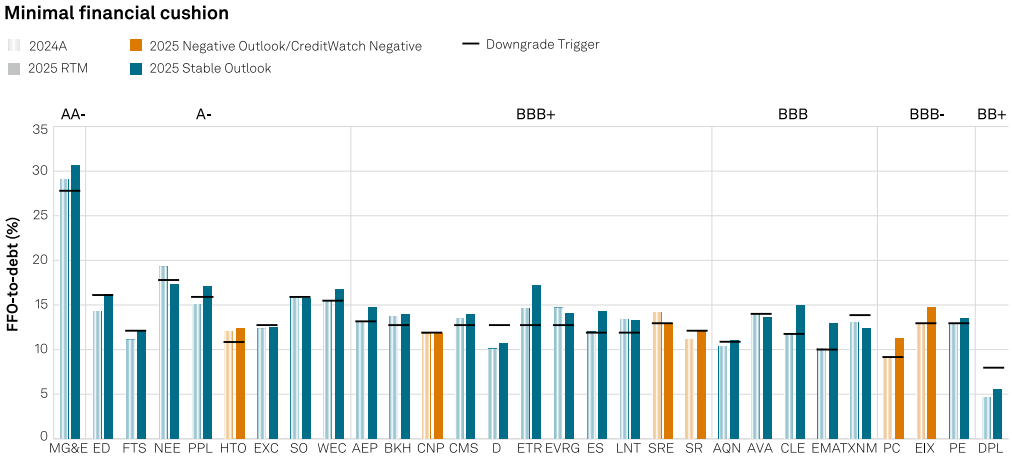


Data as of Oct. 31, 2025. Source: S&P Global Market Intelligence.

T&D rising risks. For T&D utilities, energy and capacity costs are a passed through to the customer bill. The T&D utility has no influence over these costs, but as these costs rise, customer complaints increase, usually affecting a utilities ability to effectively manage regulatory risk.

Chart 19

PJM Interconnection | Capacity Prices Higher For Longer



Data as of Oct. 31, 2025. Source: S&P Global Ratings.

The competitive process for electricity worked well over the past two decades when there was little growth because of conservation. However, as demand for electricity is now increasing and prices are rising, insufficient new generation is being built to lower the cost of electricity. As such, most T&D utilities are experiencing higher capacity and energy costs that are passed to their customers, increasing the overall electric bill. Unfortunately, there does not appear to be any near-term solution to this rising problem and T&D utility customers are likely to be paying an ever-increasing amount for electricity over the next several years. Some states are attempting to solve this problem by trying to pass legislation such that their utilities are allowed to build new regulated generation. However, this potential solution still has considerable challenges and even if enacted would likely take years to fully implement. As such, we expect that rising capacity costs will likely be a growing credit risk for the T&D utilities.

Minimal financial cushion from downgrade threshold. Because about 40% of the IOU industry is actively operating with minimal credit cushion, an unexpected event outside of the base case could result in a negative outlook or even a possible downgrade for many IOU utilities if financial levers are not quickly implemented to restore credit quality. While the industry's cash flows are highly predictable and stable, unexpected events beyond the base case still occur. Utilities with financial cushion from their downgrade threshold are more able to absorb these unexpected events while maintaining credit quality. However, utilities who strategically operate with minimal financial cushion must have financial levers that they can quickly implement, when necessary, to maintain credit quality.

Consumers Energy Company

Fitch Ratings expects Consumers Energy Company's (Consumers Energy) credit metrics to be temporarily pressured during the construction phase of new generation assets and funds from operations (FFO) leverage to average 4.7x through 2028, above Fitch's negative sensitivity. Leverage is higher than previously anticipated due to additional and expedited capital expenditures (capex) for new generation. Fitch expects FFO leverage to improve to 4.5x in 2029 once the assets are in service and included in rate base.

