Dear Michigan Public Service Commissioners,

I'm writing to urge you to reject DTE's proposed rate increase that would make rooftop solar unaffordable and kill jobs.

Michigan's solar industry is a growing part of our economy, supporting thousands of jobs while helping Michigan families and businesses reduce their energy costs.

DTE's outrageous fee for using the grid is unfair, burdensome and would make solar unaffordable for Michigan families while killing jobs in the rooftop solar industry.

In addition, DTE Energy's proposal will raise electricity rates and allow the big utility to gouge rooftop solar users, paying them only a fraction of what their energy is actually worth, killing jobs and slamming the brakes on rooftop solar energy.

I urge you to reject DTE Energy's rate increase to keep rooftop solar affordable and protect Michigan jobs.

Thank you for your consideration.

Sincerely,
Robert Hair

Dear Michigan Public Service Commissioners,

I'm writing to urge you to reject DTE's proposed rate increase that would make rooftop solar unaffordable and kill jobs.

As a member of a community that bears a disproportionate energy burden relative to their income, rooftop solar and the opportunity it presents to help families become energy independent AND to support a transition to a cleaner, more just energy economy.

DTE's outrageous fee for using the grid is unfair, burdensome and would make solar unaffordable for Michigan families while killing jobs in the rooftop solar industry. This proposal only benefits the shareholders of DTE- not the rate payers, not the communities, not the solar businesses and certainly not the environment.

In addition, DTE Energy's proposal will raise electricity rates and allow the big utility to gouge rooftop solar users, paying them only a fraction of what their energy is actually worth, killing jobs and slamming the brakes on rooftop solar energy.

You play an important role in helping Michigan transition to a more just, equitable and sustainable energy future. There is undeniable momentum in government, in communities and in the next generation towards a better system. Please use the power that the State of Michigan has given to you to support this transition and keep power within the people to be a part of and truly benefit from this change.

I urge you to reject DTE Energy's rate increase to keep rooftop solar affordable and protect Michigan jobs.

Thank you for your consideration.

Dear Michigan Public Service Commissioners,

I'm writing to urge you to reject DTE's proposed rate increase that would make rooftop solar unaffordable and kill jobs.

Michigan's solar industry is a growing part of our economy, supporting thousands of jobs while helping Michigan families and businesses reduce their energy costs.

DTE's outrageous fee for using the grid is unfair, burdensome and would make solar unaffordable for Michigan families while killing jobs in the rooftop solar industry.

In addition, DTE Energy's proposal will raise electricity rates and allow the big utility to gouge rooftop solar users, paying them only a fraction of what their energy is actually worth, killing jobs and slamming the brakes on rooftop solar energy.

I urge you to reject DTE Energy's rate increase to keep rooftop solar affordable and protect Michigan jobs.

Thank you for your consideration.

Sincerely,
Dianna Boulanger

Please preserve Net-Zero where any excess energy I may produce is credited back to me when I need it.

My small home system has a 15 year payback only if rates for such systems remain Net-Zero. Since my system only produces a fraction of my total energy needs I am still paying DTE service fees 24-7. My small system, and those like it help reduce this countries use of fosel fuel. Those like me who have implemented energy saving efforts, including solar electric and solar heating should be rewarded for our efforts, NOT PUNISHED by large energy companies like DTE.

I urge you to reject DTE Energy's rate increase to keep rooftop solar affordable and protect Michigan jobs.

Thank you for your consideration.
