Subject: [Docket U-20162] Reject DTE's Distributed Generation Rider 18
Date: Thursday, December 6, 2018 3:32:53 PM

Dear Michigan Public Service Commissioners,

As a DTE customer, I respectfully urge you to reject the DTE's proposal (Distributed Generation Rider 18), which will adversely impact me, my community, and the state of Michigan.

Rooftop solar gives families like mine a way to save money with clean energy and take control of my own electricity needs. DTE's punitive proposal to replace net metering with an additional, unjust fee, and by lowering our export credit rate, is unfair and unjust, and harmful to DTE customers like me.

Solar and other forms of clean, distributed energy play a critical role in Michigan's path to a reliable, resilient and affordable energy future. We ask that you reject DTE's attempt to slow down rooftop solar with fees that put it out of reach for average customers and instead make way for a 21st century clean energy economy.

Lawmakers in Michigan charged you with developing a fair deal for rooftop customers. DTE's proposal is self-serving, unjustified and would have significant negative consequences for individuals and for the broader economy. Please stand up for solar in Michigan.

Sincerely,

Jeff Klein

Dear Michigan Public Service Commissioners,

As a DTE customer, I respectfully urge you to reject the DTE's proposal (Distributed Generation Rider 18), which will adversely impact me, my community, and the state of Michigan.

Our family has invested in rooftop solar and HPEV car to reduce global carbon dioxide emissions and protect the planet. Rooftop solar gives families like mine a way to save money with clean energy and take control of my own electricity needs. DTE's punitive proposal to replace net metering with an additional, unjust fee, and by lowering our export credit rate, is unfair and unjust, harmful to the environment, and harmful to DTE customers like me. It also harms all the small businesses and employees that install rooftop solar. Schools and NGO's that operate on limited funds who look to reducing their electric bill while improving the environment will not proceed because of DTE disintcentives.

Solar and other forms of clean, distributed energy play a critical role in Michigan's path to a reliable, resilient and affordable energy future. We ask that you reject DTE's attempt to slow down rooftop solar with fees that put it out of reach for average customers and instead make way for a 21st century clean energy economy.

Lawmakers in Michigan charged you with developing a fair deal for rooftop customers. DTE's proposal is self-serving, unjustified and would have significant negative consequences for individuals and for the broader economy. Please stand up for solar in Michigan.