Key Rating Drivers

Capex Pressures Near-term Leverage: Consumers Energy's capex plans have been increased to $24 billion for 2026-2030, a 20% increase from the prior five-year plan. The increase is predominantly driven by new gas generation to replace retiring capacity and meet existing and anticipated load growth. The company expedited investment to manage global supply chain constraints, which will pressure credit metrics since these assets have later in-service dates. FFO leverage is expected to average 4.7x through 2028 before improving to 4.5x in 2029 when these assets are in rate base. Continued regulatory support is key to the company's ability to deleverage.

While not expected currently, restrictive regulatory outcomes, absent other mitigatory actions like credit supportive capital allocation, would keep leverage elevated for longer and could lead to negative rating actions.

Electric Rate Case: An electric rate case was filed in June 2025, with a revenue increase later revised to $423 millionbased on a 10.25% return on equity (ROE) filed later. Late March-2026, the MPSC approved a rate increase of $313 million, based on a 9.9% ROE, and a $24 million distribution deferral. The rate increase also includes the approved significant vegetation management and ERP related spending deferrals.

Load Growth and Potential Capex: Fitch expects Consumers Energy to benefit from increasing energy demand from manufacturing activity and data centers. Fitch estimates retail sales will grow by 2% to 3% annually through 2030. Fitch's current forecasts do not include major data center growth, beyond existing contracts. A further load increase is likely in the outer years given evolving data center activity in the state. While large load growth is cash flow accretive, the addition of large load customers would require additional capex.

Consumers Energy will file an Integrated Resource Plan in 2H26, which could highlight the need for additional investments for system resource adequacy . Continued ability to fund and recover associated investments in a credit-supportive manner would remain key to the ratings. Michigan's energy legislation allows for expanded incentives and improved economics for power purchase agreements (PPAs), providing investment flexibility. Continued ability to monetize tax credits on renewable projects and parent equity could provide further support.

Large Load Tariff: In November 2025, MPSC approved a specialized tariff for customers with new load exceeding 100 MW and set standards for contracts aimed at protecting existing customers against possible subsidization of data center costs. While individual rate design is subject to future rate case decisions, Fitch believes the order alleviates uncertainty in attracting and structuring new data center contracts and provides ratepayer protection in future rate cases. Key elements include minimum 15-year contracts and 80% minimum billing demand. To protect against stranded costs, a four-year termination notice and an exit fee with 50% default collateral, reduced over time is required.

Michigan Regulation Remains Supportive: Fitch believes the regulatory framework remains constructive from a credit perspective, allowing for full pass-through of fuel costs and purchased power, forward-looking test years and a timely 10-month rate case resolution. Furthermore, Consumers Energy's authorized ROE of 9.8% for gas and 9.9% for electric compares favorably with industry averages. Fitch expects continued annual rate case filings. In June 2025, MPSC allowed a storm deferral account for recovery of costs incurred during the year, a positive for the storm-prone service territory.

Other Rate Case Activity: In December 2024, Consumers Energy filed a gas rate case with requested revenue increase later revised to $208 million , with a 10.25% return on equity (ROE) and a test year ending in October 2026. In September 2025, The Michigan Public Service Commission (MPSC) delivered a largely constructive decision authorizing a $158 million revenue increase, with a 9.8% allowed ROE, 10bps lower than previously authorized but still constructive and in line with a peer utility. In December 2025, Consumers Energy filed a gas rate case requesting a $240 million increase, with a 10.25% ROE. A decision is expected in 3Q26.

Coal Retirement Delayed: Consumers Energy's 1.4GW Campbell coal plants, scheduled to retire in May 2025, have been ordered to continue operations under various 90-day emergency orders by the Department of Energy. FERC's August 2025 decision is largely favorable as it allocates costs across MISO, which could alleviate increasing affordability concerns for the utility's customers in Michigan. However, while deferral has been allowed, FERC has not yet approved specific tariffs for recovery of costs. Fitch expects a constructive decision but there is no timeline for an outcome. The mechanism and timing of recovery would be key to prevent further pressure on leverage.

Parent/Subsidiary Linkage: There is parent-subsidiary rating linkage between CMS Energy and Consumers Energy. Fitch believes CMS Energy's consolidated credit profile is weaker than Consumers Energy's standalone credit profile (SCP). Emphasis is placed on the latter's status as a regulated entity. Legal ring-fencing is considered porous, given the general protections afforded by economic regulation. Access and control are also evaluated as porous. CMS Energy centrally manages the treasury function; however, both entities issue their own long-term debt. Fitch will limit the difference between the Long-Term IDRs of CMS Energy and Consumers Energy to two notches.

Rating Sensitivities

Factors that Could, Individually or Collectively, Lead to Negative Rating Action/Downgrade

- FFO leverage expected to exceed 4.5x on a sustained basis;
- A material deterioration of the Michigan regulatory environment;
- A downgrade to CMS Energy's Long-Term IDR.

Factors that Could, Individually or Collectively, Lead to Positive Rating Action/Upgrade

- A positive rating action on Consumers Energy would also require an equally positive rating action on its parent, CMS, under Fitch's Parent and Subsidiary Linkage Criteria;
- FFO leverage expected to be less than 3.5x on a sustained basis.

Issuer Profile

CMS Energy is an energy holding company whose principal operating subsidiary is Consumers Energy Company, a regulated integrated electric and natural gas distribution utility in Michigan.

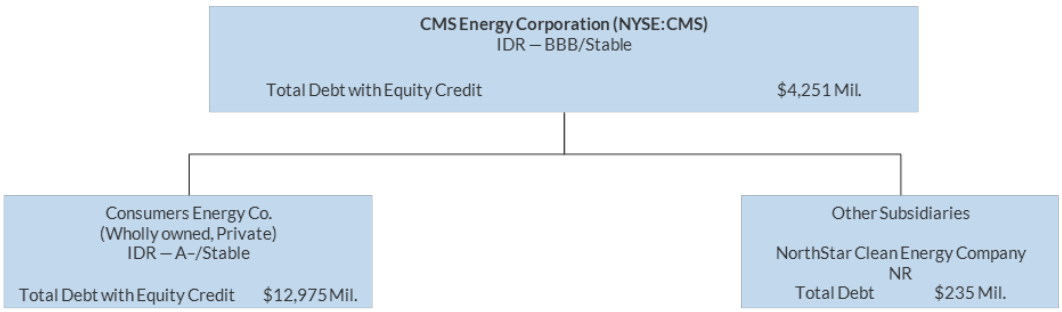
Corporate Rating Tool Inputs and Scores

Fitch Scored the Issuer as follows, Using our Corporate Rating Tool (CRT) to Produce the STANDALONE Credit Profile (SCP):

- Business and financial profile factors (assessment, relative importance): Management (bbb, Lower), Sector Characteristics (a-, Higher), Market and Competitive Positioning (a-, Moderate), Diversification and Asset Quality (a, Moderate), Company Operational Characteristics (a-, Moderate), Profitability (bbb, Lower), Financial Structure (bbb+, Higher), and Financial Flexibility (a-, Moderate).
- The quantitative financial subfactors are based on custom CRT financial period parameters: 50% weight for the forecast year 2029 and 50% for the forecast year 2030.
- The Governance assessment of 'Good' results in no adjustment.
- The Operating Environment assessment of 'aa-' results in no adjustment.
- The SCP is 'a-'.



To Derive the IDR:

- Application of Fitch's Parent Subsidiary Linkage Considerations Rating Criteria results in a consolidated profile+2 approach.

Factor/Subfactor	Score/Outlook/Importance Description
Management	bbb/stable/lower

Exclusively for the use of Simar Jolly at Fitch Group, Inc.. Downloaded: 15-Apr-2026

Factor/Subfactor	Score/Outlook/Importance	Description
Risk tolerance	bbb/moderate	Management committed to conservative risk profile. Only modest/short-term deviations from strategy allowed.
Management strategy	bbb/moderate	Good track record of implementing coherent and stable strategy.
Management quality	bbb/moderate	Experienced management or proven track record. Management composition is broadly stable. No evidence of material risk management weaknesses.

Factor/Subfactor	Score/Outlook/Importance	Description
Sector characteristics	a-/stable/higher	
Regulatory environment	a/moderate	Track record of transparent and predictable regulation.
Mechanisms supportive of creditworthiness	a-/moderate	Effective regulatory ring-fencing.
Cost and investment recovery	a-/moderate	Minimal lag to recover capital and operating costs.
Trend in authorized roes	a/moderate	Above-average authorized ROE.
Market structure	a-/moderate	Well-established market structure with complete transparency in price-setting mechanisms.

Factor/Subfactor	Score/Outlook/Importance	Description
Market and competitive positioning	a-/stable/moderate	
Underlying supply mix	a-/moderate	Extremely low cost and flexible supply.
Consumption growth potential	a/moderate	Economically vibrant market or service territory with strong sales growth.
Supply demand dynamics	a-/moderate	Beneficial outlook for prices/rates.

Factor/Subfactor	Score/Outlook/Importance	Description
Diversification and asset quality	a/stable/moderate	
Asset diversification	a/moderate	High-quality and/or large-scale diversified assets.
Geographic diversification	a/moderate	Favorable location or high geographic diversity.
Customer diversification	a+/moderate	Favorable customer mix.

Factor/Subfactor	Score/Outlook/Importance	Description
Company operational characteristics	a-/stable/moderate	
Operational reliability	a/moderate	Track record of reliable, low-cost operations.
Capex intensity	bbb+/moderate	Moderate reinvestments requirements in established technologies.
Cost competitiveness	a+/moderate	Complete pass-through of commodity costs.
Exposure to weather risk	bbb+/moderate	Resilient asset base, manageable exposure to wildfire, hurricane or other weather-related natural disasters supported by effective legal/regulatory constructs.
Environmental exposure	bbb+/moderate	Limited or manageable exposure to environmental regulations.

Factor/Subfactor	Score/Outlook/Importance	Description
Profitability	bbb/stable/lower	
Free cash flow	bb+/moderate	Structurally negative FCF across the investment cycle.
Volatility of profitability	a/moderate	Higher stability and predictability of profits relative to utility peers.

Factor/Subfactor	Score/Outlook/Importance	Description
Financial structure	bbb+/stable/higher	
Ebitda leverage (x)	bb/lower	4.75
Ffo leverage (x)	bbb+/higher	5.0

Factor/Subfactor	Score/Outlook/Importance	Description
Financial flexibility	a-/stable/moderate	

Exclusively for the use of Simar Jolly at Fitch Group, Inc.. Downloaded: 15-Apr-2026

Factor/Subfactor	Score/Outlook/Importance	Description
Financial access	a/moderate	Unequivocal access through the cycle to: Local financial markets with FMD of 'a' and above, or International financial markets with (primarily) FMD of 'a' and above. If the issuer is an infrequent/ untested issuer, the issuer must be very likely to be able to freely access these markets through the cycle.
Liquidity	bbb+/moderate	One-year liquidity ratio above 1.25x. Well-spread maturity schedule of debt but funding may be less diversified.
Ffo interest coverage (x)	bbb+/moderate	4.5

Factor/Subfactor	Score/Outlook/Importance	Description
Governance	Good/—/—	
Ownership and decision-making concentration	Good/moderate	No concentration in ownership and/or decision-making. Presence of effective checks and balances. Key person risk is immaterial. Decision-making is defensible from a governance perspective.
Group structure transparency and contagion risk	Good/moderate	Transparent group structure. No contagion risks.
Information quality/transparency	Good/moderate	Timely and good provision of financial and operational information, facilitating the analysis of the credit profile.

Parent Subsidiary Linkage Analysis

Key Risk Factors and Notching Approach

Parent	CMS Energy Corporation
Parent LT IDR	BBB
Subsidiary	Consumers Energy Company
Subsidiary LT IDR	A-
Path	Stronger Subsidiary
Legal ring-fencing	Porous
Access and control	Porous
Notching matrix outcome	Parent consolidated profile+2
Override applied	No
Notching approach	—

LT IDR – Long-Term Issuer Default Rating
Source: Fitch Ratings

Stronger Subsidiary Maximum Rating Matrix

Access and control	Open	Porous	Insulated
With open ring-fencing	Parent consolidated profile	Parent consolidated profile+1	Parent consolidated profile+2[b]
With porous ring-fencing	Parent consolidated profile+1	Parent consolidated profile+2[b]	Parent consolidated profile+2[b]
With insulated ring-fencing	[a]	Standalone	Standalone

[a]It is unlikely that considerations for "insulated" legal ring-fencing would coexist with the conditions outlined under "open" for access and control. It is more likely that other factors relevant to legal ring-fencing or access and control, but not within this table, would move either one, or both, of the individual Linkage Factor Assessments (LFAs) to a "porous" level that would lead to a Parent consolidated+1, Parent consolidated+2 or standalone outcome. [b]Notching is capped at the subsidiary's Standalone Credit Profile.
Source: Fitch Ratings

Fitch's Key Rating-Case Assumptions

- Constructive regulatory environment in Michigan with authorized ROEs for both electric and gas utility operations in line with recent rate cases;
- Gas rate case decision in 3Q26, constructive in line with other recent rate cases;
- Annual rate case filings;
- Largely flat annual natural gas sales growth;
- Electric sales growth ranging 2%-3% over 2026-2030;
- Total utility capex in line with management's assumptions;
- Normal weather;
- Tax credit transfers of $1.3 billion over 2026-2030 for CMS

Exclusively for the use of Simar Jolly at Fitch Group, Inc.. Downloaded: 15-Apr-2026

Liquidity and Debt Structure

Consumers Energy's $500 million commercial paper (CP) program is supported by its $1.1 billion RCF maturing November 2030, almost fully undrawn as of Dec. 31, 2025. It also had a separate $300 million RCF, fully available and $10 million available out of its $350 million LC facilities.

Consumers Energy had $25 million in unrestricted cash at Dec. 31, 2025. Consumers Energy has bond maturities of $115 million in 2026, $135 million in 2027, $725 million in 2028 and $1,150 million in 2029.

Fitch's views these maturities as manageable given the history of successful refinancing and expected continued access to capital markets. As of Dec. 31, 2025, Consumers Energy was compliant with its consolidated debt/capitalization covenants of 65%.

How to Interpret the Forecast Presented

The forecast presented above is based on Fitch Ratings' internally produced, conservative rating case forecast. It does not represent the forecast of the rated issuer. The forecast set out above is only one component used by Fitch Ratings to assign a rating or determine a rating outlook, and the information in the forecast reflects material but not exhaustive elements of Fitch Ratings' rating assumptions for the issuer's financial performance. As such, it cannot be used to establish a rating, and it should not be relied on for that purpose. Fitch Ratings' forecasts are constructed using a proprietary internal forecasting tool, which employs Fitch Ratings' own assumptions on operating and financial performance that may not reflect the assumptions that you would make. Fitch Ratings' own definitions of financial terms such as EBITDA, debt or free cash flow may differ from your own such definitions. Fitch Ratings may be granted access, from time to time, to confidential information on certain elements of the issuer's forward planning. Certain elements of such information may be omitted from this forecast, even where they are included in Fitch Ratings' own internal deliberations, where Fitch Ratings, at its sole discretion, considers the data may be potentially sensitive in a commercial, legal or regulatory context. The forecast (as with the entirety of this report) is produced strictly subject to the disclaimers set out at the end of this report. Fitch Ratings may update the forecast in future reports but assumes no responsibility to do so. Original financial statement data for historical periods is processed by Fitch Solutions on behalf of Fitch Ratings. Key financial adjustments and all financial forecasts credited to Fitch Ratings are generated by rating agency staff.

Peer Analysis

Consumers Energy's credit profile is comparable to peers such as DTE Electric Company (DTEE; A-/Stable), Northern States Power Company-Minnesota (NSP-Minnesota; A-/Stable) and Northern States Power Company-Wisconsin (NSP-Wisconsin; A-/Stable), and Public Service Company of Colorado (A-/Stable). All four are regulated utilities with single state operations albeit in generally constructive environments.

Fitch forecasts Consumer Energy's FFO leverage to remain elevated, averaging 4.7x near term, the improving to 4.5x over 2029-2030. This is better than the average 4.6x through 2028 projected for the pure gas utility, DTE Gas Company (BBB+/Stable). Financial metrics at other electric peers are stronger, with leverage forecast to average 3.8x through 2028 at DTEE, 4.0x-4.4x for NSP-Wisconsin, and 3.5x-4.0x for NSP-Minnesota through 2029, making them well positioned for their ratings.

Climate Vulnerability Considerations

Fitch uses Climate Vulnerability Signals (Climate.VS) as a screening tool to identify sectors and Fitch-rated issuers that are potentially most exposed to climate-related risks. If Fitch identifies an entity as higher risk (i.e. its Climate.VS in 2035 is 50 or higher), the entity receives additional analysis and consideration in rating reviews. Climate.VS range from 0 (lowest risk) to 100 (highest risk). For more information on Climate.VS, see Fitch's Corporate Rating Criteria. For more detailed, sector-specific information on how Fitch perceives climate-related transition risks, see Climate Vulnerability Signals for Non-Financial Corporate Sectors.

The Climate.VS for 2035 is 42 out of 100. This reflects a VSp of 22 and a VSt of 40.

Climate Vulnerability Signals

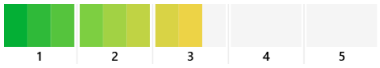
ESG Considerations

The highest level of ESG credit relevance is a score of '3', unless otherwise disclosed in this section. A score of '3' means ESG issues are credit-neutral or have only a minimal credit impact on the entity, either due to their nature or the way in which they are being managed by the entity. Fitch's ESG Relevance Scores are not inputs in the rating process; they are an observation on the relevance and materiality of ESG factors in the rating decision. For more information on Fitch's ESG Relevance Scores, visit https://www.fitchratings.com/topics/esg/products#esg-relevance-scores.



The highest level of ESG credit relevance is a score of '3', unless otherwise disclosed in this section. Social Relevance Scores

General issues	Score	Sector-specific issues	Reference
Human Rights, Community Relations, Access & Affordability	3	Product affordability and access	Company Operational Characteristics; Sector Characteristics; Profitability; Financial Structure
Customer Welfare - Fair Messaging, Privacy & Data Security	3	Quality and safety of products and services; data security	Sector Characteristics; Profitability
Labor Relations & Practices	3	Impact of labor negotiations and employee (dis)satisfaction	Company Operational Characteristics; Profitability
Employee Wellbeing	2	Worker safety and accident prevention	Profitability; Company Operational Characteristics
Exposure to Social Impacts	3	Social resistance to major projects that leads to delays and cost increases	Company Operational Characteristics; Profitability

Governance Relevance Scores

General issues	Score	Sector-specific issues	Reference
Management Strategy	3	Strategy development and implementation	Management; Governance
Governance Structure	3	Board independence and effectiveness; ownership concentration	Governance
Group Structure	3	Complexity, transparency and related-party transactions	Governance
Financial Transparency	3	Quality and timing of financial disclosure	Governance

ESG Scoring

ESG relevance scores range from '1' to '5' based on a 15-level colour gradation. Red (5) is most relevant to the credit rating and green (1) is least relevant.

The Environmental (E), Social (S) and Governance (G) tables break out the general and the sector-specific issues that are most relevant to each industry group. Relevance scores are assigned to each sector-specific issue, signalling the credit relevance of the sector-specific issues to an issuer's overall credit rating. The Reference column highlights the factor(s) within which the corresponding ESG issues are captured in Fitch's credit analysis.

The panels underneath the relevance scores tables are visualisations of the frequency of occurrence of the highest ESG relevance scores across the combined E, S and G categories. The Score columns summarise rating relevance and impact to credit from ESG issues. The column on the far left identifies any ESG relevance sub-factor issues that are drivers or potential drivers of an issuer's credit rating (corresponding with scores of '3', '4' or '5'). All scores of '4' and '5' are assumed to reflect a negative impact unless indicated with a '+' sign for positive impact.

Classification of ESG issues has been developed from Fitch's sector ratings criteria. The general and sector-specific issues draw on the classification standards published by the UN Principles for Responsible Investing, the Sustainability Accounting Standards Board and the World Bank.

Credit-Relevant ESG Scale

5 Highly relevant, a key rating driver that has a significant impact on the rating on an individual basis. Equivalent to 'Higher' relative importance within the Navigator.

4 Relevant to rating, not a key rating driver but has an impact on the rating in combination with other factors. Equivalent to 'Moderate' relative importance within the Navigator.

3 Minimally relevant to rating, either very low impact or actively managed in a way that results in no impact on the entity rating. Equivalent to 'Lower' relative importance within the Navigator.

2 Irrelevant to the entity rating but relevant to the sector.

1 Irrelevant to the entity rating and irrelevant to the sector.

SOLICITATION & PARTICIPATION STATUS

For information on the solicitation status of the ratings included within this report, please refer to the solicitation status shown in the relevant entity's summary page of the Fitch Ratings website.

For information on the participation status in the rating process of an issuer listed in this report, please refer to the most recent rating action commentary for the relevant issuer, available on the Fitch Ratings website.

DISCLAIMER & DISCLOSURES

All Fitch Ratings (Fitch) credit ratings are subject to certain limitations and disclaimers. Please read these limitations and disclaimers by following this link: https://www.fitchratings.com/understandingcreditratings. In addition, the following https://www.fitchratings.com/rating-definitions-document details Fitch's rating definitions for each rating scale and rating categories, including definitions relating to default. Published ratings, criteria, and methodologies are available from this site at all times. Fitch's code of conduct, confidentiality, conflicts of interest, affiliate firewall, compliance, and other relevant policies and procedures are also available from the Code of Conduct section of this site. Directors and shareholders' relevant interests are available at https://www.fitchratings.com/site/regulatory. Fitch may have provided another permissible or ancillary service to the rated entity or its related third parties. Details of permissible or ancillary service(s) for which the lead analyst is based in an ESMA- or FCA-registered Fitch Ratings company (or branch of such a company) can be found on the entity summary page for this issuer on the Fitch Ratings website.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third- party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed. Fitch Ratings makes routine, commonly-accepted adjustments to reported financial data in accordance with the relevant criteria and/or industry standards to provide financial metric consistency for entities in the same sector or asset class.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US$1,000 to US$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US$10,000 to US$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.

Fitch Ratings, Inc. is registered with the U.S. Securities and Exchange Commission as a Nationally Recognized Statistical Rating Organization (the "NRSRO"). While certain of the NRSRO's credit rating subsidiaries are listed on Item 3 of Form NRSRO and as such are authorized to issue credit ratings on behalf of the NRSRO (see https://www.fitchratings.com/site/regulatory), other credit rating subsidiaries are not listed on Form NRSRO (the "non-NRSROs") and therefore credit ratings issued by those subsidiaries are not issued on behalf of the NRSRO. However, non-NRSRO personnel may participate in determining credit ratings issued by or on behalf of the NRSRO.
